

Congressional Budget Justification

Department of State, Foreign Operations, and Related Programs

FISCAL YEAR 2017

This page intentionally left blank.

THE SECRETARY OF STATE
WASHINGTON

February 9, 2016

In his recent State of the Union address, President Obama described a “smarter approach” to sustaining and strengthening America’s place as the pre-eminent force for peace, prosperity, and progress across the globe. He called for a “patient and disciplined strategy that uses every element of our national power,” explaining that U.S. leadership in the 21st century “means a wise application of military power...rallying the world behind causes that are right [and] seeing our foreign assistance as part of our national security, not something separate, not charity.”

The President underscored what we at the State Department and the U.S. Agency for International Development (USAID) see every day on the front lines of our nation’s foreign policy: that our country’s ability to influence events abroad depends on our willingness to tap into all of the resources at our disposal; combining our unquestioned military might with creative diplomacy and tangible support for democracy, development, and human rights.

Our purpose in doing so is to promote the safety, prosperity, and overall wellbeing of the American people at a turbulent time in a complex world: to counter violent extremism; defeat terrorist organizations such as ISIL and al-Qa’ida; combat climate change; promote America’s economic interests; prevent the proliferation of dangerous weapons; curb international narcotics trafficking; protect the global environment; combat hunger and epidemic disease; respond to humanitarian emergencies; advance the status of women and girls; and encourage high standards of governance in countries across the globe.

The budget that follows outlines what is necessary to support our continued leadership and to advance the full range of America’s national security objectives.

This proposal is made with full awareness of the need for accountability, efficiency, and effectiveness in the use of taxpayer dollars. We are conscious that the money we devote to international programs, including everything from embassy security to counter-terrorism and non-proliferation, amounts to just one percent of the total federal budget, but it may well define the majority of the history written about our era.

This year, our budget request for the Department of State and USAID is \$50.1 billion.

This funding includes a base request of \$35.2 billion, which will directly support the people and programs that advance critical national security priorities. These resources will deepen cooperation with our allies and regional partners and bolster American leadership at the UN and other multilateral organizations. They will protect U.S. diplomatic personnel, facilities, and information worldwide. They will help us to mitigate the harmful consequences of climate change, promote human rights, combat trafficking in persons, and facilitate educational exchanges with promising young leaders. Worldwide, they will furnish life-saving humanitarian

aid, foster growth, reduce poverty, increase access to education, combat disease, and promote democratic governance and the rule of law.

The Overseas Contingency Operations (OCO) portion of our budget request is \$14.9 billion, consistent with the Bipartisan Budget Act of 2015. The OCO request will provide support to, respond to, recover from, or prevent crises abroad, including armed conflict, as well as human-caused and natural disasters. The OCO request will enable us to contribute to peacekeeping and UN special political missions; shield allies and partners from potential threats; aid Afghanistan and Pakistan; step up our efforts to destroy ISIL and confront and recover from other crises in the Middle East and Africa; and sustain security programs and embassy construction at high risk posts. The request includes a mechanism for supporting new or expanded peace operations.

While the Department welcomes the revised budget levels set by the Bipartisan Budget Act, shifts in funding for FY 2016 and FY 2017 result in OCO funding covering greater than 50 percent of select ongoing programs. The FY 2017 President's Budget assumes that further adjustments to the Budget Control Act's discretionary spending limits will be needed to sustain these activities in FY 2018. To mitigate perceptions that some of our core programs, including ongoing assistance to key partners such as Iraq and Afghanistan, our UN treaty commitments, and security and humanitarian responsibilities, are 'temporary' contingencies, the Department's enduring funding for ongoing operations must remain at a sustainable level as we move into FY 2018.

With your support, a strategic investment of \$50.1 billion in FY 2017 will advance U.S. national security priorities while confronting new and urgent global challenges; promote our economic interests and reaffirm America's indispensable role in the world.

Advancing Security, Confronting New Threats, and Global Challenges

The President's highest priority is to keep the American people safe. To fulfill this duty, our budget invests in the tools, programs, and platforms needed to counter violent extremism, defeat terrorist networks, stabilize zones of conflict, strengthen our alliances, and address urgent crises and threats in the Middle East, North Africa, Eastern Europe, Central America, South Asia, and elsewhere.

First and foremost, our request supports ongoing efforts to fight extremist groups perpetrating unspeakable acts of violence today and to prevent new terrorist organizations from gaining strength in the future. This includes help for programs to address failed governance, poor economic growth, and corruption that create environments that violent extremists exploit. The funding will also enable us to expand the newly launched Center for Global Engagement which is designed to strengthen the ability of our international partners to counter violent extremist groups.

The budget seeks resources to enhance our nation's leadership of the global coalition to degrade and destroy ISIL. Our strategy draws on every aspect of our power and that of our partners to intensify pressure against ISIL's leaders, infrastructure, and revenue sources. To that end, our request aims to stabilize communities liberated from ISIL in Syria and Iraq; disrupt ISIL's

decision-making, financing, and recruitment; discredit terrorist propaganda; and support a political solution to the Syrian civil war.

We will also continue our long-standing efforts to strengthen our key regional partners, including Israel and Jordan. We will provide humanitarian assistance to those impacted by the conflict inside Syria and in neighboring countries, and address the needs of refugees.

In addition to the battle against the forces of terror and violent extremism, our budget would protect U.S. interests by investing in peace, security, and stability in key regions.

In Europe, our request includes \$953.0 million to support a democratic Ukraine, and to enhance security, prosperity, energy independence and good governance in partner countries. These efforts will contribute to our long term strategic goal of an integrated, free, and peaceful Europe.

In our own Hemisphere, our budget ensures ongoing implementation of the U.S. Strategy for Engagement in Central America and dedicates over \$750.6 million – as part of the Administration’s \$1.0 billion request for appropriations and financing assistance to Central America - to a long-term, comprehensive approach designed to address the underlying factors of migration of unaccompanied children and families. These whole-of-government efforts are geared toward promoting economic opportunities for the Central American people; building democratic, accountable, transparent, and effective public institutions; and providing a safer and more secure environment for citizens in the region.

In South America, in anticipation of a possible peace agreement between the Colombian government and the rebel group FARC, the request provides assistance to address emerging security concerns in post-conflict areas and highlights the importance of demining efforts in the agreement, and supports civil society programs through increased security assistance, access to justice, and public services.

In Afghanistan and Pakistan, our proposal calls for \$3.4 billion to sustain our commitment to both countries. Our proposal requests \$2.5 billion for programs that reinforce Afghanistan’s security and development by maintaining the gains of the last decade, supporting military training and assistance, tackling corruption, countering the influence of extremists and terrorists, strengthening civil society, and supporting health, education, economic growth, and good governance.

The budget also includes \$859.8 million towards sustaining cooperative relationships with Pakistan and making progress to disrupt, dismantle and defeat violent extremist groups. The requested funding will support the country’s counter-insurgency missions, and bolster stability, energy access, economic growth, and social reform.

In Africa, the budget requests \$7.1 billion to bolster democracy, health, education, economic growth, and security. We are focused on strengthening civil society and democratic institutions, improving governance, spurring economic growth, and protecting human rights through such mechanisms as the President’s Stand With Civil Society Initiative. Our assistance is also designed to capitalize on democratic gains in Nigeria and support for critical democratic

transitions in Guinea and elsewhere. We are investing in regional prosperity through Power Africa. Finally, the budget supports regional stability by contributing to strategically important international peace operations, and by continuing efforts under the African Peacekeeping Rapid Response Partnership as well as the Security Governance Initiative.

In the Asia Pacific, the budget requests \$1.5 billion to support the Administration's Asia Rebalance priorities that advances security, prosperity, and human dignity across the region. The request aligns resources and activities to strengthen U.S. alliances and partnerships with emerging powers, promote regional economic cooperation, and support the Trans-Pacific Partnership to help open markets and level the playing field for U.S. workers and businesses.

Beyond specific regions and countries, our budget provides the resources needed to address challenges that are global in nature and reach.

First, the budget requests \$983.9 million to support the Global Climate Change Initiative through the State Department's and USAID's multilateral and bilateral engagement with major and emerging economies. It includes funding for the Green Climate Fund, which will help developing countries leverage public and private financing to reduce carbon pollution and strengthen resilience to climate change.

Second, the budget requests \$6.2 billion to address humanitarian challenges around the world, including help for internally displaced persons, refugees, and communities affected by conflict or natural disasters.

Third, our proposal includes \$2.7 billion for Democracy, Human Rights and Governance (DRG), one of the core strategic goals of this Administration. Our assistance programs help to safeguard national security, foster global prosperity, and demonstrate our continued commitment to principles that reflect American values and identity. A lack of democratic governance creates an enabling environment for instability, violent extremism, and humanitarian crises, which often are a result of corruption, poor governance, and weak or nonexistent democratic institutions. The request reflects this reality with strong support for critical democracy, human rights and governance programs worldwide.

Finally, the request includes over \$4.7 billion in assessed dues and voluntary contributions for international organizations and peacekeeping efforts and to enhance the ability of other countries to participate in peacekeeping and stability operations. These funds strengthen our strategic relationships across the globe and enable the U.S. to advance global security, protecting not only our citizens but those in other critical allied nations, such as Israel. Our assistance to the UN is crucial to ensuring that other nations to share the burdens of leadership. These resources also support contingency funding for new or expanded peace operations that may emerge outside the regular budget cycle; and possible security sector reform efforts in the aftermath of conflict.

Promoting Prosperity, Health, and Development

The FY 2017 request reaffirms our country's leading role in the global economy by supporting American jobs, promoting new and open markets for U.S. firms, and helping our companies

compete for foreign government and private contracts. This budget will expand U.S. engagement on global information and communication technology policy, which shapes standards for Internet freedom and digital privacy. In so doing, it will support our companies' access to information technology and marketplaces.

The budget provides for U.S. consular and border security programs and operations. Consular fees and surcharges support a range of activities that are critical to ensuring U.S. border security, including services for American citizens overseas, passport issuance, visa adjudications, and fraud prevention. The availability of passport and visa revenues remains vital to enabling secure travel to and from the United States; such travel is critical to America's multi-billion dollar tourism industry. Our budget also responds to continued growth in visa demand for business, tourists, and student travel to the U.S., and to the corresponding security mandates.

Our proposal increases the Administration's commitment to global health – because a healthy global population is critical to sustained economic growth and poverty reduction. The budget requests \$8.6 billion for global health programs, including strong support for the President's Emergency Plan for AIDS Relief (PEPFAR), Global Health Security programs, Gavi, and other key programs to address important health issues such as preventing avoidable child and maternal deaths. The budget requests increased support for the President's Malaria Initiative (PMI) in support of President Obama's call to end the scourge of malaria. This includes a total increase of \$200.0 million (30 percent) above last year's level, including an increase of \$71.0 million for the PMI program and a proposal to redirect \$129.0 million in remaining Ebola emergency funds toward malaria programs. The request also includes vital support for the Global Fund, a unique public-private partnership dedicated to the prevention and treatment of HIV/AIDS, tuberculosis, and malaria.

To bolster development, the budget supports the President's Power Africa initiative, which encourages investment in Africa's energy portfolio and in building greater economic and institutional capacity among our partners. The budget also invests in the President's Feed the Future initiative, which is on track to significantly reduce poverty and malnutrition in targeted areas. And the budget contributes to other important goals, such as democracy, human rights, good governance, trade, education for children (including adolescent girls), clean water, and the conservation of natural resources.

Our People, Our Platforms, and Our Global Engagement

To achieve America's international objectives, we must give State Department and USAID personnel the tools and resources they need to do their jobs well.

Our budget request includes a \$169.0 million net increase for Diplomatic and Consular Programs ongoing operations, reflecting heightened investments in such areas as processing Freedom of Information Act requests, cyber security, counterterrorism, and intelligence and research. The Budget also includes \$1.4 billion for the USAID Operating Expenses account to maintain the Agency's workforce and sustain on-going global operations to meet foreign policy objectives, implement Presidential initiatives, and expand global engagement. As recommended by the Quadrennial Diplomacy and Development Review (QDDR), the budget supports increased

diversity through expanded recruitment and fellowship opportunities for America's future foreign policy leaders. In addition to the proposed 1.6 percent pay raise for American employees, the request includes \$57.0 million to provide more competitive wages for the locally employed staff that make up the majority of our workforce. Our locally employed staff provide the area expertise, language skills, and important contacts with local officials that are critical to achieving our objectives abroad. Providing them the wages necessary given everyday exchange rate fluctuations is an obligation we have in each local environment.

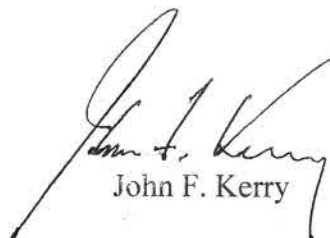

A large portion of the Department's operating platform consists of security programs and overseas facilities, and the request proposes \$6.1 billion for these activities. The \$3.7 billion request for Worldwide Security Protection includes Diplomatic Security (DS) operations, IT network and infrastructure protection, medical support at selected posts, and emergency planning and preparedness. The \$2.4 billion request for diplomatic facility construction and maintenance sustains the Department's commitment to implementing the security recommendations of the Benghazi Accountability Review Board, while providing ongoing repair and maintenance to our overseas real property assets.

The FY 2017 request will also help fulfill our global engagement priorities. Our \$1.2 billion request for public diplomacy programs and educational exchanges promotes U.S. interests – including our campaign against violent extremism --by countering misinformation about American society and policies. These programs also enhance our relationships with foreign populations, including future international leaders.

I have been in public life for more than three decades, on Capitol Hill and now in the Executive branch. I have never seen a time when the United States was more deeply engaged in more parts of the world than we are today. This is a reflection of the depth of our global interests, the challenges we face, the opportunities we have, and the ongoing need for our leadership.

As Members of Congress, the direct representatives of the American people, you play a major foreign policy role through the oversight you provide, the counsel you give, and the resources you make available to pursue the international priorities of our country. I look forward to working with you as you consider this budget request for Fiscal Year 2017.

With your support, you may be sure that the success of our diplomatic and development efforts abroad – the alliances we forge, the agreements we negotiate, the cooperation and collaboration we engender, the assistance we provide and the investments we make – will have a direct and positive impact on the security and prosperity of the American people and on the democratic values that define us and continue to inspire the world.

John F. Kerry

Footnotes

1/ The FY 2015 level reflects the following transfers: \$1,500,000 transferred to the International Litigation Fund; \$195,000 transferred to Embassy Security, Construction, and Maintenance to ameliorate an asbestos problem in an Abu Dhabi residence and commence plans to redesign a medical unit in Jerusalem; \$767,580 transferred from Conflict Stabilization Operations (CSO) for transition of CSO's Syria programs; \$4,000,000 transferred to Educational and Cultural Exchange Programs to support the Young African Leadership Initiative (YALI); \$500,000 transferred to Educational and Cultural Exchange Programs to support the Dole-Harkin Partnership Program; \$515,000 transferred to Educational and Cultural Exchange Programs to support the Kennedy-Lugar Youth Exchange and Study Program; \$88,352,000 transferred from the Buying Power Maintenance Account; \$100,000 transferred from Contributions for International Peacekeeping Activities for mission monitoring activities. The FY 2015 level also includes \$36,420,000 in Ebola Emergency funding, but is depicted in the separate column for display purposes.

2/ The FY 2015 level includes \$195,000 transferred from Diplomatic and Consular Programs (Near Eastern Affairs) to Embassy Security, Construction, and Maintenance to ameliorate an asbestos problem in an Abu Dhabi residence and commence plans to redesign a medical unit in Jerusalem.

3/ The FY 2015 level includes \$767,580 transferred from Conflict Stabilization Operations (CSO) to Diplomatic and Consular Programs for transition of CSO's Syria programs.

4/ The FY 2015 level includes \$4,000,000 transferred from Diplomatic and Consular Programs (Public Diplomacy) to Educational and Cultural Exchange Programs to support the Young African Leadership Initiative (YALI).

5/ The FY 2015 level includes \$500,000 transferred from Diplomatic and Consular Programs to Educational and Cultural Exchange Programs to support the Dole-Harkin Partnership Program.

6/ The FY 2015 level includes \$515,000 transferred from Diplomatic and Consular Programs (Public Diplomacy) to Educational and Cultural Exchange Programs to support the Kennedy-Lugar Youth Exchange and Study (YES) Program.

7/ The FY 2015 level includes \$4,520,903 in mandatory funds transferred from the Vietnam Debt Repayment Fund to Educational and Cultural Exchange Programs.

8/ The FY 2015 level includes \$88,352,000 transferred from the Buying Power Maintenance Account to Diplomatic and Consular Programs.

9/ The FY 2015 level includes \$23,000,008 transferred from the International Development Administration to Contributions to International Organizations.

10/ The FY 2015 level includes \$100,000 transferred from Contributions for International Peacekeeping Activities to Diplomatic and Consular Programs for mission monitoring activities.

11/ The FY 2015 OCO level includes Foreign Assistance Act sec. 610 transfers from FY 2014 International Narcotics Control and Law Enforcement-OCO account (\$66.011 million), Foreign Military Financing-OCO (\$10.5 million), and Nonproliferation, Antiterrorism, Demining and Related Programs (\$32.176 million).

12/ The FY 2015 OCO level includes the transfer of \$14.583 million from the FY 2015 Foreign Military Financing-OCO account to the Economic Support Fund-OCO.

13/ The FY 2015 OCO level includes the transfer of \$4 million from the FY 2015 International Narcotics and Law Enforcement-OCO account to the Economic Support Fund-OCO account.

14/ The FY 2015 OCO level includes the transfer of \$4 million from the FY 2015 Nonproliferation, Antiterrorism, Demining and Related Programs-OCO account to the Economic Support Fund account-OCO.

15/ The FY 2015 enduring level includes Foreign Assistance Act sec. 610 transfers from FY 2014 Nonproliferation, Antiterrorism, Demining and Related Programs account (\$12.15 million), FY 2010 International Narcotics Control and Law Enforcement account (\$12.468 million), and FY 2011 International Narcotics Control and Law Enforcement account (\$13 million).

16/ The FY 2015 level includes the transfer of \$4.16 million from the FY 2015 International Organizations & Programs account to the Global Health Programs - USAID account.

17/ The FY 2015 enduring level includes the transfer of \$29.907 million from the Economic Support Fund to the Department of Treasury Clean Technology Fund (\$16.607 million) and the Strategic Climate Fund (\$13.3 million) in accordance with sec. 7060(c)(8) of the Consolidated and Further Continuing Appropriation Act, 2015.

18/ The FY 2016 enduring level includes the transfer of \$54.975 million from the FY 2016 International Narcotics Control and Law Enforcement account to the Assistance for Europe, Eurasia & Central Asia account.

19/ The FY 2016 enduring level includes the transfer of \$7 million from the FY 2016 Economic Support Fund to the Migration and Refugee Assistance account.

20/ The FY 2016 enduring level includes the transfer of \$9.72 million from the Economic Support Fund to the Department of Treasury Strategic Climate Fund in accordance with sec. 7060(c)(5) of the Consolidated Appropriation Act, 2016.

21/ The FY 2017 budget requests \$10.8 million for the East-West Center under the Educational and Cultural Exchange programs heading.

22/ The FY 2016 level does not reflect the \$86 million in emergency funding that was appropriated to the International Monetary Fund.

23/ FY 2016 estimate total includes the enacted level of \$88.500 million plus \$0.342 million in carryover.

Statement of Performance

Performance Analysis

The Department of State (the Department) and the U.S. Agency for International Development (USAID) continue to make strides toward defining goals and objectives, assessing challenges and progress, and measuring the results of diplomacy and development efforts to create a more secure, democratic and prosperous world for the benefit of the American people and the international community. Resulting improvements in strategic planning, performance management, and evaluation throughout the Department and USAID are detailed in the accompanying Diplomatic Engagement and Foreign Assistance Appendices of the Congressional Budget Justification (CBJ) and [Performance.gov](#).

The 2015 Quadrennial Diplomacy and Development Review (QDDR) builds upon progress made by calling for the advancement of Strategic Planning and Performance Management by strengthening information-sharing and collaboration, instituting senior-level bureau and mission progress reviews, and deepening expertise in planning and performance management. The full QDDR can be viewed at <http://www.state.gov/s/dmr/qddr/2015/>.

The FY 2014-2017 Joint State and USAID Strategic Plan

The FY 2014-2017 Joint State and USAID Strategic Plan (JSP) reiterates the commitment of the Department and USAID to joint planning to implement foreign policy initiatives and invest effectively in foreign assistance programs. The 13 strategic objectives of the JSP serve as a basis for performance measurement and strategic analysis for the Department and USAID. The JSP can be found at <http://www.state.gov/documents/organization/223997.pdf>.

Strategic Review

In FY 2015, the Deputy Secretary of State for Management and Resources convened strategic budget reviews with the Department of State and USAID to examine the FY 2017 budget request. These reviews assessed how requests aligned with bureau strategy, where gaps existed between the budget request and guidance levels, how performance is being monitored and evaluated, and what policy considerations and challenges exist in successfully implementing these goals. Those conversations, shaped by Presidential policies, previous strategic planning efforts, and the 2015 QDDR, were an important opportunity to assess how programmatic and strategic achievements are linked to future plans. Leadership considered recommendations from a variety of research and studies, including management reviews, program evaluations, benchmarking studies and communications analyses.

Performance Planning and Reporting

After the release of the Congressional Budget Justification, the Department of State and USAID will publish the joint FY 2015 Annual Performance Report (APR) and FY 2017 Annual Performance Plan (APP) on [Performance.gov](#). The APR/APP includes performance goals and indicators aligned to each strategic objective in the JSP that assess progress over time and articulate a path for ongoing progress.

Evaluation

The Department and USAID each have Evaluation policies as well as implementation guidance and staff training. The focus of the Department since issuance of the updated evaluation policy in January 2015 has

been communicating how programs as well as processes and activities can be evaluated, and emphasizing quality of evaluations and their dissemination. The Department has developed tools for planning evaluations, including development of statements of work, and for following up on evaluation results. These are available to the Department on the evaluation community of practice page.

To ensure country programs and strategies are achieving results, USAID introduced a new evaluation policy in 2011. Under this policy, USAID conducts high-quality evaluations worldwide that are helping to make smarter decisions. Evaluations are integrated into program design, and evaluation findings are integrated into decision-making about strategies, program priorities, and project design. Further information about USAID evaluations is located on USAID's Development Experience Clearinghouse available at: <https://dec.usaid.gov/dec/home/Default.aspx>. Additional information on the Department's evaluations can be found at: <http://www.state.gov/f/evaluations/index.htm>.

Summary of Appropriations Footnotes:

1/ The FY 2015 level reflects the following transfers: \$1,500,000 transferred to the International Litigation Fund; \$195,000 transferred to Embassy Security, Construction, and Maintenance to ameliorate an asbestos problem in an Abu Dhabi residence and commence plans to redesign a medical unit in Jerusalem; \$767,580 transferred from Conflict Stabilization Operations (CSO) for transition of CSO's Syria programs; \$4,000,000 transferred to Educational and Cultural Exchange Programs to support the Young African Leadership Initiative (YALI); \$500,000 transferred to Educational and Cultural Exchange Programs to support the Dole-Harkin Partnership Program; \$515,000 transferred to Educational and Cultural Exchange Programs to support the Kennedy-Lugar Youth Exchange and Study Program; \$88,352,000 transferred from the Buying Power Maintenance Account; \$100,000 transferred from Contributions for International Peacekeeping Activities for mission monitoring activities. The FY 2015 level also includes \$36,420,000 in Ebola Emergency funding.

2/ The FY 2015 level includes \$195,000 transferred from Diplomatic and Consular Programs (Near Eastern Affairs) to Embassy Security, Construction, and Maintenance to ameliorate an asbestos problem in an Abu Dhabi residence and commence plans to redesign a medical unit in Jerusalem.

3/ The FY 2015 level includes \$767,580 transferred from Conflict Stabilization Operations (CSO) to Diplomatic and Consular Programs for transition of CSO's Syria programs.

4/ The FY 2015 level includes \$4,000,000 transferred from Diplomatic and Consular Programs (Public Diplomacy) to Educational and Cultural Exchange Programs to support the Young African Leadership Initiative (YALI).

5/ The FY 2015 level includes \$500,000 transferred from Diplomatic and Consular Programs to Educational and Cultural Exchange Programs to support the Dole-Harkin Partnership Program.

6/ The FY 2015 level includes \$515,000 transferred from Diplomatic and Consular Programs (Public Diplomacy) to Educational and Cultural Exchange Programs to support the Kennedy-Lugar Youth Exchange and Study (YES) Program.

7/ The FY 2015 level does not include \$4,520,903 in mandatory funds transferred from the Vietnam Debt Repayment Fund to Educational and Cultural Exchange Programs.

8/ The FY 2015 level includes \$88,352,000 transferred from the Buying Power Maintenance Account to Diplomatic and Consular Programs.

9/ The FY 2015 level includes \$23,000,008 transferred from the International Development Administration to Contributions to International Organizations.

10/ The FY 2015 level includes \$100,000 transferred from Contributions for International Peacekeeping Activities to Diplomatic and Consular Programs for mission monitoring activities.

11/ The FY 2017 request includes \$10,800,000 million for the East-West Center under the Educational and Cultural Exchange programs heading.

Diplomatic and Consular Programs

(\$ in thousands)	FY 2015 Actual ^{1/}	FY 2016 Estimate	FY 2017 Request	Increase / Decrease

1/ The FY 2015 level reflects the following transfers: \$1,500,000 transferred to the International Litigation Fund; \$195,000 transferred to Embassy Security, Construction, and Maintenance to ameliorate an asbestos problem in an Abu Dhabi residence and commence plans to redesign a medical unit in Jerusalem; \$767,580 transferred from Conflict Stabilization Operations (CSO) for transition of CSO's Syria programs; \$4,000,000 transferred to Educational and Cultural Exchange Programs to support the Young African Leadership Initiative (YALI); \$500,000 transferred to Educational and Cultural Exchange Programs to support the Dole-Harkin Partnership Program; \$515,000 transferred to Educational and Cultural Exchange Programs to support the Kennedy-Lugar Youth Exchange and Study Program; \$88,352,000 transferred from the Buying Power Maintenance Account; \$100,000 transferred from Contributions for International Peacekeeping Activities for mission monitoring activities. The FY 2015 level also includes \$36,420,000 in Ebola Emergency funding.

2/ The FY 2015 level reflects the following transfers: \$4,515,000 to Educational and Cultural Exchange Programs and \$13,589,000 from the Buying Power Maintenance Account.

The FY 2017 request for Diplomatic and Consular Programs (D&CP) – the State Department’s principal operating appropriation – totals \$8.7 billion. The \$6.5 billion in Enduring provides for the core people, infrastructure, and programs that conduct official U.S. relations with foreign governments and international organizations, and supports the U.S. global footprint to bolster and strengthen foreign policy expertise. The request supports the Department’s global engagement as a national security institution, building relationships with other nations to advance American interests and values. The \$2.1 billion Overseas Contingency Operations (OCO) request is discussed in the OCO section.

The FY 2017 request proposes restoring two-year availability to all base D&CP funding (which would be consistent with the availability provided for OCO accounts) to build on the agility and continuity gained through existing transfer authority that allows extending the availability of 15 percent of D&CP base funds. The 15 percent authority remains a valuable tool for strategic planning and management of global operations and programs, but the creation of two distinct Treasury accounts has complicated administration of the annual appropriation. Two-year authority would simplify the allocation of funds across multiple domestic bureaus and 275 diplomatic and consular posts in 190 countries.

D&CP – Enduring

The D&CP Enduring request provides \$4.6 billion for Ongoing Operations and \$1.9 billion for Worldwide Security Protection. This funding supports essential diplomatic personnel and programs worldwide.

The request includes \$152.5 million in current services increases to sustain D&CP-funded bureaus and programs at their FY 2016 operating levels, incorporating American pay and locality pay increases and locally employed (LE) staff wage increases, domestic and overseas price increases, recurring costs for newly constructed overseas facilities, and GSA rent increases at domestic facilities. It also supports the realignment of overseas condo fee expenses from the Embassy Security, Construction, and Maintenance account to regional bureaus funded within the Overseas Programs category.

Requested program changes total \$765.3 million, including the restoration of \$245.4 million for ongoing operations that were funded through OCO in FY 2016. The Bipartisan Budget Act of 2015 established an FY 2016 nondefense OCO level of \$14.9 billion, and the Department aligned D&CP allocations to that level by temporarily funding select ongoing activities in OCO. In FY 2017, the Department's Enduring funding for ongoing operations must remain at a sustainable level to accommodate the realignment of funds from OCO back to the Enduring base.

Proposed staffing increases are focused on a limited number of bureaus, with funding for 37 new U.S. Direct Hire (USDH) positions, including 15 Foreign Service and 22 Civil Service. As outlined below, these positions will support a number of priorities including countering violent extremism, cyber security policy improvements, and enhanced engagement in Central America and Cuba.

The request includes a total of \$550.4 million for Public Diplomacy (PD) personnel and programs to advance U.S. foreign policy goals by informing and influencing foreign opinion. Public Diplomacy efforts include countering misinformation about U.S. society and policies, strengthening relationships between American and foreign publics, and shaping worldwide information campaigns on issues such as climate change, food security, water, and global health. The Public Diplomacy Request includes resources for new alumni coordinators for the Young African Leaders Initiative and continued support of the program to counter Russian propaganda. The request also supports a new Customer Relationship Management System, American Space construction, the world-wide deployment of Google Apps for efficient collaboration, and increased funding for evaluation of PD programs.

D&CP – Category Details

Human Resources: \$2,570.9 million

Resources requested in this category will be directed toward salaries for domestic and overseas American employees (including employees engaged in Public Diplomacy and Worldwide Security Protection programs). This category also includes funding for staff, facilities, and instructional materials for the Foreign Service Institute, the Department's platform for providing cost-effective in-house training to Department employees and workers throughout the federal government.

The Department's workforce serves the American public by achieving objectives for worldwide security, humanitarian relief and diplomatic engagement. Sustained investment in recruiting and developing an exceptional workforce is vital to fulfilling the Department's mission. In FY 2017, Departmental Human Resources priorities include:

- **Continued Diversification of the Department's Workforce: \$5.4 million**
The request will allow expansion of diversity recruitment and development programs, particularly the Pickering and Rangel Fellowship programs. The Pickering and Rangel Foreign Affairs Fellowships identify and prepare diverse candidates for Foreign Service careers. Fellows who successfully complete the programs and Foreign Service entry requirements receive appointments as Foreign Service Officers. These fellowship programs have raised the Department's measures of Foreign Service workforce diversity by 21 percent. Requested funding will also support

Pathways hiring and paid internships, the International Career Advancement Program, and recruiting outreach to under-represented communities.

Overseas Programs: \$1,756.7 million

The Department's overseas programs link America to the rest of the world by relaying on-the-ground political and economic intelligence back to the United States, and by representing our national interests at both the personal and governmental levels. Embassies and consulates protect our homeland and the promise of American opportunity by regulating the flow of tourists, investors, and students who seek to enter the United States. Overseas missions also provide critical support to American businesses and citizens abroad.

This category includes the regional bureaus (African Affairs, East Asian and Pacific Affairs, European and Eurasian Affairs, Near Eastern Affairs, South and Central Asian Affairs, and Western Hemisphere Affairs), the Bureau of Conflict Stabilization Operations, the Departmental divisions that support U.S. participation in the United Nations and other multinational collaborations (the Office of International Conferences, and the Bureau of International Organization Affairs), as well as the Office of the Medical Director (MED). Additionally, resources in this category cover the cost of Departmental employees' travel on assignment, and liabilities resulting from the separation of LE staff.

The FY 2017 Overseas Programs request includes an OCO to Enduring shift to regularize ongoing Iraq, Afghanistan, and Pakistan operations costs into the base, including \$58.9 million in D&CP Program Operations and \$32.6 million in D&CP Public Diplomacy.

The Department's FY 2017 request seeks resources for the following key Overseas Programs priorities:

- **Maintaining Competitive Wages for Locally Employed Staff: \$28.2 million**
The Department will raise wages for locally employed overseas staff, ensuring that compensation for these vital employees keeps pace with inflation and local labor markets.
- **Implementation of the U.S. Strategy for Engagement in Central America: \$1.6 million**
The Department will provide assistance in program monitoring and evaluation to ensure efficient use of resources for this interagency effort. This initiative will promote good governance and economic growth in the United States and in Central America, helping to remediate the root causes of immigration to the United States – including the migration of unaccompanied children.
- **Cuba Mission Positions and Support: \$3.8 million**
To direct the opening of a new chapter in relations between America and Cuba, the Department plans to modernize the American Embassy in Havana and bring staffing levels in line with similar posts in the region. The Embassy will replace its internet cabling to allow secure and reliable communication, bring its computer equipment up to date, and enlarge and update its vehicle inventory. Embassy Havana's newly expanded mission will also require nine USDH positions: six overseas Foreign Service positions, two domestic Foreign Service positions, and one Civil Service position.
- **Bureau of Conflict Stabilization Operations: \$21.5 million**
The Bureau of Conflict Stabilization Operations (CSO) provides in-country assistance to American personnel and allies during outbreaks of combat, political instability, and atrocity. In accordance with the Department's Quadrennial Diplomacy and Development Review and key Administration initiatives, CSO is moving its focus toward countering violent extremism and

stabilizing unrest in critical areas of the Middle East and North Africa, East Africa, Central America, and Central and Southeast Asia.

- **Gulf Cooperation Council (GCC): \$4.6 million**
The GCC countries (Kuwait, Qatar, Bahrain, United Arab Emirates, Saudi Arabia, and Oman) have a unique labor environment that is highly dependent upon imported labor, known as the *kafala* (sponsorship) system. At U.S. Missions, the majority of LE staff are employed at a disadvantage under the *kafala* system because they are not fully free to change employment or negotiate contract terms, resulting in wages and/or benefits that are not adjusted for local cost of living, and are therefore held artificially low. This GCC initiative helps address these inequities by providing \$4.6 million to support increased and/or new housing and education allowances for GCC LE staff.
- **Variable Contribution Plan (VCP): \$1.8 million**
The VCP program is a defined contribution end-of-service benefit for LE staff in the NEA region. Missions in conflict areas operate from confined compounds that require comprehensive life support contracts and additional USDH allowances to reflect the dangerous environments these postings have become. This increase includes funding for Tunisia to allow more frequent R&R breaks from confined living environments, and to provide additional funding for overtime and danger pay.

Diplomatic Policy and Support: \$754 million

Resources in the Diplomatic Policy and Support category sustain the Department's essential strategic and managerial functions. The Departmental components funded under this category are the bureaus and offices of Administration; Arms Control, Verification and Compliance; Budget and Planning; Chief of Protocol; Comptroller and Global Financial Services; Democracy, Human Rights, and Labor; Economic and Business Affairs; Energy Resources; Information Resource Management; Intelligence and Research; International Criminal Justice; International Security and Nonproliferation; the Legal Adviser; Legislative Affairs; Oceans and International Environmental and Scientific Affairs; Political-Military Affairs; Population and International Migration; Public Affairs; the Secretary of State; the Under-Secretary for Management; and the Office to Monitor and Combat Trafficking in Persons.

In FY 2017, the Department's key priorities in the Diplomatic Policy and Support category include:

- **Freedom of Information Act (FOIA) Processing: \$5 million**
The recent growth in FOIA requests put the Department on pace for a 30 percent increase in its FOIA response backlog in FY 2015. The Department will use the requested \$5 million increase over the FY 2016 funding level of \$29 million to reduce this backlog, minimize vulnerability in litigation, and make further improvements to the FOIA program consistent with legal mandates and other directives.
- **Leveraging the Office of the Coordinator for Cyber Issues to Promote a Secure and Open Internet: \$1.4 million**
The Coordinator for Cyber Issues, located in the Office of the Secretary, will manage computer security incident response teams and coordinate the Department's multilateral efforts to develop country-level cyberspace policies. The United States has an interest in cooperating with other nations to achieve an open, secure and reliable internet while countering efforts by countries such as China and Russia to gain greater governmental control of the internet and restrict the free flow of information and human rights activities online.

- **Leading the Arctic Council and Engaging Trade Partners: \$2.3 million**
As the United States chairs the Arctic Council through 2017, the Bureau of Oceans and International Environmental and Scientific Affairs (OES) will be responsible for planning and staffing the U.S.-hosted Ministerial Meeting in May 2017, as well as more than 20 other international meetings. OES will also play a key role in FY 2017 in finalizing and executing the environmental provisions of the Trans-Pacific Partnership (TPP) and the Transatlantic Trade and Investment Partnership (TTIP).

Security Programs: \$1,458.3 million

These resources support the Department's security programs and policies. This request includes provisions for the Bureau of Counterterrorism (CT), the Office of Foreign Missions, the Bureau of Diplomatic Security (DS), and the Worldwide Security Protection (WSP) sub-account. WSP supports the Bureau of Diplomatic Security and security components of the Bureau of Administration, Bureau of Intelligence and Research, Bureau of International Security and Non-Proliferation, Bureau of Information Resource Management, Bureau of Human Resources, Office of the Medical Director, Chief of Protocol, and the Foreign Service Institute.

The Worldwide Security Protection Enduring request provides \$1.9 billion for DS and partner bureaus to ensure the security of Department staff, property, and information. Of the \$1.9 billion WSP funding level, \$1.4 billion is distributed to Security Programs, while \$463.4 million is included in the Human Resources category to pay for personnel costs. All DS resources are now aligned to WSP with a final \$95.1 million realignment of DS D&CP funding. DS funding supports ongoing core functions such as the worldwide local guard program, high threat protection, security technology, armored vehicles, cybersecurity, and diplomatic couriers.

The request includes \$2 million to establish an Office of Countering Violent Extremism (CVE) within CT, and provide CVE with six USDH positions. The new CVE Office will elevate CVE as a priority in the Department and sustain the work of the 2015 White House CVE Summit process by coordinating CVE policy, programs, and assistance. The CVE staff will lead the Department's CVE analytical work, policy planning, international assistance and cooperation efforts, and monitoring and evaluation.

WSP funding also supports IRM's information technology security and information assurance programs, the Bureau of Administration's domestic emergency management planning, MED's Operational Medicine support to high-threat posts, and CT's coordination of National Level Exercise support.

Beginning in FY 2018, the Administration intends to request that Worldwide Security Protection be established in a separate account outside of D&CP.

1/ The FY 2015 level reflects the following transfers: \$1,500,000 transferred to the International Litigation Fund; \$195,000 transferred to Embassy Security, Construction, and Maintenance to ameliorate an asbestos problem in an Abu Dhabi residence and commence plans to redesign a medical unit in Jerusalem; \$767,580 transferred from Conflict Stabilization Operations (CSO) for transition of CSO's Syria programs; \$4,000,000 transferred to Educational and Cultural Exchange Programs to support the Young African Leadership Initiative (YALI); \$500,000 transferred to Educational and Cultural Exchange Programs to support the Dole-Harkin Partnership Program; \$515,000 transferred to Educational and Cultural Exchange Programs to support the Kennedy-Lugar Youth Exchange and Study Program; \$88,352,000 transferred from the Buying Power Maintenance Account; \$100,000 transferred from Contributions for International Peacekeeping Activities for mission monitoring activities. The FY 2015 level also includes \$36,420,000 in Ebola Emergency funding.

2/ The FY 2015 level reflects the following transfers: \$4,515,000 to Educational and Cultural Exchange Programs and \$13,589,000 from the Buying Power Maintenance Account.

IT Central Fund

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Capital Investment Fund	56,400	66,400	12,600	-53,800
Expedited Passport Fees	228,828	168,000	283,300	115,300
Total IT Central Fund	285,228	234,400	295,900	61,500

The IT Central Fund (ITCF) was established to enable efficient procurement and management of information technology and related capital investments. The fund is comprised of both appropriations and Expedited Passport Fee (EPF) revenues. The Department's FY 2017 request of \$12.6 million for the Capital Investment Fund (CIF) appropriation will support greater consolidation and efficiency, cyber security related infrastructure enhancements, and improved customer support. Combined with the estimated collections of \$283.3 million in EPF for FY 2017, the ITCF will provide a total of \$295.9 million for priority IT investments and modernization activities. Due to a temporary passport renewals surge in FY 2016 and FY 2017, the Department is projecting higher collections from the Expedited Passport Fees, which will offset the reduction in the appropriations request.

The Department's IT platform delivers vital tools and information products to reach the foreign public and engage effectively in the global competition for ideas and values. The Department capitalizes on secure mobile technologies, social media, knowledge management tools, enterprise system monitoring, configuration management solutions, and the integration of core IT systems to provide better information analysis and a more productive and secure work environment. The infrastructure supports other U.S. Government agencies operating overseas through an environmentally sustainable, cost-efficient, integrated platform that promotes interagency collaboration.

The Department also focuses resources on bolstering cybersecurity measures. In particular, the funding will strengthen the Department's ability to protect and secure its information systems. The Department will continue the modernization of major functional systems, which operate as enterprise-wide centrally managed shared services (e.g. logistics, financial management, and human resource management), with data standardization, system interoperability, integrated management reporting, and mobile delivery. The Department will continue to invest in global training for IT specialists and end users, focusing on use of distance learning, online courses, and knowledge sharing.

The FY 2017 Request continues to support the Department's Information Technology Strategic Plan and ensures the protection of the Department's sensitive national and economic security interests. This plan focuses on five strategic goals:

Goal 1: Mobile Diplomacy - Ensures that State Department personnel can securely use mobile devices and access Information Technology (IT) systems and data anytime, anywhere.

Goal 2: Digital Diplomacy - Enhances collaboration and information sharing among our internal and external stakeholders ensuring that our diplomats and development experts can communicate securely.

Goal 3: Mission and Management systems – Modernizes and integrates enterprise applications to exploit technology, provide comprehensive functional capabilities, and enhance services to U.S. citizens and other stakeholders.

Goal 4: Global Infrastructure - Provides a secure, robust, worldwide, web-based infrastructure to U.S. agencies operating overseas under Chief of Mission authority and Department employees.

Goal 5: IT Leadership – Ensures effective governance of IT resources focusing on accountability for performance and service delivery with a highly trained workforce.

Activities - Funds by Goal	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase/ Decrease
Goal One: Mobile Diplomacy	63,900	70,904	64,393	-6,511
Foreign Post Telephones	3,677	3,300	3,300	-
Global IT Modernization	55,804	53,775	47,264	-6,511

Total IT Central Fund	285,228	234,400	295,900	61,500

^{1/} Goal Three Other includes funding for the Legacy Compensation System, which is scheduled to be replaced in FY 2017 by GFACS. The \$2.345 million required to operate the Legacy Compensation System in FY 2017 is included in the GFACS investment.

^{2/} Goal Four Other includes funding for the Information Assurance program in FY 2015, which was shifted to the Worldwide Security Protection program in FY 2016.

Consular and Border Security Programs

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Consular and Border Security Programs	3,155,231	4,318,839	4,197,681	-121,158

The Department of State's Consular and Border Security Programs account (CBSP) is a central component of the coordinated national effort to deny entry into the United States by individuals who threaten the country, while simultaneously facilitating the entry of legitimate travelers. The Bureau of Consular Affairs (CA) and 13 CBSP partner bureaus provide consular-related services that most efficiently and effectively protect the lives and serve the interests of U.S. citizens overseas, strengthen U.S. security, facilitate legitimate international travel, and foster economic growth.

Revenue from Department-retained consular fees and surcharges funds CBSP consular programs and activities. These fees and surcharges include: Machine Readable Visa (MRV) fees, Western Hemisphere Travel Initiative (WHTI) surcharges, Passport Security surcharges, Immigrant Visa Security surcharges, Diversity Visa Lottery fees, Fraud Prevention and Detection fees (H&L), and Affidavit of Support (AoS) Review fees. Each consular fee or surcharge is used to fund CBSP activities consistent with its applicable statutory authorities.

CONSULAR PROJECT INITIATIVES: \$2,676.6 million

Consular Systems Technology: \$388.2 million

Consular Systems Technology (CST) supports worldwide consular information systems operations, maintenance, and modernization. CST includes several major investments, including ConsularOne, which consolidates and modernizes all consular applications under a common IT application framework. Other CST application packages support citizens with unplanned or emergency needs, and support task force groups when crises arise that endangers citizens' lives. The FY 2017 request of \$388.2 million, which reflects a decrease of \$185.8 million from the FY 2016 estimate, ensures that CA/CST continues to develop and maintain the IT systems and infrastructure necessary to support both domestic offices and overseas posts. Hardware and software expenditures will decrease in FY 2017, due to the FY 2016 completion of worldwide infrastructure replacement projects needed to support the anticipated passport surge. The request reflects continued full software development support of ConsularOne.

Domestic Executive Support: \$38.0 million

Domestic Executive Support encompasses CA's Front Office, the Office of the Executive Director (CA/EX), the Office of Policy Coordination and Public Affairs (CA/P), and the Office of the Comptroller (CA/C). Under the leadership of the Assistant Secretary and Principal Deputy Assistant Secretary for Consular Affairs (CA), the Front Office oversees the overall performance of the Bureau in its role as the primary implementer and manager of the Consular and Border Security Program. The FY 2017 request supports overall operational costs including contracts, supplies, travel and other domestic operations. The \$2.2 million decrease below the FY 2016 estimate is associated with the the realignment of payments for Protecting Powers and Emergency Medical and Dietary Assistance (EMDA) programs to American Citizens Services.

Document Integrity, Training and Anti-Fraud Programs: \$4.8 million

The FY 2017 request for CA's Office of Fraud Prevention Programs (CA/FPP) will support efforts to identify and combat internal fraud, to ensure unqualified applicants do not receive or retain consular benefits.

Visa Services: \$96.4 million

CA administers the visa portion of the U.S. immigration framework, using the latest technology to automate the visa process and working with other U.S. government agencies to efficiently and accurately screen all applicants for security threats and other potential ineligibilities. The FY 2017 request of \$96.4 million will fund Visa Services activities, including plans for a large-scale digitization of approximately 50 million visa records, a quality assurance audit among contractors to ensure proper procedure and policies are followed, and increases to the labor contract at the National Visa Center (NVC) and Kentucky Consular Center (KCC) due to anticipated workload increases. The \$10.2 million decrease is attributable to non-recurring costs in the FY 2016 estimate.

Affidavit of Support Program: \$36.7 million

The Affidavit of Support (AoS) form is a requirement for many family- and employment-based immigrant visas, to demonstrate that the applicant will have adequate financial support once in the United States. Revenue from the AoS fees support the review and processing of AoS forms.

Diversity Visa Lottery Program: \$4.0 million

The Diversity Visa (DV) program randomly selects nationals of certain countries for the opportunity to apply for immigration visas. DV lottery fees support the administration of the DV program.

Passport Services: \$991.7 million

The Passport Services Directorate (PPT) protects U.S. border security and facilitates legitimate travel through comprehensive management of consular information technology systems, financial resources, and human resources in support of consular activities. As the Department prepares for the significant increase in passport demand related to the WHTI surge, the FY 2017 request will ensure that PPT can continue to provide exemplary service while meeting the FY 2017 projected workload of 20 million applications. Increasing workload demand is a driver of most CBSP expenses, including those of Passport Services. The overall increase of \$24.8 million over the FY 2016 estimate includes increases for the Traceable Mail Initiative, travel, the Passport Call Center, supplies such as passport books and cards, and the full implementation of the Next Generation Passport (NGP) book, which will include more security features than the current passport. The increases, however, will be offset by reductions for foils and ribbons not required with the NGP; savings from phasing out printers for the current passport, and a reduction in postage.

American Citizens Services (ACS): \$13.5 million

The Directorate of Overseas Citizens Services, Office of American Citizens Services and Crisis Management (OCS/ACS) provides documentation and protection to U.S. citizens worldwide. The FY 2017 request will allow CA to meet its protection responsibilities for U.S. citizens overseas through programs for crisis management; protection of children, victims of crime, and U.S. citizens residing and traveling abroad; voter assistance; and emergency support to destitute U.S. citizens. The FY 2017 request reflects a \$912,000 increase over the FY 2016 estimate, which supports the biannual paper stock purchases for Consular Report of Birth Abroad (CBRA) forms and the realignment of payments for Protecting Powers and Emergency Medical and Dietary Assistance (EMDA) programs from Domestic Executive Support.

Consular Affairs Overseas Support: \$1,102.1 million

CA Overseas Support covers overseas expenses of the CBSP, including the costs of start-up support costs for overseas staff. Overseas support includes continued implementation of the Global Support

Strategy (GSS); International Cooperative Administrative Support Services (ICASS) contributions; equipment for consular agents; and recurring, non-salary support for Locally Employed Staff (LE Staff) and all U.S. Direct Hire (USDH) personnel. The FY 2017 request of \$1,102.1 million is approximately \$1.7 million below the FY 2016 Estimate, which is the net result of an increase of additional overseas operational expenses of \$19.5 million, offset by a \$21.2 million decrease for non-recurring new position support costs from FY 2016. Additionally, CA will begin paying non-rent operating expenses in FY 2017, which were previously funded by the Embassy Security, Construction, and Maintenance (ESCM) appropriation.

FSN Separation Liability Trust Fund (FSNSLTF): \$1.2 million

FSNSLTF covers the accrued separation pay of CBSP-funded locally employed staff who voluntarily resign, retire, die in service, or lose their jobs due to reduction-in-force. The FY 2017 request funds the FSNSLTF contribution for consular-related Foreign National staff.

BORDER SECURITY STAFF/AMERICAN SALARIES (AMSALS): \$680.5 million

Human capital is the most vital component of the CBSP. The Department devotes a significant level of effort and resources toward increasing the efficiency and capacity in the visa and passport processes, including ensuring adequate staffing levels both domestically and overseas. CBSP-funded staff costs include positions in CA as well as in numerous partner bureaus. The \$37.4 million increase over the FY 2016 estimate is attributable to the new positions, which will strengthen the consular workforce during the upcoming renewal of millions of passports in FY 2017. To support the consular-funded programs and activities, the FY 2017 request includes 90 new positions: seven domestic consular positions; 61 overseas consular positions; 20 positions for the Bureau of Diplomatic Security (DS); and two positions for the Foreign Service Institute (FSI).

BORDER SECURITY SUPPORT/DEPARTMENT OF STATE PARTNERS: \$642.6 million

Bureau of Administration (A): \$120.8 million

A Bureau manages the rent and leasing for all consular domestic facilities including CA's headquarters building (SA-17) in Washington, DC. Funding for A Bureau also supports facilities maintenance, custodial services, and utilities for the Portsmouth Consular Center (PCC), the Kentucky Consular Center (KCC), and the Charleston Regional Center (CRC). Beginning in FY 2016, A Bureau will oversee the design and construction of a new CBSP-funded training facility on the FSI campus. This two-year, \$116.2 million project will support the expansion needed to accommodate consular staffing growth resulting from increased demand for consular services. The increase in FY 2017 will support the second phase of the new training facility.

Bureau of Diplomatic Security (DS): \$70.2 million

DS plays an important role in consular operations and border security by coordinating and facilitating investigations involving U.S. travel documents. DS investigates and coordinates the handling of fraudulent issuance, acquisition, and use of U.S. passports; and of international visa fraud cases including fraudulent issuance, procurement, counterfeiting and forgery of U.S. visas. In coordination with CA, DS investigates fraudulent document vendors, bribery, alien smuggling, or trafficking involving U.S. travel documents and allegations of corruption by American employees and LE Staff. DS continues to pursue and expand its programs, both domestically and overseas, to develop patterns of fraud and human trafficking and strategies to stop them. DS also hires and assigns uniformed protection officers to guard domestic CA facilities. The FY 2017 request supports the Uniformed Protective Guard program, visa

and passport security programs, investigative support and program and staffing support costs, which are priorities at the U.S. southern border and specific high-fraud diplomatic missions worldwide.

Foreign Service Institute (FSI): \$21.8 million

FSI supports consular training. The FY 2017 request will fund training in the form of classes, workshops, and on-line courses to Consular Officers, Information Management Specialists, LE Staff and Consular Agents. The FY 2017 request provides new position support costs, including language classes for the staff hired to support the visa and passport workload. The FY 2017 request provides additional language testers and training to accommodate the projected increase in LNA staff members going to post. These increases are offset by a \$3.7 million reduction in non-recurring support costs for positions hired in FY 2016.

Information Resource Management (IRM): \$74.5 million

IRM provides systems technology and backbone support for critical visa and passport systems. The FY 2017 request will directly support domestic and overseas initiatives such as Network Services, Enterprise Server Operations Center (ESOC) Hosting Services, Global IT Modernization (GITM) Program, SharePoint, and SMART. The \$5.2 million increase over the FY 2016 Estimate reflects new position support costs and increased IT support to meet surging visa demand in Mission China.

Office of the Legal Advisor (L): \$232,000

Office of the Legal Adviser for Consular Affairs (L/CA) provides legal advice and services to Consular Affairs and other Department of State bureaus and officials on consular-related matters. The FY 2017 request will provide funding for staff support costs.

Overseas Building Operations (OBO): \$292.2 million

OBO directs the worldwide overseas building program for the Department, including embassies and consulates. CA is the public face of the U.S. government for millions of U.S. citizens and foreign nationals overseas. More than 90 percent of all visitors to U.S. embassies and consulates visit just one office – the consular section. The FY 2017 request funds \$118.6 million for facility support, including new position support costs, office space (functional leases) and housing space (residential leases) for consular personnel; \$143.5 million for CA's share for new embassy/consulate capital construction projects through the Department's Capital Security Cost-Sharing Program (CSCS); and \$30.1 million for targeted facility infrastructure improvement projects for consular sections overseas. The net decrease of \$29.7 million from the FY 2016 estimate reflects a reduction in the number of consular-specific facilities and maintenance projects planned for FY 2017.

American Institute in Taiwan (AIT): \$1.1 million

AIT is a non-profit organization contracted by the Department of State to carry out relations between the peoples of the United States and Taiwan pursuant to the Taiwan Relations Act (Public Law 96-8). The FY 2017 request of \$1.1 million maintains the current level of support for a portion of consular operations at AIT's offices in Taipei and Kaohsiung.

Repatriation Loans: \$759,000

The CBSP funds the administrative costs for the Repatriation Loans program, which assists destitute U.S. citizens abroad. The FY 2017 request will allow the Department to administer the program from approval to final repayment at a level consistent with expected loan volumes for Americans abroad who have no other source of funds to return to the United States.

Comptroller and Global Financial Services (CGFS): \$1.4 million

CGFS provides financial services in support of consular-related activities, such as vouchering, payroll processing, and accounts payable/receivable. The FY 2017 request will provide contractual and operational support to ensure these essential services are available to the CA.

Confidential Investigations (EDCS): \$500,000

The FY 2017 request includes \$500,000 for certain law enforcement activities related to visa and passport fraud. The FY 2017 request sustains activity at the FY 2016 level.

Post Assignment Travel (PAT): \$46.9 million

PAT costs for overseas consular personnel include training, travel, and change of station costs, which are crucial to staffing overseas missions with trained personnel. The decrease from the FY 2016 Estimate reflects the non-recurrence of FY 2016 one-time startup costs.

Human Resources (HR): \$11.8 million

HR provides onboarding and administrative support for domestic and overseas consular employees. The 2017 request supports the staffing level needed to address consular workload changes.

Office of Medical Services (MED): \$427,000

MED's mission is to safeguard and promote the health and well-being of America's diplomatic community. The FY 2017 request of \$427,000 funds medical clearance onboarding costs for additional consular staff, including Foreign Service generalist attrition replacement hiring. The \$60,000 decrease is attributable to the lower number of new hires in FY 2017 compared to FY 2016.

FBI FINGERPRINT CHECKS REIMBURSEMENT: \$198.0 million

The FY 2017 request includes funding for the Department to reimburse the Federal Bureau of Investigation (FBI) for fingerprint and name check clearances for visa applicants. The \$28.1 million increase over the FY 2016 estimate supports the expected increase in applications.

Working Capital Fund

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Working Capital Fund	1,425,640	1,457,064	1,497,903	40,839

The Working Capital Fund (WCF) operates under the legal authority of 22 U.S.C. 2684 and does not receive direct appropriations. The WCF currently consists of 12 service centers that provide support for aviation, post assignment travel, information technology, publishing, shipping and freight, medical services, procurement, and services to the foreign diplomatic community. Revenues are generated in the WCF from the sale of goods and services to the Department, other federal agencies, and non-federal sources. The revenue collected from these customers is used to pay for the acquisition of resources needed to ensure the continuous operation of the various WCF activities.

The WCF allows economies of scale and more consistent business practices and customer services, which in turn control costs and avoid duplication. Offices operating WCF service centers do not have the same latitude as commercial businesses, but they act similar to businesses because they charge customers for services and use revenue to fund their activities.

Beginning in FY 2016, spending within the Office of Foreign Missions service center will increase to support the development of the Foreign Missions Center, which will ultimately provide foreign governments with parcels for the relocation and construction of modern chancery facilities through long-term lease or reciprocal property exchanges. For FY 2017, the Department is also considering creation of a service center for managing Special Issuance Passport services to State and other Federal agencies.

The table below includes FY 2016 and FY 2017 estimated obligations for the 12 service centers.

Service Center (S in thousands)	FY 2015 Actual	FY 2016 Estimate ^{1/}	FY 2017 Request	Increase / Decrease
Global Publishing Solutions	28,323	26,769	27,304	535

^{1/} The FY 2016 estimate has been revised to reflect anticipated gross obligations.

Embassy Security, Construction and Maintenance

(\$ in thousands)	FY 2015 Actual ^{1/}	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Embassy Security, Construction and Maintenance	2,324,200	2,221,747	2,356,659	134,912
Enduring	2,063,400	1,473,896	1,117,859	-356,037
Ongoing Operations	822,900	785,097	759,161	-25,936
Worldwide Security Upgrades	1,240,500	688,799	358,698	-330,101
Overseas Contingency Operations ^{2/}	260,800	747,851	1,238,800	490,949
Ongoing Operations	10,800	12,650	10,800	-1,850
Worldwide Security Upgrades	250,000	735,201	1,228,000	492,799

1/ The FY 2015 level includes \$195,000 transferred from Diplomatic and Consular Programs (Near Eastern Affairs) to Embassy Security, Construction, and Maintenance to ameliorate an asbestos problem in an Abu Dhabi residence and commence plans to redesign a medical unit in Jerusalem.

The Bureau of Overseas Buildings Operations (OBO), funded through the Embassy Security, Construction, and Maintenance (ESCM) appropriation, is responsible for providing U.S. Diplomatic and Consular missions overseas with secure, safe, and functional facilities to assist them in achieving the foreign policy objectives of the United States.

The work supported by this request is vital, as over 86,000 U.S. Government employees from more than 30 agencies at 275 diplomatic and consular posts depend on the infrastructure OBO provides and maintains. OBO is focused on several priorities to ensure that the President, the Secretary, and other U.S. government agencies have the tools and platform to be effective in their mission. Following the September 2012 attacks on several embassies and the subsequent recommendations of the Benghazi Accountability Review Board (ARB), the Department completed a worldwide review of its overall security posture to identify and implement additional measures to bolster the security of our facilities and personnel where necessary. The FY 2017 Request supports \$2.2 billion for the construction of new secure facilities, consistent with the recommendations of the ARB.

OBO is focused on four priority goals that advance diplomatic readiness and are aligned with the Department's strategic goals. They are:

- **Capital Security Construction** – Award capital security construction projects which have been listed in the Department's Annual Planning Report (APR) after consultation with other agencies, and complete the construction on-time and within budget. The program will provide new facilities that are secure, safe, and functional for U.S. Government employees to pursue the national interests of the U.S.
- **Compound and Physical Security** – Provide physical security and compound security upgrades to Department overseas facilities to protect employees from terrorist and other security threats. This also includes security upgrades for soft targets such as schools, recreational facilities, and residences.
- **Maintenance of Assets** – Maintain, repair, and rehabilitate overseas diplomatic and consular facilities in an effective manner that enhances the quality of life of employees while allowing

them to perform their duties in secure, safe, and functional facilities.

- **Asset Management** – Acquire, dispose of, and manage the Department’s overseas real property in a professional manner that meets Department needs and is performed on terms favorable to the U.S. Government.

The FY 2017 request is \$2.4 billion and 1,026 positions, an increase of \$134.9 million above the FY 2016 Estimate. The increase largely reflects additional OCO funding to support the remaining components of transition in Kabul, Afghanistan, to include security upgrades to enable the Embassy compound to more safely accommodate the planned civilian presence that will remain after the military transition. The OCO level also includes ongoing ESCM programs that have been shifted from Enduring as a result of the Department’s revised FY 2016-2017 OCO allocations under the Bipartisan Budget Agreement of 2015.

The FY 2017 request includes \$1.6 billion to continue the Worldwide Security Upgrade Program, composed of both OCO (\$1,228 million) and enduring (\$358.7 million) to continue the Capital Security, Maintenance Cost Sharing, and Compound Security Programs; and \$759.2 million for Ongoing Operations.

The FY 2017 request splits ESCM funding between Enduring and OCO to support the construction of new secure facilities overseas. The request includes \$1,018.5 million of ESCM funding for State’s share of the Capital Security Cost Sharing (CSCS) program. When combined with CSCS contributions from other agencies and other reimbursements (including a contribution from Consular and Border Security Program fee revenues), the request will provide a total of \$2.2 billion for up to five new construction projects, as well as site acquisitions for future plans.

In addition, the WSU request includes the Compound Security and Maintenance Cost-Sharing (MCS) programs. The \$101 million for Compound Security is to be funded from OCO to continue security upgrades for high risk diplomatic facilities and soft targets, such as schools and recreation facilities. The MCS program, which is to be funded with enduring resources, will address facility needs at posts that will not receive a new embassy compound in the near future. The \$185 million provided under the MCS initiative is to extend the useful life of existing infrastructure and protect the U.S. long-term investment in new facilities. This request will be combined with \$215 million of cost sharing contributions from other agencies and other reimbursements (including a contribution from Consular and Border Security Program fee revenues), for a total of \$400 million.

The ESCM request further provides \$759.2 million for Ongoing Operations, of which \$92.8 million is for the Repair and Construction Program and \$666.4 million supports OBO’s operating elements. The funding will support real property management, including administration of the Department’s worldwide leases, and other vital ongoing activities. These activities include repair and construction, program development and support, construction and security management, and maintenance and renovation of the Department’s facilities at locations in the United States. The Ongoing Operations request also includes \$18 million for the Domestic Renovations program and repairs to be done through the Capital Improvement Program.

Office of Inspector General

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Office of Inspector General	130,300	139,300	141,969	2,669
Enduring	73,400	72,700	87,069	14,369
Overseas Contingency Operations including SIGAR	56,900	66,600	54,900	-11,700
Special Inspector General for Afghanistan Reconstruction	56,900	56,900	54,900	-2,000

The Office of Inspector General's (OIG) mandate encompasses all domestic and overseas activities, programs, and missions of the Department and the Broadcasting Board of Governors (BBG). OIG's overarching goal for FY 2017, as set forth in its Functional Bureau Strategy, is to be a world-class organization and a catalyst for effective management, accountability, and positive change in the foreign affairs community by focusing on three strategic priorities:

- **Promoting Positive Change.** OIG will conduct and report on its independent oversight work that strengthens the Department and BBG's ability to effectively and efficiently advance U.S. foreign policy goals and protect U.S. citizens and interests abroad. OIG will engage stakeholders in conducting effective oversight that addresses priorities identified in the Quadrennial Diplomacy and Development Review (QDDR) and the State-USAID Joint Strategic Plan. OIG's oversight supports informed decision making to improve programs, effect positive change, and promote the most effective use of limited funding in an environment of increasingly constrained financial resources. OIG will recommend actions that correct identified vulnerabilities, prevent losses, and improve efficiencies and security.
- **Fostering Increased Accountability and Integrity.** OIG will engage stakeholders and employees in conducting effective oversight to identify and deter criminal activity and misconduct. OIG also will take proactive steps to identify potential waste, fraud, and abuse through enhanced investigative capabilities and analytical mechanisms. OIG will investigate allegations of criminal activity and employee misconduct. OIG's priorities include increasing prosecutions of procurement fraud; suspending and debaring companies that do not comply with the law; and educating agency employees to use OIG as a resource. OIG's efforts result in millions in monetary benefits from investigative recoveries, restitutions, and fines.
- **Addressing Core Challenges.** OIG will target oversight activities to address Department and BBG's major management challenges, high-risk operations, and major vulnerabilities. Specifically, OIG will focus on improving the integrity of the agencies' financial, management, and information technology systems and procedures. OIG will recommend actions that correct identified vulnerabilities and result in savings, cost recoveries, funds put to better use, restitutions, fines, prevention of losses, and improved efficiencies and security. Through increased compliance follow-up, OIG will strengthen accountability, efficiency, and effectiveness.
- **Harnessing Outstanding Talent, Leadership, and Effective Operations.** OIG will strengthen internal operations, platforms, and processes, aligning its planning, budget, and personnel to improve organizational performance and support the most efficient and effective use of OIG resources, to include emphasizing professional and leadership development to promote a culture of accountability.

Information technology priorities include strengthening security over OIG's sensitive electronic data and developing a robust in-house data analytics capability.

The FY 2017 enduring request of \$87.1 million, \$14.4 million above the FY 2016 Estimate, supports OIG's ever-increasing global mandate of robust oversight activities of the Department's and BBG's worldwide programs and operations. This request focuses on ensuring that OIG is adequately resourced to conduct the audits, inspections, evaluations, and investigations to address the Department's and BBG's top management challenges, including programs and operations in Iraq, Pakistan and Afghanistan. For FY 2017, OIG's high priorities also include enhancing collaboration, communication, and management systems to leverage OIG resources efficiently and maximize the impact of its work. The request includes funding for 15 direct-hire positions to strengthen OIG oversight of Department and BBG operations and management, including OIG's significant role as one of the Lead Inspector General for Overseas Contingency Operations (LIG-OCO); physical, personnel, and information security; procurement activities, including contracts and grants; and financial operations and foreign assistance. The request also includes an increase for American pay raises and domestic inflation, and provides OIG's full contribution to the Council of the Inspectors General on Integrity and Efficiency.

Educational and Cultural Exchange Programs

(\$ in thousands)	FY 2015 Actual ^{1/}	FY 2016 Estimate	FY 2017 Request ^{2/}	Increase / Decrease
Educational and Cultural Exchange Programs	594,915	590,900	639,773	48,873

1/ The FY 2015 level includes \$5.015 million transferred from Diplomatic and Consular Programs

2/ The FY 2017 request includes \$10.8 million for the East-West Center under the Educational and Cultural Exchange programs heading.

The Department of State's Bureau of Educational and Cultural Affairs (ECA) within the Undersecretariat for Public Diplomacy and Public Affairs designs and implements educational, professional, and cultural exchange programs that are central to achieving our nation's foreign policy goals. ECA people-to-people exchanges encourage the spread of democratic values and the growth of robust civil societies; promote secure, peaceful communities and counter violent extremism; unlock economic growth, especially through entrepreneurship in the United States and around the world; boost knowledge about and efforts to stem environmental degradation and climate change; and increase mutual understanding by exposing foreign audiences to U.S. policies, values, and culture. ECA exchanges target specific demographics including youth, civil society leaders, community influencers, and at-risk and underrepresented populations. ECA is committed to supporting rapid response programming through flexible and short-term exchanges to address new and emerging global policy objectives.

Academic Programs include the Fulbright Program and related exchanges, which provide U.S. and foreign students and scholars the opportunity to study, pursue degrees, teach, and conduct research at foreign and U.S. universities. The request sustains the Fulbright Program at the FY 2016 level and fully supports the desire of the House and Senate to fund Fulbright Programs at \$236 million.

Educational advising is critical to promoting U.S. higher education and supporting outreach to foreign students as they apply to U.S. universities. English language programs help train and develop foreign teachers and learners of English, and send Americans overseas to teach English and train instructors.

Additional academic programs provide opportunities for a wide spectrum of participants to study and conduct research abroad, such as the American Overseas Research Centers and the Benjamin A. Gilman International Scholarship Program, which provides study abroad opportunities for economically disadvantaged American undergraduate students who might not otherwise participate. In addition, \$10.8 million will be made available to the East-West Center. This proposal does not affect the way the East-West Center will receive its appropriation in FY 2017 or existing authorities. The purpose is to co-locate appropriated international exchange programs under a single appropriation heading.

Professional and Cultural Exchanges are anchored by the International Visitor Leadership Program and Citizen Exchanges, which allow current and future leaders to travel to the United States and partner with an extensive network of organizations and experts in professional, arts, sports, and cultural fields.

Professional and Cultural Exchange programs also include the J. Christopher Stevens Virtual Exchange Initiative in honor of the late Ambassador. Professional and Cultural Exchanges are the foundation of civil society and democracy promotion programs, giving leaders across sectors the skills to expand democratic values, human rights, economic opportunity, and security in their home communities.

Youth Leadership Initiatives invest in creating relationships with the next generation of global leaders. The Mandela Washington Fellowship for Young African Leaders under the Young African Leaders

Initiative (YALI), the Young Southeast Asian Leaders Initiative (YSEALI) and the Young Leaders of the Americas Initiative (YLAI) empower and bolster emerging African, Asian and Latin American and Caribbean leaders through academic coursework, leadership training, professional development, mentoring, networking, and follow-on support. These initiatives cement ties between individuals from the participating countries and the United States, continue a strategic emphasis on Africa, Latin America and the Caribbean, and support the Department's rebalance toward Asia. Together, the FY 2015 funding for these programs supported more than 1,500 current and future young leaders from these regions and the United States. The FY 2017 request would further increase this total to 1,750.

Program and Performance includes performance monitoring, program evaluation, alumni activities, and the Collaboratory Initiative's virtual exchange activities. Robust evaluation ensures the integrity and continuous improvement of ECA programs. Alumni engagement is vital to understanding and tracking the impact of public diplomacy programs, such as international exchanges. Continued funding will enable ECA to study and research alumni engagement and work with other bureaus in the Department and at USAID to enhance alumni engagement activities.

Exchanges Support includes staffing and other administrative costs. ECA personnel ensure that ECA programs meet U.S. government goals, track and report outcomes, protect the health, safety, and welfare of United States and international program participants, and provide continuous and intensive oversight and monitoring of all programs to ensure that resources are expended with maximum efficiency and effectiveness.

Representation Expenses

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Representation Expenses	8,030	8,030	8,263	233

Representation Expenses are funds provided to Department personnel commissioned overseas, pursuant to section 905 of the Foreign Service Act of 1980, for the purpose of assisting them in furthering the interests of the United States abroad. Representation Expenses are granted to enable the Department and the Foreign Service to provide for the proper representation of the United States, in this way supporting its foreign policy objectives.

Representation Expenses permit Ambassadors, Principal Officers at constituent posts, and other Foreign Service Officers with vital contacts in the host country, to obtain reimbursement of certain costs incurred for official representation overseas. These official contacts help establish and maintain close personal ties with local government officials and influential private citizens who have expertise in the fields of politics, economics, business, journalism, labor, and science. Representational functions are used both to convey U.S. foreign policy goals and objectives overseas as well as to inform U.S. bilateral and multilateral policies. Funding supports formal protocol events, such as the installation or inauguration of national leaders, recognition of deaths or marriages of prominent citizens and presentation of credentials to heads of state, as well as other bilateral events. The Department aims use of representational funds for activities that support U.S. interests by promoting foreign policy priorities such as economic diplomacy and climate policy by facilitating modest events celebrated on the margins of key regional events, such as the Asia Pacific Economic Cooperation (APEC), the Association of Southeast Asian Nations (ASEAN) and the African Growth and Opportunity Act (AGOA) to mention only a few.

The FY 2017 request is \$8.2 million, a \$233,000 increase from the FY 2016 estimate level to offset overseas inflation that erodes posts' purchasing power. Representation activities directly contribute to engagement with foreign counterparts, thus enabling the environment for diplomacy, as well as advancing U.S. led development efforts, aligning with Presidential Policy Directives on Global Development and with the Quadrennial Diplomacy and Development Review (QDDR).

Protection of Foreign Missions and Officials

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Protection of Foreign Missions and Officials	30,036	30,036	30,344	308

This appropriation provides funding for reimbursable expenses to New York City, the surrounding areas, and other state and local governments as a result of extraordinary protection services provided for the protection of foreign missions and officials.

The FY 2017 Request for Protection of Foreign Missions and Officials (PFMO) is \$30.3 million, which is \$308,000 above the FY 2016 level.

In addition to direct appropriations, the Department requests continuation of legislative authority to transfer expired, unobligated balances from the Diplomatic and Consular Programs appropriation to the PFMO account. This transfer authority was originally provided in FY 2014. To the extent that such balances are available in FY 2017 and future years, they will provide additional resources for the Protection of Foreign Missions and Officials to meet extraordinary protection requirements and to pay arrears owed to state and local governments.

Emergencies in the Diplomatic and Consular Service

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Emergencies in the Diplomatic and Consular Service	7,900	7,900	7,900	-

The Emergencies in the Diplomatic and Consular Service (EDCS) is used to meet unforeseen emergency requirements in the conduct of foreign affairs, including evacuations of personnel and their families overseas and, in certain circumstances, private U.S. citizens and third country nationals, as well as other authorized activities that further the realization of U.S. foreign policy objectives. Funding is heavily influenced by unpredictable evacuations that may occur as a result of natural disasters, epidemics, terrorist acts, and civil unrest. Recent demands include Sierra Leone's Ebola-related emergency evacuation and the evacuation of the embassy in Ukraine due to the ongoing conflict. In FY 2014, evacuations occurred in Juba, South Sudan; Kyiv, Ukraine; Tripoli, Libya; Monrovia, Liberia; Freetown, Sierra Leone; Maseru, Lesotho; Sanaa, Yemen; and Los Cabos, Mexico. In FY 2015, evacuations occurred in Sanaa, Yemen; Bujumbura, Burundi; N'Djamena, Chad; Ouagadougou, Burkina Faso; and Kathmandu, Nepal.

EDCS also funds certain activities relating to the conduct of foreign affairs by senior Administration officials. These activities generally take place in connection with the U.S. hosting of U.S. Government-sponsored international conferences and participation in other diplomatic forums, such as the UN and OAS General Assemblies, the G-20 Summit, the Nuclear Security Summit, the U.S.-China Strategic and Economic Dialogue, the Asian-Pacific Economic (APEC) Summit, and the NATO Summit. In CY 2014, for instance, the U.S. hosted the U.S. - Africa Leaders' Summit. In CY 2015, the U.S. began the two-year Chairmanship of the Arctic Council and the White House held the Summit on Countering Violent Extremism. In CY 2016, the Department will host the Nuclear Security Summit, the Global Entrepreneurship Summit, and Our Oceans Conference.

Other EDCS activities include travel of Presidential delegations; official visits and official gifts for foreign dignitaries; Presidential, Vice Presidential, and Congressional travel overseas; representation requirements of senior Department officials; rewards for information on international terrorism, narcotics trafficking, transnational organized crime, and war crimes; as well as the expansion of publicity efforts. The FY 2017 Request includes no additional funding for the Rewards Program. The Department anticipates transferring prior year expired balances from Diplomatic and Consular Programs to the EDCS account to fund rewards, as authorized in the Department of State, Foreign Operations, and Related Appropriations Act, 2008 (Div.J,P.L. 110-161).

Buying Power Maintenance Account

(\$ in thousands)	FY 2015 Actual ^{1/}	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Buying Power Maintenance Account	-	-	-	-

1/ In FY 2015 the Department transferred \$88,352,000 to the Diplomatic and Consular Programs Account from the Buying Power Maintenance Account.

The Buying Power Maintenance Account (BPMA) is intended to offset adverse fluctuations in foreign currency exchange rates and/or overseas inflationary requirements. The FY 2017 request does not include an increase in BPMA total appropriated resources. The anticipated impact of overseas inflation and local employee wage increases has been incorporated into the affected appropriation accounts, primarily D&CP. The Department will continue to use BPMA balances and related transfer authority to manage exchange rate fluctuations, as well as overseas inflation adjustments and locally employed staff wage increases that exceed budgetary estimates.

Repatriation Loans Program Account

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Repatriation Loans Program Account	1,300	1,300	1,300	-

The FY 2017 Repatriation Loans Program Account request is \$1.3 million, which is a straight-line from the FY 2016 estimate. At the FY 2017 subsidy rate of 53.42 percent, the appropriated amount would result in a total loan level of over \$2.4 million. These funds will allow the Department of State to subsidize the Repatriation Loans Program consistent with the Credit Reform Act of 1990.

Administrative costs for Repatriation Loans are requested in the Consular and Border Security Programs section.

Payment to the American Institute in Taiwan

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Payment to the American Institute in Taiwan	30,000	30,000	31,963	1,963

Created in 1979 as a nonprofit corporation pursuant to the Taiwan Relations Act (TRA), the American Institute in Taiwan (AIT) provides a critical role in managing the extraordinarily broad and complex unofficial relationship between the United States and the authorities on Taiwan. The relationship is crucial to the United States' strategic rebalance to Asia and for the maintenance of close security, economic, and people-to-people ties with the people on Taiwan. These relations significantly benefit the American economy and people, and are an essential element of U.S. efforts in Asia. Taiwan is the United States' tenth-largest trading partner, with two-way trade in goods and services estimated to be \$87 billion annually.

The Department's FY 2017 request of \$32.0 million for the American Institute in Taiwan (AIT) includes adjustments to maintain current services, and continues support for several key initiatives as a result of reduced visa revenue due to Taiwan's entry into the Visa Waiver Program. In addition to these amounts, consular-related expenses for AIT are funded with fee revenue from the Consular and Border Security Programs.

Contributions to International Organizations

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Contributions to International Organizations	1,496,559	1,446,186	1,387,131	-59,055
Enduring	1,422,159	1,344,458	1,290,891	-53,567
Overseas Contingency Operations	74,400	101,728	96,240	-5,488

The FY 2017 request of \$1.4 billion for Contributions to International Organizations (CIO) provides funding to pay the U.S. share of the assessed budgets of 44 international organizations.

U.S. participation in nearly all of these organizations is the result of U.S. ratification of a treaty or convention that commits the United States along with all other member countries to pay an assessed contribution.

The Administration's commitment to strengthening and working through international organizations is laid out in the National Security Strategy as a vital component of diplomacy and foreign policy. By combining resources and expertise provided by nations from every part of the world, international organizations undertake coordinated efforts that are an effective alternative to acting unilaterally or bilaterally, especially in the areas of providing humanitarian assistance, eradicating disease, setting food and transportation safety standards, and reaching agreement to impose sanctions on rogue states and actors. International organizations facilitate collective action by the world community to combat violent extremism; limit the spread of nuclear and chemical weapons; achieve balanced and sustainable economic growth; and forge solutions to the threats of armed conflict, hunger, poverty, and climate change.

The Administration is committed to robust multilateral engagement and to promoting U.S. leadership in international organizations as a means of advancing U.S. national interests and values. For this reason, the Department continues to seek legislative authority to waive statutory restrictions that prohibit paying U.S. contributions to United Nations (UN) specialized agencies that grant the Palestinians the same standing as member states or full membership as a state. The FY 2017 request does not include funding for organizations currently subject to such restrictions, but does include transfer authority should the waiver be enacted. The ability to make such contributions is essential to advancing U.S. interests worldwide and strengthening U.S. global leadership, influence, and credibility. The Administration remains committed to heading off any new efforts by the Palestinians to seek such membership in organizations across the UN system.

International organizations offer significant benefits to U.S. taxpayers. Nearly every Federal agency relies on international organizations to help advance foreign and domestic objectives. Countless U.S. businesses and citizens depend on international organizations to reduce barriers to trade, improve border and port security, obtain international patent and trademark protection, set standards for aviation and maritime security, maintain the world's telecommunications networks, harmonize international law in the areas of child custody, support, and international adoption, and disseminate information about the supply and demand of vital commodities such as cotton and coffee. Appendix 1 of the Congressional Budget Justification demonstrates the return on investment that the U.S. taxpayers receive through hundreds of accomplishments that international organizations have achieved in these areas.

1/ The Administration seeks Congressional support for legislation that would provide authority to waive legislative restrictions that, if triggered, would prohibit paying U.S. contributions to United Nations specialized agencies that grant the Palestinians the same standing as member states or full membership as a state.

2/ Funding is necessary for the U.S. share of costs for the UN special political missions in Afghanistan (UNAMA) and Libya (UNSMIL) for the period July 1 through December 31, 2015. The Department will pay the requirement in FY 2016. The UN General Assembly included the requirement in the FY 2017 UN Regular Budget rather than the FY 2016 UN Regular Budget.

Contributions for International Peacekeeping Activities

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Contributions for International Peacekeeping Activities	2,118,791	2,460,662	2,394,930	-65,732
Enduring	2,118,791	666,574	806,930	140,356
Overseas Contingency Operations	-	1,794,088	1,588,000	-206,088

The Contributions for International Peacekeeping Activities (CIPA) account funds expenses of international peacekeeping activities directed to the maintenance or restoration of international peace and security. United Nations (UN) peacekeeping, which is the principal use for which CIPA funds are utilized, promotes the peaceful resolution of conflict.

The FY 2017 Request of \$2.39 billion will provide funds for the U.S. share of assessed expenses for UN peacekeeping operations including the cost to fully meet US commitments for each mission. Of the total request, \$1.6 billion is funded from Overseas Contingency Operations (OCO) resources. Major highlights include:

- UNDOF (Golan Heights) is expected to continue to operate at a reduced force level from 1,250 to 800 due to force protection measures, and continue to monitor the ceasefire between Israel and the Syrian Arab Republic in the 1974 Disengagement of Forces Agreement, albeit in a volatile environment. The mission continues to assess, plan, train, and equip itself to return to its positions in the area of separation once security conditions permit;
- UNIFIL (Lebanon) is anticipated to continue operating at current levels through FY 2017, although the prospect remains that a change in the situation in Syria could have a rapid and dramatic impact on the UNIFIL area of operations;
- UNOCI (Cote d'Ivoire) will continue a phased reduction in military personnel following its first successful presidential election since the 2011 crisis, with an eye towards transition;
- MINUSTAH (Haiti) will maintain current troops levels in advance of a UN review, which will follow presidential elections and the installation of a new government in 2016, to consider further reducing authorized force levels, while strengthening and training mid- and senior-level Haitian National Police to develop the capacities required to assume responsibility for a growing security force to maintain security;
- UNAMID (Darfur, Sudan) will continue to operate at a reduced level while focusing on its revised strategic priorities, which include: 1) support to political/peace processes; 2) protection of civilians and support to the delivery of humanitarian assistance; and 3) local mediation. Conditions permitting, the mission will also be continuing strategic dialogue on an exit strategy with key stakeholders;
- UNSOS (UN Support Office in Somalia, successor to UNSOA) will continue to provide logistical support to the African Union Mission in Somalia (AMISOM) and the United Nations Assistance Mission in Somalia (UNSOM), as well as to certain Somali National Forces engaged in joint operations with AMISOM as it continues its strategic offensive against al-Shabaab and stabilization of cleared areas in support of a constitutional referendum and elections expected in 2016. The UN

Security Council in its resolution 2245 (2015) renamed the United Nations Support Office for AMISOM (UNSOA) as UNSOS. AMISOM will remain at, or close to, its authorized strength of 22,126 uniformed personnel and UNSOS costs will continue to include the reimbursement of contingent-owned equipment as well as enablers;

- MONUSCO (Democratic Republic of the Congo (DRC)) will continue to focus on its core tasks, including protection of civilians, and, should the Secretary-General make an appropriate notification to the UN Security Council, reorienting itself to respond to elections-related violence, as well as providing logistical support to regional and national elections in FY 2016. MONUSCO's Intervention Brigade will continue to work to neutralize the threat from armed groups operating in the eastern DRC, while diplomatic efforts will continue to address the root causes of conflict in the region;
- UNISFA (Abyei, Sudan/South Sudan) where we expect the troop ceiling to remain at 5,326, will continue to maintain security in the Abyei area and to provide force protection to the Joint Border Verification Monitoring Mission (JBVMM) along the 1,200 mile-long Safe Demilitarized Border Zone between Sudan and South Sudan. Lack of progress by Sudan and South Sudan in 2015 in implementation of agreements on establishment of administrative and police bodies in Abyei may result in a reconfiguration of UNISFA;
- UNMISS (South Sudan) completed a major reconfiguration in 2015, including a surge in troops and police personnel and a revised and expanded mandate. The mission, which faces a challenging security situation, will continue to focus on the core tasks of protection of civilians, creating conditions conducive to the delivery of humanitarian assistance, protection of human rights, and supporting the parties in implementation of the "Agreement on the Resolution of the Conflict in the Republic of South Sudan";
- MINUSMA (Mali) which reached near full authorized strength in 2015, will continue to play a key role in supporting the parties' implementation of the Agreement on Peace and Reconciliation in Mali - particularly the security aspects, ceasefire monitoring, the political reconciliation process, and stabilization efforts - backed up by French regional counter-terrorist forces and Malian security forces;
- MINUSCA (CAR) which will remain at full strength, will continue to carry out its mandate, including to protect civilians and support the presidential electoral process and assist the newly elected government to extend state authority and establish the rule of law and the administration of justice;
- UNMIL (Liberia) where the UN Security Council will decide on the mission's transition or possible closure based upon a review of the political and security situation in the country. Funding for UNMIL, if needed, could be drawn from the Mechanism for Peace Operations, or other available resources.
- Mission Monitoring and Effectiveness Support Funds would continue to support costs associated with U.S. oversight of and travel to UN peacekeeping missions at least once a year to review the budgets and effectiveness of the missions.

The FY 2017 request is based on the United States' 28.5 percent assessment rate, as specified in the Annex accompanying United Nations General Assembly document A/70/331/Add.1. The Department requests that funds be appropriated in the CIPA account with two-year availability to provide flexibility to respond to the requirements in this account from year to year and the nature of multi-year operations that have mandates overlapping U.S. fiscal years.

1/The UN Security Council in its resolution 2245 (2015) renamed the United Nations Support Office for AMISOM (UNSOA) as the UN Support Office in Somalia (UNSOS). For FY 2015 and FY 2016, Congress provided authority to pay assessed expenses for Somalia in the Peacekeeping Operations account.

2/ FY 2016 OCO Missions include: UNDOF, UNIFIL, ICTY, ICTR, UNMIL, UNOCI, UNAMID, MONUSCO, MICT, UNISFA, UNMISS, and MINUSMA. FY 2017 OCO Missions include: UNDOF, UNIFIL, ICTY, UNOCI, UNAMID, UNSOS, MONUSCO, MICT, UNISFA, UNMISS, and MINUSMA.

International Boundary and Water Commission

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
International Boundary and Water Commission	73,707	73,707	76,534	2,827
IBWC - Salaries and Expenses	44,707	45,307	48,134	2,827
IBWC - Construction	29,000	28,400	28,400	-

The International Boundary and Water Commission (IBWC) is a treaty-based binational commission comprised of U.S. and Mexican Sections. The Sections exercise respective national rights and obligations under U.S.-Mexico boundary and water treaties and related agreements to develop binational solutions to boundary and water problems arising along the 1,952-mile border.

The FY 2017 request for IBWC Salaries & Expenses (S&E) is \$48.1 million, \$2.8 million above the FY 2016 Estimate level, for the staffing, operations and maintenance of headquarters in El Paso, Texas, as well as eight field offices and three satellite offices along the border. The (S&E) appropriation provides for the preservation of the international border and addresses binational sanitation issues through wastewater treatment. It also supports administrative and engineering activities. The request increase supports domestic and overseas inflation, the Federal pay raise, heavy equipment for flood control operations, security monitoring and deterrent contracting services, and Global OpenNet services. These activities afford protection of lives and property from floods in bordering communities.

The FY 2017 request for IBWC Construction provides \$28.4 million for major renovations and construction that enable the storage, distribution, and delivery of international waters in the Rio Grande, Tijuana, and Colorado Rivers. The FY 2017 request continues multi-year efforts to improve Rio Grande levees and related flood control structures in the United States. The levees contain approximately 506 miles of river and interior floodway channels along three unique Rio Grande flood control systems. The funding will also support rehabilitation of the dams for which the IBWC is responsible.

American Sections

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
American Sections	12,561	12,330	12,258	-72
International Joint Commission	7,663	7,508	7,552	44
International Boundary Commission	2,525	2,422	2,304	-118
Border Environment Cooperation Commission	2,373	2,400	2,402	2

International Joint Commission

The FY 2017 request provides \$7.5 million for the International Joint Commission (IJC). This funding will support the activities of the U.S. Section staff in Washington, DC, and a binational Great Lakes Regional Office in Windsor, Canada.

The IJC was established by the 1909 Boundary Waters Treaty as a cornerstone of U.S.-Canadian relations in the boundary region. Under the treaty, the IJC provides oversight on uses, obstructions, or diversions of boundary waters in one country that affect water levels and flows on the other side, provides advice to the governments and conducts studies on critical issues of mutual concern, assesses progress in restoration of water quality in the Great Lakes, and assists in efforts to prevent trans-boundary air pollution and to improve air quality.

The IJC's model for preventing and resolving disputes is scientifically based, inclusive, and open to public input. Currently, 17 active boards and task forces, plus various related technical working groups and committees, assist the Commission with expert advice on both science and policy issues.

International Boundary Commission

The FY 2017 request provides \$2.3 million for the International Boundary Commission (IBC). This funding will support the primary mission of the IBC to maintain an effective (accurately delineated and marked) boundary between the United States and Canada as prescribed by the 1925 Treaty of Washington. Maintaining such a boundary ensures the sovereignty of each nation over its territory by clearly establishing where one's rights and responsibilities end, and the other's begin, thus virtually eliminating the potential for serious and costly boundary disputes.

The request will fund IBC operations and six boundary maintenance projects along the 5,525-mile boundary. The IBC maintains more than 5,500 land boundary monuments and more than 2,800 reference monuments. The request will also provide for mapping and maintenance of a Geographical Information System.

Border Environment Cooperation Commission

The FY 2017 request provides \$2.4 million for the Border Environment Cooperation Commission (BECC). The funding will continue the BECC's work to improve health and environmental conditions for the U.S.-Mexico border region by strengthening cooperation among interested parties and supporting sustainable projects. A binational institution created in 1993, the BECC assists border communities in developing environmental infrastructure projects that meet certification requirements to be eligible to receive funding from the North American Development Bank or other institutions. These certifications help ensure that projects are technically feasible, affordable, and provide environmental and health benefits.

International Fisheries Commissions

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
International Fisheries Commissions	36,681	36,681	32,502	-4,179

The FY 2017 request for International Fisheries Commissions (IFC) provides \$32.5 million to fund the U.S. share of operating expenses for ten international fisheries commissions, the International Whaling Commission, two international marine science organizations, the Arctic Council, the Antarctic Treaty, international shark and sea turtle conservation initiatives. These levels also include travel expenses of the U.S. Commissioners, and compensation payments to non-government employees for the days worked as U.S. Commissioners to the Pacific Salmon Commission. While lower than the FY 2016 Estimate, the FY 2017 request would fully pay all assessments and contributions for FY 2017. The request does not include the additional funding provided by Congress for the Great Lakes Fishery Commission.

In most cases, U.S. contributions are mandated by treaties and agreements. Each commission facilitates international cooperation by conducting or coordinating scientific studies of fish stocks and other marine resources and their habitats and establishing common management measures to be implemented by member governments. Many also oversee the allocation of fishing rights to their members.

Full payment of assessments is required to maintain voting privileges and influence in the commissions and organizations to advance the economic and conservation interests of the U.S. and important constituent groups.

Through the ongoing efforts of the commissions and programs funded by this appropriation, many fishing areas that were nearly depleted are now yielding sustainable catches for U.S. commercial and sport fishermen, and some key endangered populations are recovering. The commercial and recreational fisheries managed by the commissions generate income of \$12 billion to \$15 billion annually and support thousands of jobs for the U.S.

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimated	FY 2017 Request	Increase/ Decrease
Inter-American Tropical Tuna Commission (IATTC)	1,749	1,750	1,750	-

Western & Central Pacific Fisheries Commission (WCPFC)	1,070	1,093	1,100	7
Total	36,681	36,681	32,502	-4,179

The Asia Foundation

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
The Asia Foundation	17,000	17,000	12,000	-5,000

The Asia Foundation (TAF) is a private, non-profit organization that advances U.S. interests in the Asia-Pacific region. Incorporated and headquartered in California, TAF operates programs through 18 offices in Asia. TAF's programs and grants support democratic initiatives, governance, the rule of law and civil society, economic reform and development, women's empowerment, the environment, and peaceful relations between the United States and Asia. Ongoing TAF efforts reinforce the Rebalance to Asia policy and have meaningful impact on-the-ground. Its longstanding and deep relationships over 62 years with governments, civil society and reform-minded individuals in Asia are unique.

Under the Asia Foundation Act of 1983, appropriated funds are TAF's core funding source, critical to leveraging over four times as much funding from other sources to support democracy and governance programs. The FY 2017 request of \$12.0 million will enable TAF to continue its work with Asian governments, nongovernmental organizations, and the private sector. TAF will seek to leverage additional program funds from other Federal and non-Federal sources.

East-West Center

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request ^{1/}	Increase / Decrease
East-West Center	16,700	16,700	[10,800]	-16,700

1/ The FY 2017 request includes \$10.8 million for the East-West Center under the Educational and Cultural Exchange programs heading.

The Center for Cultural and Technical Interchange between East and West (East-West Center or EWC) was established by Congress in 1960 to promote understanding and good relations between the United States and the nations of the Asia-Pacific region. Located in Hawaii, the East-West Center has engaged more than 62,000 participants, including the highest political levels in some nations, in its programs since its inception. It draws on extensive individual and institutional ties to work effectively on critical regional issues.

The EWC FY 2017 Request is included in the Educational and Cultural Exchange Programs (ECE) request. For FY 2017, \$10.8 million in funding will be made available as a grant to EWC for carrying out the provisions of the East and West Act of 1960. With this funding, the EWC will continue to host approximately 2,600 participants a year; carry out a limited number of programs with partner organizations where solid analysis and interaction among the collaborators can help governments, regional organizations, businesses, and educational or other institutions address issues of pressing and common concern; generate at least \$12 million in external funding through the EWC budget as well as approximately double that in partner expenditures for collaborative Public Diplomacy programs; and support collaborative analytical content in areas of sustainable economic growth, innovation, climate change and the environment, justice and rule of law, transition democracy and civil society, and international relations.

National Endowment for Democracy

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
National Endowment for Democracy	135,000	170,000	103,500	-66,500

The National Endowment for Democracy (NED) is a non-profit organization created in 1983 to strengthen democratic institutions around the world. Through a worldwide grants program, NED assists those working abroad to build democratic institutions and spread democratic values. The NED grants program and related activities reflect a strategic response to changes in the state of democracy in the world and the nature and composition of democracy assistance.

NED's four affiliated core institutes – the American Center for International Labor Solidarity, the Center for International Private Enterprise, the International Republican Institute, and the National Democratic Institute – represent public American institutions working in sectors critical to the development of democracy. NED also supports initiatives of nongovernmental organizations fostering independent media, human rights, and other essential democratic elements.

Directed by a bipartisan board, NED makes approximately 1,200 grants per year in nearly 100 countries. NED's grants advance long-term U.S. interests and address immediate needs in strengthening democracy, human rights, and the rule of law.

The FY 2017 request is \$103.5 million, which will enable NED to continue a strong grants program in priority countries and regions. The \$66.5 million reduction below the FY 2016 enacted level encourages NED to compete for specific U.S. Government programs, raise revenue through private donors, and shift away from directly appropriated government funds.

Center for Middle Eastern-Western Dialogue (Hollings Center)

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Center for Middle Eastern-Western Dialogue (Hollings Center)	106	122	122	-

The International Center for Middle Eastern-Western Dialogue (Hollings Center) was established by Congress in 2004 to foster improved understanding and expand channels of communication between the United States and countries with significant Muslim populations located in the Middle East, North Africa, South Asia, Central Asia, and elsewhere. The Hollings Center is based in Washington, DC and Istanbul, Turkey.

Estimated net interest earned from the Hollings Center's trust fund in FY 2016 totaling \$122,000 will be available in FY 2017 for operations, support for conferences, academic programs, and grants.

The FY 2017 request reflects \$122,000 in estimated net interest to be earned in FY 2017 that would be utilized in FY 2018. In addition to the earned interest, the Trust Fund principal balance may be utilized for Hollings Center operations. Up to \$746,000 of this principal may be applied during FY 2017.

Eisenhower Exchange Fellowship Program

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Eisenhower Exchange Fellowship Program	265	400	350	-50

The Eisenhower Exchange Fellowship Program (EEF) builds international understanding by bringing rising leaders to the United States, and sending their American counterparts abroad, on custom designed professional programs. The fellowships link emerging international and U.S. leaders in government, business, and NGOs by providing scholarships that will strengthen relationships. The EEF trust fund accrues interest earnings to support these exchanges. The FY 2017 request reflects an estimated \$350,000 in projected earnings to be available for obligation to the program.

Israeli Arab Scholarship Program

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Israeli Arab Scholarship Program	24	47	47	-

The Israeli Arab Scholarship Program (IASP) funds scholarship programs for Israeli Arabs to attend institutions of higher education in the United States. The IASP Trust Fund will provide an estimated \$47,000 in interest earnings in FY 2017 to support such activities to be implemented by the Bureau of Education and Cultural Affairs. Due to the low interest earned by this trust fund, the Department intends to allow for the accumulation of interest and earnings over time to effectively implement the scholarship program. In the meantime, opportunities for highly qualified Israeli-Arab graduate students to attend institutions of higher education in the U.S. will be included as part of the Fulbright program.

International Chancery Center

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
International Chancery Center	533	743	1,320	577

The International Chancery Center (ICC), authorized by the International Center Act in 1968, is a diplomatic enclave located on a 47 acre lot in northwest DC, near the intersection of Connecticut Avenue and Van Ness Street. According to the Act, *“The Secretary of State is authorized to sell or lease to foreign governments...property owned by the United States, in order to facilitate the conduct of foreign relations by the Department of State...through the creation of a more propitious atmosphere for the establishment of foreign government and international organization offices and other facilities.”* Under these authorities, the Department has benefited through the transfer of development rights for specific parcels of the ICC to 19 foreign governments through leasing and reciprocal property swaps. Proceeds from these leases have been deposited in a trust that is drawn upon, within limits established by annual appropriations, to perform basic site maintenance and repairs. Previously, this activity was included within the Diplomatic and Consular Programs appropriation, however since the funding is derived from a trust, to provide greater visibility, it is presented as a separate account. The FY 2017 request for these lease proceeds will fund initial maintenance and security, as well as several overdue repairs at the existing ICC site including sidewalks, streets, curbs, driveways, staircases, and handrails.

Foreign Service Retirement and Disability Fund

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Foreign Service Retirement and Disability Fund	158,900	158,900	158,900	-

This appropriation provides mandatory funding for the Foreign Service Retirement and Disability Fund (FSRDF). The FSRDF includes the operations of two separate retirement systems - the Foreign Service Retirement and Disability System (FSRDS) and the Foreign Service Pension System (FSPS). The FSRDF was established to provide pensions to all eligible retired and disabled members of the Foreign Service who are enrolled in either of the two systems, and certain eligible former spouses and survivors.

The annual request maintains the required funding level of the FSRDF, serving as one of the resources to finance any unfunded liability created by new or liberalized benefits, new groups of beneficiaries, and salary increases paid from the Fund, and for normal costs not met by employee and employer contributions. The amount of the mandatory appropriation is determined by the evaluation of the Fund balance derived from current statistical data, which includes Federal pay raise.

The FY 2017 request for the FSRDF is \$158.9 million. This amount includes estimated Foreign Service costs for the Department of \$122.5 million and for USAID of \$36.4 million.

Broadcasting Board of Governors

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Broadcasting Board of Governors	736,708	749,587	777,843	28,256
International Broadcasting Operations	726,655	734,087	768,143	34,056
Broadcasting Capital Improvements	800	4,800	9,700	4,900
Overseas Contingency Operations	9,253	10,700	-	-10,700

The total BBG FY 2017 Budget Request of \$777.8 million provides \$768.1 million for International Broadcasting Operations (IBO) and \$9.7 million for Broadcasting Capital Improvements (BCI). The Broadcasting Board of Governors (BBG) uses IBO funds to operate its media organizations, along with related program delivery and support activities. The \$9.7 million in BCI funding will maintain the worldwide transmission network of the BBG, including the security requirements of facilities, maintenance, repairs, and improvements to existing systems.

The BBG is an independent Federal agency responsible for all U.S. non-military international media programs. BBG media networks include two Federal entities, the Voice of America (VOA) and the Office of Cuba Broadcasting's (OCB) Radio and TV Marti. BBG's networks also include three grantee organizations: Radio Free Europe/Radio Liberty (RFE/RL), Radio Free Asia (RFA), and the Middle East Broadcasting Networks' (MBN) Radio Sawa and Alhurra Television. BBG includes an Internet Freedom Program to counter internet censorship.

The BBG mission is to inform, engage, and connect people around the world in support of freedom and democracy. BBG radio, television, internet, digital and mobile programs reach more than 226 million people each week in 61 languages. By delivering accurate and timely news and information, the BBG is a leading channel for information about the United States, our people, society, government and policies. We create access to news and information and support freedom of expression to foster the development of democratic values in transitioning and closed societies. Nurturing democratic values and countering misinformation that threatens peace, stability and freedom is a national security imperative, consistent with the President's National Security Strategy.

The Request includes investments that continue BBG's evolution away from shortwave radio transmissions towards more aggressive use of digital media and television. The BBG budget focuses on supporting current foreign policy priorities, such as countering propaganda from Russia and the violent extremism of the Islamic State of Iraq and the Levant (ISIL). For areas susceptible to extremist recruitment, BBG will expand our multiplatform *Raise Your Voice* campaigns encouraging audiences to express their opinions. To counter Russian pressure BBG will significantly increase Russian television and digital content.

The BBG will continue to integrate multiple language services in strategic markets, increasing efficiency and boosting impact, by ensuring coordinated, complementary operations and content where two BBG broadcasters co-exist. The Request does not propose any language services for elimination. The Agency will also fund research to measure and increase its impact on the hundreds of millions who consume BBG media each week.

The Request also proposes key organizational changes, including an empowered Chief Executive Officer, tools to surge broadcast capacity in response to natural or societal instability, and the authority for BBG to

establish a new Spanish language non-federal organization that would receive a BBG grant and perform the functions of the current Office of Cuba Broadcasting (OCB).

United States Institute of Peace

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
United States Institute of Peace	35,300	35,300	37,884	2,584

The United States Institute of Peace (USIP) is a congressionally mandated, independent, nonpartisan institution charged with increasing the nation’s capacity to prevent, mitigate and help resolve international conflict without violence. USIP exemplifies America’s commitment to peace and acts daily to uphold that commitment. USIP is governed by a 15-person board made up of the Secretary of State and the Secretary of Defense, the President of the National Defense University, and 12 others appointed by the President of the United States on a bipartisan basis and confirmed by the U.S. Senate.

The FY 2017 request for USIP provides \$37.9 million to engage directly in conflict zones and provide education, training, research, analysis, and resources to those working for peace.

USIP works with U.S. government partners and non-governmental organizations to advance U.S. strategic interests. These conflicts undermine legitimate governments that attempt to resolve disputes through laws rather than arms, and violate universal standards of human dignity. All too often, they sustain extremists and their vicious ideologies. Left unaddressed, these conflicts imperil America’s economic and physical security. They threaten values America shares with just societies worldwide. For these reasons, Congress included United States Institute of Peace Act in Title XVII of the Defense Authorization Act of 1985, creating an independent institute to “promote international peace and the resolution of conflicts among the nations and peoples of the world without recourse to violence.”

Footnotes

- 1/ The FY 2015 OCO level includes Foreign Assistance Act sec. 610 transfers from FY 2014 International Narcotics Control and Law Enforcement-OCO account (\$66.011 million), Foreign Military Financing-OCO (\$10.5 million), and Nonproliferation, Antiterrorism, Demining and Related Programs (\$32.176 million).
- 2/ The FY 2015 OCO level includes the transfer of \$14.583 million from the the FY 2015 Foreign Military Financing-OCO account to the Economic Support Fund-OCO.
- 3/ The FY 2015 OCO level includes the transfer of \$4 million from the FY 2015 International Narcotics and Law Enforcement-OCO account to the Economic Support Fund-OCO account.
- 4/ The FY 2015 OCO level includes the transfer of \$4 million from the FY 2015 Nonproliferation, Antiterrorism, Demining and Related Programs-OCO account to the Economic Support Fund account-OCO.
- 5/ The FY 2015 enduring level includes Foreign Assistance Act sec. 610 transfers from FY 2014 Nonproliferation, Antiterrorism, Demining and Related Programs account (\$12.15 million), FY 2010 International Narcotics Control and Law Enforcement account (\$12.468 million), and FY 2011 International Narcotics Control and Law Enforcement account (\$13 million).
- 6/ The FY 2015 level includes the transfer of \$4.16 million from the FY 2015 International Organizations & Programs account to the Global Health Programs - USAID account.
- 7/ FY 2015 enduring level includes the transfer of \$29.907 million from the Economic Support Fund to the Department of Treasury Clean Technology Fund (\$16.607 million) and the Strategic Climate Fund (\$13.3 million) in accordance with sec. 7060(c)(8) of the Consolidated and Further Continuing Appropriation Act, 2015.
- 8/ The FY 2016 enduring level includes the transfer of \$54.975 million from the FY 2016 International Narcotics Control and Law Enforcement account to the Assistance for Europe, Eurasia & Central Asia account.
- 9/ The FY 2016 enduring level includes the transfer of \$7 million from the FY 2016 Economic Support Fund to the Migration and Refugee Assistance account.
- 10/ FY 2016 enduring level includes the transfer of \$9.72 million from the Economic Support Fund to the Department of Treasury Strategic Climate Fund in accordance with sec. 7060(c)(5) of the Consolidated Appropriation Act, 2016.
- 12/ The FY 2016 level does not reflect the \$86 million in emergency funding that was appropriated to the International Monetary Fund.
- 13/ FY 2016 estimate total includes the enacted level of \$88.500 million plus \$0.342 million in carryover.

USAID Operating Expenses

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
USAID Operating Expenses	1,216,300	1,282,876	1,404,800	121,924
Enduring	1,090,836	1,143,614	1,306,340	162,726
Overseas Contingency Operations	125,464	139,262	98,460	-40,802

	FY 2015 Emergency Funding Actual, P.L. 113-235
Ebola Response and Preparedness	19,037

The U.S. Agency for International Development's (USAID's) global engagement is essential to advancing U.S. interests, enhancing national security, and reaffirming its global development leadership. In recognition of the importance of development to U.S. foreign policy and national security, the National Security Strategy calls for investing in development capabilities and institutions. The FY 2017 USAID Operating Expense (OE) request provides that investment in a constrained budget environment. The request includes funding to maintain the strengthened U.S. Direct Hire (USDH) overseas workforce and sustain on-going global operations to meet foreign policy objectives, implement Presidential initiatives, and expand global engagement.

For FY 2017, the \$1,306.3 million enduring USAID OE request will fund the administrative costs of managing USAID programs. This amount will allow the Agency to offset the projected decrease in other funding sources, such as carryover, recoveries, reimbursements, and trust funds that support operations while restoring the new obligation authority needed to maintain current operations into FY 2017. The OE budget covers salaries and benefits, overseas and Washington operations, and central support, including human capital initiatives, security, and information technology (IT).

FY 2017 funds also will cover salaries and operational costs for the enduring programs in the frontline states of Afghanistan, Pakistan, and Iraq. An additional \$98.5 million is requested in Overseas Contingency Operations (OCO) for extraordinary costs for the Frontline States.

Below are highlights of the FY 2017 enduring request, including \$112.1 million in other funding sources USAID expects to have available in FY 2017.

Highlights:

- **Overseas Operations (\$731.1 million):** The request includes funding for all USDH salaries and benefits for Foreign Service Officers serving overseas and the costs associated with securing and maintaining mission operations, such as the salaries of local staff, travel, office and residential space, and International Cooperative Administrative Support Services. The request includes funding for the frontline states of Afghanistan, Pakistan, and Iraq, which also have requests under OCO.
- **Washington Operations (\$415.3 million):** Funding covers USDH salaries and benefits for Civil Service and Foreign Service employees working in Washington, general office support, and advisory and assistance services.

- **Central Support (\$272 million):** The request includes funding for IT, office space, and other mandatory services.

The FY 2017 OCO request of \$98.5 million for USAID OE is addressed in the OCO chapter.

USAID Capital Investment Fund

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
USAID Capital Investment Fund	130,815	168,300	199,985	31,685
Enduring	130,815	168,300	66,145	-102,155
Overseas Contingency Operations	-	-	133,840	133,840

The FY 2017 enduring request for the U.S. Agency for International Development (USAID) Capital Investment Fund (CIF) of \$66.1 million will support capital investments in information technology (IT), facility construction, and real-property maintenance. The USAID Operating Expenses account funds the annual operating and maintenance costs of information systems and facilities infrastructure.

Highlights:

- Facility Construction (\$33.5 million):** The request, combined with the Overseas Contingency Operations (OCO) request of \$133.8 million, will support USAID's full cost of participation in the Capital Security Cost Sharing (CSCS) Program, which is designed to accelerate the construction of new secure, safe, and functional diplomatic and consular office facilities for all U.S. government personnel overseas. The Secure Embassy Construction and Counterterrorism Act of 1999 (P.L. 106-113) requires USAID to co-locate on new embassy compounds. The total CSCS request is \$167.3 million.
- Information Technology (\$25.7 million):** The IT request will align resources to address USAID IT Strategic Planning Goals and multiple Presidential/Office of Management and Budget mandates, including: Cloud First, Cyber Security, Open Government, and the 25 Point Implementation Plan to Reform Federal Information Technology Management. These investments align with required Federal Information Security Management Act (FISMA) actions and will contribute towards overall FISMA compliance. In addition, the FY 2017 request enables the Agency to fund the Development Information System; enhance and strengthen the mission-critical infrastructure; further develop a system to capture performance data; and support core acquisition-and-assistance and accounting systems.
- Real Property Maintenance (\$7 million):** The request will continue a real property maintenance fund that will allow the Agency to sustain a maintenance-and-repair program for the properties it owns. The fund will reduce the expensive future cost of major repairs, limit health and safety risks, increase efficiencies, protect value, and align with best practices.

The FY 2017 OCO request of \$133.8 million for CIF is addressed in the OCO chapter.

USAID Office of Inspector General Operating Expenses

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
USAID Office of Inspector General Operating Expenses	54,285	66,000	67,600	1,600
	FY 2015 Emergency Funding Actual, P.L. 113-235			
Ebola Response and Preparedness				5,626

The Office of Inspector General (OIG) for the U.S. Agency for International Development (USAID) conducts and supervises audits and investigations of foreign assistance programs and operations and recommends policies for promoting economy, efficiency, and effectiveness and for preventing and detecting fraud, waste, and abuse in those activities. OIG executes these functions in relation to the programs and operations of USAID, the Millennium Challenge Corporation (MCC), the United States African Development Foundation (USADF), and the Inter-American Foundation (IAF), along with limited oversight of the Overseas Private Investment Corporation (OPIC).

The FY 2017 request of \$67.6 million will enable OIG to continue to execute core oversight functions in these areas. OIG will use these resources to address statutory requirements while focusing resources on oversight of high-risk activities and high-profile initiatives that contribute to national security and regional stability and have long-range implications.

In addition to sustaining overall levels of oversight activity, this amount will enable OIG to add to its base of specialized skills and technical knowledge to better equip the organization to address a growing investigative caseload and to help improve foreign assistance programs and operations. The request also provides sufficient funds to support the Council of the Inspectors General on Integrity and Efficiency.

OIG expects to continue to provide substantial benefits for the U.S. government and for taxpayers in executing its mandate, building upon work that resulted in \$374 million in questioned costs, funds to be put to better use, and investigative savings and recoveries in FY 2015.

Global Health Programs

(\$ in thousands)	FY 2015 Actual ¹	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Global Health Programs	8,458,110	8,503,450	8,576,500	73,050
Global Health Programs - USAID	2,788,110	2,833,450	2,906,500	73,050
Global Health Programs - State	5,670,000	5,670,000	5,670,000	-

	FY 2015 Emergency Funding Actual, P.L. 113-235
Ebola Response and Preparedness	312,000

1/ The FY 2015 level includes the transfer of \$4.16 million from the FY 2015 International Organizations & Programs account to the Global Health Programs - USAID account.

The Global Health Programs account funds health-related foreign assistance managed by the Department of State and the U.S. Agency for International Development (USAID). Investments in global health target the symptoms and root causes of poverty and provide valuable assistance for U.S. government partner countries to effectively deliver services, leading to the advancement of basic human rights and dignity. Moreover, these investments protect Americans at home and abroad, strengthen fragile states, promote social and economic progress, and support the rise of capable partners who may help to solve regional and global problems. U.S. government efforts in ending preventable child and maternal deaths, creating an AIDS-free generation, and protecting communities from infectious diseases are a signature of American leadership in the world.

The FY 2017 budget reflects increased support for comprehensive and integrated global health approach under the Administration's Global Health Initiative (GHI). Under GHI, the Department of State and USAID will continue the drive for maximum impact by building upon previous investments made through the President's Emergency Plan for AIDS Relief, the President's Malaria Initiative, maternal and child health, family planning and reproductive health, tuberculosis, global health security, neglected tropical diseases, and other programs. The U.S. government's approach will continue to save millions of lives while fostering sustainable health care delivery systems that can address the full range of developing country health needs. The Department of State and USAID's overall emphases are improving health outcomes through a focus on women, girls, and gender equity; increasing impact through strategic coordination and integration; strengthening and leveraging key multilateral organizations and global health partnerships; encouraging country ownership and investing in country-led plans; building sustainability through investments in health systems strengthening; improving metrics, monitoring, and evaluation; and promoting research, development, and innovation. The Department of State and USAID remain steadfast in their commitment to enhancing the integration of quality interventions with the broader health and development programs of the U.S. government, country partners, multilateral organizations, and other donors. Responding to global health challenges is a shared responsibility that cannot be met by one nation alone. The United States will remain unrelenting in its challenge to the global community that it continue to focus on building healthier, stronger, and more self-sufficient nations in the developing world.

For FY 2017, a total of \$8,576.5 million is requested for Global Health Programs (GHP) under two subaccounts: \$2,906.5 million GHP-USAID for USAID-administered programs and \$5,670 million

GHP-State for Department of State-administered programs. The programs will focus on three key areas: Ending Preventable Child and Maternal Deaths; Creating an AIDS-free Generation; and Protecting Communities from Infectious Diseases. For all programs, resources will be used to support interventions intended to achieve ambitious global health outcomes. They will be focused toward countries with the highest need, demonstrable commitment to achieving sustainable health impacts, and the greatest potential to leverage U.S. government programs and platforms.

Ending Preventable Child and Maternal Deaths

The U.S. government continues to lead the charge in renewing the global effort to end preventable child and maternal deaths while building sustainable partnerships. Together with country partners, international organizations, and non-governmental organizations from around the globe, the United States is working towards targets that will truly represent an end to preventable child deaths – with all countries having fewer than 20 deaths per 1,000 live births and fewer than 50 maternal deaths per 100,000 live births by 2035. Achieving these goals will save an additional 5 million children’s lives each year and decrease by 75 percent the number of women who die from complications during pregnancy on an annual basis.

Ending preventable child and maternal deaths is not an outcome of U.S. government assistance alone nor is it solely the outcome of narrowly defined programs in maternal and child health (MCH). Rather, improvements in mortality outcomes are the result of increasingly effective efforts to link diverse health programs – in MCH, in malaria, in family planning’s contribution to the healthy timing and spacing of pregnancy, in nutrition, in HIV/AIDS, and in sanitation and hygiene improvement. All of these efforts contribute to ending preventable child and maternal deaths.

The FY 2017 request provides over \$2.2 billion in pursuit of the goals, as stated above.

Highlights:

Maternal and Child Health (MCH) (\$814.5 million): Funding will support programs that work with country and global partners to increase the wide-spread availability and use of proven life-saving interventions, and to strengthen the delivery systems to help ensure the long-term sustainability of these programs. USAID will extend coverage of proven, high-impact interventions to the most vulnerable populations in high-burden countries.

Funding will support a selection of cost-effective, high-impact interventions, continuing to accelerate the reduction of maternal and newborn mortality, including the introduction and scale-up of new vaccines, targeted to those children most in need. The FY 2017 request includes \$275 million within the overall MCH request for Gavi, the Vaccine Alliance, to support the Administration's four-year \$1 billion pledge to this vital partner. Resources for Gavi will support the introduction of new vaccines, especially pneumococcal and rotavirus vaccines, which have the greatest potential impact on child survival. Other priority child health interventions include essential newborn care; prevention and treatment of diarrheal disease, including increased availability and use of household and community-level water, sanitation, and hygiene; and expanded prevention and treatment of pneumonia, particularly at the community level. Resources will be provided to combat maternal mortality with expanded coverage of preventive and life-saving interventions, such as prevention and management of post-partum hemorrhage, hypertensive disorders of pregnancy, sepsis, as well as contributory causes of maternal death such as anemia. Simultaneously, resources will support efforts to build the health systems capability required to provide functioning referral systems and comprehensive obstetric care. The MCH program will also work to leverage investments in other health programs, particularly family planning and reproductive health,

nutrition, and infectious diseases. The request provides increased funding for polio programs in Pakistan which were previously requested and funded under the Economic Support Fund account.

Malaria (\$745 million): Consistent with the President's call to end the scourge of malaria, FY 2017 resources will increase support for the comprehensive strategy of the President's Malaria Initiative (PMI), which brings to scale a combination of proven malaria prevention and treatment approaches and integrates, where possible, these interventions with other priority health interventions.

The fight against malaria is making historic gains across sub-Saharan Africa. In countries where insecticide-treated mosquito nets (ITNs), indoor residual spraying (IRS), improved diagnostic tests, and highly effective antimalarial drugs have been scaled up, mortality rates in children under five years of age have fallen markedly. According to the World Health Organization's (WHO's) 2014 World Malaria Report, in Africa, between 2000 and 2013, the estimated number of malaria cases in all age groups decreased from 174 million to 163 million.

The U.S. government's financial and technical contributions, through PMI, have been key in this remarkable progress. In the nearly 10 years since it was launched, PMI has garnered recognition as a highly effective program that successfully combines solid support at the country level with global leadership on malaria prevention and control with other funding and technical partners. In 17 of the 19 PMI countries (Angola, Benin, the Democratic Republic of the Congo, Ethiopia, Ghana, Kenya, Liberia, Madagascar, Malawi, Mali, Mozambique, Nigeria, Rwanda, Senegal, Tanzania, Uganda, and Zambia) where at least two data points are available from national household surveys, significant declines in all-cause mortality rates among children under five have been observed – ranging from 18 percent (in both Liberia and Nigeria) to 55 percent (in Zambia).

While a variety of factors are influencing these mortality declines, malaria prevention and control efforts are playing a major role in these reductions. Ninety percent of all malaria deaths occur in sub-Saharan Africa, and the vast majority of these deaths are among children under five. The request provides increased resources for malaria programs to expand PMI. USAID, through PMI, will continue to scale up malaria prevention and control activities and invest in strengthening delivery platforms in up to 27 African countries as well as support the scale-up of efforts to contain the spread of multidrug-resistant malaria in the Greater Mekong region of Southeast Asia and the Amazon Basin of South America. PMI will support host countries' national malaria control programs and strengthen local capacity to expand the use of four highly effective malaria prevention and treatment measures, including indoor residual spraying, long-lasting insecticide-treated mosquito nets, artemisinin-based combination therapies to treat acute illnesses, and interventions to prevent malaria in pregnancy, and pilot new proven malaria control strategies as they become available. Funding will support work with countries to meet pre-elimination and elimination criteria in five sub-national areas. Funding will also continue to support the development of new malaria vaccine candidates, antimalarial drugs, new insecticides, and other malaria-related research with multilateral donors.

Family Planning and Reproductive Health (\$544 million): Funding will support programs that improve and expand access to high-quality voluntary family planning services and information as well as other reproductive health care and priority health services. An estimated 222 million women in the developing world have an unmet need for family planning, resulting in 53 million unintended pregnancies annually. Family planning (FP) is an essential intervention for the health of mothers and children, contributing to reduced maternal mortality (through preventing unintended pregnancy), healthier children (through breastfeeding), and reduced infant mortality (through better birth spacing). Activities will be directed toward enhancing the ability of couples to decide the number, timing, and spacing of births and toward reducing abortion and maternal, infant, and child mortality and morbidity. Activities will also support the key elements of successful FP programs, including mobilizing demand for modern family

planning services through behavior change communication; commodity supply and logistics; service delivery; policy analysis and planning; biomedical, social science, and program research; knowledge management; and monitoring and evaluation. Priority areas include leveraging opportunities to expand services through MCH and HIV platforms; contraceptive security; community-based approaches; expanding access to voluntary long-acting and permanent contraceptive methods; promoting healthy birth spacing; and focusing on cross-cutting issues of gender, youth, and equity. The request provides increased funding for voluntary family planning programs in Pakistan which were previously requested and funded under the Economic Support Fund account.

Nutrition (\$108.5 million): Good nutrition is central to successful development and is the defining link between the Global Health and Feed the Future Initiatives. Undernutrition contributes to almost half of all the deaths of children under five by undermining their health and development. A stunted child is 4.6 times more likely to die from infectious diseases compared to a non-stunted child. Undernutrition leads to irreversible losses to children's cognitive development, resulting in lower educational attainment and lower wages. USAID expands evidence-based approaches to nutrition and supports innovative new approaches that will improve outcomes for the most vulnerable populations. Activities focus on the prevention of undernutrition through integrated services. These include nutrition education to improve maternal diets, nutrition during pregnancy, exclusive breastfeeding, and infant and young child feeding practices; diet quality and diversification through fortified or biofortified staple foods, specialized food products, and community gardens; and delivery of nutrition services such as micronutrient supplementation and community management of acute malnutrition.

Vulnerable Children (\$14.5 million): Funding for the Displaced Children and Orphans Fund (DCOF) supports projects that strengthen the economic capacity of vulnerable families to protect and provide for the needs of their children, strengthen national child protection systems, and facilitate family reunification and social reintegration of children separated during armed conflict, including child soldiers, street children and institutionalized children. Support for implementation of the Action Plan on Children in Adversity is also included under Vulnerable Children. Children in adversity include those affected by HIV/AIDS, in disasters, or who are orphans, trafficked, exploited for child labor, recruited as soldiers, neglected, or in other vulnerable conditions. This effort integrates models of assistance and measures results to help ensure that children ages 0-18 not only survive, but also thrive.

Creating an AIDS-free Generation

The goal of achieving an AIDS-free generation is a shared responsibility; neither the United States nor any other single entity can accomplish this goal alone. The United States has made an unwavering commitment, in support of the global 90-90-90 goals set forth by the United Nations Program on HIV/AIDS (UNAIDS), to work with partner governments and other stakeholders to turn the tide on HIV/AIDS, by targeting efforts programmatically and geographically.

The U.S. President's Emergency Plan for AIDS Relief (PEPFAR), the largest effort by any nation to combat a single disease, continues to work towards achieving ambitious HIV prevention, care, and treatment goals while strengthening health systems and continuing to work in close collaboration and partnerships with host-country governments, civil society, multilateral institutions, the private sector and other stakeholders. With a focus on transparency and accountability for impact, as well as accelerating core interventions for epidemic control, PEPFAR continues to actively work with partners to control the HIV/AIDS pandemic to help achieve an AIDS-free generation. PEPFAR is committed to supporting activities that are grounded in science and that are optimally focused programmatically and geographically to control the epidemic, critical to saving lives and preventing new HIV infections.

The FY 2017 request will support targeted global HIV/AIDS efforts by continuing the PEPFAR Impact Fund, directed to countries that take concrete steps to realign their national HIV/AIDS programs using geographic and site-level data, to increase their own share of HIV budgets, and to take greater ownership of data collection and expenditure analysis.

The GHP account is the largest source of funding for PEPFAR and this account is overseen and coordinated by the Department of State's Office of the U.S. Global AIDS Coordinator and Health Diplomacy. The request includes \$6,000 million (\$5,670 million GHP-State and \$330 million GHP-USAID) for country-based HIV/AIDS activities; technical support, strategic information, and evaluation support for international partners; and oversight and management. PEPFAR implementation is a broad interagency effort that involves the Department of State, USAID, the Peace Corps, and the Departments of Health and Human Services, Defense, Commerce, and Labor, as well as local and international non-governmental organizations, faith- and community-based organizations, private sector entities, and partner governments.

Highlights:

Integrated HIV/AIDS Prevention, Care, and Treatment and Other Health Systems Programs (\$4,193.5 million, including \$3,957.5 million in GHP-State and \$236 million in GHP-USAID):

These resources will support PEPFAR core activities that will advance progress toward sustainable control of the HIV epidemic in a programmatically- and geographically-focused approach in countries with greatest need and, ultimately, achieve an AIDS-free generation. Funding supports a combination of high-impact HIV interventions, focusing on: combination prevention, including prevention of mother-to-child transmission (PMTCT), antiretroviral treatment (ART), provision of condoms, and voluntary medical male circumcision; orphans and vulnerable children, including holistic services for families; neglected and hard-to-reach populations, such as pediatrics, adolescent girls and key populations; and health systems, which includes human resources for health; commodity procurement; supply chains; and laboratory systems.

The GHP-USAID request contributes to PEPFAR's global fight against the HIV/AIDS epidemic by targeting resources to meet critical needs of USAID field programs and by providing technical leadership worldwide. Funding supports centrally driven initiatives that catalyze new interventions at the field level, translate research findings into programs, and stimulate scale-up of proven interventions. GHP-USAID field resources leverage larger contributions from multilateral, international, private, and partner country sources by providing essential technical assistance for health systems strengthening, sustainability, capacity building, and country ownership. In addition to country programs, USAID also will continue to support the development of advanced product leads.

International Partnerships (\$1,489 million, including \$1,395 million in GHP-State and \$94 million in GHP-USAID): PEPFAR will continue to expand multilateral engagement with the goal of leveraging the work of multilateral partners to maximize the impact of country programs. Funds requested in GHP-State will support a \$45 million contribution to UNAIDS and a \$1,350 million contribution to the Global Fund to Fight AIDS, Tuberculosis, and Malaria. The GHP-USAID request will support the Commodity Fund, which is used to procure condoms, HIV vaccine development, and major research with worldwide impact, including microbicides research activities.

Oversight and Management (\$197.5 million in GHP-State): FY 2017 resources will support costs incurred by multiple U.S. government agency headquarters including: supporting administrative and institutional costs; management of staff at headquarters and in the field; management and processing of cooperative agreements and contracts; and the administrative costs of the Office of the U.S. Global AIDS Coordinator.

Technical Support, Strategic Information, and Evaluation (\$120 million in GHP-State): Funding will be used for central technical support and programmatic costs and strategic information systems that monitor program performance, track progress, and evaluate the effectiveness of interventions. This will increase transparency, oversight and accountability across PEPFAR and its interagency partners. PEPFAR aims to support the expansion of the evidence base around HIV interventions and broader health systems strengthening in order to support sustainable, country-led programs. While not a research organization, PEPFAR works with implementers, researchers, and academic organizations to help inform public health and clinical practice. Technical leadership and direct technical assistance activities (including scientific quality assurance) are supported for a variety of program activities, including treatment, prevention, and care, as well as cross-cutting efforts such as human capacity development, training for health care workers, and supply chain management.

Protecting Communities from Infectious Diseases

In addition to work on ending preventable child and maternal deaths and creating an AIDS-free generation, U.S. government efforts will also continue to combat other infectious diseases that threaten the lives of millions of people each year, including tuberculosis, neglected tropical diseases, pandemic influenza, Ebola, and other emerging threats. The FY 2017 request includes \$350 million GHP-USAID for programs to fight against – and protect people across the globe from – other infectious diseases.

Highlights:

Tuberculosis (TB) (\$191 million): Funding will support programs that address a disease that is the leading cause of death and debilitating illness for adults throughout much of the developing world. Globally, 1.5 million people die annually from TB, and there are 9 million new cases of TB each year. There are also approximately 480,000 cases of multi-drug resistant (MDR) TB each year, which are difficult to cure and are often deadly. USAID program efforts focus on early diagnosis and successful treatment of the disease to both cure individuals and prevent transmission to others. Funding priority is given to those countries that have the greatest burden of TB and MDR-TB, consistent with the goals and objectives of the Administration's National Action Plan for Combating Multidrug-Resistant Tuberculosis. Country-level expansion and strengthening of the global Stop TB Strategy will continue to be a focal point of USAID's TB program, including increasing and strengthening human resources to support the delivery of priority health services such as Directly Observed Treatment, Short Course (DOTS) implementation, preventing and treating TB/HIV co-infection, and partnering with the private sector in DOTS. In particular, USAID will continue to accelerate activities to address MDR-TB and extensively drug resistant TB, including the expansion of diagnosis and treatment, and infection control measures. USAID collaborates with PEPFAR, other U.S. government agencies, and the Global Fund to integrate health services and strengthen delivery platforms to expand coverage of TB/HIV co-infection interventions.

Neglected Tropical Diseases (NTDs) (\$86.5 million): More than one billion people worldwide suffer from one or more neglected tropical diseases that cause severe disability, including permanent blindness, and hinder growth, productivity, and cognitive development. USAID focuses the majority of its NTD support on scaling-up preventive drug treatments for seven of the most prevalent NTDs - schistosomiasis, onchocerciasis, lymphatic filariasis, trachoma, and three soil-transmitted helminths. USAID programs use an agency-tested and WHO-approved integrated mass drug administration delivery strategy that will target affected communities using drugs that have been proven safe and effective and can be delivered by trained non-health personnel. Through USAID partnerships with pharmaceutical companies, the vast majority of drugs are donated, valued at close to \$1 billion each year. Expanding these programs to national scale will support the acceleration of global efforts to eliminate lymphatic filariasis and blinding trachoma globally. USAID will continue to work closely with the WHO and global partners to create an

international NTD training course and standardized monitoring and evaluation guidelines for NTD programs, and ensure the availability of quality pharmaceuticals.

Global Health Security (\$72.5 million): In our globalized world, no country is more than a flight away from a dangerous pathogen, underscoring the critical nature of the Global Health Security Agenda. The Ebola epidemic in West Africa demonstrates the potential perils of any country with weak disease prevention, detection, and response capacities, particularly in geographic areas where new public health threats are likely to emerge. To accelerate progress toward a world safe and secure from infectious disease threats, in partnership with other nations, international organizations and public and private stakeholders, the State Department and USAID seek to prevent avoidable epidemics, detect threats early, and respond rapidly and effectively to disease outbreaks. Nearly 75 percent of all new, emerging, or re-emerging diseases affecting humans at the beginning of the 21st century originated in animals (zoonotic diseases), underscoring the need for the development of comprehensive disease detection and response capacities that span the traditional domains of animal health, public health, ecology, and conservation. In particular, activities will expand surveillance to address the role of wildlife in the emergence and spread of new pathogens; enhance field epidemiological training of national partners; and strengthen laboratory capability to address infectious disease threats. Using a “One Health Strategy,” professionals from public health, medicine, veterinary medicine, and wildlife conservation will be engaged to strengthen their capacity to monitor and respond to animal viruses that are becoming threats to public health.

Development Assistance

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Development Assistance	2,507,001	2,780,971	2,959,573	178,602

The FY 2017 Development Assistance (DA) request of \$2,959.6 million supports two overarching, complementary, and intrinsically linked goals: ending extreme poverty and promoting the development of resilient, democratic societies. These funds will support core U.S. Agency for International Development (USAID) interventions and partnerships in 54 countries and regional missions that reduce the fundamental obstacles to development caused by fragile democracies, poor governance and accountability systems, lack of employment opportunities, and weak economies. These interventions enable inclusive, sustainable growth; promote free, peaceful, and self-reliant societies with effective, legitimate governments; and build human capital and create social safety nets that reach the poorest and most vulnerable, in a comprehensive effort to end extreme poverty. In doing so, they will help drive progress toward meeting the global development vision and priorities adopted in the 2030 Agenda for Sustainable Development.

In FY 2017, 40 percent of the funding from this account supports the Presidential Initiatives for Global Climate Change (GCC) and Feed the Future. The GCC Initiative invests in climate change adaptation, clean energy, sustainable land use and associated economic development. The FY 2017 request will support climate action to reduce greenhouse gas (GHG) emissions and build more resilient and sustainable economies while ensuring that vulnerable populations are able to adapt to the impacts of climate change. The GCC Initiative will support assisting and enabling implementation of nationally determined contributions (NDCs) for the reduction of GHGs, improving and enhancing the rigor and ambition of NDCs, increasing climate resilience and adaptation, and developing systems to enhance the transparency of reporting and implementation of NDCs including carbon accounting.

Feed the Future supports inclusive agriculture-led economic growth through improving agricultural productivity, expanding markets and trade, addressing the root causes of food insecurity and increasing the economic resilience of vulnerable rural communities. The request continues the initiative's focus on unleashing the potential of agricultural producers and the private sector to connect smallholders to markets and to reduce poverty and stunting by an average of 20 percent in targeted regions. The funding request also supports improving nutritional quality and food safety across the agricultural value chain. Both the Global Climate Change Initiative and Feed the Future help to end extreme poverty by addressing underlying climate and agriculture-related problems inhibiting economic development.

FY 2017 funding will also support additional sectors fundamental to development, including democracy, rights, and governance (DRG), education, water, and biodiversity. Lack of democratic governance creates an enabling environment for instability, violent extremism, and humanitarian crises, which can result from corruption, human rights violations, poor governance, and weak or nonexistent democratic institutions. DRG funding is critically needed to address democratic backsliding and closing political spaces, respond to and support political democratic transitions in countries such as Nigeria, and maximize key opportunities for political competition in places such as Kenya. DRG funding will help to promote a stable and democratic Cambodia, improve government institutions and political competition in Bangladesh, and strengthen democracy in Indonesia. DRG funding will also support critical DRG programs in countries with multiple Presidential initiatives to ensure achievement of sustainable development results across USAID's overall development agenda,

For example, funding will support efforts such as the President's Stand with Civil Society Initiative and the Sahel Development Initiative (SDI). SDI uses DRG funding to balance and complement security assistance efforts to present a more comprehensive and effective response to violent extremism in the Sahel.

In addition, clean water and sanitation programs are fundamental to development as a precursor to successful health, nutrition, and agriculture programs. Basic education is crucial for the future economic success of children worldwide and for active citizen engagement in democracies. Funding in the education sector will support the Education Strategy with an emphasis on primary grade reading and equitable access to education in crisis/conflict countries. Biodiversity programming contributes to preserving healthy and resilient ecosystems and the numerous goods and services they provide.

In FY 2017, DA account funding in Central America, especially for the Northern Triangle countries, aims to continue to advance economic prosperity through reducing poverty, improving education and workforce development, and strengthening resilience in the region and to continue to improve governance and strengthen the effectiveness of state institutions. All of these objectives address underlying factors contributing to the continued flow of migrants from the region to Mexico and the United States. The request for DA provides \$291 million for Power Africa to increase access to power in sub-Saharan Africa. By working with the private sector and other partners and by increasing the capacity of African governments and utilities to develop and manage their domestic energy sectors, Power Africa enhances energy security, decreases poverty, and advances economic growth. In pursuit of 30,000 megawatts of new, cleaner electricity generation capacity and increasing electricity access to at least 60 million new households and businesses, the FY 2017 request for Power Africa is the second year for the Administration's expanded annual commitment of \$300 million. The DA request includes \$75 million for Trade and Investment Capacity Building in Africa (TICB)/Trade Africa to improve sub-Saharan Africa's capacity for trade and export competitiveness, including trade facilitation to reduce the time and cost to trade, while increasing opportunities for U.S. businesses to positively participate in and benefit from African economic growth. The DA request also includes \$10 million in support of the President's signature professional exchange program, the Young Africa Leader's Initiative (YALI). Funding for YALI will provide resources to support four regional YALI centers on the continent to help connect the growing network of young professional leaders, unleash creativity, provide business logistics support including access to high speed internet and develop and strengthen civil society. The request includes support for the Administration's rebalance to the Asia-Pacific region to enhance cooperation among bilateral and regional partners, including technical assistance related to the Trans-Pacific Partnership. DA will also fund the Global Development Lab and expand efforts in the areas of innovation, science, and technology, as well as critical development programs that empower women and girls. Funding in these areas responds to longer-term challenges of human and economic security and helps protect U.S. national security in the long-run.

Highlights:

The Administration's priorities for DA funding in FY 2017 include:

- **Feed the Future (FTF) (\$870.8 million):** Nearly 800 million people suffer from chronic hunger and more than 3.1 million children die from undernutrition every year. By 2050, the world's population is projected to increase to more than 9 billion, requiring at least a 60 percent increase in agricultural production. Seventy-five percent of the world's poor live in rural areas in developing countries, where most livelihoods are directly reliant on agriculture. Food security efforts generate economic growth and promote global stability, which creates a healthier and more prosperous world. The President's Feed the Future initiative, a USAID-led, whole-of-government effort, is the primary

vehicle through which the U.S. government is pursuing its global food security objectives. With a focus on smallholder farmers, particularly women, FTF supports countries in developing their own agriculture sectors to generate opportunities for economic growth and trade, which help reduce poverty, hunger, and stunting. FTF leverages the best of U.S. agricultural research and builds capacity for excellence in agricultural science and technology in our partner countries. In addition, FTF is also focused on helping to prevent food crises by addressing the root causes of recurrent food crises and building the resilience of vulnerable populations. The FY 2017 request for FTF will fund the eighth year of this Presidential Initiative. During FY 2016, USAID anticipates releasing results from the first interim impact surveys to assess progress to date toward the FTF goals.

The FY 2017 FTF request allocates resources to 19 focus countries, along with aligned and regional programs, that are making progress toward sustainably developing their own agriculture sectors as a catalyst to economic growth and trade to reduce poverty and stunting. FTF investments address key constraints along the entire value chain – from developing and bringing to scale innovative technologies that sustainably intensify on-farm productivity, to improving crop storage and handling, combatting emerging animal and plant diseases, and increasing market access. FTF also fosters improvements in government policies that favor market-based agriculture-led economic growth. Programs are integrated with other initiatives and efforts to capitalize on the synergies between agriculture, health, nutrition, water, and climate change efforts. In crisis, conflict, and post-conflict stabilization settings, programs contribute to sustainably reducing hunger, improving nutrition, and building resilience among vulnerable populations. Funding promotes greater private sector investment in agriculture, connects smallholders to markets, and builds the capacity of vulnerable and chronically food insecure households to participate in these economic activities. Funding also aims to reduce long-term vulnerability to food insecurity, particularly in the Horn of Africa and the Sahel.

The FY 2017 FTF request will support implementation of the President's Executive Order on Climate-Resilient International Development. FTF will work in the agriculture sector to build resilience to climate change and weather extremes, which adversely affect food security. FTF will develop and deploy climate resilient technologies and innovations, such as drought tolerant maize and drip irrigation, to help smallholder farmers sustainably boost both agricultural yields and household income and help countries and communities transition to agricultural systems that are better adapted to climate stresses. As part of this work, FTF will assist farmers and others involved in food production to reduce greenhouse gas emissions from agricultural activities, where appropriate. FTF will work closely with the Global Climate Change Initiative to leverage resources and integrate efforts across both initiatives.

The FY 2017 FTF request will also support programs that promote nutrition-sensitive agriculture. This includes promoting the diversification of diets by increasing access to nutritious foods through both commercial and home-based efforts, as well as enabling small- to medium-scale producers of these foods to access markets. FTF will improve nutritional quality and food safety across value chain programs by promoting nutrient-rich crops, increasing availability of animal sourced foods, reducing mycotoxin contamination, and improving post-harvest processing and storage.

FTF will also support food security activities that help vulnerable populations to mitigate and adapt to recurrent shocks such as droughts and floods that keep them in extreme poverty. These efforts support country-led efforts to address the root causes of food insecurity and vulnerability in areas beset by recurrent humanitarian crises, ultimately reducing the need for continued large-scale, humanitarian food aid responses over the long-term.

Finally, the FY 2017 request supports the President's G-8 commitment to the New Alliance for Food Security and Nutrition in Africa, which promotes effective policies, encourages greater local and international private sector investment in agricultural development, and brings innovations to scale to improve agricultural productivity and nutrition. Through the New Alliance, FTF will promote policy reforms, help to mobilize responsible private sector investments, and build mutual accountability and inclusiveness.

- **Global Climate Change (\$310.3 million):** Global climate change threatens the livelihoods of millions in developing countries, and if not addressed will likely stall or even reverse the gains of many development efforts. Nearly 90% of the increase in future emissions from 2015-2035 is projected to come from the developing world. Additionally, climate change poses national security challenges, especially from the destabilizing impact it can have on economies, livelihoods, and thereby governance. The poor in developing countries are often the earliest and hardest hit by the impacts of climate change, as they are heavily dependent on climate sensitive economic activities such as agriculture, fisheries, forestry, and tourism, and they lack the resources to cope with economic or environmental shocks.

The FY 2017 request will support implementation of the historic 2015 UNFCCC Paris Agreement, which establishes a long term, durable global framework to reduce greenhouse gas emissions and provides strong assurance to developing countries that they will be supported as they pursue clean and climate resilient growth while ensuring that vulnerable populations are able to adapt to the impacts of climate change. The GCC Initiative will support the Paris Agreement by assisting and enabling implementation of developing countries' nationally determined contributions (NDCs) to reducing emissions, improving and enhancing the rigor and ambition of NDCs, and developing systems to enhance the transparency of reporting and implementation of NDCs, including carbon accounting. The GCC Initiative will also support the adaptation elements in the agreement and the U.S. commitment to double its grant-based public finance for adaptation by 2020. The FY 2017 request for State and USAID increases funding for GCCI adaptation activities by \$19.3 million above the FY 2015 enacted level as a first step in meeting this commitment.

Adaptation programs (\$141.8 million DA) will support the development and implementation of National Adaptation Plans. They will also help countries access and use high quality climate information, develop and implement effective strategies for reducing the impact of global climate change on vulnerable populations, and secure financing and other resources needed to increase their populations' resilience to the negative impacts of climate change. For example, projected climate change impacts will reduce agricultural productivity, threaten clean water supplies, destroy vital infrastructure, and undermine public health. Adaptation activities will respond to these threats through partnerships with governments, the private sector, and civil society organizations, and will focus assistance on least-developed countries, glacier-dependent nations, small-island developing nations, and other countries most prone to climate-related disasters. Adaptation activities will also help support the agencies' efforts to systematically integrate climate-resilience considerations into international development investments under Executive Order 13677, ensuring that these investments remain sustainable and durable and better enable communities to cope with the adverse impacts of extreme weather events and climate change.

Clean energy programs (\$93 million DA) will reduce long-term emissions trends in ways that further national development goals and implement NDCs and international commitments. Clean energy assistance helps countries to leapfrog emissions-intensive energy technologies through support for renewable energy and energy efficiency; modernization of policy, planning and regulatory systems; emissions inventories; improved electric grids; improved access to finance; and actions to reduce emissions in the energy, industry, transportation, and buildings sectors. Clean energy programs will

focus on major emerging economies and potentially large emitters through Enhancing Capacity for Low Emission Development Strategies (EC-LEDS) programs in selected countries, including major emitters in Asia, Latin America, Europe and Eurasia, and countries participating in the Power Africa Initiative.

Sustainable landscapes programs (\$75.5 million DA), focused primarily in countries with globally important forests, will help countries address deforestation and land degradation while promoting economic opportunity and reducing GHG emissions. Sustainable landscapes programs will work through public-private partnerships to reduce tropical deforestation associated with key value chains in cooperation with the Tropical Forest Alliance 2020. Sustainable landscapes programs will also develop and implement actions to assist in reducing emissions from land use under the EC-LEDS program, and build in-country capacity to measure and monitor GHG emissions from forests, wetlands, and other carbon-rich landscapes. Programs in this area will also promote policies and incentives that reward sustainable land use practices, build forest management capacity, and enhance property rights of local communities to help ensure better stewardship and management.

- **Implementing the U.S. Strategy for Engagement in Central America:** The FY 2017 DA request includes \$357 million to continue implementation of the U.S. Strategy for Engagement in Central America (Strategy), as part of State and USAID's total request for bilateral and regional assistance for Central America. This funding will promote prosperity, improve governance, and enhance security in the region, especially in the Northern Triangle countries of El Salvador, Guatemala, and Honduras. The Strategy complements the work undertaken by national governments of the Northern Triangle countries as well as the multilateral development banks, to implement their Alliance for Prosperity Plan. The Strategy focuses on three overarching objectives: 1) promoting prosperity and regional economic integration; 2) enhancing security through continued and expanded Central America Regional Security Initiative (CARSI) activities; and 3) promoting improved governance. Therefore, the total FY 2017 request includes the resources necessary to continue to comprehensively increase economic opportunity, reduce extreme violence, and strengthen the effectiveness of state institutions, addressing challenges that result in an influx of migration from the region, largely from El Salvador, Guatemala, and Honduras.

A secure, democratic, and prosperous Central American region is a stronger partner for the United States and can provide an environment in which all of its citizens, including youth, find opportunities to build prosperous, secure lives at home. Without significant progress in these areas, the region will continue to face extreme violence, severe economic inequality, social exclusion, and widespread corruption and poverty, thus compelling many Central Americans to flee their homes each year. With FY 2017 bilateral and regional DA funds, USAID will continue to help empower the countries in Central America to improve governance and economic prosperity while simultaneously advancing regional integration.

Through the whole-of-government approach to implementing the Strategy, the prosperity agenda fosters integration of a regional market of 43 million people and includes efforts that promote better education and vocational training for all citizens including women and marginalized groups. It fosters business environments friendly to entrepreneurs and provides alternatives to the illicit activities that contribute to insecurity and undermine effective governance. FY 2017 DA funds will continue to provide support for early grade literacy and alternative education such as vocational skills training, which align workforce skills with productive sector needs, and continue to bolster business creation and job placement for at-risk youth and to accelerate sustainable rural development, in order to increase the resiliency of vulnerable communities and households as well as reduce poverty and provide alternatives to gang involvement or migration.

The governance agenda of the Strategy recognizes that economic growth is only sustainable when the rule of law and democratic institutions flourish, corruption and impunity are reduced, fundamental freedoms are respected, and civil society and the media play their rightful roles. As a result, U.S. government efforts support governance programs that improve the delivery of government services, improve revenue collection and public financial management, promote civil service reforms, increase civil society engagement, and strengthen democratic and judicial institutions.

In FY 2017, governance programs will continue to improve countries' capacities to provide basic services at the national, municipal and local levels in transparent and accountable ways that also promote active dialogue between governments and their citizenries. Additionally, regional-based efforts will continue to build upon existing transnational relationships to promote human rights and victims' advocacy to decrease impunity and improve monitoring of justice sector performance.

- **U.S. Global Development Lab:** The U.S. Global Development Lab seeks to increase the use of science, technology, innovation, and partnerships to extend the development impact of U.S. assistance in an effort to end extreme poverty. In partnership with public and private innovators around the world, USAID Missions, the private sector, and interagency colleagues, the Lab puts tools in place to create and scale solutions to global challenges, such as expanding use of E-Payment and information and communication technology systems, improving urban sanitation and access to potable water, and supporting the response to the Ebola outbreak in West Africa and the longer term conditions for recovery and resilience. Requested funding of \$170 million for the Lab in FY 2017 (including \$165 million in DA) seeks to strengthen critical initiatives including Power Africa, Feed the Future, Global Climate Change, and Global Health by increasing USAID's ability to: seek and invest in disruptive new ideas and technologies, develop and scale what works, leverage resources, and partner with governments, the private sector, researchers, investors, and civil society – at home and abroad – to solve hard development challenges and mainstream the solutions in an effort to end extreme poverty. As part of the landmark Mission Innovation commitment by the U.S. and 19 other countries to dramatically accelerate global clean energy innovation, USAID will establish a new R&D effort through the Lab and GCCI that will support joint efforts in clean energy topical areas important to developing nations, such as electrified vehicles or affordable energy-self-sufficient, or net-zero-energy, housing and community buildings.
- **Governing Justly and Democratically:** Guided by government policies, Presidential directives, and agency strategies, the United States supports numerous programs that foster good governance, promote access to justice, strengthen civil society, protect human rights, counter trafficking in persons, and reinforce effective and accountable institutions at all levels. The U.S. government has made support for democracy, human rights and governance a core strategic goal because it embodies American values, fosters prosperity, and safeguards national security. Democracy, human rights, and governance are fundamental objectives in and of themselves: a lack of democratic governance creates an enabling environment for instability, violent extremism, and humanitarian crises, which often are a result of corruption, poor governance, and weak or nonexistent democratic institutions. Democracy, human rights, and governance are also essential to the achievement of sustainable development results across USAID's overall development agenda. DRG programming will help to build resilient, democratic societies and support countries that are committed to building effective, transparent and accountable governments that respect human rights and can deliver social and political benefits to citizens. The FY 2017 request targets the following priorities:
 - o address democratic backsliding and closing political spaces;
 - o respond to and support political democratic transitions; and
 - o sustain investments in countries making progress.

- **Economic Growth:** Economic growth is both an essential dimension of overall development and a means to the accomplishment of progress in all other dimensions. Growth is the main source of poverty reduction, creating opportunities for poor households to escape from their plight and generating the public resources governments need to provide complementary investments in education, health, rural roads and other infrastructure. These investments, in turn, help ensure that the benefits of growth are widely felt by all ethnic groups, women, and other marginalized groups. Rapid, sustained, and inclusive growth promotes the development of resilient, democratic societies, while economic stagnation can predispose societies toward civil conflict. The FY2017 request supports inclusive market strategies that help poor families contribute to and benefit from economic growth; targets innovative approaches to expand access to financial markets; promotes greater and more efficient domestic resource mobilization to enable governments to carry out their core responsibilities more effectively; streamlines trade practices to increase trade flow and market access; and encourages the adoption of policies and practices that allow the private sector to play the lead role in economic development.
- **Education:** Education is a pillar of inclusive and sustainable economic growth, as laid out in USAID's "Vision for Ending Extreme Poverty," and it plays a key role in USAID's mission to partner to end extreme poverty and to promote resilient, democratic societies while advancing our security and prosperity. Yet we find ourselves in the midst of a global learning crisis. In 2013, over 59 million children of primary school age and about 65 million adolescents of lower secondary school age were out of school. Of those who do attend school, some 250 million do not learn the basic skills required to be competitive economic actors in a globalized world. Drop-out rates remain high and too few students, particularly adolescent girls, continue studies beyond the primary level. While important gains in primary school enrollment have been achieved across the developing world and the gender gap in access to primary education has been narrowed or closed in many countries, access to education remains inequitable and the quality of education remains poor. More children have a better chance of attending school than ever before, but they do not necessarily have a better chance of learning anything while there.

Thus, improving lives through education and learning is one of USAID's core development objectives. This request supports USAID's work to address the global learning crisis and ensure that pathways out of extreme poverty arise from educational opportunities. USAID investments aim to improve the lives of millions of children and young people globally through targeted support and strengthening of key elements of education structures and systems to promote and maximize learning. USAID education investments are working to reach the poorest and most vulnerable, and continued investments are needed to both advance our strategic goals in education and to realize USAID's vision of ending extreme poverty.

The request will support education programs and investments that focus on the strategic goals of: advancing learning outcomes and improving early grade reading; providing young people with relevant skills to gain employment; and increasing equitable access to education in crisis and conflict-affected areas. In order to achieve results in these areas, programs will build on previous investments and address learning across the education spectrum, including basic education, higher education, and workforce development. This request comes as USAID is completing five years of implementation under its Education Strategy 2011-2015. Since 2011, USAID missions have put in place over 140 unique projects to advance USAID's Education Strategy goals, and these projects have benefitted over 30 million individual children and youth. The Agency has cultivated and advanced partnerships with host country governments, donor partners, multilateral partner organizations, private sector actors, and implementing partner organizations to advance our priorities and leverage our investments. The Agency has learned much in the last five years to inform and improve education programming, and this request supports USAID work to sustain its investment and momentum in order to achieve its ambitious education goals.

- **Gender:** To optimize outcomes for U.S. foreign policy objectives, including stability, peace, and development, the FY 2017 foreign assistance budget request supports U.S. promotion of gender equality and advancement of the political, economic, social, and cultural status of women and girls. USAID, through its 2012 Gender Equality and Female Empowerment Policy, and the Department of State are systematically addressing gender inequality in all foreign assistance programming and implementing commitments under the 2011 Women, Peace, and Security (WPS) National Action Plan and the 2012 U.S. Strategy to Prevent and Respond to Gender-Based Violence (GBV) globally. USAID is programming DA funds for activities that promote women's leadership and empowerment, prevent and respond to GBV, and pursue specific objectives related to WPS and women's inclusion in peace-building. Funding will aid operating units in integrating gender equality into their strategies, project design, and monitoring and evaluation activities.
- **Let Girls Learn:** At the intersection of education and gender, and in collaboration with the Office of the First Lady, Let Girls Learn brings together USAID, the Department of State, the Peace Corps, the Millennium Challenge Corporation, as well as other agencies and programs like the U.S. President's Emergency Plan for AIDS Relief (PEPFAR), to address the range of challenges preventing adolescent girls from enrolling, completing, and succeeding in school. In FY 2017, USAID will support Let Girls Learn programs in Afghanistan and augment other ongoing investments that support the initiative. The Agency will also provide up to \$35 million for the Let Girls Learn Challenge Fund which, along with other investments, will continue to leverage public-private partnerships, and challenge organizations, governments, and private sector partners to commit resources to improve the lives of adolescent girls worldwide.

International Disaster Assistance

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
International Disaster Assistance	1,895,000	2,794,184	1,957,000	-837,184
Enduring	560,000	874,763	125,000	-749,763
Overseas Contingency Operations	1,335,000	1,919,421	1,832,000	-87,421

	FY 2015 Emergency Funding Actual, P.L. 113-235
Ebola Response and Preparedness	1,436,273

The FY 2017 enduring International Disaster Assistance (IDA) request of \$125 million will provide funds to save lives, reduce suffering, and mitigate and prepare for natural disasters and complex emergencies through relief, rehabilitation, and reconstruction assistance, including food assistance, activities that transition to development assistance programs, and disaster preparedness/risk reduction activities, with a focus on areas where OCO has not generally been used to date. The IDA request will enable the U.S. government to meet humanitarian needs quickly and support mitigation and preparedness programs, as well as provide emergency food assistance.

This request includes \$95 million for the Office of U.S. Foreign Disaster Assistance and \$30 million for the Office of Food for Peace for emergency food response.

Approximately \$1 million in IDA will be used to meet USAID's responsibility to cover certain necessary recurring and non-recurring costs for providing U.S. disaster assistance under the Compact of Free Association between the United States and the Republic of the Marshall Islands and the Federated States of Micronesia. These funds are in addition to the \$1 million in Development Assistance provided through USAID's Asia Bureau.

Details of the FY 2017 OCO request of \$1,832 million for IDA are addressed in the OCO chapter.

Transition Initiatives

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Transition Initiatives	67,000	67,000	77,600	10,600
Enduring	47,000	30,000	15,000	-15,000
Overseas Contingency Operations	20,000	37,000	62,600	25,600

The FY 2017 enduring request of \$15 million for the Transition Initiatives (TI) account will be used to address opportunities and challenges in conflict-prone countries and assist in their transition toward sustainable development, peace, good governance, and democracy, with a focus on areas where Overseas Contingency Operations (OCO) has not generally been utilized to date.

TI funding will support catalytic programs targeting political crises, preventing and mitigating conflict, and addressing stabilization needs in countries important to U.S. foreign policy. TI funds will support fast, flexible, short-term assistance to help government and civilian partners advance peace and democracy. TI funding will target foreign policy priority countries where the USAID Office of Transition Initiatives (OTI) acts as a first responder to engage quickly and robustly and where additional contingency funds are less readily available.

Examples of assistance include addressing underlying causes of instability and violent extremism, support to key transitional processes such as elections and constitutional assemblies, promoting central government responsiveness to local needs, civic participation programs, media programs raising awareness of national issues, and conflict resolution measures.

The FY 2017 OCO request of \$62.6 million for TI is addressed in the OCO chapter.

Complex Crises Fund

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Complex Crises Fund	50,000	30,000	30,000	-
Enduring	20,000	10,000	10,000	-
Overseas Contingency Operations	30,000	20,000	20,000	-

The FY 2017 enduring request for the Complex Crises Fund (CCF) of \$10 million will be used to support prevention activities, and respond to emerging or unforeseen challenges and complex crises in areas where OCO has not generally been utilized to date. Managed by USAID, these funds will target countries that demonstrate a high or escalating risk of conflict, instability, or atrocities. Funds will also be used to respond to unanticipated opportunities for progress in newly emerging or fragile democracies. CCF projects will aim to address and prevent the root causes of conflict and instability through a whole-of-government approach, including host government participation, as well as other partner resources.

The FY 2017 OCO request of \$20 million for CCF is addressed in the OCO chapter.

Development Credit Authority

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Development Credit Authority - Subsidy (Transfer)	[40,000]	[40,000]	[60,000]	[20,000]
Development Credit Authority - Administrative Expenses	8,120	8,120	10,000	1,880

The FY 2017 Development Credit Authority (DCA) request includes \$10 million for DCA administrative expenses. The increase over the FY 2016 DCA appropriation will allow the U.S. Agency for International Development (USAID) to strengthen its credit portfolio management practices by hiring six additional critical staff in credit portfolio monitoring, risk management, and program evaluation. These additional staff members are needed to enable DCA to keep pace with its growing portfolio, which has tripled in size, in terms of private capital mobilized, over the past three years. DCA also plans to hire three additional investment officers with specialized expertise in capital market financing for infrastructure and power projects, particularly those supporting administration priorities in the Power Africa and the Global Climate Change Initiatives.

The request also includes \$60 million in DCA transfer authority to allow field missions to move funds from USAID appropriation accounts to the DCA program account to finance the subsidy cost of new guarantees. As a result of the transfer authority limit being reached for the first time in FY 2015, the Agency seeks an increase in the transfer cap to accommodate forecasted increasing demand from USAID field missions for DCA guarantees to support their core development programs. An increase in the cap will allow DCA to continue to grow and provide even greater development benefits to USAID missions. USAID does conduct regular reviews of risk exposure at both the transaction and portfolio levels as the primary way it monitors and manages this exposure. This process will continue under any increased transfer level. An increase in the DCA portfolio limit to \$2 billion is also requested to accommodate the request for additional transfer authority.

Under DCA guarantee, banks and other local capital providers lend into markets underserved by formal financial institutions, particularly in critical development sectors such as agriculture, health, water, and clean energy. DCA guarantees have proven to be a highly effective tool for the Agency to catalyze large amounts of private financing at very little cost to the U.S. Government; financing that reduces the need for and dependency on additional donor funding. In coordination with related technical assistance programs, DCA guarantees demonstrate to financial markets the sustainability of commercial lending into underserved, and often marginalized, communities.

For 17 years, DCA guarantees have been used to mobilize in excess of \$4.3 billion in local private financing at a budget cost of \$190 million. DCA transfer authority has enabled 75 USAID missions to enter into over 450 guarantees in every development sector. USAID has incurred only \$18 million in default claims to-date for all of the guarantees made under DCA, which represents an overall default rate of only 2.4 percent. In FY 2015, working directly with our partners and missions, USAID completed 47 DCA transactions in 32 countries to mobilize up to \$695 million in private capital for critical investments in agriculture, education, energy, health, textiles, and water.

Many of these guarantees directly supported administration priorities, particularly in agriculture, clean energy and power. For example, the Agency implemented a \$50 million Pan-African guarantee to support working capital loans to small and medium agricultural businesses throughout sub-Saharan Africa

under the Feed the Future initiative. In addition, USAID designed a \$75 million guarantee in support the Power Africa initiative by encouraging investments in off-grid renewable energy in 33 countries in sub-Saharan Africa, and a \$60 million guarantee in Zambia designed to support Power Africa's energy goal of increasing the amount of grid connections and strengthening the energy distribution grid in the country.

In FY 2015 USAID also took the opportunity to deepen its guarantee relationship with other donors in order to get more value for money, such as the \$10 million co-guarantee it designed with the Swedish International Development Agency (Sida) to support diaspora financing in Bosnia, and a \$25 million global co-guarantee with Sida to support investments in social enterprises working in the healthcare, energy, and education sectors. Such co-guarantees significantly reduce both the cost and risk of DCA guarantees to USAID without diminishing their development impact.

In FY 2017, USAID will continue to use DCA guarantees to help banks and microfinance institutions access affordable long-term capital for small and medium-enterprise lending at longer tenors, particularly in sub-Saharan Africa. Additionally, DCA will continue to support energy related transactions in connection to Power Africa. DCA will also take advantage of more developed municipal capacity and capital markets to expand successful sub-sovereign financing models developed in Asia and Eastern Europe. DCA will also play an important role in the whole of government effort to expand US government engagement in Central America. Lastly, DCA loan guarantees will be used to increase investments in agriculture, health, and climate change mitigation activities, including clean energy generation and resiliency.

In accordance with the Federal Credit Reform Act of 1990, the \$10 million request for credit administrative expenses will fund the total cost of development, implementation, and financial management of the DCA program, as well as the continued administration of USAID's sovereign and legacy credit portfolios.

Economic Support Fund

(\$ in thousands)	FY 2015 Actual ^{1, 2, 3,} 4, 5, 6	FY 2016 Estimate ^{7, 8}	FY 2017 Request	Increase / Decrease
Economic Support Fund	4,885,776	4,302,268	6,080,607	1,778,339
Enduring	2,640,240	1,879,595	2,408,454	528,859
Overseas Contingency Operations	2,245,536	2,422,673	3,672,153	1,249,480

	FY 2015 Emergency Funding Actual, P.L. 113-235
Ebola Response and Preparedness	711,725

1/ The FY 2015 OCO level includes Foreign Assistance Act sec. 610 transfers from FY 2014 International Narcotics Control and Law Enforcement-OCO account (\$66.011 million), Foreign Military Financing-OCO account (\$10.5 million), and Nonproliferation, Antiterrorism, Demining and Related Programs account (\$32.176 million).

2/ The FY 2015 OCO level includes the transfer of \$14.583 million from the FY 2015 Foreign Military Financing-OCO account to the Economic Support Fund-OCO account.

3/ The FY 2015 OCO level includes the transfer of \$4 million from the FY 2015 International Narcotics and Law Enforcement-OCO account to the Economic Support Fund-OCO account.

4/ The FY 2015 OCO level includes the transfer of \$4 million from the FY 2015 Nonproliferation, Antiterrorism, Demining and Related Programs-OCO account to the Economic Support Fund-OCO account.

5/ The FY 2015 enduring level includes Foreign Assistance Act sec. 610 transfers from FY 2014 Nonproliferation, Antiterrorism, Demining and Related Programs account (\$12.15 million), FY 2010 International Narcotics Control and Law Enforcement account (\$12.468 million), and FY 2011 International Narcotics Control and Law Enforcement account (\$13 million).

6/ The FY 2015 enduring level includes the transfer of \$29.907 million from the FY 2015 Economic Support Fund to the Department of Treasury Clean Technology Fund (\$16.607 million) and the Strategic Climate Fund (\$13.3 million) in accordance with sec. 7060(c)(8) of the Consolidated and Further Continuing Appropriations Act, 2015.

7/ The FY 2016 enduring level includes the transfer of \$7 million from the FY 2016 Economic Support Fund account to the Migration and Refugee Assistance account.

8/ The FY 2016 enduring level includes the transfer of \$9.72 million from the FY 2016 Economic Support Fund to the Department of Treasury Strategic Climate Fund in accordance with sec. 7060(c)(5) of the Consolidated Appropriations Act, 2016.

The FY 2017 Economic Support Fund (ESF) enduring request of \$2,408.5 million advances U.S. interests by helping countries meet short- and long-term political, economic, and security needs. These needs are addressed through a range of activities, including countering terrorism and extremist ideology; increasing the role of the private sector in the economy; assisting in the development of effective, accessible, independent legal systems; supporting transparent and accountable governance; and empowering citizens. Programs funded through this account are critical to U.S. national security because they help to prevent wars and contain conflicts, and foster economic prosperity at home by opening markets overseas, promoting U.S. exports, and helping countries transition to developed economies.

Highlights:

Sub-Saharan Africa (\$81.7 million): The FY 2017 request includes funding for programs that strengthen democratic institutions and support conflict mitigation and reconciliation, basic education, and economic growth in key African countries, including:

- **Sudan (\$9.4 million):** Peace and stability in Sudan remain critical objectives of the United States, both in the context of resolving outstanding and post-Comprehensive Peace Agreement (CPA) issues, as well as improving conditions in Darfur and seeking an end to the conflict there. For the Two

Areas, Abyei, Darfur, and other marginalized areas, efforts will focus on peacebuilding and conflict mitigation.

- **Zimbabwe (\$19.7 million):** The FY 2017 request will expand efforts to improve governance in Zimbabwe, with an emphasis on strengthening civil society, Parliament, local governments, and executive branch structures. These efforts will help give voice to the people of Zimbabwe to hold the government accountable. Assistance will also promote improved food security and economic governance.
- **State Africa Regional (\$31.7 million):** These funds will support cross-cutting programs that strengthen democratic institutions; support social services for vulnerable populations; and foster economic growth (Africa Regional Democracy, Ambassadors' Special Self Help, Anti-Piracy Incentive, Conflict Minerals, Early Warning Response and Partnership, Kimberley Process, Safe Skies for Africa, Trafficking in Persons, and Africa-Women, Peace and Security).

East Asia and the Pacific (\$128.5 million): The FY 2017 request funds the Administration's strategic rebalance to the Asia-Pacific by strengthening democratic development and regional economic integration and trade to advance regional prosperity and U.S. economic growth. Highlights include:

- **Burma (\$82.7 million):** The FY 2017 request builds on Burma's political and economic reform agenda to promote national reconciliation, democracy, human rights, and the rule of law; foster economic opportunity; increase food security; and improve national and local health systems. U.S. assistance will continue to support the peace process and bolster democratic gains following the 2015 elections. Programs will build the capacity of key government institutions and invest in reform-focused institutions and leaders. ESF-funded programs also provide crisis assistance and recovery programs for refugees and internally displaced persons.
- **East Asia and Pacific Regional (\$24.8 million):** The FY 2017 request supports Asia's remarkable economic growth while advancing trade and investment opportunities for the United States. The Department of State leverages partnerships with key regional multilateral fora such as: the Asia-Pacific Economic Cooperation (APEC) Forum; the Association of Southeast Asian Nations (ASEAN); the ASEAN Regional Forum (ARF); the Pacific Islands Forum (PIF); the Lower Mekong Initiative (LMI); and the East Asia Summit (EAS). EAP Regional programs support these important multilateral institutions to help maintain momentum for key economic priorities, pursue broad improvements in good governance, encourage regional standards that more closely align governments with the United States, and support regional connectivity and integration.
- **Regional Development Mission for Asia (\$5 million):** The FY 2017 request expands the capacity of LMI countries -- Laos, Burma, Cambodia, Thailand, and Vietnam -- to sustainably manage their natural resources, including shared water resources. U.S. assistance will increase the capacity of environmental civil society organizations to advocate for sound natural resource management, advance regional multi-stakeholder dialogues, and increase access to information about the environmental and social risks of large-scale infrastructure investments.

Europe and Eurasia (\$162.3 million): The FY 2017 ESF request for Europe and Eurasia will build countries' resilience to Russian aggression as well as advance European integration to support the strategic goal of a Europe whole, free, and at peace. Funding will support programs focused on increasing access to objective sources of information, developing energy and economic diversification, helping countries fight corruption and strengthen their stability, and building strong and engaged civil societies. The FY 2017 request promotes efforts to bring Southeastern Europe and Eurasia closer to Europe. Highlights include the following:

- **Bosnia and Herzegovina (\$30.3 million):** Funding will help Bosnia and Herzegovina regain momentum toward Euro-Atlantic integration, resist external pressures, fight corruption, and improve progress on socio-economic and rule-of-law reforms tied to Bosnia and Herzegovina's European Union (EU) reform agenda. U.S. assistance will also support the development of state-level institutions; strengthen the rule of law; foster a sound financial and regulatory environment to promote investment; increase the competitiveness of small and medium-sized enterprises in targeted sectors; improve governance at the sub-state level; build the capacity of local government and civil society; and help address ethnic tensions.
- **Kosovo (\$38.5 million):** Funding will help Kosovo's nascent institutions address the challenges of effective governance, including the integration of the North into Kosovo institutions; further justice-sector development; drive private sector-led economic growth through policy reform and support to key sectors, including energy; strengthen democratic institutions; develop future leaders; build the capacity of civil society and independent media to address corruption and promote government accountability; and mitigate conflict by building tolerance among Kosovo's diverse communities.

Near East (\$623.8 million): The FY 2017 request includes funding to support governance and political reform throughout the Middle East and North Africa, as well as economic development, economic reforms, job growth, and improved educational and health outcomes. Funding will continue for programs that advance U.S. national security interests both bilaterally and regionally.

- **Egypt (\$150 million):** The FY 2017 request will continue to provide targeted support to the Egyptian people by promoting private sector-led job creation; broad-based economic reform and growth; better health and education outcomes; and more inclusive democratic institutions.
- **West Bank/Gaza (\$327.6 million):** The FY 2017 request will help preserve the viability of a negotiated, two-state solution to the Israeli-Palestinian conflict by working with the Palestinian Authority (PA) to build the institutions of a future Palestinian state to deliver services to the Palestinian people. This request supports the development of PA institutional capacity to operate transparently, effectively, and efficiently, and to deliver quality services; promotes the development of a strong private-sector driven economy; aids the provision of quality health and education services; provides critical infrastructure programming to improve water, sanitation, and road networks; meets humanitarian assistance needs; and provides budget support to the PA to ensure its ongoing fiscal stability.

South and Central Asia (\$134 million): The FY 2017 base ESF request for South and Central Asia (SCA) includes funding to promote democracy and good governance; increase economic growth and development; and achieve more broad-based and sustainable outcomes in health, education, food security, and management of the environment. The New Silk Road and Indo-Pacific Economic Corridor initiatives will support sustainable economic growth through activities that facilitate greater regional energy and infrastructure integration, and enhanced customs and border and people-to-people connectivity. U.S. assistance will also support efforts to counter Russian aggression by supporting civil society, fostering economic resilience, and reducing overall reliance on remittances.

- **Kyrgyz Republic (\$43.9 million):** In FY 2017, U.S. assistance will focus on supporting the Kyrgyz Republic's economic resilience and ability to withstand external pressures through programs to improve the business environment and strengthen the competitiveness of firms and industry sectors to promote business growth, job creation, trade, and economic development. U.S. democracy and

governance programs will help promote judicial reform, strengthen the country's parliamentary democracy, improve local governance, and increase the capacity of key government ministries to deliver services to its citizens. U.S. assistance will support efforts to increase citizen access to objective sources of information. It will also focus on improving the reading skills of primary-school aged students, which are critical to ensuring that the Kyrgyz Republic continues on the path of democratic reform and has a competent, well-educated workforce.

- **Sri Lanka (\$31 million):** Following the historic political transition after Presidential and Parliamentary elections in 2015, U.S. assistance to Sri Lanka has entered a new era. In FY 2017, U.S. assistance will be used to strengthen governance, democratic reform, and the rule of law by promoting and protecting human rights, strengthening justice sector institutions, and supporting civil society organizations. FY 2017 resources will also be used to encourage reconciliation efforts and support anti-corruption activities – key foci as the government undertakes major reforms during this political transition. To help increase economic stability, U.S. assistance will also work to improve economic governance and growth, while supporting livelihoods and promoting trade.
- **Tajikistan (\$28.6 million):** Stability and economic growth in Tajikistan are critical to achieving regional stability and strengthening regional economic integration. Recognizing that food insecurity hampers economic growth and affects the health of Tajiks, U.S. assistance will support efforts to improve food security and ensure access to proper nutrition through the Feed the Future (FTF) initiative. U.S. assistance will fund programs to provide clean water, improve sanitation government services, and promote education and access to information. Programs will increase U.S. engagement with Tajikistan's educational institutions and promote civic involvement and knowledge of basic democratic principles. Programs focused on economic resilience and diversity will reduce Tajikistan's reliance on limited trading partners and its dependence on income from remittances of migrant laborers.
- **Central Asia Regional (\$7 million):** U.S. assistance includes support for the Organization for Security and Cooperation in Europe (OSCE) to promote democracy and human rights, protect national minorities, and advance media freedom.

Western Hemisphere (\$513.4 million): The FY 2017 ESF request for the Western Hemisphere promotes three interconnected and broadly shared goals: a secure and democratic hemisphere, social inclusion and expanded opportunity and prosperity, and a clean and secure energy future. These investments will promote development and regional security and are critical to reducing the reach of transnational criminal organizations and violence throughout the region. Programs will also strengthen the resilience of at-risk communities against criminal activity and promote economic livelihood. Regional ESF for Central America, including assistance for the Central America Regional Security Initiative, economic opportunity, and prosperity and governance, will complement assistance requested for Central America bilaterally under other accounts.

- **Colombia (\$187.3 million):** The requested ESF funds will strengthen Colombia's capacity to implement a sustainable and inclusive peace, including improved presence of democratic institutions and processes in targeted areas; reconciliation among victims, ex-combatants, and other citizens; increased rural economic growth; and strengthened environmental resilience. Programs will build on the security gains achieved, support alternative development, strengthen the criminal justice system, support internally displaced persons and vulnerable populations, and expand economic opportunity. U.S. assistance will continue to target areas with a high concentration of vulnerable populations most affected by conflict, with particular focus on Afro-Colombians, indigenous groups, and ex-combatants, as well as strategic geographic zones in which violence, illicit crop cultivation, and

drug trafficking converge. U.S. assistance will remain flexible and responsive to the Government of Colombia's implementation priorities when a peace agreement is reached.

- **Cuba (\$15 million):** The FY 2017 request will support fundamental freedoms and respect for human rights. Programs will support humanitarian assistance to victims of political repression and their families, strengthen independent Cuban civil society, and freedom of expression.
- **Haiti (\$79.9 million):** Funding in the FY 2017 request will continue supporting the U.S. commitment to help build a stable and more prosperous Haiti by engaging in partnership with the Government of Haiti and other donors, local organizations, and private sector partners. The request supports long-term development in the four strategic pillars of the Post-Earthquake U.S. Government Haiti Strategy and will focus on these key sectors: social and economic infrastructure; food and economic security; health and other basic services; and governance and rule of law. The request provides support in these areas to help Haiti continue to rebuild and transform itself into a secure, prosperous, democratic nation that meets the needs of its people and contributes to regional stability.
- **Mexico (\$49 million):** The FY 2017 request will support the United States' continued partnership and cooperation with Mexico under the Merida Initiative to address security threats stemming from transnational crime and violence. Specifically, ESF will be used to improve the rule of law by supporting the Government of Mexico's efforts to implement constitutional and criminal justice reforms; promote respect for human rights through policy-level reform, the prevention of torture, and the protection of journalists and human rights defenders; and build strong and resilient communities in order to prevent and reduce crime and violence. These activities will contribute to increasing U.S. national security, enhance economic growth potential, and protect U.S. citizens along our shared border.
- **Peru (\$37 million):** FY 2017 ESF funds will support four overarching U.S. goals: 1) combating transnational organized crime by providing licit alternatives to drug trafficking, illegal logging, and illegal mining; 2) meeting the challenges of environmental degradation and climate change; 3) promoting improved governance; and 4) promoting greater social and economic inclusion for Peruvians who have not benefited from the country's progress.
- **Venezuela (\$5.5 million):** The FY 2017 request will defend and strengthen democratic practices, institutions and values that support human rights and Venezuelan civic engagement and democratic governance. FY 2017 activities will help civil society to promote institutional transparency, engage diverse constituencies in the democratic process, and defend human rights.
- **Western Hemisphere Regional (\$139.7 million):** The FY 2017 request will support critical, multi-account efforts under the Central America Regional Security Initiative (CARSI) (\$100.3 million) and the Caribbean Basin Security Initiative (CBSI) (\$23.4 million), in addition to investments in Central America economic opportunity (\$15 million), and Summit of the Americas-related initiatives (\$1 million), to sustain investments specifically designed to address the underlying causes of migration in Central America. CARSI and CBSI focus on addressing the drivers of violence tied to illicit trafficking, transnational crime, and organized gangs and reinforcing accountable, democratic and effective security and justice sector institutions. Violence from Central America and the Caribbean directly impacts U.S. security. U.S. assistance addresses these threats and supports the U.S. national interest.

As part of the \$1 billion whole-of-government request for an inclusive approach under the U.S. Strategy for Engagement in Central America (Strategy), ESF will continue to support the Strategy's three overarching lines of action: 1) promoting prosperity and regional economic integration, 2) enhancing security through continued and expanded CARSI activities, and 3) promoting improved governance. The Strategy complements the work undertaken by national governments and multilateral development banks to support the priority objectives identified by the Northern Triangle countries of El Salvador, Guatemala, and Honduras in their Alliance for Prosperity Plan. Therefore, the FY 2017 request includes and aligns the resources necessary to continue to comprehensively increase economic opportunity, reduce extreme violence, and strengthen the effectiveness of state institutions, addressing challenges that have resulted in an influx of migration from the region, largely from the Northern Triangle.

CARSI programs will improve regional security and reduce gang violence to complement and enhance U.S. bilateral assistance. This program's funding prioritizes the Northern Triangle countries of El Salvador, Guatemala, and Honduras by strengthening security and justice sector institutions and supporting an integrated approach to crime and violence prevention that blends population-based programs in high-violence communities with targeted interventions for the highest-risk youth most susceptible to being both perpetrators and victims of violent crime. In addition to CARSI and consistent with the Strategy, ESF will also support regional economic growth activities to improve income opportunities for Central America, especially the Northern Triangle countries.

Separate from Central America, in the Caribbean, CBSI builds and strengthens the rule of law, supports anti-corruption efforts, and provides vocational training to at-risk youth and other vulnerable populations to increase their licit employment opportunities. ESF will support outcomes stemming from the 2015 Summit of the Americas and commitments for the 2018 Summit.

Global Programs (\$760.8 million): The FY 2017 ESF request also funds programs that are implemented worldwide. Highlights include:

- **Oceans and International Environmental and Scientific Affairs (OES) (\$632.3 million):** As part of the President's Global Climate Change Initiative (GCCCI), OES programming constitutes an integral element of U.S. leadership on climate change. The request includes \$500 million for the Green Climate Fund (GCF), providing a total of \$750 million when combined with \$250 million requested through the Department of the Treasury. Joining other nations, the United States pledged \$3 billion, not to exceed 30 percent of total confirmed pledges, to the GCF to help developing countries leverage public and private finance and invest in reducing carbon pollution and strengthening resilience to climate change. By reducing the most catastrophic risks of climate change, the GCF will help promote smart, sustainable long-term economic growth and preserve stability and security in fragile regions of strategic importance to the United States. Funds will also support other programs that forge new paths forward on clean energy and emissions reductions through bilateral cooperation with major emitters such as China and India and through activities such as the Clean Energy Ministerial, the Climate and Clean Air Coalition, and the U.S.-Africa Clean Energy Finance initiative, which were established as a result of U.S. diplomacy. Funding for sustainable landscapes may include support for technical programs such as Climate Fellows and SilvaCarbon, as well as contributions to multilateral initiatives such as the BioCarbon Fund Initiative for Sustainable Forest Landscapes. Adaptation funds will allow the Department to support a global network on national adaptation planning and the cross-cutting Climate Smart Food Security initiative, which will support multilateral climate-smart agriculture programs in alignment with the U.S. Strategy on Engagement in Central America. OES also will use requested funding to assist U.S. free trade agreement (FTA) partners, including parties to the Trans-Pacific Partnership, fulfill their FTA environment chapter commitments, including to effectively enforce their environmental

laws, which in turn will help level the playing field between U.S. businesses and businesses in our FTA partner economies. In addition, requested funding will ensure the United States can meet its commitments to Pacific Island partners and maintain U.S. engagement in the region as work continues to renew or restructure the South Pacific Tuna Treaty to promote American jobs and economic development in the Pacific Region. Finally, OES will strengthen regional cooperation and build global capacity in science technology and innovation as well as sound stewardship of natural resources in concert with global economic growth and social development.

- **Energy Resources (\$17 million):** The FY 2017 request will support improved energy sector governance and transparency, technical engagement to address the challenges involved in safely and responsibly developing unconventional gas resources, power sector reform to expand and accelerate electricity access, and development of the policy, regulatory and legal frameworks needed to enable investment in renewable energy generation. These programs work to alleviate economic under-development and poverty resulting from a lack of access to energy and poor resource management. ENR programs support and complement key diplomatic and policy engagements as well as Administration and Department initiatives, including the North American Leaders Summit, U.S. Strategy for Engagement with Central America, Caribbean Energy Security Initiative, U.S.-Asia Pacific Comprehensive Energy Partnership, Lower Mekong Initiative, Global Climate Change Initiative, good governance components of Power Africa, U.S.-Mexico High Level Economic Dialogue, U.S.-Colombia High Level Partnership Dialogue, and Connecting the Americas 2022.
- **Democracy, Human Rights and Labor (\$75 million):** Through the implementation of innovative programs and use of new technologies, the FY 2017 request will address human rights abuses globally, wherever fundamental rights are threatened; open political space in struggling or nascent democracies and authoritarian regimes; support civil society activists worldwide; and protect populations that are at risk, including women, religious and ethnic minorities, indigenous populations, and lesbian, gay, bisexual, and transgender peoples. Governments that protect human rights and fundamental freedoms are ultimately more stable, successful, and secure than those that do not. The United States finds more willing, reliable, and lasting partners in those governments that reflect and act in the broad interests of their own people, rather than the narrow interests of the few.

Details of the FY 2017 OCO Request for ESF are addressed in the OCO chapter.

Migration and Refugee Assistance

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate ¹	FY 2017 Request	Increase / Decrease
Migration and Refugee Assistance	3,059,000	3,066,000	2,798,600	-267,400
Enduring	931,886	938,886	922,597	-16,289
Overseas Contingency Operations	2,127,114	2,127,114	1,876,003	-251,111

1/ The FY 2016 enduring level includes the transfer of \$7 million from the FY 2016 Economic Support Fund account to the Migration and Refugee Assistance account.

The world is struggling with humanitarian crises that are unprecedented, both in severity and duration. Through the Bureau of Population, Refugees, and Migration (PRM)'s global programs, the U.S. government seeks to protect and assist the world's most vulnerable people including refugees, conflict victims, internally displaced persons (IDPs), stateless persons, and vulnerable migrants. Programs funded through the Migration and Refugee Assistance (MRA) account save lives and ease suffering, uphold human dignity and reflect the American people's steadfast belief in assisting those in need. By also helping to stabilize volatile situations, this assistance forms an essential component of U.S. foreign policy. MRA-funded programs meet basic needs to sustain life; protect and assist to the most vulnerable, particularly women and children; assist refugees with voluntary repatriation, local integration, or permanent resettlement in a third country; and foster the humane and effective management of international migration policies.

The FY 2017 enduring MRA request of \$922.6 million will fund contributions to key multilateral organizations such as the UN High Commissioner for Refugees and the International Committee of the Red Cross, and to non-governmental organizations that address pressing humanitarian needs overseas and resettle refugees in the United States. Programmatically, these resources will focus on areas where OCO has not generally been utilized to date, including for administrative costs and the U.S. Refugee Admissions Program.

The FY 2017 request also includes \$1,876 million under the Overseas Contingency Operations (OCO) heading for humanitarian needs, with a particular emphasis on populations impacted by conflict. Details of the FY 2017 OCO Request for MRA are addressed in the OCO chapter.

Highlights:

- Overseas Assistance (\$307.6 million):** MRA programs aim to save lives and ease suffering, protect vulnerable populations, achieve durable solutions for those displaced by conflict, and exert leadership in the international community. PRM provides humanitarian assistance in response to complex emergencies and protracted displacement, as well as supports the voluntary return and local integration of refugees and IDPs. PRM-supported programs are designed to identify and protect the most vulnerable, such as single heads of households, children, the elderly, and the disabled to ensure that they have equal access to life-sustaining goods and services. Strategies to protect the beneficiaries from harm and to protect their rights are incorporated into multiple sectors including: water, sanitation and hygiene, shelter, food, health and nutrition, education, livelihoods, and camp management. Coupled with diplomatic efforts, these programs seek to: prevent the forcible return of refugees to a place where their lives or freedom would be threatened; negotiate access for humanitarian agencies to operate safely and reach people affected by conflict; resolve protracted

refugee situations; prevent and reduce statelessness; promote adherence to international humanitarian and human rights law; and help vulnerable people maintain their dignity by advocating for opportunities that promote self-sufficiency. In addition, PRM's core support to multilateral partners allows them to respond quickly and effectively when a crisis hits.

- **Refugee Admissions (\$567.5 million):** Resettlement is a key element of refugee protection and an important solution when repatriation and local integration are not possible. The United States has the world's largest resettlement program and welcomes the most vulnerable refugees from many backgrounds. The \$567.5 million will fund international and non-governmental organizations to help refugees and certain other categories of special immigrants to resettle in communities across the United States.
- **Humanitarian Migrants to Israel (\$7.5 million):** This funding helps find durable solutions for populations of concern by maintaining U.S. government support for relocation and integration of Jewish migrants, including those from the former Soviet Union, Eastern Europe, and Africa to Israel.
- **Administrative Expenses (\$40 million):** PRM oversees all programs funded through MRA enduring and OCO appropriations, as well as any funding drawn from the U.S. Emergency Refugee and Migration Assistance (ERMA) account. The \$40 million in funds requested for FY 2017 will ensure strong monitoring and oversight of critical humanitarian programs. The largest portion of administrative expenses will cover the salary, benefits, and travel costs of U.S. direct hire staff, including regional refugee coordinators posted in U.S. embassies around the world.

U.S. Emergency Refugee and Migration Assistance

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
U.S. Emergency Refugee and Migration Assistance	50,000	50,000	50,000	-
Enduring	50,000	50,000	10,000	-40,000
Overseas Contingency Operations	-	-	40,000	40,000

The U.S. Emergency Refugee and Migration Assistance Fund (ERMA) enables the President to provide humanitarian assistance for unexpected and urgent refugee and migration needs. The FY 2017 enduring request of \$10 million will allow the United States to respond quickly to urgent and unforeseen needs of refugees and other populations of concern in areas where Overseas Contingency Operations (OCO) funding has not generally been used to date.

The FY 2017 request for ERMA also includes \$40 million under the OCO heading for needs related to populations impacted by conflict. Details of the FY 2017 OCO request are addressed in the OCO chapter.

Peace Corps

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Peace Corps	379,500	410,000	410,000	-

The FY 2017 budget request for the Peace Corps of \$410 million, of which \$5.5 million is for the Office of Inspector General, will allow the Peace Corps to meet its core goals: to help countries meet their development needs by spearheading progress in those countries and to promote a better understanding of the American people by building bridges between American Volunteers and the peoples of the countries in which they live and work. This request promotes a positive image of the United States and helps our country achieve its international development and citizen diplomacy goals in a cost-effective manner.

This even funding level will enable the Peace Corps to continue to build the necessary infrastructure to support a larger Volunteer population, strengthen the effectiveness of our programs, and implement the President's strategic initiatives, such as expanding Peace Corps' Teaching English as a Foreign Language (TEFL) certificate program. The Peace Corps' FY 2017 budget request will provide support to approximately 7,700 Americans serving abroad as Volunteers in approximately 64 countries.

The Peace Corps takes a unique approach to meeting its development and outreach goals. The agency selects, trains, and supports American Volunteers who live and work in areas that other programs are often unable to reach. Most Volunteers serve for 27 months, integrating into local communities and using their skills and experience to build capacity at the community level so that communities are empowered to solve their development challenges long after the Volunteers have returned home. In addition, the Peace Corps provides targeted assistance in short-term, specialized assignments through Peace Corps Response, a program that matches more experienced individuals with unique assignments that require advanced language, technical, and intercultural skills. Peace Corps Volunteers help promote a better understanding of the United States and its values by serving as grassroots ambassadors around the world.

The Peace Corps works as a force multiplier by partnering with other government agencies to dramatically increase the impact and sustainability of U.S. international development programs. With its unique ability to bring about lasting change in hard-to-reach communities, the Peace Corps is an important partner in a number of whole-of-government and interagency development initiatives, including Let Girls Learn, the President's Emergency Plan for AIDS Relief, the President's Malaria Initiative, and Feed the Future. In FY 2017, the Peace Corps will continue, as well as expand, these partnerships, while seeking further strategic partnerships to leverage the Peace Corps' training and programmatic resources without compromising the agency's independence or mission.

The Peace Corps is closely involved with Let Girls Learn, a whole-of-government initiative designed to help adolescent girls around the world attend and complete school. As part of the U.S. government's commitment to Let Girls Learn, First Lady Michelle Obama and the Peace Corps formed a powerful collaboration that empowers local leaders, elevates existing Volunteer programs, and leverages public and private sector partnerships. In FY 2016, the agency is training thousands of Volunteers and community leaders to design sustainable, grassroots projects that focus on girls' education and development opportunities. Volunteers will receive expanded training in gender analysis skills, in addition to local language and sector-specific technical skills. Also in FY 2016, the Peace Corps' Let Girls Learn program will expand from the initial 13 countries to a total of at least 35 countries, with projected growth to at least 40 countries in FY 2017. Girls' education has benefits that extend far beyond the classroom. Educated girls become higher wage earners and have healthier, better educated families overall, resulting

in benefits not just for girls themselves, but also for their families and communities. Peace Corps Volunteers, who live and work at the grassroots level, are uniquely positioned to support community-led solutions to reduce barriers that prevent adolescent girls from completing their education.

In FY 2017, the Peace Corps will continue implementing our strategic plan to modernize agency operations, strengthen the effectiveness of our programs, and increase our ability to achieve our three goals. The health, safety, and security of Volunteers remain the agency's highest priorities. The Peace Corps continues to implement new policies and programs to dramatically improve the quality of support to Volunteers, particularly in the areas of health, safety, technical training, and program support. In addition, the agency continues to have a greater focus on strategic impact, ensuring that Volunteers are placed in the areas of the world working on projects with the greatest impact.

Following the agency's historic application and recruitment reforms, the new, streamlined process continues to provide an open, transparent process that empowers applicants to choose their country of service and apply to specific programs. As a result, we have seen two consecutive years of substantial increases in the number of applications for two-year service positions, setting a 40-year record in FY 2015. By providing more choice, increased transparency, and reduced uncertainty for those applying to serve, the agency is better positioned to field a Volunteer force that reflects the rich diversity of the American people.

The Peace Corps is now well-positioned to grow its Volunteer force over time, in a gradual and sustainable manner. In FY 2017, Peace Corps will strategically increase the number of Volunteers in a managed and sustained way while maintaining the high quality of its work and support to Volunteers.

Volunteers' service to the United States continues long after they have left the Peace Corps by helping Americans learn about other cultures and peoples. When Volunteers return to the U.S., they are deeply changed by their experience and bring their knowledge, skills, and expertise with them wherever they go. The skills they acquire while serving—whether it be professional growth in cross-cultural settings, a new language, or technical development expertise—are invaluable to the United States, as is the commitment to public service that the Peace Corps instills. Ultimately, the investment made in Volunteers is repaid many times over, at home and abroad.

Millennium Challenge Corporation

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Millennium Challenge Corporation	899,500	901,000	1,000,000	99,000

The Millennium Challenge Corporation (MCC) is requesting \$1,000 million for FY 2017. Funding will support compacts with Lesotho, Nepal, and the Philippines, as well as threshold programs with Sri Lanka and Togo. The increased funding level will allow the agency to expand its poverty-reduction partnerships that incentivize policy reform and leverage private sector investment, leading to sustainable economic growth in the developing world. This level of funding will increase MCC's ability to develop high-impact compacts on an expedited timetable in key regions, and to further share its expertise across the U.S. government. MCC's model relies on rigorous, objective analysis of data and evidence to select partner countries, design cost-effective investments, and measure results. Coupled with disciplined, time-limited, and country-owned implementation, the evidence-led approach ensures the sustainability of project investments. MCC leverages its budget by encouraging business-friendly environments in partner countries and incentivizing countries to reform their laws, policies, and institutions.

Highlights:

MCC was established to both *incentivize reform* and *promote poverty-reducing economic growth* through large-scale projects that address binding constraints in partner countries. The FY 2017 request will allow MCC to achieve a more strategic and lasting impact on the economic development and public policies of eligible countries. Funds will enable MCC to increase the number or sizes of investments funded in the fiscal year, as well as support the objective analysis necessary to ensure selectivity, country-ownership, accountability, learning, and transparency. A higher sustained funding baseline will expand the agency's reach and motivate greater legal, policy, and institutional reforms, improving the environment for strategic MCC assistance and private sector investment. In FY 2017, the request will allow MCC to address constraints to economic growth in deeply impoverished countries by funding a cohort of countries with over 56 million people living on less than \$2 per day. It will also embed the United States more deeply in the fight against poverty in Asia—an economically dynamic and geopolitically important region. In FY 2017, MCC is projecting approval of compacts with Nepal, Mongolia, and the Philippines, as well as Lesotho.

The request also proposes legislative authority for *concurrent* compacts. This authority will allow MCC to pursue a regional approach that can leverage economies of scale, support public goods that cross borders, reduce negative externalities, and achieve potentially higher rates of return. For example, in West Africa, MCC could finance the development of electricity, water, or transport infrastructure and policies to facilitate regional trade. Until MCC has concurrent compact authority, MCC will look for opportunities to invest regionally within its existing authority. In December 2015, MCC's Board of Directors directed the agency to explore investments with regional impact in both Côte d'Ivoire and Senegal to maximize potential returns for each country.

MCC's Data-Led Country Selection and Implementation Processes:

Across its portfolio, MCC emphasizes results and transparency. For all major compact investments, MCC estimates economic rates of return (ERRs) to assess the economic viability and return on proposed investments, and posts the data on its website (www.mcc.gov). MCC also works with partner countries to develop detailed monitoring and evaluation plans for compact programs and tracks the progress of its

compacts and projects against defined benchmarks and outcomes, which are also available on MCC's website.

The first step in the agency's grant-making process is for MCC's Board of Directors to select countries eligible for MCC assistance. To make these determinations, the Board identifies countries below a maximum per capita income level and then assesses their performance on twenty quantified indicators that measure policy performance in three categories: *ruling justly*, *investing in people*, and *economic freedom*. MCC is the only donor agency in the world to base partner selection so heavily and transparently on public, third-party policy performance data. In addition to the policy performance indicators, the Board considers the availability of funds to MCC, the agency's ability to reduce poverty and improve economic growth in a country, and where applicable, the performance of the country in implementing a prior MCC compact. After the Board selects countries as compact eligible, MCC works with them to develop a program of investment. Countries are responsible for identifying and prioritizing their constraints to poverty reduction and economic growth, and conducting consultations across the private sector and civil society to ensure that there is widespread public support for compact investments and that program design is informed by a wide range of viewpoints. MCC uses rigorous economic analysis to inform investment decisions and measures results throughout the entire investment lifecycle. The FY 2017 request will continue support for MCC's disciplined implementation processes, knowledge-sharing efforts across the global development community, easily accessible analyses of closed compacts, and project-level independent evaluations.

Since 2004, MCC has signed 32 compacts and funded 26 threshold program agreements, committing nearly \$12 billion to poverty reduction programs built on measurable and transparent objectives.

Inter-American Foundation

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Inter-American Foundation	22,500	22,500	22,200	-300

The FY 2017 request of \$22.2 million for the Inter-American Foundation (IAF) will enable targeted investments in citizen-led development initiatives in marginalized communities throughout Latin America and the Caribbean. In FY 2017, the IAF will serve U.S. interests by creating economic opportunities, strengthening the practice of democracy, furthering social inclusion, and fostering secure communities. Communities that are productive, secure, inclusive and democratic are better able to address their own problems, including emigration of their children and young people.

The IAF will provide grants and other targeted assistance to support initiatives that create jobs, increase incomes, encourage civic engagement, advance education and training, conserve natural resources, and improve access to basic needs and services in communities that are the foundation for democratic U.S. allies. As part of the U.S. Strategy for Engagement in Central America, the IAF is working in Central America and Mexico to address root causes of migration by improving economic opportunity, citizen security and civic participation. The IAF complements the efforts of other U.S. foreign assistance agencies by contributing its specialized expertise and 44 years of experience investing in the organized poor so that they develop the capacity to advance their own communities, including by helping grassroots groups take advantage of large-scale investments, new markets and trade opportunities. Grantee partners mobilize and contribute their own resources toward their projects. Over the last five years, each dollar invested by the IAF leveraged another \$1.36 from grantee partners and others.

The IAF also collaborates with private and community foundations, private companies and diaspora groups in joint funding initiatives. Through the IAF-initiated business sector network, RedEAmérica, Latin American corporate foundations direct an additional three dollars for every dollar invested by the IAF in select grassroots organizations. This initiative has helped local corporate partners move beyond philanthropic giving to more strategic investments that benefit communities and businesses over the long-term.

The FY 2017 Budget proposes an appropriation near the level enacted in FY 2015 and FY 2016. This will enable the IAF to continue to coordinate with the Department of State and the U.S. Agency for International Development (USAID) to implement the U.S. Strategy for Engagement in Central America and to further refine the IAF's evidence-based evaluation system. The IAF will continue to explore ways to diversify its funding sources by pursuing partnership opportunities with the private sector and other U.S. government agencies.

U.S. African Development Foundation

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
U.S. African Development Foundation	30,000	30,000	28,200	-1,800

The FY 2017 request of \$28.2 million for U.S. African Development Foundation (USADF) programs will provide resources to establish new grants and to support an active portfolio of 350 grants to producer groups engaged in community-based enterprises.

USADF is a federally-funded, public corporation that supports African-led development by connecting grassroots enterprises with seed capital and local technical support. USADF impacts 1,500,000 people each year in underserved communities across Africa. Its innovative small grants program (less than \$250,000 per grant) supports sustainable African-originated business solutions that improve food security, generate jobs, and increase family incomes. In addition to economic impacts to rural populations, USADF programs create a network of in-country technical service providers with expertise critical to advancing Africa's long-term development needs.

USADF furthers U.S. priorities by directing small amounts of development resources to underserved groups in hard to reach, sensitive regions across Africa. USADF ensures that critical U.S. development initiatives such as Feed the Future, Power Africa, and the Young African Leaders Initiative extend past urban areas to rural populations living beyond Africa's growth frontier. USADF uses a cost-effective African led and managed development model to "right size" efforts, directing development resources to rural areas in greatest need and where potential for impact is strong. USADF programs also leverage funds from other donors. By matching U.S. government funds with those from host African governments and/or other private sector foundations, USADF increases the development impact of each tax dollar appropriated. USADF's size and lower-cost operating model makes it a highly flexible, innovative, and effective foreign assistance provider to Africa.

Department of Treasury

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Department of Treasury	23,500	23,500	33,500	10,000
International Affairs Technical Assistance	23,500	23,500	33,500	10,000
Technical Assistance - Enduring	23,500	23,500	33,500	10,000

Treasury Technical Assistance

The FY 2017 request includes \$33.5 million for Treasury's Office of Technical Assistance (OTA), representing a \$10 million increase over the FY 2016 enacted level. The requested increase would be a down payment on Secretary Lew's commitment at the Financing for Development conference (Ethiopia, July 2015) to double OTA assistance by 2020 to support developing countries' domestic resource mobilization and sound public financial management. If received, this significant and critical funding increase will help enable OTA to respond in a quick and sustained manner to the growing international demand for financial technical assistance around the world, thereby supporting U.S. national security, foreign policy, and economic development priorities, including, for instance, supporting the whole of government effort to expand U.S. engagement in Central America.

Debt Restructuring

No funding is requested for the Debt Restructuring account in FY 2017, though the request includes transfer authority to allocate funding for bilateral debt relief under the Heavily Indebted Poor Countries (HIPC) Initiative for Sudan, should it meet the requirements to qualify.

International Narcotics Control and Law Enforcement

(\$ in thousands)	FY 2015 Actual ¹	FY 2016 Estimate ²	FY 2017 Request	Increase / Decrease
International Narcotics Control and Law Enforcement	1,292,250	1,211,496	1,138,013	-73,483
Enduring	853,055	839,846	813,773	-26,073
Overseas Contingency Operations	439,195	371,650	324,240	-47,410

1/ The FY 2015 OCO level includes the transfer of \$4 million from the FY 2015 International Narcotics and Law Enforcement-OCO account to the Economic Support Fund-OCO account.

2/ The FY 2016 enduring level includes the transfer of \$54.975 million from the FY 2016 International Narcotics Control and Law Enforcement account to the Assistance for Europe, Eurasia & Central Asia account.

The FY 2017 International Narcotics Control and Law Enforcement (INCLE) enduring request of \$813.8 million will support country and global programs critical to combat transnational crime, disrupt illicit trafficking, and assist partner nations to build their capacities to extend their reach of justice under the rule of law. INCLE-funded programs seek to close the gaps between law enforcement jurisdictions and strengthen weak or corrupt law enforcement institutions. FY 2017 INCLE funds are focused where civilian security institutions are weak, and are used in tandem with host country government resources in order to maximize impact. INCLE program funds will also support Program Design and Learning in bilateral and regional budgets in order to most effectively conduct evaluations and assessments.

The INCLE request recognizes criminal networks disrupt U.S. trade, licit productivity, and economic opportunities, while creating security vulnerabilities for U.S. citizens around the world. The FY 2017 INCLE request will continue to address national and transnational citizen security concerns in strategically important geographic regions such as the Western Hemisphere, South Central Asia, and the Near East. The request also focuses on emerging threats to stability and regional security in Central Asia and Africa. INCLE funding will also support Program Development and Support administrative costs.

Highlights:

Africa

- **State Africa Regional (\$40 million):** The INCLE request includes funding for two regional initiatives: Combatting Wildlife Trafficking (CWT), and the Security Governance Initiative (SGI). The CWT program supports Presidential Executive Order Number 13648 on combating wildlife crime, the poaching and illegal trade in wild animals and animal parts, by assisting rangers, police, customs officials, prosecutors, investigators, and judiciaries in addressing this growing threat. SGI funding seeks to develop, support, and strengthen criminal justice institutions, including systems, policies, processes, and capabilities to more effectively ensure citizen security and promote the rule of law.

East Asia and the Pacific

- **Burma (\$3 million):** Assistance programs will support Burma's new government in the areas of law enforcement, criminal justice sector reform, and counternarcotics. Justice sector assistance will increase participation of government officials, judges, prosecutors, law enforcement officials, and

civil society in programs intended to facilitate reform. Counternarcotics programs will address the continued rise of poppy cultivation and opium production, drug trafficking, and drug use within Burma through the expansion of counternarcotics efforts in the areas of interdiction and drug demand reduction.

- **Indonesia (\$10.6 million):** Assistance programs in Indonesia will continue to focus on institutional reforms. Specific areas of assistance include national training reform, the development of professional standards and oversight, model police precinct and community engagement, women's leadership development, and improving investigations and forensics capabilities. Funding will strengthen and professionalize criminal justice sector institutions, including police, prosecutors, and judges. In addition to broad reform and institution-building efforts, INCLE programs will support specialized capacity to investigate, interdict, and prosecute money laundering, terrorism, and other transnational crimes. INCLE funding will also support the Indonesian government's counternarcotics efforts and combat wildlife trafficking.
- **Philippines (\$9 million):** Funding for the Philippines will support police training to shore up internal stability and build police investigative capacity in the wake of the transition of law enforcement functions from the military to civilian authorities in the south. Funding will also support ongoing capacity building and skills training for maritime law enforcement actors with a particular focus on the operational capacity of the Philippines Coast Guard and Philippines National Police Maritime Group to develop and deliver basic, specialized, and advanced maritime law enforcement training as well as modest infrastructure and equipment support. In the justice sector, programs will continue to promote greater access to the rule of law and facilitate criminal justice sector reform.
- **Vietnam (\$4.5 million):** Funding will support maritime law enforcement by providing training and equipment to Vietnamese Coast Guard (VCG) officers, as well as constructing regional training centers for the VCG. Training will enhance Vietnamese law enforcement officials' awareness of and capacity to counter transnational crime including wildlife, human, and drug trafficking, as well as other environmental crimes. INCLE funding will provide training and technical assistance to Vietnamese law enforcement agencies and training academies to expand their capacity to conduct evidence-based investigations and provide basic citizen security in a manner that respects human rights. Funds will also be used to strengthen and provide specialized training at police academies and training institutions. In the justice sector, funds will support capacity building and specialized skills training for prosecutors, defense lawyers, and the judiciary. Funds will also be used to provide technical assistance during the drafting of new legislation pertaining to law enforcement and/or the courts.
- **State East Asia and Pacific Regional (\$5.9 million):** Regional assistance programs aim to strengthen cooperation among law enforcement and other criminal justice sector professionals in the areas of security sector reform, cybercrime, counternarcotics, and rule of law, and will target a broad range of officials to build the capacity of authorities to address transnational criminal threats. Funding will also support regional maritime efforts to improve interoperability and coordination on maritime law enforcement issues, including curricula development, workshops, and training programs for management planning and operational activities. Regional assistance projects will complement ongoing efforts in the region and may incorporate bilateral assistance activities in regionally-funded programs.

Europe and Eurasia

- **Kosovo (\$9.5 million):** INCLE assistance helps Kosovo implement effective, professional, accountable, transparent, and accessible legal and law enforcement services strongly grounded in rule of law. Funding will support programs designed to build institutional capacity within the Kosovo Policy and Ministry of Internal Affairs. INCLE funds will also support the implementation of legal reform, training for judges and prosecutors, legal education, and access to justice. In addition, these funds will be used to promote the normalization and integration of the parallel court structure in Northern Kosovo.

Near East

- **West Bank and Gaza (\$35 million):** Security in the West Bank will remain a key component of Middle East peace negotiations. INCLE funding will continue to build the capacity of the Palestinian Authority (PA) security sector and sustain the capabilities of the PA Security Forces (PASF). Modest programming will support the PA Ministry of Interior to improve its ability to manage and provide oversight over the security forces. To build toward the self-sufficiency of the PASF, emphasis will be placed on technical assistance, including a spectrum of training and limited infrastructure support, along with replenishing worn security force equipment. Programming will also support the justice and corrections sectors to ensure their development keeps pace with the rising performance of the security forces.

Western Hemisphere

- **Colombia (\$143 million):** The Colombian government and the oldest and largest left-wing rebel group, the FARC, will likely sign a final peace accord in early 2016. Helping Colombia consolidate its peace accord implementation would cement a major bipartisan U.S. foreign policy success and position Colombia to expand its support for U.S. foreign policy priorities, including regional security cooperation. Increased FY 2017 assistance will focus on helping Colombia consolidate advances in security, public services, and victims' assistance in conflict-affected municipalities in the year after an accord is signed. Funding will provide U.S. support for Colombian-led efforts to expand security, reduce drug trafficking and the cultivation of illicit crops, and increase access to government services through a comprehensive approach in conflict zones and priority rural areas. INCLE resources will largely support the capacity of the Colombian National Police (CNP) to assume additional security responsibilities – especially in rural areas – as well as to investigate and arrest illegal criminal organizations. Funds will also build the capacity of the Colombian government to export its security-expertise and training to third countries, primarily in Central America and the Caribbean. Support for interdiction efforts with the CNP and Colombian Navy and Coast Guard will continue to prevent the trafficking of multiple metric tons of drugs to the United States and weaken drug trafficking organizations. FY 2017 INCLE funding will also support Colombia's judicial institutions, enhancing the protection of human rights and developing local capacity to investigate, prosecute, and adjudicate complex criminal cases.
- **Mexico (\$80 million):** With the FY 2017 INCLE request, the United States and Mexican governments will continue to focus on institutionalizing the rule of law, disrupting and dismantling criminal organizations, creating a 21st century border, including Mexico's southern border, and building strong and resilient communities through the Merida Initiative. INCLE-funded programs will focus on supporting Mexico's rule of law institutions through training, technical assistance, and limited equipment purchases. Programs will continue to provide assistance to federal and state criminal justice institutions, including law enforcement, prosecutorial, judicial, and corrections institutions.

- **Peru (\$33.5 million):** The FY 2017 INCLE request will support efforts by the Government of Peru to combat the illicit drug industry, including efforts to extend state presence in the Monzon region as well as the Apurimac, Ene, and Mantaro River Valleys in order to oppose drug traffickers and criminal networks, including those aligned with the Shining Path terrorist group. In support of the Government of Peru's robust national program, FY 2017 INCLE funds will support drug interdiction and coca eradication operations, improved controls at ports and airports, judicial reform, drug demand reduction, police academies, and training on community policing.
- **State Western Hemisphere Regional (\$225 million):** INCLE funding will support the Central America Regional Security Initiative (CARSI) (\$205 million) and the Caribbean Basin Security Initiative (CBSI) (\$20 million).

As part of the \$1 billion inclusive whole-of-government approach to support the U.S. Strategy for Engagement in Central America, INCLE funding will promote governance, and security in the region, especially in the Northern Triangle countries. The Strategy complements the work undertaken by national governments and multilateral development banks, to support the priority objectives identified by the Northern Triangle countries of El Salvador, Guatemala, and Honduras in their Alliance for Prosperity Plan. The FY 2017 request includes and aligns the resources necessary to continue to comprehensively increase economic opportunity, reduce extreme violence, and strengthen the effectiveness of state institutions, addressing challenges that have resulted in an influx of migration from the region, largely from El Salvador, Guatemala, and Honduras. CARSI activities will include: extension of Model Police Precincts and the place-based strategy in coordination with USAID; in-service training and capacity enhancements of law enforcement personnel including anti-gang and transnational crime task forces; strengthening security and justice institutions to address transnational crime through joint police-prosecutor task forces; land border and maritime interdiction; regional aviation; and efforts to combat impunity. Increased emphasis will also be given to activities that support civil society through access to justice, protection of human rights, anticorruption, community engagement and support to justice system actors, with a particular focus on programs that address the insecurity and lack of opportunity driving increased migration.

In support of CBSI, INCLE funding will continue efforts to combat illicit trafficking and organized crime, increase port and border security, and strengthen the rule of law through training and technical assistance. Funding will promote information sharing and collaboration among CBSI partner nations, while enhancing the capacity of criminal justice and security institutions.

Centrally Managed Programs

- **Anti-Crime Programs (\$18.1 million):** Funding will support efforts to address alien smuggling and border security, money laundering and financial crimes, cybercrime and intellectual property rights, corruption and kleptocracy, and transnational organized crime. Consistent with the President's National Strategy for Combating Wildlife Trafficking, a portion of the transnational organized crime funding will support programs to reduce wildlife trafficking globally, including strengthening policies and legislative frameworks, enhancing investigative and law enforcement functions, supporting cross-border law enforcement cooperation, and developing capacities to prosecute and adjudicate wildlife crimes and related corruption.
- **Demand Reduction (\$12.5 million):** Funds will address pressing regional and global drug-related threats posed by methamphetamine, opiates such as heroin and opium, crack cocaine, and high-risk drug-using behavior that promote HIV/AIDS. Funding supports an innovative training model to

certify addiction counselors, sub-regional training centers that disseminate best-practice approaches; drug-free community coalitions that target illegal drugs; research and demonstration that improve women's treatment and minimize child addiction; and the development of scientific and technical methods to better detect, quantify, and understand drug use and its health-related consequences.

- **International Law Enforcement Academy (ILEA) (\$27 million):** Funds will support existing ILEAs in Bangkok, Budapest, Gaborone, Roswell, San Salvador, and the Regional Training Center (RTC) in Accra. These funds will support programs that focus on institution and capacity building within the criminal justice sector of 85 participating countries, and build regional networks to combat transnational organized crime. Additionally, funds made available to support the Shared Security Partnership initiative will be used to support emerging regional security priorities in West Africa to enhance regional criminal justice institutions on priority areas such as anticorruption, anti-money laundering, and advanced criminal investigations, as well as support enhanced program monitoring and evaluation programs.
- **Inter-regional Aviation Support (\$38.5 million):** FY 2017 funds will sustain centralized aviation services in support of INL's overseas aviation programs including central management and oversight of technical functional areas such as operations; training; flight standardization; safety; maintenance; and logistics; and a centralized system for acquiring, storing, and shipping parts and commodities in support of all of these overseas locations. This program provides professional aviation services to INL's programs overseas, including counternarcotics and border security program elements in the Stabilization Operations and Security Sector Reform program area.
- **Program Development and Support (\$34.1 million):** Funding will provide for limited personnel costs, including contract personnel, travel, and minimal support services to design, implement, monitor, evaluate and oversee INCLE programs.

Office to Monitor and Combat Trafficking in Persons (\$20.7 million)

- INCLE funds managed by the Office to Monitor and Combat Trafficking in Persons (J/TIP) will help stimulate governments to take action towards the eradication of trafficking in persons through criminal justice sector improvements including developing comprehensive legislation, strengthening anti-trafficking laws and enforcement strategies, training criminal justice officials on those laws and practices and how to implement them, supporting protection and assistance services to victims, developing victim-centered identification and assistance protocols and practices, and developing and implementing anti-trafficking public awareness campaigns. J/TIP's funding priorities are guided by the findings of the annual *Trafficking in Persons Report (TIP Report)*, with the goal of assisting those countries on the lower tiers of the *TIP Report* (Tier 2, Tier 2 Watch List, and Tier 3) to achieve compliance with the Trafficking Victims Protection Act's minimum standards for the elimination of trafficking in persons. Resources are directed to countries that demonstrate political will to address the deficiencies noted in the *TIP Report*, but lack the economic resources and technical expertise to do so. In FY 2017, J/TIP looks to continue its commitments in the Asia region in order to stay aligned with the Administration's rebalance to Asia.

Details of the FY 2017 OCO Request for INCLE are addressed in the OCO chapter.

Nonproliferation, Anti-Terrorism, Demining and Related Programs

(\$ in thousands)	FY 2015 Actual ¹	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Nonproliferation, Anti-Terrorism, Demining and Related Programs	681,500	885,472	668,450	-217,022
Enduring	586,260	506,381	454,196	-52,185
Overseas Contingency Operations	95,240	379,091	214,254	-164,837

	FY 2015 Emergency Funding Actual, P.L. 113-235
Ebola Response and Preparedness	5,300

1/ The FY 2015 OCO level includes the transfer of \$4 million from the FY 2015 Nonproliferation, Antiterrorism, Demining and Related Programs-OCO account to the Economic Support Fund-OCO account.

The FY 2017 Nonproliferation, Anti-Terrorism, Demining and Related Programs (NADR) request will support a broad range of U.S. national interests through critical, security-related programs that reduce threats posed by international terrorist activities; landmines, explosive remnants of war (ERW) and stockpiles of excess conventional weapons and munitions; nuclear, chemical, and biological weapons of mass destruction (WMD); and other destabilizing weapons and missiles, including Man-Portable Air Defense Systems (MANPADS) and their associated technologies. The enduring request for NADR is \$454.2 million and an additional \$214.3 million is requested in NADR OCO.

Highlights:

Nonproliferation Activities

- The voluntary contribution to the International Atomic Energy Agency (IAEA) (\$89.8 million) supports programs that promote nuclear safeguards, nuclear safety and security, nuclear energy, and the peaceful use of nuclear science technologies. This level includes funding to support IAEA verification activities.
- The Global Threat Reduction (GTR) program (\$67 million) supports tailored activities worldwide aimed at reducing the threat of terrorist or state acquisition of WMD materials and expertise. Initiatives include strengthening the capacity to disrupt and deter chemical terrorism, enhancing the security of dangerous pathogens, and reducing insider nuclear threats.
- The Export Control and Related Border Security program (EXBS) (\$41.5 million) seeks to prevent states and terrorist organizations from acquiring WMD, their delivery systems, and destabilizing conventional weapons by helping partner countries to develop comprehensive strategic trade control and related border security systems. The program builds partner country capacity to ensure that transfer authorizations support only legitimate trade, and to detect and interdict illicit transfers at borders. Funding for some EXBS programs is requested in OCO, as detailed in the OCO chapter.
- Contributions to the Comprehensive Nuclear-Test-Ban Treaty Organization (\$32 million) help to fund the fielding, operation, and maintenance of the worldwide International Monitoring System as well as

Preparatory Commission activities, including the development of the On-Site Inspection element of the Treaty's verification system. This amount also includes funding for projects to increase the effectiveness and efficiency of the Treaty's verification regime.

- The Nonproliferation and Disarmament Fund (NDF) (\$20 million) develops, negotiates, and implements carefully-vetted programs to destroy, secure, or prevent the proliferation of WMD and related materials and delivery systems, and destabilizing conventional weapons. NDF undertakes rapid-response activities to reduce threats that are unforeseen and unanticipated around the globe.
- The Weapons of Mass Destruction Terrorism (WMDT) program (\$6.2 million) undertakes specialized, targeted projects to enhance global capabilities to prevent terrorist acquisition and use of nuclear/radioactive materials. WMDT accomplishes this through the Global Initiative to Combat Nuclear Terrorism (GICNT) and the Counter Nuclear Smuggling Program (CNSP), which helps improve capabilities in key countries to prevent, detect, and respond to nuclear terrorism and nuclear smuggling. WMDT also maintains the web-based Global Initiative Information Portal, which is the GICNT's secure communications system used by partners to share information and support GICNT activities.

Antiterrorism Activities

- Antiterrorism Assistance (ATA) bilateral and regional programs (\$58.7 million) provide training, consultations, equipment, infrastructure, and mentoring/advising to help partner nations deal effectively with security challenges within their borders, defend against threats to national and regional stability, and deter terrorist operations across borders and regions. ATA capacity-building includes, but is not limited to, strengthening law-enforcement counterterrorism investigations, bomb detection and disposal, critical-incident management, dignitary protection, airport and border security, hostage negotiation, and cyber security. ATA capacity-building is specifically designed to foster increased respect for human rights and the rule of law. The requested funds will build upon productive and strategic existing partnerships with countries including Kenya, Indonesia, the Philippines, and a number of other countries. Funding requested in ATA for Countering Violent Extremism (CVE) programming is part of the State Department's broader efforts to increase our partner's capabilities to effectively counter the drivers of violent extremism. Specifically, NADR funds will be used to build the capacities of partner country law enforcement institutions to work with at-risk communities, civil society groups, and others to advance counter-radicalization and counter-recruitment efforts. Programs also build the capacity of correctional institutions and their partners to rehabilitate and reintegrate violent extremist offenders. Funding for some ATA programs is requested in OCO, as detailed in the OCO chapter.
- The Terrorist Interdiction Program/Personal Identification, Secure Comparison, & Evaluation System (TIP/PISCES) program (\$30 million) provides state-of-the-art computerized screening systems, periodic hardware and software upgrades, and technical assistance and training to partner nations that enable immigration and border control officials to quickly identify suspect persons attempting to enter or leave their countries. The request provides funds for the deployment of PISCES installations, including biometric enhancements, to critical partner and candidate nations vulnerable to terrorist travel. As foreign fighters continue to travel to Syria and Iraq, the threat of their return to their home countries or to other conflict zones makes TIP programs increasingly key to safeguarding our partners and the homeland. Worldwide, an estimated over 300,000 travelers are processed through PISCES-equipped border control sites every day in 22 high-counterterrorism-priority countries. The funding also supports research, development and testing of enhanced capabilities to address evolving United States and host nation requests for customized interfaces with local and international databases, as well as deployment of portable and mobile PISCES systems for remote locations

lacking infrastructure, while ensuring that the PISCES system maintains standards in accordance with international norms. Funding for some TIP programs is requested in OCO, as detailed in the OCO chapter.

- The Counterterrorism Financing (CTF) program (\$10 million) builds the capacity of frontline partner-nations to detect, disrupt, and dismantle terrorist financing networks. CTF funding will provide bilateral and multilateral program funds directed at key countries to assist them to develop anti-money laundering (AML) and CTF programs. Programs are focused on: strengthening legal frameworks; assisting financial regulatory systems to meet international standards; ensuring that countries' financial intelligence units are able to detect, analyze, and disseminate information about illicit financial flows moving through their formal and informal financial entities; improving the skills of police to investigate financial crimes linked to terrorism; training lawyers, prosecutors, and judges on how to best adjudicate these crimes; and, lastly, improving the cooperation between our countries on terrorist financing cases.
- The Counterterrorism Engagement (CTE) program (\$5 million) supports key bilateral, multilateral, and regional efforts to build political will among foreign government officials and civil societies to address shared counterterrorism challenges. By working with other government agencies and nongovernmental organizations, CTE programs support initiatives and training, including through the United Nations and regional bodies, to promote the rule of law and human rights while countering terrorism and raising awareness of the UN Global Counterterrorism Strategy and implementation of UN counterterrorism resolutions. This funding will also support activities of the Global Counterterrorism Forum, a multilateral platform for senior counterterrorism policymakers and experts to engage on a sustained basis to build and mobilize the expertise and resources needed to identify and address critical civilian counterterrorism capacity-building challenges in key regions and countries around the globe. CTE funding will also go towards supporting the International Institute for Justice and the Rule of Law (IIJ) in Malta program, which provides rule of law-based training to lawmakers, police, prosecutors, judges, corrections officials, and other justice sector stakeholders on how to address terrorism and related transnational criminal activities within a rule of law framework. Although the IIJ's mandate is global in nature, it focuses on countries in North and sub-Saharan Africa, and the Middle East, paying particular attention to supporting countries in transition.

Regional Stability and Humanitarian Assistance

- The Conventional Weapons Destruction (CWD) program (\$94.1 million) will continue to advance U.S. efforts to secure and combat the illicit proliferation of small arms/light weapons (SA/LW), including MANPADS and other advanced conventional weapons systems, and to clear land contaminated with landmines and ERW. CWD activities mitigate security and public safety risks associated with excess, obsolete, unstable, or poorly-secured/maintained weapons and munitions stockpiles, including MANPADS, by assisting countries with destruction programs, improving physical security at storage facilities, and enhancing stockpile management practices. CWD also confronts the dangers posed by landmines and other ERW by surveying hazard areas, clearing landmines and ERW from affected areas, educating vulnerable populations, and assisting victims. CWD priorities for FY 2017 include improving the security and safety of existing stockpiles and reducing excess, unstable, and poorly secured stockpiles, including stockpiles of MANPADS, that threaten the life and property of U.S. citizens and U.S. allies; preventing illicit SA/LW proliferation; continuing clearance of U.S.-origin ERW in Southeast Asia and the Pacific; expanding mine clearance activities in Colombia in support of peace; and reducing the threat of illicitly-held by non-State Actors of Concern or at-risk MANPADS through safe and effective destruction efforts. Funding for some CWD programs is requested in OCO, as detailed in the OCO chapter.

Details of the FY 2017 OCO Request for NADR are addressed in the OCO chapter.

Peacekeeping Operations

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Peacekeeping Operations	473,691	600,630	475,391	-125,239
Enduring	144,993	131,361	126,291	-5,070
Overseas Contingency Operations	328,698	469,269	349,100	-120,169

The FY 2017 enduring request for Peacekeeping Operations (PKO) of \$126.3 million supports critical programs to bolster the peacekeeping capacity of partner countries, enhance maritime security, and promote security sector governance and reform, as well as provides support for the ongoing mission of the Multinational Force and Observers (MFO) mission in the Sinai. Funds for monitoring and evaluation efforts to help evaluate the effectiveness of PKO-funded programs are also included in the request.

Highlights:

- Global Peace Operations Initiative (GPOI) (\$61 million):** FY 2017 funds will continue to support U.S. contributions to international peacekeeping capacity building by providing training, equipment, and other support for peacekeeping troops, with a focus on strengthening partner country capabilities to train their own peacekeeping units and achieve self-sufficiency. Funds will also support the deployment of troops to peace operations, enabling countries to more rapidly respond to conflict-related crises worldwide. The requirements and standards for peace operations have continued to expand as missions have become more complex. Therefore, FY 2017 funds will be used to continue to address significant capacity shortfalls in the UN's and regional organizations' peace operations, with a particular focus on enabling capabilities. Funds will also continue to support efforts to increase the effectiveness of UN and regional operations, including better protecting civilians in areas of armed conflict and addressing gender issues in peacekeeping. Finally, funds will continue an evaluation and metrics mechanism, including measures of effectiveness, to ensure GPOI is achieving its goals efficiently and effectively.
- Multinational Force and Observers (MFO) (\$34.5 million):** The FY 2017 request includes funds to continue the U.S. contribution to the MFO mission in the Sinai, which supervises the implementation of the security provisions of the Egyptian-Israeli Peace Treaty, a fundamental element of regional stability.
- Security Governance Initiative (SGI) (\$14 million):** Funds will support defense sector reform efforts with the governments of the six SGI countries (Ghana, Kenya, Mali, Niger, Nigeria, and Tunisia) through the new SGI program, announced at the 2014 U.S.-Africa Leaders Summit. Funds will concentrate on institutional reform, with a heavy focus on the proper role of the military, civil-military relations, and respect for human rights. Support may include training, advisory support and potential refurbishment of facilities.
- Maritime Security Technical Experts Program (MSTEP) (\$0.5 million):** Funds will support a new global maritime security program to provide maritime security advisory support to priority countries globally. MSTEP will temporarily place subject matter experts overseas to help foreign partners address key national level maritime security needs. In coordination with country teams and interagency partners, MSTEP advisors will assist in strengthening maritime security governance and administration at ministerial to technical expert levels with the intent to shape and complement

subsequent and more specific security assistance programs. MSTEP will reach throughout the U.S. government to retain appropriate maritime security advisor experts.

- **Africa Regional (\$16.3 million):** FY 2017 funds will be used to support the following programs:
 - o *Africa Conflict Stabilization and Border Security (AC SBS) (\$8.3 million):* Funds will continue to support efforts to address regional crises on the African continent; provide monitoring teams, advisory assistance, training, logistical support, infrastructure enhancements, and equipment; and support civil society engagement in the security sector as well as the military component of broader security sector reform efforts. Funds will also support operations and maintenance and recapitalization of the Logistics Depot in Freetown, Sierra Leone and counterpoaching capacity building activities. Funds may also support targeted peacekeeping requirements in Mali and other high priority missions on the continent.
 - o *African Union Rapid Deployment Capability (\$3 million):* The FY 2017 request will support training, advisory and non-lethal equipment support to enable the African Union headquarters to more quickly deploy to crisis operations.
 - o *Africa Military Education Program (AMEP) (\$3 million):* The FY 2017 request will support professionalization at the institutional level of select African partner nations. This program will complement, but not duplicate, the International Military Education Training program, which focuses primarily on direct training of African military and select civilian personnel primarily in the United States. AMEP funds will provide training, advisory support, and potentially equipment and supplies to African military training institutions to enhance their ability to professionalize their militaries, including an appreciation of civilian control of the military, respect for the rule of law, and human rights.
 - o *Africa Maritime Security Initiative (AMSI) (\$2 million):* Funds will be used to continue developing African maritime security capabilities through the provision of regional training activities (including the training component of the Department of Defense's Africa Partnership Station program) and provide modest training equipment. By enhancing U.S. partners' maritime enforcement capabilities, the effort helps to develop African maritime forces that can better respond to piracy, terrorist activity, illegal fishing, environmental threats, and trafficking in drugs, arms, and humans.

Details of the FY 2017 Overseas Contingency Operations (OCO) request for PKO are addressed in the OCO chapter.

International Military Education and Training

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
International Military Education and Training	106,074	108,115	110,300	2,185

The FY 2017 request for the International Military Education and Training (IMET) program is \$110.3 million. As a key component of U.S. security assistance, IMET promotes regional stability and defense capabilities through professional military education (PME) and training, including technical courses and specialized instruction conducted at U.S. military schoolhouses or through mobile education and training teams abroad. IMET provides students from allied and friendly nations with valuable training and education on U.S. military practices and standards and exposes students to the concepts of democratic values and respect for internationally-recognized standards of human rights. IMET serves as an effective means to strengthen military alliances and international coalitions critical to U.S. national security goals. IMET also helps to develop a common understanding of shared international challenges, including terrorism, and fosters the relationships necessary to counter those challenges in a collaborative manner.

Highlights:

- **Africa (\$17.9million):** IMET programs for Africa focus on professionalizing defense forces in support of efforts to respond to regional crises and provide for long-term stability on the continent. Major IMET programs include Kenya, Nigeria, Senegal, Ghana, Uganda, and South Africa – states critical to long-term regional peace and stability.
- **East Asia and the Pacific (\$11.5 million):** IMET programs in East Asia and the Pacific focus on professionalization and English language training which enables not only interoperability with U.S. forces but also their participation in regional and international peacekeeping missions. IMET courses also support building partner maritime security capability and respect for the rule of law, human rights, and civilian control of the military. Priority recipients include Indonesia, Mongolia, the Philippines, and Vietnam.
- **Europe and Eurasia (\$31.4 million):** IMET programs for this region enhance regional security and interoperability among U.S., NATO, and European armed forces. Importantly, these programs help to ensure that those nations that operate alongside the United States have officers that understand and appreciate the doctrine and operational tactics of the U.S. military. The largest programs include key strategic partners such as Turkey, Ukraine, Georgia, and Bulgaria.
- **Near East (\$18 million):** IMET programs for the Near East include critical countries, such as Egypt, Iraq, Jordan, Lebanon, Morocco, Oman, and Tunisia. Programs focus on enhancing professionalism, providing the technical training necessary to maintain U.S.-origin equipment, and increasing awareness of international norms of human rights and civilian control of the military, topics critical for the development of security forces in the region in a time of change.
- **South and Central Asia (\$12.9 million):** IMET programs in South and Central Asia focus on professionalizing the defense forces of regional partners, with a particular emphasis on English language training and respect for the rule of law, human rights, and civilian control of the military. Major IMET programs in this region include Pakistan, India, and Bangladesh.

- **Western Hemisphere (\$13.2 million):** IMET programs in the Western Hemisphere focus on professionalizing defense forces, institutionalizing respect for human rights and the rule of law, and enhancing the leadership and technical ability of partner nations to protect national territory and maritime borders against transnational threats. Priority programs include Colombia, Mexico, and the Northern Triangle countries of Central America.

Foreign Military Financing

(\$ in thousands)	FY 2015 Actual ¹	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Foreign Military Financing	5,865,946	6,025,698	5,713,963	-311,735
Enduring	5,014,109	4,737,522	4,701,813	-35,709
Overseas Contingency Operations	851,837	1,288,176	1,012,150	-276,026

1/ The FY 2015 OCO level includes the transfer of \$14.583 million from the FY 2015 Foreign Military Financing-OCO account to the Economic Support Fund-OCO account.

The FY 2017 enduring request of \$4,701.8 million for Foreign Military Financing (FMF) furthers U.S. interests around the world by helping ensure that coalition partners and friendly foreign governments are capable of working towards common security goals and sharing burdens in joint missions. FMF promotes U.S. national security by contributing to regional and global stability, strengthening military support for democratically-elected governments, and countering transnational threats, including terrorism and trafficking in narcotics, weapons, and persons. Increased military capabilities establish and strengthen multilateral coalitions with the United States and enable friends and allies to be interoperable with U.S., regional, and international military forces. Additional funding is requested in Overseas Contingency Operations (OCO).

Highlights:

- Africa (\$23.8 million):** In Africa, assistance will support defense reform, enhance counterterrorism and maritime security capabilities, promote interoperability, and expand recipient countries' capacity to participate in peacekeeping operations. FMF will strengthen security cooperation through support provided through regional programs as well as through bilateral engagement with Djibouti, Ethiopia, Ghana, Kenya, Nigeria, Senegal, and South Africa. Increased funding for regional programs will focus on sustaining counterterrorism investments. FMF funding for Liberia is requested in OCO.
- East Asia and the Pacific (\$86.6 million):** Assistance will meet security challenges by enhancing ties with allies and partners. Programs will demonstrate U.S. commitment to priority regional security concerns of enhancing maritime security and freedom of navigation; disaster response; enabling troop-contributing countries to participate in peacekeeping and coalition operations; increasing educational opportunities and English language capacity in support of deeper partnership with the United States; developing mutual understanding; and building the professionalization of partner nations' security forces, including strengthening democratic values and respect for human rights.
- Europe and Eurasia (\$37.3 million):** In Europe and Eurasia, FMF assistance furthers defense reform, military modernization, and interoperability of recipient country armed forces with the United States and NATO. A key focus of the program is helping ensure our European allies and partners, including Poland, Romania, and Bulgaria, are ready and capable to undertake and sustain overseas deployments and peacekeeping missions, lessening the burden on U.S. forces. FMF funding for Georgia, Ukraine, Moldova, and Europe and Eurasia Regional is requested in OCO.
- Near East (\$4,410 million):** The majority of FY 2017 FMF funding will provide continued assistance to the Middle East and North Africa region, including support for Israel in accordance with

the Memorandum of Understanding. This request continues assistance to Egypt to further our shared security interests and protect key U.S. regional and strategic interests, including counterterrorism and border security, safe commercial and military transit through the Suez Canal, regional military access enhanced by U.S. overflight of Egyptian air space, and maintenance of the Peace Treaty with Israel. FMF funding will also continue support for programs that consolidate gains in the development of counterterrorism capabilities and professional militaries in Morocco and Bahrain. FMF funding for Iraq, Jordan, Lebanon, and Tunisia is requested in OCO.

- **South and Central Asia (\$2.8 million):** In South Asia, assistance for Bangladesh, the Maldives, and Sri Lanka will promote the professionalization of security forces with a particular focus on building land and maritime border security and disaster response capabilities. FMF funding for Central Asia Regional, Nepal, and Pakistan is requested in OCO.
- **Western Hemisphere (\$71.3 million):** FMF in the Western Hemisphere supports our partners' efforts to control national territory, modernize defense forces, and secure the southern approaches to the United States. FMF funding for Central America will support partner efforts to control national territory and borders, denying safe havens and operating areas to transnational criminal organizations (TCO) and others who drive violence and other illicit activity that threatens the security of our partners. FMF for Central America will also address security sector reform to ensure that at the strategic, operational, and tactical levels each country has the ability to manage, plan and carry out their border and maritime missions in the most effective manner to counter TCOs. These activities directly support two lines of action in the Administration's whole-of-government Strategy for U.S. Engagement in Central America: enhancing security through continued and expanded Central America Regional Security Initiative (CARSI) activities, and promoting improved governance. FMF will continue to support Colombia's efforts to ensure that its security gains are irreversible and support the transition of the bilateral relationship toward that of a strategic partnership in a post-accord environment. FMF will also support Mexico's efforts to control national territory and enhance cooperation with the United States. FMF support through the Caribbean Basin Security Initiative (CBSI) will continue to build maritime security and support efforts in the region to identify, track and address transnational threats, such as illicit narcotics trafficking.

In addition to the regional highlights above, \$70 million will be used for administrative expenses including monitoring and evaluation efforts.

Details of the FY 2017 OCO Request for FMF are addressed in the OCO chapter.

Special Defense Acquisition Fund

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Special Defense Acquisition Fund	100,000	900,000	900,000	-
Offsetting Collections	-100,000	-900,000	-900,000	-
Net Cost for Special Defense Acquisition Fund	-	-	-	-

All funding to support the annual obligation limitation is derived from offsetting collections. Actual obligations and collections may be lower than the enacted limitation amount.

The Special Defense Acquisition Fund (SDAF) allows the United States to better support coalition and other partners, including those participating in U.S. overseas contingency and other operations, by expediting the procurement of defense articles for provision to foreign nations and international organizations.

The FY 2017 request reflects an additional \$900 million in new SDAF obligation authority, to be funded by offsetting collections. In FY 2017, offsetting collections will be derived from SDAF sales of stock as well as other receipts consistent with section 51(b) of the Arms Export Control Act. The FY 2017 request will support advance purchases of high-demand equipment that have long procurement lead times. Long procurement lead times are often the main limiting factor in our ability to provide coalition partners with critical equipment to make them operationally effective in a timely manner. Improving the mechanism for supporting U.S. partners is a high priority for the Departments of State and Defense.

Multilateral Assistance

(\$ in thousands)	FY 2015 Actual ^{1, 2, 3, 4}	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Multilateral Assistance	2,770,814	2,628,969	2,617,921	-11,048
International Organizations and Programs	340,010	339,000	332,900	-6,100
International Development Association	1,287,800	1,197,128	1,384,072	186,944

Central America and Caribbean Catastrophe Risk Insurance Program	-	-	12,500	12,500
Global Infrastructure Facility	-	-	20,000	20,000

1/ The FY 2015 level includes the transfer of \$4.16 million from the FY 2015 International Organizations & Programs account to the Global Health Programs - USAID account.

2/ Sec. 7060(d)(2) of the Consolidated and Further Continuing Appropriations Act, 2015 includes authority for a contribution to GAFSP from bilateral assistance if such contribution will not cause the United States to exceed 33 percent of total contributions.

3/ FY 2015 includes the transfer of \$16.607 million from the Economic Support Fund account to the Clean Technology Fund in accordance with sec. 7060(c)(8) of the Consolidated and Further Continuing Appropriation Act, 2015.

4/ FY 2015 includes the transfer of \$13.3 million from the Economic Support Fund account to the Strategic Climate Fund in accordance with sec. 7060(c)(8) of the Consolidated and Further Continuing Appropriation Act, 2015. FY 2016 includes the transfer of \$9.72 million from the Economic Support Fund to the Strategic Climate Fund in accordance with sec. 7060(c)(5) of the Consolidated Appropriation Act, 2016.

International Organizations and Programs (IO&P)

The FY 2017 request of \$332.9 million for the International Organizations and Programs (IO&P) account will advance U.S. strategic goals across a broad spectrum of critical areas by supporting and enhancing international coordination as well as leveraging resources from other countries. From this account, the

United States provides voluntary contributions to international organizations. Such contributions help accomplish transnational goals where solutions to problems can best be addressed globally, such as protecting the ozone layer or safeguarding international air traffic. In other areas, such as development programs, the United States can multiply the influence and effectiveness of its own assistance through support for international programs that are attracting additional resources from other donors, thereby leveraging other donors' contributions to advance U.S. strategic goals.

Highlights:

- **United Nations Children's Fund (UNICEF) (\$132 million):** UNICEF acts as a global champion for children and strives to ensure the survival and well-being of children throughout the world. U.S. voluntary contributions support the core budget of UNICEF, which provides goods, and services directly to the world's most disadvantaged and marginalized children and their families, and contributes to the development of local institutional capacity to help them.
- **United Nations Development Program (UNDP) (\$60 million):** UNDP is the primary development agency of the UN, working in over 130 countries. UNDP's work in promoting stability and peaceful political and economic transitions in countries facing challenges and crises helps to advance U.S. development priorities and national interests by strengthening America's foreign policy impact on our strategic challenges.
- **United Nations Population Fund (UNFPA) (\$35 million):** UNFPA advances the U.S. government's strategic foreign policy goals to reduce poverty, improve the health of women and their families, prevent HIV/AIDS, address gender-based violence, and provide voluntary family planning assistance worldwide. With programs in over 150 countries, UNFPA is the largest multilateral provider of family planning, reproductive health, and maternal health services which are key elements of global health and contribute to the U.S. comprehensive strategy for sustainable development.

Multilateral Development Banks

Treasury requests \$105.3 million for annual general capital increase (GCI) commitments at the multilateral development banks (MDBs). GCI payments for the African Development Bank (AfDB) are scheduled to continue through FY 2019. GCI payments for the North American Development Bank (NADB) are scheduled to continue through FY 2021. FY 2017 is the first year since FY 2012 that funding is not requested for scheduled annual installments at the World Bank's International Bank for Reconstruction and Development (IBRD) and the Inter-American Development Bank (IDB), whose GCIs conclude during FY 2016. The FY 2017 request includes \$22 million to clear unmet commitments to the IDB and \$6 million to clear unmet commitments to the IBRD. The IBRD funding will protect U.S. shareholding at the World Bank by avoiding a forfeiture of shares by the United States.

The request also includes \$1.6 billion to fully meet annual replenishment commitments to the World Bank's International Development Association (IDA), the African Development Fund (AfDF), and the Asian Development Fund (AsDF).

Food Security

The request includes \$23 million for the Global Agriculture and Food Security Program (GAFSP), the multilateral component of the President's Feed the Future initiative. In 2012, the United States pledged to contribute \$1 for every \$2 in new contributions by other donors up to \$475 million during the pledge period. While U.S. leadership of GAFSP has been an important component of its success to date, the Administration continues to work with other donors to increase their contributions and to strive for a

United States' share of contributions of no more than one-third of total contributions since GAFSP's inception in 2010. In addition, the request includes the second payment of \$30 million towards the current replenishment of the International Fund for Agricultural Development (IFAD).

Environment and Clean Energy

Treasury's request fully funds the annual installation of the replenishment commitment to the Global Environment Facility (GEF) at \$137 million. Also, the request includes \$250 million toward the U.S. pledge to the Green Climate Fund (GCF), providing a total of \$750 million for the GCF when combined with \$500 million requested through the Department of State. Joining other nations, the United States in 2014 pledged \$3 billion – not to exceed 30 percent of total confirmed pledges – to the GCF, which has received over \$10 billion in pledges to support the transition of developing countries to a low-emission and climate resilient development path. The GCF includes innovative mechanisms to help mobilize significant private-sector finance and is building on the best practices and lessons learned from the Climate Investment Funds (CIFs), to which the United States has contributed with bipartisan support. FY 2017 is the first year since the United States made its original pledge to the CIFs that funding is not requested for the CIFs because the \$2 billion pledge has been fulfilled.

The request also includes \$13 million for the CCRIF Segregated Portfolio Company (formerly known as the Caribbean Catastrophe Risk Insurance Facility). This is the first time Treasury has requested funding for CCRIF. A U.S. contribution will help the six countries of Central America plus the Dominican Republic purchase catastrophe risk insurance coverage and access technical assistance to enhance their disaster risk management capacity, improving their resilience to natural disasters.

Infrastructure

Treasury's request includes \$20 million for U.S. support to new infrastructure investments for the World Bank Global Infrastructure Facility (GIF). The GIF aims to catalyze private capital for public infrastructure projects by addressing constraints arising from countries' legal and regulatory regimes, project design and implementation, and project and financing structures. Participation in this initiative will demonstrate a commitment to helping developing and emerging markets, bolster existing infrastructure financing from the MDBs, and reinforce U.S. leadership at the World Bank.

Unmet Commitments

U.S. unmet commitments, which are approaching \$1.6 billion, erode U.S. leadership and influence, pose a threat to shaping the policy priorities of the MDBs and related funds, and hamper the ability of these entities to deliver results. The FY 2017 request would reduce these unmet commitments by \$160 million for both GCIs and replenishments. In making allocations, Treasury has prioritized unmet commitments at institutions where contributions will most effectively showcase strong U.S. leadership of and commitment to the international financial architecture. The U.S. endeavors to avoid incurring new unmet commitments, but will not fully achieve that goal due to new unmet commitments to the Multilateral Debt Relief Initiative (MDRI).

Specifically, the FY 2017 request allocates \$93 million for unmet commitments at IDA. The approximately \$777 million in U.S. unmet commitments to IDA severely constrain IDA's overall programming capacity. Paying down unmet commitments would demonstrate sustained support for this global institution, which makes critical contributions to fragile states, citizen security in Central America, international efforts to address disaster responsiveness, and infrastructure financing for the world's poorest countries. Additionally, demonstrating strong progress towards meeting the IDA and IBRD commitments is critical for maintaining U.S. leadership in the World Bank.

The FY 2017 request includes \$19 million to pay down U.S. unmet commitments to the AfDF. The nearly \$227 million in U.S. unmet commitments constrain the AfDF's capacity to make new investments. Paying down some of the U.S. unmet commitments would increase AfDF assistance, including support for Power Africa, as well as the fight against extremism and instability on that continent.

Treasury's FY 2017 request allocates \$9 million for unmet commitments at the AsDF, which is the largest on-budget financier of infrastructure and other services in Afghanistan. The AsDF also promotes energy sector reform in Pakistan, bolsters the democratic transition in Burma, and helps strategic partners in Central Asia reduce their economic dependence on Russia.

The FY 2017 request includes \$10 million for unmet GEF commitments, which total \$180 million (\$135 million from GEF-2 and \$45 million from GEF-6). These resources will further increase the GEF's ability to fund environmental projects that support key U.S. priorities, such as the President's Executive Order on Combating Wildlife Trafficking and reducing mercury emissions that contaminate our food supply. Addressing these unmet commitments will help position the United States to capture a GEF-6 encashment bonus for prompt payment.

Export-Import Bank of the United States

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Export-Import Bank of the United States	-455,870	-473,250	-433,400	39,850
Operations	122,000	122,250	125,700	3,450
Offsetting Collections	-547,870	-595,500	-559,100	36,400
Rescission	-30,000	-	-	-

The FY 2017 Budget estimates that the Export-Import Bank of the United States (Ex-Im Bank) export credit support will total \$20.4 billion in lending activity, and will be funded largely by receipts collected from the Ex-Im Bank's customers. These receipts are expected to total \$559.1 million in excess of estimated losses in FY 2017. These funds, treated as offsetting collections, will be used to pay \$110 million for administrative expenses. The administrative expenses estimate includes funding to expand the Bank's support for small business exports. The FY 2017 request for the Ex-Im Bank also includes \$10 million in carryover authority and \$5.7 million for the expenses of the Inspector General. The Bank forecasts a net return (i.e. negative subsidy) of \$433.4 million to the U.S. Treasury as receipts in excess of expenses.

The Ex-Im Bank is an independent, self-sustaining executive agency, and a wholly-owned U.S. government corporation. As the official export credit agency of the United States, the mission of the Ex-Im Bank is to support U.S. exports by providing export financing through its loan, guarantee, and insurance programs. These programs are implemented in cases where the private sector is unable or unwilling to provide financing, and to level the playing field in export sales between U.S. exporters and foreign exporters financed by their respective governments. By facilitating the financing of U.S. exports, Ex-Im Bank helps companies support and maintain U.S. jobs. The Ex-Im Bank actively assists small and medium sized businesses.

Overseas Private Investment Corporation

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Overseas Private Investment Corporation	-233,413	-283,213	-340,853	-56,640
Offsetting Collections	-321,200	-366,000	-448,853	-81,853
Administrative Expenses	62,787	62,787	88,000	25,213
Credit Subsidy	25,000	20,000	20,000	-

The Overseas Private Investment Corporation (OPIC) is the U.S. government's development finance institution. OPIC mobilizes private capital to help solve critical development challenges and in doing so, advances U.S. foreign policy. OPIC offers financing to private sector companies with an American nexus that will promote market-based economies and set high labor standards in low-income and politically unstable regions. It helps U.S. businesses gain footholds in emerging markets, catalyzing revenues, jobs and growth opportunities both at home and abroad. OPIC achieves its mission by providing investors with financing, guarantees, political risk insurance, and support for private equity investment funds. By balancing risks, returns and resources, OPIC maintains itself as a self-sustaining Federal Corporation and regularly contributes to deficit reduction.

OPIC's budget is fully self-funded from offsetting collections. OPIC is requesting \$88 million for administrative expenses and \$20 million for credit subsidy. These resources will enable OPIC to hire additional staff to originate, monitor, and analyze up to \$4.8 billion in new direct loans, risk insurance and loan guarantees and prudently manage its \$20 billion portfolio.

The requested resources are integral to OPIC's ability to continue its role as a leading contributor to U.S. foreign policy and international development priorities such as:

Small Businesses: Over the past five years, 71 percent of OPIC projects were in partnership with U.S. small businesses, accounting for over \$600 million annually in U.S. exports.

National Security: One-third of OPIC's portfolio is in post-conflict nations or nations currently vulnerable to conflicts, such as Jordan, Ukraine, Georgia, Iraq, Afghanistan, and the West Bank.

Power Africa: OPIC's partnership with the private sector is an essential part of this signature Presidential priority. OPIC has exceeded its initial target of \$1.5 billion in Power Africa commitments, a full two years ahead of schedule, and has an ample pipeline to reach its enhanced goal of an additional \$1 billion in Power Africa commitments by 2018.

Healthcare and Housing: OPIC currently hosts over 7 million patient visits per year in small clinics and large hospitals. OPIC supported projects have constructed homes for over 60,000 low-income homeowners and have provided over 200,000 home mortgages, the majority of which are to first-time homeowners.

Climate Finance: In the last five years, OPIC has had a tenfold increase in commitments to renewable energy projects in support of U.S. companies investing in fast growing markets. Support for the transition to a low-carbon economy has been, and will continue to be, central to U.S. leadership in this area.

Central America and the Caribbean: OPIC is a key implementing agency of the Administration's Caribbean Energy Security Initiative (CESI), launched in 2014, and has already committed over \$100 million to support two renewable energy projects. Additionally, OPIC will play an important role in the whole of government effort to expand U.S. engagement in Central America.

U.S. Trade and Development Agency

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
U.S. Trade and Development Agency	60,000	60,000	80,700	20,700

The FY 2017 request for the U.S. Trade and Development Agency (USTDA) of \$80.7 million will strengthen the Agency's ability to help U.S. companies create jobs through the export of U.S. goods and services for priority development projects in emerging economies. USTDA links U.S. businesses to export opportunities by funding project preparation activities, pilot projects and reverse trade missions that create sustainable infrastructure and foster economic growth in its partner countries. In carrying out its mission, USTDA prioritizes activities where there is a high likelihood for the export of U.S. goods and services that can match the development needs of the Agency's overseas partners.

USTDA programs have a proven record of success. In FY 2015, the Agency identified over \$11.8 billion in U.S. exports that were attributable to its activities since 1998. On average, USTDA's activities generate over \$74 in U.S. exports for every taxpayer dollar programmed.¹ Given the nature of USTDA's role in early project planning and development, results are realized over the long-term. As such, a ten-year rolling average (TYRA) is the interval of time used to capture a meaningful, relevant representation of the U.S. export results of USTDA's programs. The TYRA currently consists of all USTDA activities completed between years 2003-2012. USTDA's success results, in part, from its rigorous, evidence-based decision-making processes. The Agency prioritizes funding for activities in markets and sectors where there are strong opportunities for U.S. exports and where U.S. industry expertise can meet the development needs of its partner countries. To maximize its return on appropriated funds, USTDA will continue to prioritize support for energy, transportation, and information and communications technology projects in developing and middle-income countries around the world.

The FY 2017 budget request represents an increase of \$20.7 million over the FY 2016 enacted level—an increase that represents the potential generation of an additional \$1 billion in U.S. exports based upon the Agency's historical track record. The additional funds will enable USTDA to support Administration priorities and to help level the playing field for U.S. companies in emerging markets by:

- providing critical project preparation assistance to support clean energy development as part of the Power Africa initiative;
- playing an important role in the whole of government effort to expand U.S. engagement in Central America;
- catalyzing investment from the U.S. private sector—leading to more exports and, ultimately, supporting more U.S. jobs—in the Asia-Pacific and Latin America regions; and
- promoting value-based procurement methods to improve development outcomes and increase international competition.

¹ Given the nature of USTDA's role in early project planning and development, results are realized over the long-term. As such, a ten-year rolling average (TYRA) is the interval of time used to capture a meaningful, relevant representation of the U.S. export results of USTDA's programs. The TYRA currently consists of all USTDA activities completed between years 2003-2012.

International Trade Commission

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate ¹	FY 2017 Request	Increase / Decrease
International Trade Commission	85,381	88,842	92,866	4,024

1/ The FY 2016 estimate total includes the enacted level of \$88.5 million plus \$0.342 million in carryover.

The U.S. International Trade Commission (ITC) is an independent, nonpartisan, Federal agency with a wide range of trade-related mandates. The ITC makes determinations regarding unfair trade practices in import trade and conducts import-injury investigations. It also conducts economic research and fact-finding investigations of trade issues, maintains the Harmonized Tariff Schedule of the United States, participates in work on the international Harmonized System tariff nomenclature, and provides technical information and advice on trade matters to the Congress and the Administration. The FY 2017 request of \$92.9 million will fund activities related to these mandates.

Foreign Claims Settlement Commission

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Foreign Claims Settlement Commission	1,993	2,374	2,409	35

The Foreign Claims Settlement Commission (FCSC) is a quasi-judicial, independent agency within the Department of Justice. Its principle mission is to adjudicate claims of U.S. nationals against foreign governments, under specific jurisdiction conferred by Congress, pursuant to international claims settlement agreements, or at the request of the Secretary of State.

The FY 2017 request for FCSC provides \$2.4 million to continue evaluating claims of U.S. nationals against foreign governments under current claims programs as well as maintaining the decisions and records of past claims programs, and continue building and modernizing both current and past claims programs records by creating and updating the relevant databases.

Food for Peace Title II

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Food for Peace Title II	1,466,000	1,716,000	1,350,000	-366,000

Title II of the Food for Peace Act (P.L. 83-480) authorizes the provision of U.S. food assistance to meet emergency food needs around the world, and funds development-oriented programs to help address the underlying causes of food insecurity. Funding for Title II, also known as P.L. 480 Title II, is appropriated to the U.S. Department of Agriculture and is administered by the U.S. Agency for International Development (USAID).

The FY 2017 Title II request of \$1,350 million includes funding for development food assistance programs, complemented by resources requested in the Development Assistance (DA) account under USAID's Community Development Fund. Together, these resources support development food assistance programs' efforts to address chronic food insecurity in areas of recurrent crises using a multi-sectoral approach to reduce poverty and build resilience.

The majority of the FY 2017 Title II request will be used to provide emergency food assistance in response to natural disasters and complex emergencies. In an emergency, when people face severe food insecurity, Title II emergency programs save lives, boost the resilience of disaster-affected communities, and support the transition from relief to recovery. This food, including specialized, processed commodities, provides life-saving assistance to millions of vulnerable people facing disasters overseas.

The request would allow the use of up to 25 percent of this appropriation, valued at \$337.5 million, for market-based food assistance for emergencies including interventions such as the local or regional procurement of agricultural commodities, use of food vouchers, or use of cash transfers. This allows USAID to make emergency food aid more timely and cost-effective, improving program efficiencies and performance. It is estimated that these market based approaches will allow USAID to assist approximately 2 million more emergency beneficiaries annually within the requested resources.

This flexible assistance will be targeted at addressing growing needs due to conflict in the Middle East and to address other urgent food needs around the world, and a range of factors may be considered when exercising these market-based tools, including whether:

- 1) U.S. commodities are not an appropriate response because of market conditions or security concerns, or;
- 2) A rapid response is critical to adequately respond to emergency food needs and U.S. food cannot be accessed in a timely way, or;
- 3) A goal of the response is to directly enhance the nutritional value of the standard food basket/ration and transition beneficiaries from food distribution to nutritious local foods.

McGovern-Dole International Food for Education and Child Nutrition Program

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
McGovern-Dole International Food for Education and Child Nutrition Program	191,626	201,626	182,045	-19,581

McGovern-Dole International Food for Education and Child Nutrition Program – The program provides for the donation of U.S. agricultural commodities and associated financial and technical assistance to carry out preschool and school feeding programs in foreign countries. Maternal, infant, and child nutrition programs also are authorized under the program. Its purpose is to reduce the incidence of hunger and malnutrition and improve literacy and primary education. These measures contribute to a healthy, literate workforce that can support a more prosperous, sustainable economy and ensure long-term food security. The 2017 Budget proposes \$182 million for the McGovern-Dole program. With this funding, the program is expected to support assistance to 3.4 million individuals in food insecure countries in 2017. As in 2016, up to \$5 million of McGovern-Dole funding will be used for Local and Regional Food Aid Procurement in 2017.

USDA Local and Regional Food Aid Procurement Program

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
USDA Local and Regional Food Aid Procurement Program	-	-	15,000	15,000

Local and Regional Food Aid Procurement – The 2014 Farm Bill authorized the Local and Regional Food Aid Procurement (LRP) program to provide for local and regional procurement of food aid commodities for distribution overseas to complement existing food aid programs and to fill in nutritional gaps for targeted populations or food availability gaps generated by unexpected emergencies. Under the program, grants are provided to private voluntary organizations, cooperatives, and the World Food Program that undertake the procurement activities. The 2017 Budget proposes \$15 million to support the program with up to an additional \$5 million from McGovern-Dole funding, the total of which is expected to be used within development projects that support 68,000 individuals in food insecure countries. Independent evaluation of LRP pilot projects authorized in the 2008 Farm Bill demonstrated that locally procured food assistance in emergency situations can provide cost savings and speed delivery time to needy populations. The program will serve as a complementary tool to support existing food aid programs, especially for the McGovern- Dole International Food for Education and Child Nutrition Program.

3/ The FY 2015 OCO level includes the transfer of \$4 million from the FY 2015 International Narcotics and Law Enforcement-OCO account to the Economic Support Fund-OCO account.

4/ The FY 2015 OCO level includes the transfer of \$4 million from the FY 2015 Nonproliferation, Antiterrorism, Demining and Related Programs-OCO account to the Economic Support Fund account-OCO.

Overseas Contingency Operations Overview

The Administration's FY 2017 International Affairs request includes \$14.9 billion for Overseas Contingency Operations (OCO) funding. The OCO request will enable us to prevent, address, and help countries recover from manmade-caused crises and natural disasters, particularly in Africa, the Middle East and South Central Asia. It will ensure continued strong support for humanitarian assistance activities as well as peacekeeping and UN special political missions, including support for new or expanded peace operations. It supports our response to the crisis in Syria, our efforts to counter the Islamic State in Iraq and the Levant (ISIL), the building of counterterrorism partnerships, and both new and ongoing peace operations. It will also continue to provide key support for ongoing operations in Afghanistan and Pakistan. In addition, it supports efforts to counter Russia's malign influence. This approach allows the Department to deal with extraordinary activities critical to our immediate national security objectives.

The FY 2017 OCO request reflects the Bipartisan Budget Agreement (BBA) base to OCO shift. Normal operating costs for Worldwide Security Protection, Contributions to International Organizations, Contributions to International Peacekeeping Activities, and Embassy Security, Construction and Maintenance are funded in OCO, in line with the allocation of OCO in the FY 2016 appropriation. The FY 2017 OCO request also includes funding for the majority of foreign assistance and operations in Iraq, Afghanistan, Pakistan, and other countries affected by conflict or natural disasters. As this BBA-determined level requires a significant expansion in the scope of OCO relative to previous Budgets, the Department assumes that the OCO increase will shift back to the base in FY 2018.

The FY 2017 OCO request for Afghanistan continues transitioning to a more self-sustaining diplomatic mission, focused on diplomatic engagement, public outreach, and empowering the Government of Afghanistan in its ongoing efforts toward self-sustainment. Maintaining the development gains made over the last 13 years in health, education, and gender remains a priority, while also continuing to partner with the Government of Afghanistan in its ongoing efforts to bolster economic growth, strengthen the rule of law, and fight corruption. Mission Afghanistan supports vital national security objectives, chief among them disruption of al-Qaida and its extremist allies and empowerment of the government of Afghanistan as it takes the lead on management of security, economic, and political transitions. The request for the Special Inspector General for Afghanistan Reconstruction (SIGAR) provides for timely, effective oversight of Afghanistan programs.

For Pakistan, the OCO request supports a robust diplomatic presence and critical assistance programs to advance cooperation and reforms in energy, economic growth, and agriculture, education, health, and stabilization of areas vulnerable to violent extremism. This includes supporting the government and its people, while maintaining diplomacy and outreach in the face of challenging political and security conditions. The request will help facilitate increased stability and prosperity in this strategically important nation. The State Department plans to sustain the presence necessary to achieve our essential strategic priorities of combatting terrorism and enhancing stability in Pakistan and the region following the transition in Afghanistan. OCO resources will support critical U.S. activities such as improving export control and border security processes, working with Pakistan to facilitate the peace process in Afghanistan, and promoting regional economic connectivity.

In Syria, OCO funds will enable the ongoing U.S. response to the humanitarian crisis and provide support through foreign assistance for the moderate Syrian opposition as they seek to counter ISIL, provide local services and security to their communities. The request also addresses Countering Violent Extremism (CVE) and fostering the conditions that can lead to political settlement. The OCO request sustains and expands counter-ISIL programs initiated in FY 2015, to include public diplomacy lines of effort. Public Diplomacy programming is targeted to increase the organizational capacity to expand counterterrorism

messaging in the key languages of Arabic, Urdu, Somali, and English during hours of peak activity in the Middle East, Central Asia and Africa, and includes dedicated counter-ISIL content, speakers, platform development, outreach programs and analytics.

FY 2017 OCO funds for Iraq will continue to promote Iraq's security, stabilization and recovery activities, economic reform agenda, and reconciliation efforts as we continue to work towards the mutually shared goal to degrade and ultimately defeat ISIL. The request supports staff and activities at Embassy Baghdad, as well as consulates in Erbil and Basrah. In addition, OCO funds will enable the ongoing U.S. response to the humanitarian crisis in Iraq.

In Jordan, consistent with the Memorandum of Understanding (MOU), OCO funds will help address temporary and extraordinary needs related to countering ISIL and mitigating Syria-related economic and security strains. These funds will expand essential services like health, education, and water required to support communities that are hosting refugees. Funds will also support the Jordanian Armed Forces' efforts to improve their border security capacity; control national territory; and improve their interoperability with the United States to participate in coalition operations, including operations to counter ISIL.

The OCO request will also support other countries affected or recovering from conflict in Africa and the Middle East. In East Africa, OCO will continue to support efforts to bring peace to South Sudan and counter Al Shabaab in Somalia. OCO funds will also help sustain a peaceful transition in the Central African Republic, and strengthen peacekeeping, rule of law and promotion of good governance, while minimizing the impact of years of conflict in the Democratic Republic of Congo. The OCO request will continue to aid Liberians as they recover from the Ebola crises. Regional programs such as the Trans-Sahara Counterterrorism Partnership will reinforce bilateral efforts to counter and prevent the spread of violent extremism and ensure effective transnational security needs across Africa. The request also helps Tunisia continue to solidify its transition to democracy while dealing with threats from regional instability; supports the new Government of National Accord and stabilization efforts in Libya; and helps Yemen recover and rebuild from a lengthy civil war.

In FY 2017, the OCO request for Diplomatic Security operations includes program costs for High Threat / High Risk posts, including local guard forces and the Special Program for Embassy Augmentation and Response (SPEAR). OBO's Worldwide Security Upgrades OCO funding will support Compound Security program projects, and comprise much of State's Capital Security Cost-Sharing contribution for new secure facilities in Europe, Asia, and Africa.

Finally, FY 2017 OCO funds will support efforts to build and maintain strong counterterrorism (CT) partnerships through CT capacity-building activities, as well as, targeted programs and outreach to address the underlying conditions that enable violent extremism. In Nepal, OCO funds will support democratic reform and post-earthquake recovery efforts. Lastly, OCO resources will assist partners to resist Russian aggression while supporting integration with Europe.

Diplomatic and Consular Programs - OCO

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Diplomatic and Consular Programs	1,350,803	2,561,808	2,132,249	-429,559
Ongoing Operations	361,097	595,176	317,039	-278,137
Worldwide Security Protection	989,706	1,966,632	1,815,210	-151,422

The FY 2017 Overseas Contingency Operations (OCO) request for Diplomatic and Consular Programs (D&CP) totals \$2.1 billion, addressing the extraordinary costs of diplomatic operations in Iraq, Afghanistan, and Pakistan, High Threat / High Risk posts, and Public Diplomacy programming focused against the Islamic State in Iraq and the Levant (ISIL). This funding is critical to achieving the following U.S. national security goals: establishing a secure, democratic, and self-reliant Iraq; supporting the Afghan government's efforts to promote peace, security, and economic development, in addition to improved relations with its regional partners; and working to eliminate terrorist safe havens in Pakistan. OCO resources support a flexible diplomatic presence along Syria's borders to provide humanitarian relief, counter sectarian strife and terrorism, and prepare for a peaceful post- conflict transition. The OCO Request also includes Diplomatic Security's High Threat / High Risk security programs and the Special Program for Embassy Augmentation and Response (SPEAR), as well as NEA's emergency Air Bridge from Lebanon to Cyprus.

D&CP - Ongoing Operations

For Iraq, the OCO request of \$172.1 million supports the U.S. Mission's strategic partnership with Iraq, through which the U.S. can advance its economic and security interests in the region. The NEA's request will support staff and activities at Embassy Baghdad, as well as consulates in Erbil and Basrah. The emergence of ISIL within Iraq has further increased the volatility and instability in the region, resulting in an expanded role for U.S. engagement with the Iraqi government. While the request is \$67.5 million above the FY 2016 estimate due to reduced carryover levels, it incorporates a \$17.1 million OCO to base shift for recurring operating costs.

For Afghanistan, the OCO request of \$93.5 million reflects the transition to a more self-sustaining diplomatic Mission, focused on engagement and public outreach. Department personnel engage in capacity building, stabilization, and development programs that are essential to strengthening Afghanistan's ability to take full responsibility for its security and growth. The request incorporates a \$41.4 million OCO to base shift for normal operating costs, and is \$50 million below the FY 2016 Estimate as the number of Department and interagency personnel is decreasing. Aviation costs for FY 2017 will largely be funded from Worldwide Security Protection.

For Pakistan, the OCO request of \$3 million reflects the normalization of 96 percent of ongoing costs into the enduring base budget. Pakistan lies at the heart of the U.S. counterterrorism strategy, the peace process in Afghanistan, nuclear non-proliferation efforts, and economic integration in South and Central Asia. OCO resources will support temporary positions critical to U.S. activities. The request incorporates a \$33.0 million OCO to base shift for normal operating costs, and is \$55.3 million below the FY 2016 Estimate

The D&CP OCO request also includes \$48.4 million for other extraordinary costs at selected posts facing unique operating challenges due to security, as well as counter-ISIL activities:

- \$4.2 million for Syria Operations which includes the Syria Transition Assistance Response Team (START), Southern Syria Assistance Program (SSAP), Protective Power Agreement, and CSO's Syria program transitioning to NEA.
- \$20 million for NEA to sustain the Lebanon Air Bridge.
- \$5.5 million for the Yemen Affairs Unit operating out of Jeddah and Libya External Office (LEO) operating out of Tunis.
- \$600,000 for Counter ISIL Coalition Working Group.
- \$18.1 million for IIP to sustain and expand the Center for Global Engagement and counter-ISIL Public Diplomacy programs initiated in FY 2015, increasing the Department's capacity to expand counterterrorism messaging in key languages for the Middle East, Central Asia, and Africa.

D&CP – Worldwide Security Protection

For Iraq, the \$966.2 million OCO request supports operational requirements, movement security, equipment, physical and technical security, static guards, and security operations in Basrah and Erbil. The request is \$271.3 million above the FY 2016 estimate, with the following increases:

- \$58.2 million in recurring increases for ongoing lifecycle replacement of systems and equipment as well as projected increases in the static and movement security contract;
- \$43.6 million in start-up costs for lifecycle replacement of security systems, equipment and vehicles, which have been deferred in previous years; and
- \$170 million for replacement of the Worldwide Protective Services (WPS) mancamp at Camp Condor.

The FY 2017 OCO increase will enable necessary investments to maintain an appropriate level of security for current diplomatic operations. The increase is needed to avoid reductions in the security footprint, which would result in reduced movement of diplomatic personnel and decreases in the aviation platform.

For Afghanistan, the \$672.1 million OCO request is \$115.7 million above the FY 2016 estimate.

Requested changes include:

- \$10 million for lifecycle replacement of equipment including armored vehicles, personnel tracker locators, contingency communicator radio, sense and warn, and electronic countermeasures;
- \$16 million towards projected increases in the static and movement security contract;
- \$80 million to support aviation operations and maintenance and Camp Alvarado life support now funded from Diplomatic Engagement; and
- \$26 million for Camp Alvarado Static Guards, for a total requirement of \$64 million.
- -\$16.3 million in offsetting reductions due to the closeout of field locations and other one-time FY 2016 costs.

For Pakistan, the \$31.6 million OCO request provides for overseas protective operations at the Embassy and consulates. The request is -\$6.1 million below the FY 2016 estimate due to reduced countermeasure costs compared to FY 2016.

The OCO request includes \$145.4 million For High Threat / High Risk posts. This includes \$123.8 million for 20 posts in the AF, NEA, and SCA regions that managed by the High Threat Programs Directorate, covering ICASS payments, surveillance detection, bodyguards, physical security and countermeasures programs, and position support costs. In addition, \$21.5 million is requested to sustain the Special Program for Embassy Augmentation and Response (SPEAR). SPEAR enhances the security of high-threat, high-risk posts by providing training and loaned equipment to host nation security forces that are assigned to respond to emergencies at U.S. diplomatic facilities, but who otherwise could be inadequately trained or equipped to perform that mission effectively. SPEAR is not a one-time training

program, but is expected to become a long-term engagement with the goal of institutionalizing the host nation's enhanced capability for U.S. diplomatic community security. Relative to FY2016, this portion of the FY 2017 OCO Request shifts \$529.2 million in global ICASS costs from OCO to Enduring and realigns \$3.2 million to other OCO priorities in Afghanistan, Iraq, and Pakistan.

The FY 2017 President's Budget assumes that further adjustments to the Budget Control Act's discretionary spending limits will be needed to sustain these activities in FY 2018. The Administration's enduring funding for ongoing operations must return to a sustainable level as we move into FY 2018 to ensure this increased scope of OCO countries and levels can shift back to the base in FY 2018.

Embassy Security, Construction and Maintenance - OCO

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Embassy Security, Construction and Maintenance	260,800	747,851	1,238,800	490,949

The Bureau of Overseas Buildings Operations (OBO), funded through the Embassy Security, Construction, and Maintenance (ESCM) appropriation, is responsible for providing U.S. Diplomatic and Consular missions overseas with secure, safe, and functional facilities to assist them in achieving the foreign policy objectives of the United States.

The FY 2017 ESCM OCO request is \$1,239 million, an increase of \$490.9 million above the FY 2016 estimate which funds the remaining components of transition in Kabul, Afghanistan, Iraq property lease costs and Worldwide Security Upgrades. The ESCM OCO Request includes \$282.2 million for the following projects as detailed in the Department's Kabul multiyear funding strategy: renovation of Staff Dependent Apartments A, B, and C; parking garage with a new helicopter landing zone; perimeter security; utilities and infrastructure upgrades; and project development and design services. In addition, the Afghanistan request funds security upgrades to enable the Embassy compound to more safely accommodate the planned civilian presence that will remain after the military transition.

In FY 2017, Worldwide Security Upgrades funding is shifted into OCO as a result of the FY 2016 Balanced Budget Agreement (BBA). These resources are to support Compound Security program projects and Capital Security Construction (CSCS). When combined with Capital Security Cost Sharing (CSCS) contributions from other agencies and other reimbursements, the request will provide a total of \$2.2 billion for five new construction projects, as well as site acquisitions for future plans.

The FY 2017 President's Budget assumes that further adjustments to the Budget Control Act's discretionary spending limits will be needed to sustain these activities in FY 2018. The Administration's enduring funding for ongoing operations must return to a sustainable level as we move into FY 2018 to ensure this increased scope of OCO countries and levels can shift back to the base in FY 2018.

Office of Inspector General - OCO

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Office of Inspector General	56,900	66,600	54,900	-11,700
Special Inspector General OIG	-	9,700	-	-9,700
Special Inspector General for Afghanistan Reconstruction	56,900	56,900	54,900	-2,000

SIGAR was established by the National Defense Authorization Act for FY 2008 (Public Law 110-181) to conduct independent and objective audits and investigations of all programs and operations funded with amounts appropriated or otherwise made available for the reconstruction of Afghanistan. SIGAR's statutory mission is to prevent and detect waste, fraud, and abuse in U.S.-funded reconstruction programs and operations in Afghanistan. SIGAR is the only oversight agency that focuses solely on the reconstruction mission in Afghanistan and has the authority to audit, inspect, and investigate the reconstruction activities of all U.S. government agencies and U.S.-funded Afghanistan reconstruction activities of international organizations. SIGAR also has the responsibility for monitoring and reviewing the effectiveness of the U.S. coordination with the Afghan government and other donor countries helping implement the reconstruction.

The FY 2017 request of \$54.9 million for the Special Inspector General for Afghanistan Reconstruction (SIGAR) will enable the organization to perform independent and objective oversight of reconstruction and security assistance programs. SIGAR will continue to address emergent reconstruction issues, coordinate with experts from multiple SIGAR Directorates, and highlight potential issues that may impact the implementation of reconstruction programs. Additionally, SIGAR will produce lessons learned reports on the reconstruction efforts to help inform future overseas contingency operations.

Contributions to International Organizations - OCO

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Contributions to International Organizations	74,400	101,728	96,240	-5,488

The Contributions to International Organizations (CIO) account is the source of funding for annual U.S. assessed contributions to 44 international organizations, including the United Nations (regular budget), organizations in the United Nations System, and other international organizations such as the Organization for Economic Cooperation and Development, and the North Atlantic Treaty Organization. U.S. membership in each of these organizations is the result of U.S. accession to treaties and conventions or, in a few instances, acts of Congress that authorize U.S. participation. For each organization funded through this account, the obligations of membership include the payment of assessed contributions. The amounts of the assessed contributions are determined by the membership of the organizations.

The FY 2017 OCO request represents an overall decrease of \$5.5 million below the FY 2016 estimate. The funding will support the costs of United Nations special political missions in Afghanistan, Iraq, Libya and Somalia.

The FY 2017 President's Budget assumes that further adjustments to the Budget Control Act's discretionary spending limits will be needed to sustain these activities in FY 2018. The Administration's enduring funding for ongoing operations must return to a sustainable level as we move into FY 2018 to ensure this increased scope of OCO countries and levels can shift back to the base in FY 2018.

Contributions for International Peacekeeping Activities - OCO

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Contributions for International Peacekeeping Activities	-	1,794,088	1,588,000	-206,088

The Contribution for International Peacekeeping Activities (CIPA) account supports international peacekeeping activities that seek to maintain or restore international peace and security. UN peacekeeping operations are invaluable to promoting international peace and security. Such operations allow for financial burden-sharing and participation by countries from around the world that contribute peacekeepers, police, and enablers. Because deployment of U.S. forces to carry out similar duties would in many cases be inappropriate and in other cases very costly, IO is committed to meeting its peacekeeping funding obligations, while striving for a more equitable scale of assessments. Additionally, IO works with key stakeholders to improve the UN's planning, force generation, and accountability capacities in order to identify, generate, and deploy effective troops, police, and enablers more rapidly to peacekeeping missions.

The FY 2017 OCO request of \$1.6 billion represents a decrease of -\$206 million from the FY 2016 estimate. The funding will support the assessments for several UN Missions in Africa, including South Sudan, the Democratic Republic of Congo, Darfur, Mali, and Somalia. OCO funding will also support assessments for War Crimes Tribunals.

The FY 2017 President's Budget assumes that further adjustments to the Budget Control Act's discretionary spending limits will be needed to sustain these activities in FY 2018. The Administration's enduring funding for ongoing operations must return to a sustainable level as we move into FY 2018 to ensure this increased scope of OCO countries and levels can shift back to the base in FY 2018.

Mechanism for Peace Operations Response - OCO

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Mechanism for Peace Operations Response	-	-	150,000	150,000

The proposed Mechanism for Peace Operations Response (MPOR), Overseas Contingency Operations account, will support critical requirements for peace operations and activities that emerge outside of the regular budget cycle. Such missions may involve the United Nations (UN), regional security partnerships, coalition peacekeeping efforts, or forces which promote the peaceful resolution of conflict.

MPOR will allow the United States to respond more rapidly and effectively to unanticipated peacekeeping requirements without disrupting ongoing missions and programs. Unanticipated peacekeeping requirements that have arisen in Africa over the past two years demonstrate the need for such a mechanism, which would enable the United States to respond to future missions in Africa, the Middle East, or other needs around the world. MPOR is aimed to ensure that funding is available to respond expeditiously to unforeseen global peacekeeping requirements, including those led by the African Union, other regional or coalition entities, or the United Nations.

Allocation of this funding is subject to a determination by the Secretary that additional resources are necessary to support new or expanded peacekeeping operations or activities above the program level recommended in the FY 2017 budget submission to the Congress in the Peacekeeping Operations (PKO) or Contributions for International Peacekeeping Activities (CIPA) accounts. The MPOR request includes transfer authority to the PKO and CIPA accounts to provide flexibility for new UN or non-UN peacekeeping missions, to include significant troop level or mission expansions when approved by the relevant governing bodies.

The FY 2017 President's Budget assumes that further adjustments to the Budget Control Act's discretionary spending limits will be needed to sustain these activities in FY 2018. The Administration's enduring funding for ongoing operations must return to a sustainable level as we move into FY 2018 to ensure this increased scope of OCO countries and levels can shift back to the base in FY 2018.

USAID Operating Expenses - OCO

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
USAID Operating Expenses	125,464	139,262	98,460	-40,802

The U.S. Agency for International Development (USAID) Overseas Contingency Operations (OCO) Operating Expense (OE) request of \$98.5 million provides the resources to fund the extraordinary costs of operations in the frontline states of Afghanistan, Iraq, and Pakistan.

USAID Capital Investment Fund - OCO

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
USAID Capital Investment Fund	-	-	133,840	133,840

The FY 2017 request for the U.S. Agency for International Development (USAID) Capital Investment Fund (CIF) Overseas Contingency Operations (OCO) of \$133.8 million will support capital investments in facility construction. The request will support approximately 80 percent of USAID's costs to participate in the Capital Security Cost Sharing (CSCS) Program, which is designed to accelerate the construction of new secure, safe, and functional diplomatic and consular office facilities for all U.S. government personnel overseas. The Secure Embassy Construction and Counterterrorism Act of 1999 (P.L. 106-113) requires USAID to co-locate on new embassy compounds.

International Disaster Assistance - OCO

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
International Disaster Assistance	1,335,000	1,919,421	1,832,000	-87,421

The FY 2017 International Disaster Assistance (IDA) Overseas Contingency Operations (OCO) request of \$1,832 million will provide funds to save lives, reduce suffering, and mitigate and prepare for natural disasters and complex emergencies through relief, rehabilitation, and reconstruction assistance, including food assistance, activities that transition to development assistance programs, and disaster preparedness/risk reduction activities. This request includes \$1,001 million for the Office of U.S. Foreign Disaster Assistance to prepare for and respond to natural disasters, civil strife and prolonged displacement of populations that continue to hinder the advancement of development and stability. It also includes \$831 million for the Office of Food for Peace for emergency food response with a range of interventions, such as local and regional purchase of agricultural commodities, food vouchers and cash transfers.

The FY 2017 President's Budget assumes that further adjustments to the Budget Control Act's discretionary spending limits will be needed to sustain these activities in FY 2018. The Administration's enduring funding for ongoing operations must return to a sustainable level as we move into FY 2018 to ensure this increased scope of OCO countries and levels can shift back to the base in FY 2018.

Transition Initiatives - OCO

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Transition Initiatives	20,000	37,000	62,600	25,600

The FY 2017 Overseas Contingency Operations (OCO) request of \$62.6 million for the Transition Initiatives (TI) account will be used to address opportunities and challenges in conflict-prone countries and assist in their transition toward sustainable development, peace, good governance, and democracy.

TI funding will support catalytic programs targeting political crises, preventing and mitigating conflict, and addressing stabilization needs in countries important to U.S. foreign policy. TI funds will support fast, flexible, short-term assistance to help government and civilian partners advance peace and democracy. TI funding will target foreign policy priority countries where the USAID Office of Transition Initiatives (OTI) acts as a first responder to engage quickly and robustly and where additional contingency funds are less readily available.

Examples of assistance include addressing underlying causes of instability and violent extremism, support to key transitional processes such as elections and constitutional assemblies, promoting central government responsiveness to local needs, civic participation programs, media programs raising awareness of national issues, and conflict resolution measures.

The FY 2017 President's Budget assumes that further adjustments to the Budget Control Act's discretionary spending limits will be needed to sustain these activities in FY 2018. The Administration's enduring funding for ongoing operations must return to a sustainable level as we move into FY 2018 to ensure this increased scope of OCO countries and levels can shift back to the base in FY 2018.

Complex Crises Fund - OCO

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Complex Crises Fund	30,000	20,000	20,000	-

The FY 2017 Overseas Contingency Operations (OCO) request for the Complex Crises Fund (CCF) of \$20 million will be used to support prevention activities, and respond to emerging or unforeseen challenges and complex crises. Managed by USAID, the funds in the request will target countries or regions that demonstrate a high or escalating risk of conflict, instability, or atrocities. Funds will also be used to respond to unanticipated opportunities for progress in a newly emerging or fragile democracy. CCF projects will aim to address and prevent the root causes of conflict and instability through a whole-of-government approach, including host government participation, as well as other partner resources.

The FY 2017 President's Budget assumes that further adjustments to the Budget Control Act's discretionary spending limits will be needed to sustain these activities in FY 2018. The Administration's enduring funding for ongoing operations must return to a sustainable level as we move into FY 2018 to ensure this increased scope of OCO countries and levels can shift back to the base in FY 2018.

Economic Support Fund - OCO

(\$ in thousands)	FY 2015 Actual ^{1, 2, 3, 4}	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Economic Support Fund	2,245,536	2,422,673	3,672,153	1,249,480

1/ The FY 2015 OCO level includes Foreign Assistance Act sec. 610 transfers from FY 2014 International Narcotics Control and Law Enforcement-OCO account (\$66.011 million), Foreign Military Financing-OCO account (\$10.5 million), and Nonproliferation, Antiterrorism, Demining and Related Programs account (\$32.176 million).

2/ The FY 2015 OCO level includes the transfer of \$14.583 million from the FY 2015 Foreign Military Financing-OCO account to the Economic Support Fund-OCO account.

3/ The FY 2015 OCO level includes the transfer of \$4 million from the FY 2015 International Narcotics and Law Enforcement-OCO account to the Economic Support Fund-OCO account.

4/ The FY 2015 OCO level includes the transfer of \$4 million from the FY 2015 Nonproliferation, Antiterrorism, Demining and Related Programs-OCO account to the Economic Support Fund-OCO account.

The FY 2017 Economic Support Fund (ESF) Overseas Contingency Operations (OCO) account includes \$3,672.2 million in Overseas Contingency Operations (OCO) funding for bilateral and regional programs in strategically important countries in Africa, Europe and Eurasia, the Near East, and South and Central Asia that are threatened by or recovering from crisis, including armed conflict, as well as natural or man-made disasters.

Sub-Saharan Africa (\$365.2 million): The FY 2017 request includes funding for programs that strengthen democratic institutions and support conflict mitigation and reconciliation, basic education, and economic growth in key African countries, including:

- **Democratic Republic of the Congo (\$75.2 million):** The FY 2017 request will support conflict mitigation to avert violence and human rights violations, the prevention and treatment of victims of sexual and gender-based violence, basic education, agriculture, and capacity building for the legislature, justice, and media sectors. Funds will also be used for rule of law programs to support the development of democratic institutions that provide basic needs and services for citizens.
- **Liberia (\$65.4 million):** The FY 2017 request will support Liberia's efforts to consolidate progress made over the past few years and move more clearly from post-Ebola crisis activities into sustainable assistance programs as the Liberian government takes on greater responsibilities to solidify confidence in public governance. Funding will also be used to rebuild health, water, governance, education, and agriculture programs, all of which have faced significant setbacks due to the Ebola epidemic.
- **Somalia (\$79.4 million):** The FY 2017 request will continue to support the formation of legitimate, durable governing institutions that are essential to enhancing peace and stability in Somalia and alleviating suffering in the broader Horn of Africa. Increased resources will focus on stabilization and reconciliation efforts; nascent political party development; civil society efforts to promote peace, good governance, and consensus-building; and programs in education, livelihoods, and economic growth.
- **South Sudan (\$131.9 million):** As a result of the peace agreement that was signed in August 2015, this funding request will continue United States support for an inclusive peace process to enable a response to opportunities as conditions permit. South Sudan will continue to need significant donor assistance in developing governmental and civil society capacity and economic infrastructure to advance towards a lasting peace and democratic future. U.S. assistance will be positioned to support

progress in governance, rule of law, conflict mitigation, civil society building, agriculture, biodiversity, health, and basic education.

- **State Africa Regional (\$9 million):** These funds will support cross-cutting programs that prevent, mitigate, and resolve conflict and address regional transnational threats through the Partnership for Regional East African Counter Terrorism, and the Trans-Sahara Counter-Terrorism Partnership.

Europe and Eurasia (\$363.3 million): The FY 2017 ESF request for Europe and Eurasia will counter Russian aggression as well as advance European integration to support the strategic goal of a Europe whole, free, and at peace. Funding will support programs focused on increasing access to objective sources of information, developing energy and economic diversification, helping countries fight corruption and strengthen their stability, and building strong and engaged civil societies. The FY 2017 request maintains high levels of support for Ukraine, Georgia, and Moldova, the countries most vulnerable to Russian aggression, and will address regional, cross-border challenges such as corruption, energy security, and trade diversification. Highlights include the following:

- **Georgia (\$63 million):** FY 2017 resources will support Georgia's democratization, economic development, Euro-Atlantic integration, and resistance to Russian aggression. U.S. programs will help strengthen institutional checks and balances and the rule of law; develop a more vibrant civil society; improve access to independent, reliable, and balanced media; promote political pluralism and reconciliation efforts in Abkhazia; increase energy security and advance clean energy; promote reforms necessary to foster economic development; expand private-sector competitiveness and agricultural productivity; and attract foreign investment. Increased funding will be targeted towards enhancing energy security and economic opportunities for populations susceptible to Russian influence.
- **Moldova (\$41.1 million):** FY 2017 funding will help expedite reforms necessary for Moldova's European integration and mitigate vulnerabilities to Russian trade bans and other forms of aggression. The United States will provide increased support for Moldova's integration with the EU energy market, as well as private sector competitiveness and regulatory reform as Moldova pivots toward European markets and looks to promote greater foreign investment. FY 2017 funding will also support ongoing reforms to improve governance; increase transparency and accountability; strengthen the rule of law; address corruption; and bolster civil society, civic activism, and independent media.
- **Ukraine (\$192.4 million):** FY 2017 ESF funding will help Ukraine reduce its vulnerability to Russian aggression and build its resilience as it seeks to advance a comprehensive reform agenda intended to comply with EU and IMF requirements, and respond to the strong demands from the Ukrainian people for meaningful change. Funding will accelerate reforms to address corruption; enhance transparency and accountability, including by expanding e-governance initiatives; advance institutional reforms and training necessary for European integration; improve the business climate and enhance trade capacity, including to implement World Trade Organization agreement rights and obligations; strengthen the agricultural sector; support energy security through reform of Ukraine's national oil and gas company and increase energy efficiency; contribute to reconstruction efforts, and increase support for a robust OSCE border monitoring mission to help secure Ukraine's border. Funds will also continue to promote democratic and economic reforms; support civil society, decentralization, improve access to unbiased information, and judicial reform; encourage clean energy investment; and help bring the damaged Chornobyl nuclear facility to an environmentally safe and stable condition and properly store its nuclear waste.

- **Europe and Eurasia Regional (\$66.8 million):** Resources will support initiatives to counter corruption and advance economic and democratic transition in the region. U.S. assistance will help advance economic integration, growth, and competitiveness, especially in the Western Balkans; support cross-border energy linkages and lower emissions development pathways for the region; promote civil society development and networks; foster professional investigative journalism particularly through regional journalist networks; and leverage transition experience and resources from emerging donors in Central Europe and the Baltic states.

Near East (\$1,378.9 million): The FY 2017 OCO request addresses urgent and extraordinary needs associated with prevention and recovery from conflicts in the region. OCO funding will be used to support the moderate Syrian opposition, provide assistance to Syria's neighbors, support to the Iraqi government, and counter extremist elements in the region, including ISIL. Support provided to the moderate Syrian opposition, Jordan, and Iraq will be tailored to the individual needs of each partner and country. Funding will be used to meet needs in communities in the region that are hosting refugees from Syria as well as bolster governments that are bearing costs associated with the refugee crisis and countering ISIL.

Assistance will also address transitions in Tunisia, Libya, and Yemen. The Administration's strategy makes clear that bolstering resilience and stability in the region is a priority while the United States continues to focus efforts on countering violent extremists and terrorist organizations, like ISIL, and their ability to exploit governance shortfalls and sectarian tensions to expand their own reach.

- **Iraq (\$332.5 million):** The FY 2017 request for ESF-OCO for Iraq is required to support the President's strategy to degrade and ultimately defeat ISIL. These programs will have a direct impact in communities and areas liberated from ISIL's control, and will promote long-term stability nationwide through activities that support good, responsive governance; inclusivity; and effective and transparent use of public resources. Assistance will support the reform agenda, designed to help government at all levels better respond to citizens' needs to rebuild trust and legitimacy necessary to counter ISIL's messaging and promote stabilization, recovery, and reconciliation. A significant increase in ESF-OCO resources is planned to support Iraq's efforts to stabilize and strengthen its macroeconomic position as it pursues reforms in line with conditions outlined in international financial institutions agreements. This includes \$260 million to provide a \$1 billion Sovereign Loan Guarantee to the Government of Iraq, conditioned on economic reform implementation in support of International Financial Institution reform efforts. FY 2017 request will include assistance to support moderate, democratic actors to reinforce Iraq's constitutional system, and promote inclusive governance. Assistance will support work at the community level to complement national-level efforts that promote tolerance and counter sectarianism.
- **Jordan (\$632.4 million):** The FY 2017 request will continue critical support to mitigate the economic strains Jordan faces due to regional instability, the ISIL offensive, and the influx of refugees from the crisis in both Iraq and Syria. Funds will also provide balance of payments support to the Government of Jordan to enhance economic stability. In addition to supporting Jordan's economic stability, funding may provide assistance in sectors that are increasingly under strain in communities hosting significant numbers of refugees from Syria. The request includes programs that will increase private sector competitiveness through reforms to the business enabling environment and development of a workforce that can meet the demands of Jordan's growing private sector. A portion of ESF assistance will be provided for sub-national and local governments to support policies that enhance government functionality at the municipal level, as well as support meaningful citizen participation and representation. Finally, this assistance will improve the Government of Jordan's ability to strengthen the delivery and quality of basic, essential services, especially those related to health, education, and water.

- **Lebanon (\$110 million):** The FY 2017 request supports Lebanese institutions that advance internal and regional stability, combat the influence of extremists, and promote transparency and economic growth. Stability and good governance in Lebanon contribute to a peaceful Middle East and a direct enhancement of U.S. national security. The request includes assistance to promote Lebanon's stability by strengthening the delivery of public services such as clean water and education, and promoting good governance and economic growth across sectarian lines. Lebanon is on the front lines of the Syrian crisis and under constant threat from extremists such as ISIL at its borders. Funds will also provide additional support to Lebanese communities through programs that bolster Lebanon's ability to provide basic services and governance, like water infrastructure and basic education, which are under strain due to the massive influx of Syrian refugees.
- **Syria (\$175 million):** The FY 2017 request will continue to provide assistance to moderate Syrian opposition groups to support critical needs resulting from the ongoing crisis. U.S. leadership will remain critical through FY 2017, and this request will help the United States advance a political transition; counter violent extremist groups, including ISIL; support local communities in liberated areas to maintain basic services; and preserve U.S. national security interests in the region. Specifically, this request continues ongoing efforts to support the moderate opposition, including national and local-level opposition groups as they strive to achieve a negotiated political solution to this conflict; provide goods and services to their communities; and jumpstart local economies. The United States remains firmly committed to international efforts that support a negotiated political solution to the crisis. Should a transition occur, U.S. assistance will focus on helping consolidate the political transition, support the democratic process, and enable reconstruction and recovery efforts, in coordination with the other international donors.
- **Tunisia (\$74 million):** Undertaking political and economic reform amid high unemployment is a key challenge for the democratically-elected Tunisian government. The ESF request will facilitate market-oriented reforms that address Tunisia's primary constraints for economic growth. In addition, the United States will continue to support bottom-up economic growth, including generating professional growth and training opportunities for women and youth in historically marginalized areas. ESF assistance will allow for increased support for Tunisia's democratic institutions and civil society, as well as support for increased governmental transparency. ESF may also be used to support appropriate institutions and processes as part of the Security Governance Initiative (SGI). This request includes \$20 million in support of the Tunisian-American Enterprise Fund.
- **Yemen (\$40 million):** The United States remains committed to supporting all Yemenis who strive for a peaceful, resilient, and unified Yemen. The needs were great before the current conflict and have risen substantially since. The FY 2017 request will help Yemen recover and rebuild in the areas of democracy and governance, education, health, nutrition, water, and economic growth. It is critical that U.S. assistance is coordinated with both the Republic of Yemen Government and international donors to bolster a Yemeni-led democratic society and support the country's most vulnerable citizens.

South and Central Asia (\$1,505.8 million): The FY 2017 request includes funding to support extraordinary and temporary needs that will help stabilize conflict areas and aid in the transition to long-term sustainable and durable development of Afghanistan and Pakistan.

- **Afghanistan (\$1,027 million):** In FY 2017, Afghanistan will be entering its third year under a new government with international forces pursuing a train, advise-and-assist mission. This request prioritizes areas critical to sustaining gains of the last decade and objectives of the government while continuing to lay the foundation for sustained economic, political, and social sector development.

Civilian assistance programs will center increasingly on long-term development and the critical task of making Afghanistan more self-reliant and sustainable. The United States will continue to sustain our partnership with Afghanistan in close coordination with the government as it advances its plan to grow the private sector, combat corruption, and expand upon the development gains made since 2001. Support from the United States will remain critical, as Afghanistan will continue to be tested by economic and governance challenges as well as threats to stability posed by violent extremism. The government continues to work towards reforms first laid out in London in 2014. The concept of mutual accountability was further refined with the announcement of the New Development Partnership between the Government of Afghanistan and the United States in March 2015 and the development of the Self Reliance Through Mutual Accountability Framework (SMAF) in September 2015. FY 2017 ESF programs will focus on promoting economic growth by investing in key enabling sectors that include agriculture, improved governance, a better system of justice, and alternatives to the illicit production of narcotics. The U.S. government will also work with the Afghan government to support the completion and maintenance of core infrastructure investments that bring sustainable electric grid power to the North and South – a critical component of the U.S. government economic growth strategy for Afghanistan. U.S. assistance programs will promote a more sustainable and resilient economy, increased government revenues driven by private sector-led investment and growth, and stronger regional market linkages. To foster sustained growth, funds will also support investments in high-growth potential sectors such as agriculture, extractive industries and information communications technology. The U.S. government will work with international partners to sustain gains in health and education and will support women and girls through the transition decade and beyond. This includes continued support for the Let Girls Learn initiative where the United States will continue to support substantial investments in girls' education, further advancing the United States' commitment to empower women and girls in Afghanistan. The United States and the Government of Afghanistan will continue working together to make progress on the fundamental reform objectives laid out in the Afghan government's reform agenda and the SMAF. The United States will continue to provide incentive for progress by conditioning a portion of assistance on the Afghan government's achievement of development and reform results in critical areas. The current areas of emphasis for the U.S. incentive program are improving fiscal sustainability, improving governance, countering corruption, and reducing poverty including through the empowerment of women. Incentive funds will support government reform efforts through the Afghan Reconstruction Trust Fund. Donors and the Afghan government will meet in Brussels in late 2016 to review progress on SMAF benchmarks and renew development assistance commitments.

- **Nepal (\$64 million):** U.S. assistance will be used to foster economic growth, and support reconstruction of houses, schools, and livelihoods in Nepal following the devastating April 2015 earthquake. Resources will also be used to increase agricultural productivity and promote changes in nutrition habits in order to lower the poverty rate and increase food security. Additionally, U.S. assistance will be used to improve resource management, adaptation to climate change, and protect biodiversity. ESF will also be used to strengthen national disaster institutions in order to increase Nepal's preparedness and response to future natural disasters. U.S. assistance will also help increase effective governance through support for constitutional reform, increased political competition, improved government institutions, and a more strategic and effective civil society that advances the public interest.
- **Pakistan (\$400 million):** The FY2017 ESF-OCO request will continue to support the United States' strategic objectives in the region, including combatting terrorism and violent extremism and increasing security, growth and stability within Pakistan and the broader region. The request will also demonstrate the United States' commitment to fostering long-term cooperation with the Government of Pakistan in order to address areas of mutual interest. Civilian assistance is organized around a five-sector strategy focused on fostering Pakistan's growth and stability: energy; economic growth

and agriculture; stabilization of areas vulnerable to violent extremism; education; and health. This request will continue assistance to support to energy investments that help Pakistan address its debilitating energy crisis, which remains the highest civilian assistance priority for both the United States and the Government of Pakistan. These projects will focus on clean energy, particularly facilitating private sector investment in the energy sector. Interventions will support increasing power generation, transmission, reforms, and improving the business climate of the energy sector.

U.S. assistance will support economic growth through facilitating trade, private sector led growth, modernization of agricultural operations and good farming practices; improve Pakistan's education sector by enhancing both reading skills and teacher capacity, as well as build U.S.-Pakistan ties and cooperation in higher education; and promote improvements in Pakistan's health sector, including maternal and child health services. U.S. assistance will also support stabilization and civilian governance, infrastructure reconstruction and development, and increased regional trade economic activity, particularly but not exclusively in the tribal areas and border regions with Afghanistan.

U.S. assistance will also help expand the writ of the Government of Pakistan to improve democracy, governance, and the delivery of essential services, as well as expand economic opportunities, in areas prone to instability. In addition, this request also supports the return of persons displaced by counterterrorism operations, and provides related construction and rehabilitation of roads, bridges, irrigation systems, and other infrastructure to promote development in these areas.

- **Central Asia Regional (\$14.8 million):** U.S. assistance will complement bilateral programs in Central Asia to build resilience to economic and political aggression due to Russian influence. Funding will support regional efforts to increase access to relevant objective news and information. Funding will continue to support regional cross-border activities under the New Silk Road initiative, which aims to further Afghanistan's economic integration into the broader region and increase Central Asia's access to diverse markets. Specifically, these resources will fund projects that increase economic growth and trade, including improving the transit of legal goods and services across borders, increase regional cooperation on the use of energy resources, increase cooperation and rational use of water and other natural resources, improve governance along trade and transit corridors, and foster business-to-people exchanges. These funds will support the new "C5+1" process, which provides a forum for high-level dialogue between the United States and all five Central Asian states, and will include projects on enhancing regional economic connectivity, addressing environmental challenges, and improving regional coordination on security challenges, such as recruitment by violent extremist groups.

Global Programs (\$59 million): The FY 2017 ESF-OCO request also funds a program that is implemented worldwide.

- **Counterterrorism Partnerships Fund (CTPF) (\$59 million):** Pursuant to strategic threat assessments and building upon FY 2016 funding, FY 2017 ESF funds for the CTPF will enhance the capabilities of governmental and non-governmental partners across the Middle East, North Africa and the Sahel, the Horn of Africa, and South and Central Asia, and other regions as required, to mitigate the threat posed by foreign terrorist fighters, prevent and counter terrorist safe havens and recruitment, and counter Iranian-sponsored terrorism. Funds will allow the United States to broaden partnerships with other governmental actors, sub-national authorities, and civil society organizations in these regions that can help provide the necessary civilian security to those most vulnerable to brutal terrorist actions and prevent radicalization to violent extremism. An additional \$21 million for CTPF is requested in the Nonproliferation, Anti-terrorism, Demining and Related Programs-OCO account. Programs will be appropriately balanced among interventions focused on security and criminal justice, and interventions focused on addressing the conditions driving recruitment and radicalization. Allocation decisions will be made in the context of a robust, coordinated interagency process.

The FY 2017 President's Budget assumes that further adjustments to the Budget Control Act's discretionary spending limits will be needed to sustain these activities in FY 2018. The Administration's enduring funding for ongoing operations must return to a sustainable level as we move into FY 2018 to ensure this increased scope of OCO countries and levels can shift back to the base in FY 2018.

Migration and Refugee Assistance - OCO

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Migration and Refugee Assistance	2,127,114	2,127,114	1,876,003	-251,111

The FY 2017 Migration and Refugee Assistance (MRA) Overseas Contingency Operations (OCO) request of \$1,876 million will fund humanitarian assistance to meet basic needs, including emergency shelter, medical care, protection and assistance to the most vulnerable, such as survivors of gender-based violence, with a particular emphasis on populations impacted by conflict. These funds will support multilateral organizations, including the UN High Commissioner for Refugees and the International Committee of the Red Cross, and non-governmental organizations as they respond to the immense needs of conflict victims. MRA-OCO programs aim to save lives and ease suffering, protect vulnerable populations, achieve durable solutions for those displaced by conflict, and exert leadership in the international community. The Bureau of Population, Refugees, and Migration (PRM) provides humanitarian assistance in response to complex emergencies and protracted displacement, as well as supports the voluntary return and local integration of refugees and IDPs. PRM-supported programs are designed to identify and protect the most vulnerable, such as single heads of households, children, the elderly, and the disabled to ensure that they have equal access to life-sustaining goods and services. Strategies to protect the beneficiaries from harm and to protect their rights are incorporated into multiple sectors including: water, sanitation and hygiene, shelter, food, health and nutrition, education, livelihoods, and camp management. Coupled with diplomatic efforts, these programs seek to: prevent the forcible return of refugees to a place where their lives or freedom would be threatened; negotiate access for humanitarian agencies to operate safely and reach people affected by conflict; resolve protracted refugee situations; prevent and reduce statelessness; promote adherence to international humanitarian and human rights law; and help vulnerable people maintain their dignity by advocating for opportunities that promote self-sufficiency.

The FY 2017 President's Budget assumes that further adjustments to the Budget Control Act's discretionary spending limits will be needed to sustain these activities in FY 2018. The Administration's enduring funding for ongoing operations must return to a sustainable level as we move into FY 2018 to ensure this increased scope of OCO countries and levels can shift back to the base in FY 2018.

U.S. Emergency Refugee and Migration Assistance Fund - OCO

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
U.S. Emergency Refugee and Migration Assistance Fund	-	-	40,000	40,000

The U.S. Emergency Refugee and Migration Assistance Fund (ERMA) enables the President to provide humanitarian assistance for unexpected and urgent refugee and migration needs. The FY 2017 Overseas Contingency Operations (OCO) request of \$40 million will allow the United States to respond quickly to urgent and unforeseen needs of refugees and other populations of concern, with a particular emphasis on populations impacted by conflict.

The FY 2017 President's Budget assumes that further adjustments to the Budget Control Act's discretionary spending limits will be needed to sustain these activities in FY 2018. The Administration's enduring funding for ongoing operations must return to a sustainable level as we move into FY 2018 to ensure this increased scope of OCO countries and levels can shift back to the base in FY 2018.

International Narcotics Control and Law Enforcement - OCO

(\$ in thousands)	FY 2015 Actual ¹	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
International Narcotics Control and Law Enforcement	439,195	371,650	324,240	-47,410

1/ The FY 2015 OCO level includes the transfer of \$4 million from the FY 2015 International Narcotics and Law Enforcement-OCO account to the Economic Support Fund-OCO account.

The FY 2017 International Narcotics Control and Law Enforcement (INCLE) request includes \$324.2 million in Overseas Contingency Operations (OCO) funding for bilateral and regional programs that address national and transnational citizen security concerns in strategically important countries in Africa, Europe and Eurasia, the Near East, and South and Central Asia that are threatened by or recovering from crisis, including armed conflict, as well as natural or man-made disasters.

Highlights:

Africa

- Central African Republic (\$5.7 million):** Funding will support ongoing efforts to help reestablish a functioning criminal justice system in the Central African Republic (CAR) and end impunity for serious crime by building upon current programming. Funds will support stability operations and security sector reform projects to train and professionalize CAR's law enforcement forces and prison system in line with international standards and best practices. Rule of law projects will expand the capabilities of justice sector actors, prosecution functions, and court institutions through training, mentoring, and work-related equipment for prosecutors, investigators, and court officials.
- Liberia (\$11.1 million):** Funding to civilian law enforcement will be used to continue to develop the Liberia National Police (LNP), focusing on supporting LNP's nationwide reach and building transparent processes within an efficient and effective management structure. Department of State-led efforts will complement and coordinate with other donors' programs and support the broader strategy to assist the Government of Liberia. U.S. assistance will also provide technical training, advising, mentorship, technical assistance, and materials to criminal justice institutions to uphold the rule of law and improve adherence to laws and international standards.
- South Sudan (\$6 million):** Funding will be used to develop South Sudan's capacity to provide civilian security and basic criminal justice services. Funds will support technical assistance and training for South Sudan's criminal justice sector officials, both through bilateral programs and through support to the UN Mission in South Sudan. INCLE programs will enhance short- and long-term stability as South Sudan transitions domestic security responsibility away from the military to the South Sudan National Police Service and develops its justice and correctional institutions.
- State Africa Regional (\$15 million):** The INCLE OCO request includes funding for three regional initiatives: the Trans-Sahara Counter-terrorism Partnership (TSCTP), the Partnership for Regional East African Counter Terrorism (PREACT), and the West Africa Regional Security Initiative (WARSI). Both TSCTP and PREACT focus on enhancing the capabilities of partner nations to prevent and respond to terrorism in their respective regions. TSCTP seeks to build institutional capacity in the justice and security sectors in the Sahel, in support of cross-regional programs to

address emerging security challenges facing the Sahel region of sub-Saharan Africa and the Maghreb region of North Africa. WARSI focuses on enhancing rule of law, promoting security sector reform, and building partner nations' capacity to counter transnational criminal threats, including narcotics trafficking.

Europe and Eurasia

- **Ukraine (\$15 million):** To ensure the country's future stability and advance its European integration, INCLE funding will be used to enhance efforts to develop fair, effective, and transparent justice and law enforcement systems in Ukraine. INCLE-funded programs will complement other U.S. government assistance efforts by supporting the development of a criminal justice system that is more effective and transparent, thereby limiting opportunities for corruption. As part of a comprehensive law enforcement reform program, INCLE-funded technical expertise and capacity building assistance will help the Ukrainian government reform its law enforcement and police structures, including organizational reforms within the Ministry of Interior. Programs will also improve the quality and performance of new and existing law enforcement and justice-sector personnel, assist and support reform of the Prosecutor General's Office, and counter corruption across the justice sector.

Near East

- **Lebanon (\$10 million):** INCLE assistance supports two major objectives: helping the Lebanese internal security forces become more responsive to the public's internal security needs, and enhancing the ability of Lebanon's criminal justice institutions to work together to provide effective criminal justice and internal security services to the public. The FY 2017 INCLE request supports these two objectives through assistance in law enforcement, justice sector reform, and transnational crime programming. Assistance consists of training, advising, and limited equipping procurement to increase individual and organizational capacity, improve internal processes and organizational makeup; and improve coordination within and between sectors of Lebanon's criminal justice system.
- **Tunisia (\$13 million):** INCLE funding will sustain ongoing programming focused on criminal justice sector reform efforts. Programming will continue to support the transition of Tunisia's civilian law enforcement institutions into professional organizations that are more accountable and transparent to the public; enhance the professionalism, independence, and accountability of the judiciary; and enhance the capacity of the Tunisian correctional system to manage prisons in a safe, secure, humane, and transparent fashion. Funding will support Security Governance Initiative activities as defined in the Joint Country Action Plan related to the development of national-level priorities such as border management; police policy, procedure, and community engagement; and promoting integrity and addressing radicalization in the criminal justice sector.

South and Central Asia

- **Afghanistan (\$185 million):** Afghan governing institutions continue to face a number of challenges as they assume greater responsibility for providing security and justice to the Afghan people, and for fighting corruption and the narcotics trade. INCLE funding will continue to strengthen Afghan rule of law and counternarcotics efforts and institutions, as well as enhance the Afghan government's capacity to govern in a fair, transparent, secure, and effective manner. Funding will continue to promote Afghan ownership by increasing the percentage of Afghans employed by our justice, corrections, and counternarcotics programs. Increasing Afghan management and implementation of these programs will ensure that the Department of State is able to maintain its programmatic effectiveness and overarching objectives.

INCLE-funded programming contributes to the overall commitments made by the United States at the 2012 Tokyo Conference and supports the reform agenda presented by the Afghan government and endorsed by international donors at the London Conference in 2014. FY 2017 funds will support Afghanistan's National Drug Action Plan, which is being prepared with direct input from President Ghani and includes clear, realistic benchmarks to measure progress over the remainder of his term. Additionally, FY 2017 funds will continue to support gender focused programs that provide women with paths to government and civil society leadership positions, improved security, access to justice, and provide necessary shelter for victims of domestic violence.

- **Pakistan (\$40 million):** INCLE-funded programs in Pakistan will promote stability and security in the region during the transition of U.S. forces in Afghanistan. Funding will continue to support Pakistani efforts to enhance the capacity of both federal and provincial civilian law enforcement and other criminal justice entities; extend the rule of law and access to justice; modernize and professionalize the corrections sector to ensure safe, secure, humane, and transparent prisons; and counter the production, trafficking, and use of narcotics. Programs will continue to focus on improving security in regions bordering Afghanistan and major cities such as Karachi and will support Pakistani institutions responsible for providing security and justice. The Department will be nearing completion of transitioning the 50th Aviation Squadron Air Wing to the Ministry of Interior. To ensure a responsible transition, funding will be used for training of pilots and technical personnel as well as close out costs.

The FY 2017 President's Budget assumes that further adjustments to the Budget Control Act's discretionary spending limits will be needed to sustain these activities in FY 2018. The Administration's enduring funding for ongoing operations must return to a sustainable level as we move into FY 2018 to ensure this increased scope of OCO countries and levels can shift back to the base in FY 2018.

Nonproliferation, Anti-Terrorism, Demining and Related Programs - OCO

(\$ in thousands)	FY 2015 Actual ¹	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Nonproliferation, Anti-Terrorism, Demining and Related Programs	95,240	379,091	214,254	-164,837

1/ The FY 2015 OCO level includes the transfer of \$4 million from the FY 2015 Nonproliferation, Antiterrorism, Demining and Related Programs-OCO account to the Economic Support Fund-OCO account.

The FY 2017 Nonproliferation, Anti-Terrorism, Demining and Related Programs (NADR) Overseas Contingency Operations (OCO) request of \$214.3 million will support a broad range of U.S. national interests through critical, security-related programs that reduce threats posed by international terrorist activities; landmines, explosive remnants of war (ERW) and stockpiles of excess conventional weapons and munitions; nuclear, chemical, biological, weapons of mass destruction (WMD); and other destabilizing weapons and missiles, including Man-Portable Air Defense Systems (MANPADS) and their associated technologies. The NADR OCO request is focused on programs for countries in Africa, Europe, the Near East, and South and Central Asia that are threatened by or recovering from crisis, including armed conflict.

Highlights:

Nonproliferation Activities

- The Export Control and Related Border Security (EXBS) program (\$18.5 million) seeks to prevent states and terrorist organizations from acquiring WMD, their delivery systems, and destabilizing conventional weapons by helping partner countries to develop comprehensive strategic trade control and related border security systems. The program builds partner country capacity to ensure that transfer authorizations support only legitimate trade, and to detect and interdict illicit transfers at borders. The OCO request includes resources for country and regional EXBS programs in Afghanistan, Georgia, Iraq, Jordan, Lebanon, Libya, Moldova, Nepal, Pakistan, Syria, Tunisia, Ukraine, Yemen, and Europe and Eurasia Regional.

Antiterrorism Activities

- Antiterrorism Assistance (ATA) programs (\$128.9 million) provide training, consultations, equipment, infrastructure, and mentoring/advising to help partner nations deal effectively with security challenges within their borders, defend against threats to national and regional stability, and deter terrorist operations across borders and regions. ATA capacity-building includes, but is not limited to, strengthening law-enforcement counterterrorism investigations, bomb detection and disposal, critical-incident management, dignitary protection, airport and border security, hostage negotiation, and cyber security. ATA capacity-building is specifically designed to foster increased respect for human rights and the rule of law. The OCO request includes resources for ATA country and regional programs in Afghanistan, Iraq, Jordan, Lebanon, Libya, Nepal, Pakistan, Somalia, Syria, Tunisia, Yemen, Central Asia Regional, and State Africa Regional (AF), as well as for the Trans-Sahara Counter-Terrorism Partnership (TSCTP) and the Counterterrorism bureau's Regional Strategic Initiative (RSI).

- In response to strategic threat assessments and building on FY 2016 funding, the FY 2017 request includes \$21 million in NADR OCO funds under the ATA program heading for the Counterterrorism Partnerships Fund (CTPF), which will enhance the civilian counterterrorism capabilities of key partner nations in the Middle East, North Africa and the Sahel, the Horn of Africa, and South and Central Asia, and other regions as required to mitigate the threat posed by foreign terrorist fighters, prevent and counter terrorist safe havens and recruitment, and counter Iranian-sponsored terrorism. Additional funding for CTPF (\$59 million) is requested in the Economic Support Fund- OCO account to allow the United States to broaden partnerships with other governmental actors, sub-national authorities, and civil society organizations in these regions that can help provide the necessary civilian security to those most vulnerable to brutal terrorist actions and prevent radicalization to violent extremism. Programs will be appropriately balanced among interventions focused on security and criminal justice, and interventions focused on addressing the conditions driving recruitment and radicalization. Allocation decisions will be made in the context of a robust, coordinated interagency process.
- The Terrorist Interdiction Program/Personal Identification, Secure Comparison, & Evaluation System (TIP/PISCES) program (\$3 million) provides state-of-the-art computerized screening systems, periodic hardware and software upgrades, and technical assistance and training to partner nations that enable immigration and border control officials to quickly identify suspect persons attempting to enter or leave their countries. The OCO request includes resources for TIP/PISCES bilateral and regional programs in Afghanistan and State Africa Regional.

Regional Stability and Humanitarian Assistance

- The Conventional Weapons Destruction (CWD) program (\$63.9 million) will continue to advance U.S. efforts to secure and combat the illicit proliferation of small arms/light weapons (SA/LW), including MANPADS and other advanced conventional weapons systems, and to clear land contaminated with landmines and ERW. CWD activities mitigate security and public safety risks associated with excess, obsolete, unstable, or poorly-secured/maintained weapons and munitions stockpiles, including MANPADS, by assisting countries with destruction programs, improving physical security at storage facilities, and enhancing stockpile management practices. CWD also confronts the dangers posed by landmines and other ERW by surveying hazard areas, clearing landmines and ERW from affected areas, educating vulnerable populations, and assisting victims. CWD OCO priorities for FY 2017 include preventing illicit SA/LW proliferation from the Middle East and Sahel/Maghreb region; denying SA/LW to destabilizing forces in North Africa and the Sahel; clearing battle areas in Iraq; continuing landmine and ERW clearance in Afghanistan; and engaging in UXO clearance efforts in the Islamic State in Iraq and Levant (ISIL)-liberated areas within Syria and Iraq. The OCO request includes resources for CWD bilateral and regional programs in Afghanistan, Democratic Republic of the Congo, Iraq, Jordan, Lebanon, Libya, Somalia, South Sudan, Syria, Ukraine, and Yemen, as well as Europe and Eurasia Regional.

The FY 2017 President's Budget assumes that further adjustments to the Budget Control Act's discretionary spending limits will be needed to sustain these activities in FY 2018. The Administration's enduring funding for ongoing operations must return to a sustainable level as we move into FY 2018 to ensure this increased scope of OCO countries and levels can shift back to the base in FY 2018.

Peacekeeping Operations - OCO

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Peacekeeping Operations	328,698	469,269	349,100	-120,169

The FY 2017 Peacekeeping Operations (PKO) Overseas Contingency Operations (OCO) request of \$349.1 million supports critical bilateral and regional peacekeeping, counterterrorism, and security sector reform efforts in countries in Africa and the Near East threatened by, recovering from, or responding to crisis, including armed conflict. Funds for monitoring and evaluation efforts to help evaluate the effectiveness of PKO funded programs are also included in the request.

Highlights:

- Somalia (\$110 million):** FY 2017 funds will be used to continue voluntary support to the African Union Mission in Somalia (AMISOM), including training and advisory services, equipment, and logistics support of personnel/goods from current and new force-contributing countries not covered by the UN Support Office for Somalia (UNSOS). Given the security gains and expansion made by AMISOM, increased support to the national Somali military forces is critically important. Accordingly, PKO funds will be used to professionalize, and provide training, advisory, equipment, logistical, operational, and facilities support to Somali military forces to ensure they have the capability to contribute to national peace and security in support of the international peace process efforts, and as part of a multi-sector approach to post-conflict security sector reform. Programming will emphasize human rights and civil-military relations. Funds to pay the United States' portion of the UN assessment for UNSOS are requested separately in the Contributions for International Peacekeeping Activities account.
- Syria (\$50 million):** FY 2017 assistance will build the capacity of moderate partners inside Syria to counter ISIL, enhance security and stability in their local communities, and foster conditions that can lead to political settlement in Syria. PKO OCO funds will enable the Department of State to continue the provision of non-lethal assistance to the moderate, armed Syrian opposition, which will serve to bolster their capacity, cohesion, and credibility. This funding will also be used to strengthen linkages between armed and civilian actors which are critical to enabling the opposition to counter ISIL and set the conditions for a political settlement. This assistance will complement the train and equip efforts of the Department of Defense.
- South Sudan (\$30 million):** FY 2017 funds will support the Sudan People's Liberation Army (SPLA) efforts to overcome the legacy of conflict and transform into an appropriately-sized professional military that respects human rights, represents its population, is accountable to elected leadership, protects the people of South Sudan, and encourages stability in the Horn of Africa. U.S. assistance is implemented through a "dual use" approach that builds the capacity of the SPLA in areas that will also directly benefit the citizens of South Sudan. In doing so, PKO-funded programs will provide technical training and non-lethal equipment to the military as well as expert advisors to assist both the military and the Ministry of Defense and Veteran's Affairs in the professionalization of the defense sector. If needed (depending on the security situation), funds may also support efforts to resolve or enforce stability in South Sudan such as the Intergovernmental Authority on Development (IGAD)-led monitoring mechanisms of the peace agreement.

- **Trans-Sahara Counterterrorism Partnership (TSCTP) (\$20.1 million):** The FY 2017 request continues support for the TSCTP, an interagency program designed to build the capacity and cooperation of governments across West and North Africa to counter terrorism. Funds will enhance the military capacity of TSCTP partners to respond to current and emerging threats, with an emphasis on border security, aerial mobility, military intelligence, logistics, institutional capacity, civil-military operations, military information support operations, and countering improvised explosive devices. Funds will support advisory assistance, modest infrastructure improvement, and training and equipping of counterterrorist military units in the West and North African regions and will also have a new focus on institutional reform in the partner countries to ensure they can sustain and logistically support the new counterterrorism capabilities being developed. Funds will also support a monitoring and evaluation effort to evaluate the effectiveness of the TSCTP PKO funded programs.
- **Democratic Republic of the Congo (\$10 million):** FY 2017 funds will be used to continue long-term efforts to reform the military in the DRC into a force capable of maintaining peace and security, including the development of the military justice system and the Congolese military logistics system. Funds will support advisory assistance at the strategic and operational levels, training, equipment, and infrastructure improvements that contribute to the professionalization of the Congolese military.
- **Central African Republic (\$8 million):** Requested funds will primarily support security sector reform at the national level with the Central African Republic military, including training, advisory support, and non-lethal equipment.
- **Liberia (\$1 million):** The FY 2017 request will continue to support the long-term effort to transform the Liberian military into a professional 2,100-member armed force that respects the rule of law and has the capacity to protect Liberia's borders and maintain adequate security in the country. Funds will primarily provide for support for the Department of Defense military mentors in Liberia, select infrastructure support, and advisory and/or training support.
- **Africa Regional (\$120 million):** FY 2017 OCO funds will be used to support the following programs:
 - o *African Peacekeeping Rapid Response Partnership (APRRP) (\$110 million):* Funds will support the third year of the program, announced at the 2014 U.S.-Africa Leaders Summit, to build rapid peacekeeping response capabilities in the following initial African countries: Ethiopia, Ghana, Rwanda, Senegal, Tanzania, and Uganda. Supporting partner country efforts to deploy, employ, and sustain an effective rapid response capability requires a full spectrum approach so funds may support doctrine development, organizational structures, facilities, training and education, logistics capabilities, and equipment.
 - o *Partnership for Regional East Africa Counterterrorism (PREACT) (\$10 million):* Funds will continue support for PREACT, an interagency effort to build the capacity of governments in East Africa to counter terrorism. Funds will be used to enhance the tactical, strategic, and institutional capacity of PREACT partner militaries to respond to current and emergent terrorist threats, with an emphasis on border security, command-and-control, communications, civil-military operations, logistics, military intelligence, special forces, and countering improvised explosive devices. Funds will also support advisory assistance; modest infrastructure improvements; and training and equipping of military counterterrorism units in the East Africa region.

The FY 2017 President's Budget assumes that further adjustments to the Budget Control Act's discretionary spending limits will be needed to sustain these activities in FY 2018. The Administration's enduring funding for ongoing operations must return to a sustainable level as we move into FY 2018 to ensure this increased scope of OCO countries and levels can shift back to the base in FY 2018.

Foreign Military Financing - OCO

(\$ in thousands)	FY 2015 Actual ¹	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Foreign Military Financing	851,837	1,288,176	1,012,150	-276,026

1/ The FY 2015 OCO level includes the transfer of \$14.583 million from the FY 2015 Foreign Military Financing-OCO account to the Economic Support Fund-OCO account.

The FY 2017 Foreign Military Financing (FMF) Overseas Contingency Operations (OCO) request of \$1,012.2 million is for Liberia, Iraq, Jordan, Lebanon, Tunisia, Georgia, Moldova, Ukraine, Europe and Eurasia Regional, Nepal, Pakistan, and Central Asia Regional.

Highlights:

- Iraq (\$150 million):** The FMF OCO requested for Iraq in FY 2017 will focus broadly on helping the Iraqis improve the capability and professionalism of their military and will build upon the efforts made since 2003 by U.S. military, coalition forces, and Iraqi military operations and initiatives. This assistance will help ensure that a strong U.S.-Iraq relationship is in place as Iraq continues to rely on its own fiscal resources to contribute to peace and security in the region. The program will focus on helping the Iraqi Security forces counter the Islamic State of Iraq and the Levant (ISIL); developing enduring logistics capabilities and institutions to sustain U.S. and Iraqi post-war investments; professionalizing the security forces; and strengthening the United States' long-term strategic partnership with Iraq. FMF funding may be used to support a second \$2.7 billion FMF loan to the Government of Iraq to help assist in procurement U.S. military items.
- Jordan (\$350 million):** Under the three-year Memorandum of Understanding, this \$350 million FMF OCO request for Jordan in FY 2017 will support the Jordanian Armed Forces' (JAF) efforts to improve border and maritime security, capacity to control national territory and counter internal and external threats, and interoperability with the United States to participate in coalition operations, including operations to counter ISIL. FMF will support training, equipment, and defense services that build the JAF's overall ability to secure Jordan. Such assistance may include support for Jordan's precision strike capabilities, mobility, professionalization, intelligence, surveillance, and reconnaissance (ISR) capacity, communications and command and control ability, and logistics and maintenance processes. This assistance enables Jordan's ability to support ongoing operations against extremist threats stemming from Syria. Building the capacity of the JAF will support regional security and their ability to contribute to regional security efforts.
- Lebanon (\$105 million):** With the conflict in Syria almost five years in, Lebanon remains on the frontline in the fight against regional instability and the corrupting and destabilizing influence of extremists and terrorists. FMF assistance is crucial to supporting Lebanon's security and stability. FMF OCO requested for FY 2017 will support the Lebanese Armed Forces (LAF)'s ability to secure the border and national territory against extremist threats, including ISIL and al Nusra. Assistance may focus on bolstering the capacity of the LAF to improve ISR on the border, to support mobility and precision strike capabilities, to improve technical and operational skills through training, to build improve communications and command and control capacity, and to enhance sustainment of existing equipment.

- **Tunisia (\$45 million):** Tunisia faces internal as well as external terrorist threats, including those emanating from Libya and Algeria. Terrorist cells affiliated with al-Qaida in the Islamic Maghreb (AQIM), Ansar Al-Sharia-Tunisia (AAS-T), and ISIL have a foothold in Tunisia. FMF OCO will help Tunisia counter increasing threats to its security by augmenting the capabilities of Tunisia's security forces, particularly in the areas of ISR and border security, and ensuring that Tunisia's aging equipment remains combat-capable.
- **Georgia (\$20 million):** Funds will be used to advance Georgia's development of forces capable of enhancing security, countering Russian aggression, and contributing to coalition operations. This will include support in areas such as upgrades to Georgia's rotary wing air transport capabilities, advisory and defense reform, and modernization of Georgia's military institutions.
- **Moldova (\$12.8 million):** This FMF OCO request will build on previous efforts to enable Moldova to contribute to regional stability and security and counter Russian aggression, while also increasing its ability to participate in future international peacekeeping and coalition operations. Funds will focus on providing individual equipment and training to the Moldovan Armed Forces.
- **Ukraine (\$42 million):** The FMF OCO request for Ukraine in FY 2017 will address critical equipment shortfalls to assist its armed forces in maintaining Ukraine's sovereignty and countering Russian aggression. Assistance will focus on building capabilities that respond to short-term needs and also constitute long-term investments in the modernization of Ukraine's armed forces. These funds will continue to promote Ukraine's political realignment towards the transatlantic alliance, improve interoperability with NATO and other western forces, increase Ukraine's capacity to provide for its own defense, and reinforce the long-term U.S. commitment to Ukraine's sovereignty.
- **Europe and Eurasia Regional (\$15 million):** The Europe and Eurasia Regional FMF OCO request will focus on strengthening security and enhancing stability in the region amid Russian aggression. These funds will allow the United States to respond with maximum flexibility and agility to developments in the region by providing equipment and training to assist allies and partners build capabilities focused on deterring and defending against hybrid threats, increasing military readiness, and enhancing deployable capabilities. Assistance is likely to focus on allies and partners which face the greatest vulnerability to Russian aggression, while also investing in critical capabilities among allies that will be important within NATO for current and future coalition operations.
- **Pakistan (\$265 million):** Given the ongoing transition in Afghanistan and continued terrorist attacks against civilian and military targets throughout Pakistan, FMF is essential to Pakistan's efforts to increase stability in its western border region and ensure overall stability within its own borders. The FMF OCO request for Pakistan in FY 2017 will enhance the Pakistan Army, Frontier Corps, Air Force, and Navy's ability to conduct counterinsurgency (COIN) and counterterrorism (CT) operations against militants throughout its borders, especially in the Federally Administered Tribal Areas and Khyber Pakhtunkhwa, improve Pakistan's ability to deter threats emanating from those areas, and encourage continued U.S.-Pakistan military-to-military engagement. FMF will continue to focus on seven priority COIN/CT capability areas identified and agreed to with the Government of Pakistan, including precision strike; air mobility and combat search and rescue; counter-improvised explosive device and survivability; battlefield communications; night operations; border security; and maritime security/counternarcotics in support of CT aims.

The FY 2017 President's Budget assumes that further adjustments to the Budget Control Act's discretionary spending limits will be needed to sustain these activities in FY 2018. The Administration's enduring funding for ongoing operations must return to a sustainable level as we move into FY 2018 to ensure this increased scope of OCO countries and levels can shift back to the base in FY 2018.

Acting on Evidence and Strengthening the Department of State and USAID Capacity to Build Evidence that Informs Foreign Assistance Decisions

Overview

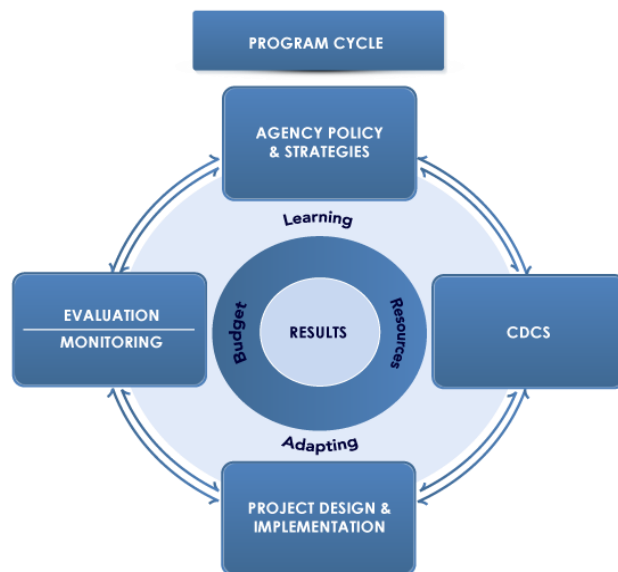

The Department of State and USAID continue to collect and use data and information to assess foreign assistance efforts as well as the ongoing performance and impact of foreign assistance programs. Ongoing performance monitoring data provide a picture of how our programs are doing and we employ deeper analysis and program evaluation to understand “why” or “what” about them is working. Following is a description of: (1) how we are building new evidence and strengthening agency capacity for rigorous monitoring, program evaluation, and data analytics to inform future decision-making; and (2) how State and USAID have acted on existing evidence to inform foreign assistance programmatic and budget decisions. The FY 2017 Annual Performance Plan (APP) and FY 2015 Annual Performance Report (APR) for the Department of State and USAID provide a more comprehensive review of the level of performance and progress towards achieving the Strategic Objectives and Performance Goals in the Joint Strategic Plan. The FY 2017 APP and FY 2015 APR will be posted on www.performance.gov in March 2016.

Building Agency Capacity to Collect Evidence

State and USAID have modified their approach to the annual planning, budgeting and performance management cycle since 2010 to create important feedback loops between strategic planning, budgeting, program management, and monitoring and evaluation that maximize the impact of Department of State and USAID resources. The *Managing for Results Framework* puts State Department bureau and mission strategic planning before the budgeting process so budget requests are informed by and support the goals and objectives bureaus and missions want to achieve.

USAID has implemented an integrated *Program Cycle* (see diagram) to strengthen evidence-based strategic and project planning, adaptive implementation, monitoring, evaluation, and learning to improve development program results. Both State and USAID have strengthened program and project management guidelines to better align and manage

programs. Robust monitoring and evaluation practices provide feedback on progress in achieving our short- and long-term goals.

The 2015 Quadrennial Diplomacy and Development Review (QDDR) outlines an approach that builds on prior work to improve strategic planning, monitoring and evaluation and to better align budgeting with planning. The QDDR considers monitoring and evaluation a requirement for strengthening information-sharing and collaboration. The QDDR also indicates that State and USAID intend to initiate regular senior-level bureau and mission progress reviews which include information obtained from monitoring and evaluation processes.

Program Evaluation

State's and USAID's program evaluation policies provide a key framework for generating evidence to inform decisions. The Department of State updated its evaluation policy in 2015 to expand its application to the full spectrum of activities encompassed in its work. State and USAID coordinate closely to share uniform definitions and evaluation principles. The State policy requires bureaus to conduct at least one evaluation per year tied to their highest priority programs, projects and/or activities. USAID requires evaluations of all large projects (projects with funding greater than the mean project size of an operating unit) and pilot projects demonstrating a new approach or an untested hypothesis that are intended for scale up if proven successful.

Some key advancements in program evaluation capacity building include:

- State Bureaus continue to build capacity for evaluation, drawing upon completed evaluations in programming and budgeting deliberations, and planning for evaluation at program inception.
- State Department hosted the U.S. Government Evaluation Forum celebrating 2015 as the International year of Evaluation. With participation from 19 agencies, the United Nations, multilateral development banks, and the private sector, the forum looked at the links between policy making and evaluation, strategies for facilitating learning and increasing evaluation use, and ways to do more with less—through partnerships, innovative planning and design, and interagency collaboration.
- Since the USAID Evaluation Policy was put into place in January 2011, USAID bureaus and missions have increased the number of programs under evaluation, producing over two hundred evaluation reports each year. USAID evaluation reports are published at the Development Experience Clearinghouse available at dec.usaid.gov.
- State issued policy guidance on the public dissemination of evaluations funded by foreign assistance in 2014. Full reports and summaries of evaluation report results are being posted on a rolling basis to <http://www.state.gov/f/evaluations/index.htm> on State's public web site.
- USAID is continuing to experiment with how to best evaluate programs in complex environments by running trials of complexity aware monitoring approaches.
- USAID has released a compendium of evaluation guidance and tools collected together as the Evaluation Toolkit. It is available to staff and partners at <http://usaidlearninglab.org/evaluation>.

- A *State Evaluation Community of Practice* meets monthly, featuring presentations on recently completed evaluations and special guests sharing best practices. The community has more than 300 members.
- USAID has several monitoring and evaluation communities of practice including the *Evaluation Interest Group* which brings together anyone interested in evaluation methods and practice. Staff formally designated as the point of contact for monitoring and evaluation, *USAID M&E POCs*, meet on a monthly basis to share common challenges and solutions. To facilitate these groups and also ensure resources are available on demand for all staff, USAID continues to offer ProgramNet and Learning Lab, which are online forums available, respectively, to USAID staff and USAID stakeholders for learning and discussion about strengthening all USAID Program Cycle components.
- State has revised its two courses on evaluation – “Managing Evaluations” and “Evaluation Designs and Data Collection Methods” – based on feedback and experience from the implementation to better meet staff needs.
- State continues to integrate elements of the *Managing for Results Framework* in its Foreign Service Institute classroom and online curriculum for civil service employees, Foreign Service Officers, and Foreign Service Nationals.
- USAID updated its popular classroom training courses for staff, including program monitoring in addition to evaluation.
- USAID continues to partner with others to ensure the agency is current on state-of-the-art evaluation methods. For example, USAID is a member of the *International Initiative for Impact Evaluation (3ie)*.
- State sponsored a competition for supplemental funding in the fall of 2015 to support collaborative evaluations under State’s policy. The competition encouraged partnerships between bureaus at State, with USAID, and with international organizations.
- State continues to collect information on evaluations through the evaluation registry and combine this data with the Evaluation Management System to track the number, type, and cost of evaluations as well as reveal trends in regions, topics and other areas as the amount of data grows.
- USAID has commissioned an independent evaluation of the utilization of evaluations at USAID. The study, to be completed in FY2016, will improve understanding of how evaluations are used and what factors hinder or promote evaluation use.
- State commissioned an independent evaluation of the Managing for Results framework to look at gaps as well as how the processes were integrated within bureaus and missions. The evaluation will be completed in early CY2016.

Program and Project Design and Management

Creating a strong culture of monitoring and evaluation starts with its early integration into program and project design. Some key efforts to build capacity in strong program and project design and management include:

- State continues to support staff in stronger program and project management with resources that include:
 - Responding to the 2015 QDDR’s call to Advance Strategic Planning and Performance Management by creating materials for program design that will be available on the

intranet for all of State. Information, tips, and tools will include resources on setting program-level goals, creating logic models, designing performance indicators, and designing monitoring and evaluation frameworks that create feedback loops to future program design as well as at the strategic planning level.

- A Program and Project Management Community of Practice that includes a community website and blog, meetings, networking events, and a speaker series that brings in internal and external experts in program and project management.
- An internal website that provides State staff access to policies, guidance documents, tools, and examples to assist them in understanding and executing each component of the *Managing for Results Framework*.
- The *Program and Project Management Guidebook: A Practical Guide for Department of State Program and Project Managers*.
- The *Project Design Guidebook*, which emphasizes the importance of defining how success will be measured and evaluated.

USAID continues to support capacity building for design and planning that are integrated with evaluation, learning and budgeting through revised guidance, technical support, training and other resources. For example, Agency policy and guidance on the program cycle is being revised to make planning, implementation, and learning requirements more agile and integrated and to reduce reporting and planning burdens where possible.

Performance Monitoring

Ongoing performance monitoring is an important part of accounting for what foreign assistance programs and projects achieve, and provides an indication of what is working or not working as anticipated. In turn, monitoring data inform programmatic, resource, and strategic decisions as well as the focus of possible evaluations that are needed to take a deeper look. Key efforts in this area include:

- USAID is revising performance monitoring requirements and guidance as part of a comprehensive update to all Program Cycle guidance.
- USAID has incorporated performance monitoring training into classroom training on monitoring and evaluation.
- The Office of U.S. Foreign Assistance Resources (F) at the Department of State concluded an extensive Performance Data Needs Study in 2015 to determine what foreign assistance stakeholders wanted to be able to do with performance data and what data they needed for these purposes (e.g. inform policy, programs, resource decisions). As a result of the study conclusions and recommendations, F is significantly revising its annual Performance Plan and Report (PPR) to focus it on capturing indicator and narrative data that has a clear and specific use for the purposes identified as important in the study. Focusing the scope of the annual PPR in this way will allow missions and bureaus to spend their limited time and resources capturing the right data, and increases headquarters' equity to review and provide feedback to ensure submitted data are complete and of high quality so it can be used for their desired purposes.

Acting on Evidence in Foreign Assistance Programming and Budgeting

The true value of data analysis, performance monitoring, and program evaluation is only realized if the lessons they reveal are put to use to inform and support foreign assistance programs and projects. Some of the many ways this information has been put to use in foreign assistance programmatic and budgetary decisions are described below.

Third-Party Data to Support Decision Making

- The FY 2016 Foreign Assistance budget request process fostered interagency collaboration on strategies and data by tracking and analyzing country progress, as reported by third-party data from multiple sources, along six dimensions: (1) economic policy; (2) governing justly and democratically; (3) economic performance; (4) health; (5) education; and (6) peace and security. A State/USAID team, called Country Data Analytics (CDA), synthesizes data for use by missions and bureaus. The CDA analyses facilitate an evidenced-based discussion as to how foreign assistance resources should be allocated. The common set of performance indicators for all countries allows foreign assistance budget analysts, bureaus and missions to identify how performance compares with other countries, groups of countries in the same region, and/or globally.
- The budget cycle continued to benefit from an expanded use of third-party data, as did strategic planning processes now underway:
 - CDA created packages of contextual data for more than 100 countries. The packages display the status of country progress across six sectors using publicly available country performance data. They are made available to operating units and are used in creating mission and bureau resource requests, allocating funding, and developing strategies and programs.
 - The data were used to inform “round tables” where functional and regional bureaus come together to discuss effective allocations of foreign assistance funding.
 - The data were used in Integrated Country Strategy processes, resulting in more informed strategic planning.
 - Data packages are also provided to headquarters units undertaking development of their Joint Regional and Functional Bureau Strategies.
- The F Interagency Network Databank, or FIND, is a website of publicly available, national-level country data that uses a core set of indicators developed through the efforts of an interagency group convened by State. FIND is scheduled to launch to the public in 2016, and will increase the use of data by enabling users to visualize data, perform customized analyses, and share analytic approaches among agencies through a web-based platform.
- USAID’s Economic Analysis and Data Services (EADS) partners with operating units and the greater development community to meet their data needs. EADS’ team provides a central source of data-driven analysis to support the goals of USAID. Through EADS, USAID has direct access to more than 100 sources of international development data, over 65 years of foreign assistance spending data, and a wealth of analytical tools and services that disseminate information, enhance understanding, and inform data-driven decisions.

Using Program Evaluation and Program Assessment Findings

Below are just a few examples from around the world that highlight how lessons learned through program evaluations and other program assessment activities have informed and improved foreign assistance programs.

Synthesizing Evidence and Identifying Gaps for Further Investigation:

- In addition to individual assessments, USAID has conducted or commissioned reviews of evidence from evaluations. For example, the USAID E3 Bureau plans to conduct a sector synthesis of all of its evaluations every year, and is producing a toolkit so that other Bureaus can follow suit. In another example, the USAID PPL Bureau has worked with the International Initiative for Impact Evaluation (3IE) to commission systematic reviews, which summarize the best available evidence from evaluation around specific topics, and Evidence Gap Maps, which highlight existing evidence and identify areas where further research is needed.

President's Emergency Plan for AIDS Relief (PEPFAR):

- PEPFAR has shifted the way it works to control the HIV epidemic more effectively. This new alignment is anchored in a data-driven approach that strategically targets populations at greatest risk in geographic areas with the highest HIV-burden. As stated in the *PEPFAR Blueprint for Creating an AIDS-free Generation*, we must go where the virus is and put our resources where we can achieve the greatest impact. Expanding site-level data collection and analyses across the entire PEPFAR initiative permits much improved geographic mapping of the HIV epidemic at a granular level and supports decision-making to strengthen programmatic impact and efficiency.

Malawi:

- The Support for Service Delivery Integration (SSD-I) evaluation assessed the effectiveness of the SSD-I approach to increase availability and utilization of quality integrated Essential Healthcare Package (EHP) services and its performance in strengthening Malawi's health system. This evaluation was essential to providing the evidence used in the design of a new Integrated Health Project for USAID/Malawi and decisions on investments in combining health systems strengthening, behavior change communication and service delivery.

Peru:

- A significant positive finding of an impact evaluation of the second Poverty Reduction and Alleviation project in Peru found that, between 2009 and 2012, poverty was reduced by 13 percent (from 55.8% to 42.4%) in the activity's area of implementation, and that 3.2 percentage points of this reduction are directly attributable to our efforts.

South America Regional:

- The mid-term performance evaluation of the Amazon Malaria Initiative (AMI) found that AMI has contributed to reducing cases of malaria in the Amazon region and, since 2008, in Central America. The main achievements of AMI are monitoring the effectiveness and resistance to anti-malarial drugs, enhancing drug management, and improving the quality of diagnosis and treatment.

Georgia:

- An evaluation of State/USAID post-conflict reconstruction and stabilization programming in Georgia, examined Section 1207 funding to assess whether the activities implemented achieved their stated objectives. The evaluation found that the 1207 funds clearly served their intended purpose and the nearly two dozen projects accomplished their stated objectives. Lessons learned included planning for extra personnel, technical expertise and specialized equipment as well as the need for flexibility; being prepared to build emergency management capacity in the agencies receiving the funds; and establishing a no exceptions requirement for performance management plans.

Middle East/North Africa:

- State's Bureau of Near Eastern Affairs' Assistance Coordination Office (NEA/AC) conducted an assessment of Economic Growth (EG) programs across the Middle East and North Africa (MENA) region. The goals of this assignment were to: (i) assist the office in documenting the types of United States government economic assistance programs and activities being implemented; (ii) identify which projects were working well and why; and (iii) assist in aligning economic assistance programming with policy priorities. While the bulk of programs were meeting or exceeding their goals, evaluators found some were not, due to lack of stability in country and project design. Future programs will identify risks and mitigation as well as establish benchmarks and best practices in design.

Philippines:

- A mid-term evaluation of the Partnership for Growth (PFG) found the PFG Philippines initiative to have made progress in developing a true partnership. PFG has led to a complete shift in how the US provides development assistance in the Philippines and to positive policy reforms, with perceptions of improved economic growth. Evaluators found the absence of an explicit M&E framework for the overall implementation of the country action plan made it a challenge to determine the performance of PFG in the Philippines at midterm.

Syria:

- An evaluation of State activities carried out under the Syria Support Program (SSP) from 2012–2015 in support of selected radio and TV stations found that the intervention helped lay the groundwork for inclusive debate. Although the stations were effective in countering regime narratives, countering violent extremist narratives proved more dangerous. The majority of stations were not yet sustainable without support. Given the baseline capacity of stations, the nature of the assistance and external events, State will look at the entire media sector holistically and focus on the quality of content with regard to news, information and concepts of key importance.

Data Driven Reviews of Agency Priority Goals

State and USAID continue to conduct data-driven reviews of their Agency Priority Goals (APG), which engage APG goal owners directly with senior agency officials. Both State and USAID have found the data-driven reviews useful in focusing attention on pipelines, higher-level results, program sustainability, target setting, reporting, interagency collaboration, and learning. The

data-driven reviews contributed to USAID and State making substantial progress toward their APGs, in many cases meeting or exceeding the established targets. Examples of results achieved to date for FY 2014-2015 APGs include:

- Assisting more than six million farmers and others in applying new technologies or management practices, where increasing yields are leading to both improved nutrition and increased incomes;
- Achieving the target of reducing all-cause under-five mortality by four deaths per 1,000 live births;
- Strengthening the capacity of over 4,500 officials and practitioners in 30 countries through participation in the Low Emission Development Strategies (LEDS) Global Partnership;
- Increasing the number of prime contract acquisition dollars obligated to U.S. small businesses worldwide; and
- Reviewing over 90 percent of non-immigrant visa applications within three weeks of application.

Using Geographic Information to Improve Programs

The USAID GeoCenter improves the effectiveness of USAID's development programs by geographically assessing where resources would likely maximize impact. The GeoCenter team works directly with field missions and Washington-based bureaus to integrate geographic analysis into the strategic planning, design, monitoring, and evaluation of USAID's development programs. To date, the GeoCenter has leveraged \$32 million worth of high-resolution imagery for development projects, at no cost to the Agency. In FY2015 alone, it provided imagery to 22 USAID programs in 17 countries. More than 600 USAID staff have been trained in the "geographic approach to development" by the GeoCenter, and in an effort to build a global network of Geographic Information Systems (GIS) Specialists across the Agency, more than 25 USAID missions and technical offices in Washington have geospatial capacity. GeoCenter analyses and maps of vulnerable livelihoods in Uganda, Ethiopia, and Bangladesh have influenced USAID's 5-year strategic planning in each of those countries.

Development Innovation Ventures

USAID's Development Innovation Ventures (DIV) uses a tiered approach to evidence-based grant-making. DIV invests small amounts into new solutions, evaluates them rigorously, and then invests more in the most promising solutions. DIV has invested in over 130 solutions with over 40% being evaluated by a randomized control trial. Of these solutions, eight associated research reports are in the process of being published in peer reviewed journals, and other NGOs and/or governments are adapting six rigorously tested solutions for scale.

Footnotes

1/ The FY 2015 OCO level includes Foreign Assistance Act sec. 610 transfers from FY 2014 International Narcotics Control and Law Enforcement-OCO account (\$66.011 million), Foreign Military Financing-OCO (\$10.5 million), and Nonproliferation, Antiterrorism, Demining and Related Programs (\$32.176 million).

2/ The FY 2015 OCO level includes the transfer of \$14.583 million from the the FY 2015 Foreign Military Financing-OCO account to the Economic Support-OCO Fund.

3/ The FY 2015 OCO level includes the transfer of \$4.0 million from the FY 2015 International Narcotics and Law Enforcement-OCO account to the Economic Support Fund-OCO account.

4/ The FY 2015 OCO level includes the transfer of \$4.0 million from the FY 2015 Nonproliferation, Antiterrorism, Demining and Related Programs-OCO account to the Economic Support Fund account-OCO.

5/ The FY 2015 enduring level includes Foreign Assistance Act sec. 610 transfers from FY 2014 Nonproliferation, Antiterrorism, Demining and Related Programs account (\$12.15 million), FY 2010 International Narcotics Control and Law Enforcement account (\$12.468 million), and FY 2011 International Narcotics Control and Law Enforcement account (\$13 million).

6/ The FY 2015 level includes the transfer of \$4.16 million from the FY 2015 International Organizations & Programs account to the Global Health Programs - USAID account.

7/ FY 2015 enduring level includes the transfer of \$29.907 million from the Economic Support Fund to the Department of Treasury Clean Technology Fund (\$16.607 million) and the Strategic Climate Fund (\$13.3 million) in accordance with sec. 7060(c)(8) of the Consolidated and Further Continuing Appropriation Act, 2015.

8/ The FY 2016 enduring level includes the transfer of \$54.975 million from the FY 2016 International Narcotics Control and Law Enforcement account to the Assistance for Europe, Eurasia & Central Asia account.

9/ The FY 2016 enduring level includes the transfer of \$7 million from the FY 2016 Economic Support Fund to the Migration and Refugee Assistance account.

10/ FY 2016 enduring level includes the transfer of \$9.72 million from the Economic Support Fund to the Department of Treasury Strategic Climate Fund in accordance with sec. 7060(c)(5) of the Consolidated Appropriation Act, 2016.

12/ The FY 2016 level does not reflect the \$86 million in emergency funding that was appropriated to the International Monetary Fund.

13/ FY 2016 estimate total includes the enacted level of \$88.500 million plus \$0.342 million in carryover.

Feed the Future

Initiative Overview

Foreign Assistance Program Overview

Although global hunger continues to decline, nearly 800 million people suffer from chronic hunger, while 45 percent of child deaths worldwide are attributable to undernutrition. The Feed the Future (FTF) initiative is the United States' contribution to a global effort that supports country-owned processes to improve food security. The President's FTF initiative, a USAID-led, whole-of-government effort, is the primary vehicle through which the U.S. government is pursuing its global food security objectives. The U.S. government and its partners invest in country-led, evidence-based strategies that are designed to raise incomes of smallholder producers, improve nutrition, enhance food security, and address the root causes of recurrent food crises in the Horn of Africa and elsewhere. The overall goals of the initiative are to: 1) reduce the prevalence of poverty by 20 percent; and 2) reduce malnutrition as measured by the prevalence of stunted children under five years of age by 20 percent, on average, in areas targeted for investment (i.e. "geographic zones of influence").

Request by Account and Fiscal Year

(\$ in thousands)	FY 2017 Total	DA	ESF	GHP
TOTAL STATE/USAID	978,000	870,800	107,200	[108,500]
Agriculture & Rural Development: Focus Countries & Other Programs	901,200	835,800	65,400	
Aligned Agriculture Programs	76,800	35,000	41,800	
[Nutrition] ¹	[108,500]			[108,500]

¹ Funding for nutrition programs incorporated into FTF that is provided through Global Health Programs is requested separately in the President's Budget as part of the Global Health Initiative request.

Development Assistance (DA)

Address the Root Causes of Hunger, Poverty, and Food Crises by Investing in Agricultural Development in FTF Focus Countries

The request of \$441.5 million in Development Assistance for FTF focus countries is 45.1 percent of the total FTF request. FTF funding will support focus country efforts to refine and implement a country-led, comprehensive food security strategy to reduce hunger and under-nutrition and increase economic growth through market-led agricultural development for smallholder producers. In FY 2017, FTF will continue to expand investments in climate resilient agriculture programming by promoting drought and heat tolerant cereal varieties, expanding work on legumes to promote soil fertility, and scaling water and labor conserving technologies such as drip irrigation and appropriately scaled mechanization.

FTF focus countries were identified on the basis of prevalence of chronic hunger and poverty in rural communities; potential for rapid and sustainable agricultural-led growth; host government commitment to country investment plans; and opportunities for regional synergies through trade. In FY 2017, FTF will focus on the sustainability and scaling of FTF efforts by encouraging greater public and private sector investment in the agriculture sector and supporting policy reforms that promote an effective business enabling environment, help smallholder farmers' access high quality inputs, strengthen land and resource

rights, manage risk, and promote efficient and competitive markets and trading systems. These efforts help host-countries sustainably develop their own agriculture sectors, utilizing increased economic growth and trade to reduce poverty and hunger. FTF also addresses the root causes of recurrent food crises and improving the resilience of vulnerable populations in these areas.

Both the breadth and depth of results observed under FTF to date provide strong evidence the initiative is having an impact in the lives of millions of families around the world. In FY 2014, FTF assistance or training reached nearly 19 million rural households and helped nearly 7 million smallholder farmers and producers use new and better tools to generate food that sustains them. Some recent country-specific results include those below.

Key Interventions:

- **Bangladesh:** More than 120 million Bangladeshis live on less than \$2 per day, 30 percent of women are chronically under-nourished, and 41 percent of children under five are stunted. Since FTF began working in Bangladesh, there has been a nearly 16 percent reduction in the number of people living on under \$1.25 per day in the FTF zone of influence, from 40.5 percent in late 2011 to 34.1 percent in early 2015. In addition, there has been a 14.4 percent reduction in childhood stunting from 2011 to 2014 in two major areas where FTF programs are concentrated, from 38.2 percent to 32.7 percent. In FY 2015, FTF established 1,280 farmer schools to instruct households on nutrition, behavior change, and new and improved technologies in vegetable gardening, poultry farming, and fish production. In FY 2015, one million farmers used improved aquaculture technologies or management practices as a result of USAID's efforts. USAID-supported farmers increased sales of fish and shrimp from \$103.0 million in FY 2014 to \$127.0 million in FY 2015. FY 2017 investments will build upon activities that have already demonstrated significant impact. Programs will promote the cultivation of high-value, nutritious commodities, such as horticulture and fish, to increase the incomes of farmers and improve the availability of nutrient-dense foods in markets and households. Funding will strengthen agricultural policies, regulations, and institutions that promote the adoption of improved, climate resilient technologies, such as high yielding rice and vegetable seeds, mechanization, and irrigation while working with the private sector.
- **Cambodia:** Despite strong economic growth since the mid-1990s, Cambodia remains a low-income, food-deficit country with approximately 10 percent of Cambodians living on less than \$1.25 a day and many more hovering just above the extreme poverty line. FTF is demonstrating impact, with a 21 percent reduction in childhood stunting from 2010 to 2014 in the FTF zone of influence, from 41.2 percent to 32.6 percent. In FY 2015, FTF activities provided training to more than 73,000 farmers in good agricultural practices and new technologies and fostered linkages between farmers and agribusinesses. As a result, farmers were able to increase sales of rice, vegetables and fish from \$8.7 million in FY 2014 to \$15.6 million in FY 2015. With FY 2017 funds, FTF will improve sustainable production along the rice, fish, and horticulture value chains; improve income generation from agriculture; and enhance target populations' capacity to meet food and nutritional needs. Programs will work with rural households, civil society, the private sector, and government to build the skills and the expertise needed to achieve food security and meet the challenges posed by climate change.
- **Ethiopia:** Operating in high-potential highland crop areas, semi-arid pastoralist lowland livestock areas, and areas experiencing high levels of food insecurity, FTF supports the Government of Ethiopia's national development strategies for enhancing agricultural productivity, graduating citizens from food aid dependency, and promoting nutrition. U.S. government and Government of Ethiopia efforts have contributed to a nine percent reduction in stunting from 2011 and 2014. In FY 2015, by providing training to beneficiary farmers and supporting domestic market linkages among smallholder farmers, farmer organizations, and traders, FTF assisted smallholder farmers to sell 3.3 metric tons (MT) of improved chickpea varieties, achieving over \$1.6 billion in additional sales. In

FY 2017, FTF will focus on gender-inclusive agricultural market development for a combination of staple, nutrient-rich commodities, such as maize, wheat, chickpeas, livestock, poultry, and dairy, and higher-value crops such as coffee, sesame, and honey. These efforts will complement, and where appropriate, will be integrated with ongoing humanitarian assistance activities to build the economic resilience of vulnerable populations in areas of pastoralism and lesser agricultural productivity and to mitigate the effects of severe drought. For example, early results indicate a 39 percent increase in the value of livestock sales in the resilience focus zone in Ethiopia, with resilience-based activities helping facilitate over \$28.0 million in private sector investment.

- Ghana: Between 2008 and 2014, stunting nationally in Ghana declined 33 percent, from 28 percent to 18.8 percent. Despite this success, development is not consistent across the country, with northern Ghana's poverty rates nearly twice that of the rest of the country and one-third of children in northern Ghana stunted. In FY 2015, FTF reached 67,000 rural households through agriculture and nutrition interventions. Nearly 27,000 farmers increased their maize yields to an average of 3.4 metric tons per hectare (MT/ha) in FY 2015, compared to 1.59 MT/ha in 2012. This has resulted in an estimated FY 2015 harvest of over 81,000 MT among FTF farmers. FTF works with farmers, fishing families, coastal communities, and research partners to identify, adapt, and disseminate promising technologies to intensify production, while mitigating emissions and natural resource depletion. This includes drought-tolerant seeds, fertilizer deep placement, alternate wet-and-dry rice production, and conservation agriculture. In FY 2017, FTF will focus on increasing the scale and depth of proven activities to poor communities across the north, including increasing farmer productivity and the resilience and nutrition of the very poor.
- Guatemala: Guatemala has the highest rate of chronic malnutrition in the Western Hemisphere and the sixth highest rate of stunting among children under five in the world. Working in the impoverished but agriculturally-promising Western Highlands, FTF helped to increase the value of incremental sales for horticulture from \$4.4 million in FY 2014 to nearly \$6.1 million in FY 2015 and lead to the creation of over 2,800 new jobs. Given the prevalence of chronic malnutrition, FTF activities emphasize nutrition-sensitive agriculture, including nutrition training to extension agents; consistent nutrition messaging between projects; production of improved goats and bean varieties to boost protein consumption; and promotion of home gardens for dietary diversity. In FY 2015 Guatemala suffered severe drought conditions due to El Nino. USAID will continue to help farmers adapt and build resilience to adverse weather by employing climate smart agriculture techniques such as improved drought resistant seed varieties. In FY 2017, FTF will continue its technical assistance for agriculture and farm management practices, link farmers to markets, and increase the nutrition impact of its agricultural projects. These activities are part of the U.S. Strategy for Engagement in Central America to reduce hunger and increase economic growth through market-led agricultural development.
- Honduras: FTF targets extreme poverty and stunting in western Honduras, where more than 600,000 people live on incomes below the extreme poverty threshold of \$1.25 per day and 40 percent of all children are stunted. Between 2012 and 2014, average income increased by 55 percent among FTF beneficiaries. Between 2011 and 2014, the prevalence of underweight children under 2 years in 230 target communities decreased by 56 percent. FTF is assisting 31 percent of extremely poor coffee growers in the zone of influence and 14 percent of all coffee growers in the country. FTF assistance helped to increase coffee sales from \$36.3 million in FY 2014 to \$49.8 million in FY 2015. By improving the productivity of maize, one of the traditional staples, FTF activities allow smallholders to invest more of their limited resources in high-value horticulture and coffee production. FY 2017 funding will reduce hunger and increase economic growth through market-led agricultural development. USAID will continue to work with farmers through multiple climate smart approaches, including new climate-resilient crop varieties and improved crop, water and soil

management to help mitigate risks and prepare for climate-related disasters. In FY 2015, Honduras suffered severe drought conditions due to El Nino. FTF will improve poor farmers' access to irrigation and other climate smart agriculture practices in those areas of the country most affected by climate change, in order to increase their ability to manage future droughts and other natural disasters. These activities are part of the U.S. Strategy for Engagement in Central America to reduce hunger and increase economic growth through market-led agricultural development.

- Kenya: In Kenya, FTF has helped achieve more than a 25 percent reduction in stunting in the areas of the former Eastern and Nyanza provinces, where FTF programs have been working, from 36.25 percent in 2009 to 26.3 percent in 2014. FTF activities in FY 2015 enabled over 1.15 million people to apply new technologies on 128,813 hectares. Through the application of improved horticultural technologies or management practices by 100,000 farmers, FTF helped stimulate \$107.0 million in sales from targeted horticultural crops. FY 2017 funding will focus on increasing the production and quality of products in the maize, dairy, horticulture, and livestock value chains. FTF will help to diversify livelihoods, transform the livestock sector and strengthen associations and cooperatives in the dry lands. To promote the economic resilience of vulnerable populations, FTF will invest in comprehensive and integrated programs that combine livelihoods and livestock production with marketing, financial services, nutrition, and women's empowerment.
- Malawi: Agriculture represents over 30 percent of the gross domestic product (GDP) for Malawi and employs over 85 percent of the labor force. An estimated 51 percent of Malawi's population lives in poverty, while 47 percent of children under five are stunted. Agriculture production is largely dependent on a single rainy season and remains highly vulnerable to recurring drought. In FY 2015, FTF supported 15,000 smallholder farmers to plant 553 hectares of nutritious orange-fleshed sweet potato, yielding 67,750 MT. This represents a 2.7 percent increase over the previous year production. FY 2017 funding will support value chain development activities for legumes, including ground nuts, and horticulture in south central Malawi and increase seed availability by working with agro-producers to expand local seed production. Programs will build the organizational and technical capacity of national and non-state stakeholders.
- Mali: Over 43 percent of the population lives on less than \$1.25 per day, with 70 percent of the population living in rural communities. Despite ongoing security concerns, in FY 2015, FTF assisted over 144,000 farmers to use improved technologies and management practices, an increase from 62,000 farmers in 2014. This helped achieve additional sales of \$15.8 million, an eight fold increase over 2014. FY 2017 funds will support FTF activities in priority food commodities such as rice, millet, sorghum, and livestock in the focus regions. Applied research on these crops from FTF-supported programs will increase productivity and food security while improving nutrition status of vulnerable populations. Improved productivity will be gained through: the development, adaptation, dissemination, and scaling of technological innovations; expanded access to agricultural inputs, reductions in regulatory barriers to cross-border trade, and increased capacity of producer organizations and water user associations. Investments in Mali will improve the quality and volume of animal production, animal health services, alternative feed sources, and market linkages. FTF will also facilitate loans to small and medium sized agricultural enterprises to provide the capital needed to fuel agro-business growth, with an emphasis on women-owned businesses.
- Mozambique: About 55 percent of the people in Mozambique live on less than \$1.25 per day, and 44 percent of children less than five years of age are stunted. In FY 2015, FTF -supported research programs produced 48 MT of improved seed in priority crops such as cowpea, pigeon pea, and soy. Production was 40 percent higher than in FY 2014, despite floods that affected several seed multiplication fields in the provinces of Nampula and Zambezia. USAID also launched four new

public-private partnerships which will benefit 50,000 smallholder farmers. FY 2017 funds will help small and medium-scale farmers and rural enterprises in producing, marketing, processing, and exporting agricultural products including oilseeds, fruits, and pulses, encourage increased investment in agriculture, expand the availability of fortified foodstuffs and highly nutritious crops, and change nutrition and sanitation behavior in target communities. FTF will continue to strengthen farmer associations, cooperatives and agro-service centers to provide smallholders with linkages to markets. FTF will also stimulate access to credit for micro, small, medium, and larger-sized enterprises along the various agricultural value chains.

- Rwanda: Agriculture continues to be one of the main drivers of growth and poverty reduction in Rwanda, accounting for 33 percent of GDP. In FY 2015, over 100,000 farmers applied improved technologies and management practices with the support of FTF. Farmers applied improved post-harvest handling technologies, such as maize shellers and drying equipment, and were able to reduce post-harvest losses and earn \$27.7 million in incremental sales. FY 2017 resources will continue to strengthen beans, maize, and dairy productivity through market-driven interventions while expanding the application of climate smart agricultural techniques. FTF activities will also increase the availability of animal sourced protein to decrease stunting while meeting the nutritional needs of Rwandans, with a special emphasis on women and children under the age of five.
- Senegal: Vulnerable to variations in rainfall and commodity prices, Senegal's agricultural sector is dominated by smallholder producers. FTF activities facilitate linkages between buyers, smallholders, and service providers; improve production, marketing, and consumption of nutritious foods; and strengthen the policy environment for private sector investments. In FY 2015, FTF interventions benefited 138,953 rural households, and over 120,000 farmers and other individuals were trained on using improved technologies and management practices. FTF farmers produced a total of 160,000 MT of cereals in FY 2015, generating \$1.2 million in additional sales for these farmers. In FY 2017, investments in Senegal will continue to scale innovative value chain activities, including certified seed production and distribution, improving processing and storage capacity, and facilitating access to capital and markets. Activities such as conservation agriculture, rain index insurance, and the use of drought-tolerant varieties will be expanded to help more farmers adapt to changing rainfall patterns.
- Tanzania: In Tanzania, over 42 percent of children are stunted and 43 percent of the population lives on \$1.25 per day or less. In FY 2015, FTF helped 164,750 producers adopt new technologies and agricultural management practices and apply them to 167,755 hectares of smallholder farmland, representing 80 percent more farmers reached than in FY 2014. In 2015, in horticulture, over 52,000 producers achieved \$17.8 million in sales, totaling over 825,000 MT in sales, with targeted horticultural crops showing an aggregate yield increase of 37 percent over the previous year, and producers earned average gross margins of \$3,906 per hectare per cropping cycle, boosting on-farm net income by 88 percent as compared to 2014. FTF will address poverty and stunting in FY 2017 through a suite of interventions, including farmer to market development in rice, maize, and horticulture. Funding will be invested in: farm-to-market roads and other rural infrastructure; food processing and fortification; improved nutrition behaviors; policy analysis and recommendations; research and development; and leadership training.
- Uganda: Agriculture is the mainstay of Uganda's economy, accounting for approximately 27 percent of GDP, employing nearly 72 percent of the labor force. Data indicates a 16 percent decrease in poverty in rural areas, including where FTF works, from 27.2 percent in 2009-2010 to 22.8 percent in 2012-2013. National poverty levels declined from 24.5 percent to 19.7 percent over the same period. FY 2017 funding will support increased access to drought and disease resistant crop varieties,

including Uganda's staple maize, and will scale up research and the adoption of vitamin-enriched staples, such as sweet potatoes. Assistance will also support Ugandan private and public sector institutions to improve the enabling environment for agricultural development, trade, and adaptation to climate change. Funding will help to: increase the production of maize, legumes, and coffee; improve market linkages; expand financial services that support the agriculture sector and provide support for trade-related sanitary standards and quality management systems.

- Zambia: Agriculture is Zambia's second major industry and employs 80 percent of the population. Despite poor rains attributed to an El Nino weather pattern and a decrease in maize yields in FY 2015, compared to the previous year, maize production still had a significant surplus. This is in contrast to prior El Nino years when the country was required to import food aid. Surplus production in a year with poor rains is a testament to the widespread use of improved seeds and conservation agriculture practices. Maize yields for beneficiary farmers averaged 2.43 MT/ha in FY 2015, compared to national averages of 1.75 MT/ha. FY 2017 funding will support Zambian smallholder farmers and will increase food security by focusing on: diversifying agricultural productivity; expanding value chains, market linkages, and small farmers' access to domestic and regional markets; enacting policy reforms to better enable private sector investments; improving economic resilience of the most vulnerable households, with a focus on nutrition and its linkages to agriculture; and increasing the sustainability of Zambia's natural resource base.

Address the Root Causes of Hunger, Poverty, and Food Crises by Investing in Agricultural Development in FTF Aligned Agricultural Programs

Key Interventions:

- FTF requests \$35.0 million in Development Assistance to work with aligned countries to implement agricultural development programs. This is 3.6 percent of the total request.
- Guinea: To address ongoing food insecurity, FY 2017 FTF resources will support farmers with activities aimed at improving production and marketing, as well as household nutrition. Activities will provide training and technical assistance at the local and national levels to improve growth in agriculture. By building sustainable production systems linked to markets, FTF will assist producers in Guinea withstand future shocks.
- Nigeria: The agriculture sector in Nigeria has the potential to reduce poverty and serve as a major productive sector in the economy. Developing the sector enhances opportunities for both skilled and unskilled labor and contributes to regional food security. During FY 2015, over 261,000 smallholders applied improved technologies or management practices, resulting in the production of 763,019 MT of agricultural commodities valued at \$334.0 million, with FTF -assisted households achieving over \$116.0 million in additional sales over baseline sale values. In FY 2017, FTF resources for Nigeria will increase productivity and reduce post-harvest losses for important West African crops, such as rice and cassava. To address the needs of vulnerable groups, funding will support nutrition interventions, access to financial services, and agricultural activities that improve household income and nutrition. Resources will also be used to improve the enabling environment for agricultural growth and business development, including working with the Government of Nigeria to build policy analysis skills, improving the trade environment, and promoting laws and regulations which foster private sector investment and the dissemination of improved agricultural technologies. Improved trade in agricultural products between Nigeria and neighboring countries will benefit the entire region.

- Sierra Leone: To address food insecurity and reduce poverty, the U.S. government has been working with the Government of Sierra Leone, who has made agriculture its top priority. Agriculture has the potential to improve household wealth, generate employment, and trigger private sector development, as the sector employs about 75 percent of the workforce and accounts for 56 percent of Gross National Product. FY 2017 FTF resources will support farmers with activities aimed at improving production and marketing, the enabling environment for private sector investment, and household nutrition.

Expand Local and Regional Trade, Harmonized Regulatory Standards and Practices, and Other Transnational Initiatives for Raising Agricultural Incomes and Productivity at the Household and Community Level and Through Private Enterprise

Key Interventions:

- FTF regional programs will promote expanded access to regional markets; mitigate risks associated with drought, disaster, and disease; and build the long-term capacity of regional organizations to address regional challenges. The FY 2017 request includes \$88.4 million in DA funding for regional programs, representing 9 percent of the total request.
- Regional FTF programs will continue to: help establish and implement common regulatory standards; support trade, tariff, and macroeconomic policy reform; establish and strengthen regional commodity exchanges and associations; coordinate infrastructure investments to support regional development corridors; build and strengthen regional research networks to promote dissemination of low cost and accessible technologies; and support cross-border management of natural resources.
- Regional programs will support the scaling-up of best practices to reduce the vulnerability of communities, including in the dry lands of the Horn of Africa and the Sahel. Activities will also link vulnerable smallholders to markets, diversify incomes, and improve intra-regional trade.

Transformed Production Systems and Improved Nutrition

Key Interventions:

- With \$144.4 million in the FY 2017 request (representing 14.8 percent of the total FTF request), USAID will continue to lead implementation of the FTF Research Strategy by engaging and leveraging research and policy expertise from U.S. universities, international research centers, the private sector, and local institutions in partner countries to solve development challenges. Human and institutional capacity development (HICD) programs related to research, education, extension, and policy advice are an integral component of research and development programs. Research, HICD, technology scaling efforts, and policy expertise are among the most critical elements to provide technologies and opportunities to farmers and other rural poor people to drive the inclusive agricultural growth and improved nutrition needed to achieve the FTF goal of reducing hunger and poverty. These programs aim to improve agricultural productivity, increase incomes, and enhance household nutrition through focused research on the development and dissemination of improved agricultural technologies and best practices, the implementation of enhanced agricultural policies, and targeted human and institutional capacity building.
- Funding will support agriculture and food security policy research, capacity development, and scaling of innovative technologies. Funding will help smallholder farmers adapt to climate change and build resilience; improve the production and processing of safe, nutritious agricultural products; develop new animal vaccines, as well as crops and animals resistant to pests and diseases; integrate small-scale irrigation, mechanization, crop and animal diversification, resource-conserving technologies, and geospatial analysis in smallholder production systems; and strengthen the capacity of partner governments and institutions to achieve inclusive agricultural growth and improved nutrition.

- Research on the production and processing of safe, nutritious agricultural products will be closely linked to extension and outreach, and to an ongoing learning agenda on factors affecting household nutrition, with a goal of preventing undernutrition, especially in women and children. The research and capacity development agenda includes improving access to and utilization of fruits, vegetables, meat, fish, dairy and legumes, and understanding the influence of environmental factors such as water contamination and mycotoxins, which affect stunting through their impact on the immune system.

Inclusive Agriculture Sector Growth through Market-Based Innovation, Partnerships, Technologies, and Policies

Key Interventions:

- FTF strives to reduce poverty, fight hunger and improve nutrition by increasing the productivity and profitability of smallholder farmers around the world through a diverse portfolio that combines market-led innovation and dissemination of technology, private sector engagement and partnerships, and activities that enable and accelerate private investment, improve access to finance, and provide risk management options to farmers. Through FTF, programs aim to help address the agricultural investment gap in developing countries through activities to catalyze increased private investment, which will provide much needed products and services to smallholder farmers and agricultural value chains, commercialize and scale promising new technologies, create jobs, and raise incomes. The FY 2017 request includes \$37.5 million to support these efforts, representing 3.8 percent of the request.
- FTF will support public-private alliances in sustainable agriculture and improved food security and nutrition. Funding will support new approaches to food security through innovative partnerships that improve market access for food-insecure households in focus countries.
- Markets are critical to improving productivity and profitability for smallholders with the potential to become commercially viable. FY 2017 funding will continue to support innovative market-led programs, including risk-mitigation mechanisms to improve farmers' resilience and access to tailored forms of financial services, including savings, crop insurance, farm inputs finance, and digital financial services.

Strengthened Planning and Implementation of Food Security and Resilience Programming

Key Interventions:

- With \$106.0 million in requested resources, FTF will support regional and country-led efforts to address the root causes of food insecurity and vulnerability among chronically vulnerable rural communities caught at the intersection of poverty, hunger and malnutrition and exposure to shocks and stresses. These programs seek to both improve these well-being outcomes and the ability of households and communities to mitigate, adapt to and recover from shocks and stresses. Ultimately, these activities, along with other Feed the Future programs, will help reduce the need for repeat, large-scale humanitarian food aid responses in areas subject to recurrent crises. This represents 10.8 percent of the total request.
- Funding will support programs that expand economic opportunities, including improving and diversifying livelihoods and increasing the range of microfinance options for vulnerable populations such as insurance and savings. These programs help to reduce vulnerability to production, income, and market disruptions related to droughts, floods, and food price volatility and exacerbated by longer-term stresses such as population pressure and climate change. Finally, these programs strengthen the health and nutrition of vulnerable populations and help strengthen community-based, disaster risk management to enable vulnerable households and communities to more effectively manage through shocks such as drought.

Increased Accountability and Learning through Evidence of FTF Results and Impacts: Monitoring and Evaluation ensures that FTF maximizes results with the resources invested. Funding will support program evaluation, performance monitoring, and knowledge-sharing activities that provide and promote empirical evidence to inform programming and investment decisions.

Key Intervention:

- With \$18.0 million in requested FY 2017 resources, FTF will conduct and support evaluations of FTF programs, implement population-level impact surveys, develop monitoring and evaluation tools for use across the FTF initiative, and help strengthen the statistical systems and capacities of partner countries to generate reliable data for strategic planning and monitoring of agricultural and socio-economic indicators.

Economic Support Fund (ESF)

Address the Root Causes of Hunger, Poverty, and Food Crises by Investing in Agricultural Development in FTF Focus Countries

Key Interventions:

- The request includes \$34.0 million in Economic Support Funds for FTF focus countries (3.5 percent of the total request). FTF funding will support focus country efforts to refine and implement country-led comprehensive food security strategies to reduce hunger and increase economic growth through market-led agricultural development.
- Haiti: Haiti is the poorest country in the Western Hemisphere, and nearly a third of the population is food insecure. Agricultural development is central to Haiti's long-term efforts to grow its economy, reduce poverty and hunger, and promote a healthy population. In FY 2015, improved production and commercialization practices significantly decreased the rejection rate of mangoes at export packing houses, contributing to an average 83 percent increase in mango-related income. In 2015, Haiti experienced its strongest drought in 35 years due to El Nino, following several consecutive years of dry conditions. To build resilience to recurrent drought and flooding, the FTF program successfully inaugurated the Riviere Grise water diversion structure in FY 2015, which will irrigate over 8,000 hectares of the Cul-de-Sac plain, benefiting approximately 10,000 farmers. Ongoing climate forecasts estimate drought-related challenges will continue to affect food security across the country during upcoming crop seasons. To address these recurring challenges, FTF investments in FY 2017 will increase agricultural productivity, stabilize watersheds to improve water and soil conservation, and strengthen agricultural markets.
- Liberia: Agriculture accounts for one half of Liberia's GDP, and more than two-thirds of Liberians depend on agriculture for their livelihood. In FY 2015, FTF assisted 19,300 rice farmers in producing and selling rice valued at over \$3.0 million. Support for vegetable farmers increased sales value over 500 percent from FY 2014 – FY 2015. In FY 2017, funding will focus on helping the production and marketing of basic staples, such as rice and cassava; expanding income generating opportunities; and increasing dietary diversity and creating alternatives to bush meat through vegetable horticulture and goat husbandry programs. FTF will promote cross-cutting support in food security, including agriculture policy advocacy and research such as pricing and trade policies; coordinate partnerships with the Ministry of Agriculture and private companies to deliver extension services; and will improve market structures such as market price information systems.
- Nepal: The prevalence of poverty and undernutrition are high in the original Nepal FTF zone of influence, comprised of 20 hill and Terai districts in the far-western, mid-western, and western

regions. Approximately 32.5 percent of the target population lives on less than \$1.25 per day and 45.2 percent of children under age two are stunted, compared to national population rates of 24.6 percent for poverty and 41 percent for stunting. In FY 2015, FTF helped over 84,000 farmers (51 percent female) apply improved technologies or management practices on over 76,778 hectares and achieve over \$71.8 million in farm-level incremental sales. After the devastating earthquake which struck Nepal in April 2015, FTF expanded to a second zone of influence in four districts in the central and eastern hills. By integrating focused value chain activities into a larger food security and resilience project, FTF will reach an additional 50,000 direct and over 200,000 indirect beneficiaries. FY 2017 FTF funding will focus on increasing smallholder farmer production of vegetables and improving the production and accessibility of livestock and staple food crops such as rice, maize, and lentils. Funds will improve irrigation systems and promote seed, fertilizer, and technology use to increase overall productivity and household incomes. Training will be provided to smallholder farmers, input service providers, and extension agents from multiple ethnic and caste groups on best production methods, nutrition, hygiene, and female-friendly farming methods. By mitigating food security shocks, FY 2017 funds will contribute to the long-term agricultural development and resilience of the country.

- Tajikistan: Tajikistan's agriculture sector accounts for 27 percent of its gross domestic product. Yet, Tajikistan is a chronically food insecure country with 26 percent of children under five stunted country-wide and 30 percent of children under five years stunted in the FTF zone of influence. In FY 2015, FTF activities helped to provide improved irrigation services to over 176,000 households. Training on nutrition and maternal and child health reached over 636,000 people and 119,560 children under the age of five. As the result of workshops and mobilization activities on breastfeeding since early 2014, the number of mothers continuing breastfeeding for children 18 to 23 month increased from 36.8 percent to 67.2 percent. FY 2017 funding will promote food security by: improving food production through fostering better inputs, extension, technology, and practices for small-holder farmers; improving household food utilization to address stunting and under-nutrition; reforming rural irrigation systems; increasing the use of improved agricultural inputs; and facilitating linkages among agricultural actors with the goal of increasing the production and profitability of the agriculture sector. Programs will help to strengthen the development of a market economy in Tajikistan through land reform and land market development, as well as increase public demand for implementation of agrarian reforms.

Address the Root Causes of Hunger, Poverty, and Food Crises by Investing in Agricultural Development in FTF Aligned Agricultural Programs

Key Interventions:

- FTF will provide \$41.8 million in Economic Support Funds to work with aligned countries, representing 4.3 percent of the total request.
- Burma: Burma is a resource-rich country with access to large and growing markets, but a quarter of the country's people still survive on less than \$1.25 per day and 35 percent of children are stunted. Decades of isolation, compounded by cumbersome regulations and unpredictable policies have stifled agricultural development, which continues to employ 66 percent of the population. Following successful elections in November 2015, Burma's democratic transition will offer significant opportunities to improve food security through key policy reforms and investment in inclusive agriculture sector growth. In FY 2015, Burma's FTF results in food security policy and value chain development created a foundation for agriculture sector transformation. FTF activities supported a first-of-its-kind inclusive policy development process for the landmark National Land Use Policy, an essential step in recognizing the land rights of Burma's people. FTF activities also performed assessments to build the evidence base for future agriculture sector reforms, initiated farmer training in good agricultural practices in the soy and coffee value chains, and introduced the innovative

fertilizer deep placement technology. FY 2017 FTF funding will empower small-scale farmers and assist small and medium enterprises to improve livelihoods, alleviate poverty and deepen the country's nascent reforms. Activities will promote increased productivity and producer incomes by expanding farmers' access to agricultural inputs, finance, and markets; work with the public and private sectors; and promote a positive policy enabling environment. Efforts to strengthen the link between food production, nutrition and health will continue with interventions to address the needs of vulnerable groups.

- Democratic Republic of Congo: The DRC is ranked 176 out of 182 in the Human Development Index, and according to the World Bank, has the highest rate of extreme poverty (70 percent) in the world. In FY 2015, USAID co-organized the first international coffee cupping competition in the DRC. International judges awarded scores of high scores to the three USAID-supported cooperatives to signify the coffee is of specialty grade, encouraging greater demand from international buyers and increased sales. Building on coffee production of 45 tons by USAID-supported cooperatives in FY 2014, participant coffee producers increased average farm productivity by over 400 percent to 191 tons of coffee in FY 2015. Coffee sold to international buyers received an average price of \$5.50 per kg, three to four times higher than the price than the price normally received from local traders. Activities in FY 2017 will target staple and cash crops, focusing on enhancing yields from farmer's fields, improving post-harvest processing and value addition, and facilitating market linkages. FTF will engage at the policy and national institution level to build an enabling environment for broader agricultural transformation, helping to increase profitability and facilitate wider adoption of improved practices. USAID expects its investments to increase farmer incomes and provide enhanced community stability, particularly in the conflict-affected eastern DRC.
- Egypt: Nearly 30 percent of Egyptians are employed in the agriculture sector. In Upper Egypt, where most FTF interventions are focused, poverty rates are over 40 percent. In FY 2015, FTF began implementing a new project which aims to improve the livelihoods of rural households in Upper Egypt, including smallholder farmers, laborers, women, unemployed youth, and entrepreneurs by strengthening sustainable, high-value fruit and vegetable supply chains for domestic and export markets. Programs in FY 2017 will seek to: catalyze the production of high value commercial horticulture value chains; improve smallholder productivity; link smallholders to market channels and agribusinesses; and continue to improve compliance with quality standards, such as Global Good Agriculture Practice (Global GAP) and Fair Trade, to improve smallholder access to local and international fresh produce and processed food markets and consequently improve their socio-economic conditions on a sustainable basis. FTF will also support workforce development, youth employment, and improved nutrition behaviors throughout the agriculture sector.
- Georgia: Food security remains an important domestic issue in Georgia. In FY 2015, FTF provided \$1.8 million in grants for 22 agribusinesses (including 10 women-owned businesses), while leveraging nearly \$8.0 million in private sector investment commitments. These investments helped transfer new agricultural technologies to over 57,000 farmers, improved management on over 320,000 hectares of land, and facilitated \$10.4 million in new commercial financing. FY 2017 funding will address competitiveness by increasing the productivity and sales of individual firms. FTF will provide technical assistance to the Government of Georgia to remove constraints to productivity in the business environment; improve agricultural policy analysis and formulation; and enhance agricultural education and extension services. Activities will: support rural enterprise development; link small-scale farmers to agribusinesses; facilitate domestic and regional market linkages; introduce modern value-adding technologies; facilitate access to rural credit; strengthen agricultural associations; support product consolidation and marketing; improve post-harvest handling practices; and expand agriculture storage capacity.

- South Sudan: Despite the challenges in program implementation posed by ongoing conflict, USAID helped to expand domestic production beyond subsistence by supporting improved on-farm management techniques and technologies. In FY 2015, more farmers were able to grow surplus crops, extending production beyond their immediate subsistence needs and, as a result, were able to create a market for staple crops produced in South Sudan's Greenbelt agro-ecological zone. Support for farmer-based organizations and cooperatives helped aggregate surplus production to sell to the World Food Program's Purchase for Progress initiative. FY 2017 funding will enable smallholder farmers, including women, to increase their knowledge of modern farming practices and their access to high-yielding seeds and other agricultural inputs and storage and marketing techniques. FTF will continue expansion of local production to address market needs more broadly and address food security needs, in collaboration with humanitarian efforts.
- Yemen: Agriculture employs over half of the country's economically active workforce and is the foundation of the country's rural society. However, during the past decade, agricultural production has decreased, resulting in food shortages, extremely high dependency on expensive food imports, high unemployment, and increased poverty, hunger and malnutrition. FTF activities in Yemen were suspended in FY 2015 due to escalating insecurity that developed into a devastating civil war. In FY 2017, FTF activities seek to build on continuing humanitarian assistance and address some of the consequences of this crisis on food security and agriculture. Depending on the permissiveness of the environment and priority needs identified in post-conflict assessments, these programs may support agricultural extension services, community-level investments in water, repairs of basic tools and machinery in agricultural areas, and community-level investments in key agricultural value chains to increase crop yields for domestic consumption and improve market access. The specifics of development assistance efforts will also be dependent on governance structures in Yemen in FY 2017.
- Zimbabwe: Although Zimbabwe's economy and food security situations have improved since the economic collapse of 2008/2009, vulnerable households still struggle to either grow or procure sufficient food. The heavy reliance on rain-fed agriculture, weak markets, inefficient policies, and high levels of poverty continue to threaten vulnerable households' ability to either grow or procure sufficient food. In FY 2015, significant portions of the country experienced total or near total crop failure due to a production season marked by erratic rains and long dry spells. FY 2017 funding will continue to promote self-sufficiency of rural households by decreasing the reliance on humanitarian assistance through training in improved technologies and management practices for a variety of high value and staple food crops, dairy, and livestock. Activities will promote market-oriented production, farm-to-market linkages, and increase access to finance for farmers and agribusiness.

Sustain Agricultural Investments through U.S. Cooperation with India on Global Food and Nutrition Security

Key Interventions:

- Through trilateral cooperation efforts, FTF will continue to leverage the significant expertise, research capabilities, investment, and leadership of India for the benefit of FTF focus countries.
- \$3.0 million is proposed to fund FTF strategic partnership programs.
- India: In FY 2015, FTF supported the pilot of cost effective, accessible technologies, such as a solar conduction drier in Kenya. The technology, originally developed in India, is now being used by women's groups in Kenya to process and preserve perishable fruits and vegetables that significantly enhances shelf life and increased market value. FTF programs also leveraged an additional \$1.5 million in private sector funds and facilitated 42 public-private partnerships to increase the scale and longevity of FTF interventions. In FY 2017, FTF will continue to advance triangular cooperation with FTF focus countries in Africa and Asia on capacity transfer and the uptake of innovative technologies, while leveraging additional funding from the private sector and government-to-government initiatives.

Expand Local and Regional Trade, Harmonized Regulatory Standards and Practices, and Other Transnational Initiatives for Raising Agricultural Incomes and Productivity at the Household and Community Level and Through Private Enterprise

Key Interventions:

- FTF regional programs will promote expanded access to regional markets; mitigate risks associated with drought, disaster, and disease; and build the long-term capacity of regional organizations to address regional challenges.
- FTF will continue to address the impact of climate change in Central America through the further integration of climate-smart agriculture activities. Working with Mexico and Canada, \$28.0 million will be used to develop a coordinated plan for these efforts and to catalyze investments by governments and other partners in the region around these activities. Additional details on this multilateral funding are included in the President's Budget as part of the Global Climate Change Initiative.

Global Health Programs (GHP)

Nutrition: Nutrition is a key point of intersection between food security and health, and is a key outcome for both the Global Health and FTF Initiatives. Nutrition affects every aspect of human development, and is both a cause and consequence of poverty. Under-nutrition contributes to 45 percent of all deaths among children under five. In May 2014, the USAID Multi-Sectoral Nutrition Strategy was launched, presenting a new model of development that harnesses science and data to inform innovative approaches in nutrition. New analysis of the causes of hidden hunger and under-nutrition has enabled us to strategically target our work in the first 1,000 days from pregnancy to a child's second birthday.

With \$108.5 million, Global Health will provide leadership and technical assistance to priority countries in both the Global Health and FTF initiatives to facilitate the introduction and scale up of nutrition activities, with a focus on the first 1,000 days to achieve maximum impact. Nutrition activities focus on the prevention and treatment of under-nutrition through integrated services that support improved nutrition of pregnant and lactating women; exclusive breastfeeding practices and infant and young child feeding practices; diet quality and diversification through fortified or bio-fortified staple foods, specialized food products, and community gardens; and micronutrient supplementation and community management of acute malnutrition. Investments include expanding the evidence base for nutrition to guide policy reform and better nutrition programs, and building capacity to design, implement, and report on food and nutrition programs while strengthening coordination and integration with other programs.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: Evaluations provide critical information about how FTF programs are working and what results are being achieved, in line with the USAID Evaluation Policy.

- To date, monitoring and evaluation funds have been used to conduct two rounds of population surveys in FTF countries, assess and build partner country agricultural data and statistical systems, and design and conduct data over 20 impact evaluations. These surveys and evaluations are designed to assess current trends and progress toward FTF goals of reducing poverty and childhood stunting in focus country zones of influence.
- In FY 2015, USAID commissioned an inventory and synthesis of all evaluations conducted on FTF investments to date. The synthesis examines and integrates findings from approximately 200 evaluations and will be used by USAID as evidence to build smarter, more cost-effective programs in FY 2017.
- USAID continues to promote the use of the Gender Integration Framework (GIF) tool to identify

constraints to achieving women's empowerment in the agriculture sector and the programmatic approaches to best address these constraints in current and future programming. The GIF builds on the logic and results of the innovative Women's Empowerment in Agriculture Index, which tracks women's empowerment and gender parity across five domains (production, resources, income, leadership, and time use).

Use of Monitoring and Evaluation Results in Budget, Policy, or Programmatic Choices: The monitoring and evaluation activities conducted informed the following actions and decisions regarding the FY 2017 budget:

- Funding in FY 2017 will support the incorporation of monitoring and evaluation results in the revisions to country funding levels, based on programmatic and financial performance, to ensure that funding is focused in areas and activities demonstrating the greatest potential to reduce levels of poverty and stunting. It will also focus on nutrition sensitive agriculture to sustain gains in nutrition and to reach FTF's ambitious stunting reduction targets.
- As data on impact indicators are received and analyzed, progress against the FTF goals of reducing poverty and stunting will be assessed and plans will be developed for adjusting country strategies and program implementation to most effectively use resources and achieve country-level targets across the initiative.
- Climate change is bringing new challenges to the agriculture sector. Utilizing the best available science to understand the effect of climate variability on agricultural productivity in FTF assisted countries, FTF will continue to support agricultural development approaches that use resources efficiently, protect and conserve the environment, utilize the best practices and technologies available, and reduce the risk for smallholder farmers.

Global Climate Change Initiative

Initiative Overview

The U.S. National Security Strategy (2015) states:

Climate change is an urgent and growing threat to our national security, contributing to increased natural disasters, refugee flows, and conflicts over basic resources like food and water....Increased sea levels and storm surges threaten coastal regions, infrastructure, and property. In turn, the global economy suffers, compounding the growing costs of preparing and restoring infrastructure. (National Security Strategy (2015), p. 12)

The Global Climate Change Initiative (GCCCI) helps countries achieve their climate and development goals by growing their economies in a way that reduces emissions of greenhouse gases (GHGs), builds resilience to climate-related impacts and disasters, and mobilizes investment for the climate and clean energy solutions of the future. GCCCI programs benefit not only the climate, but also promote broader development and diplomatic objectives. These programs produce important benefits for food security, poverty reduction, health, sustainability, economic development, and regional stability, all of which benefit U.S. security and economic interests, boost the global economy, and further the international Sustainable Development Goals and the Financing for Development agenda.

The GCCCI is comprised of three pillars:

- **Adaptation** programs help poor and especially vulnerable countries and communities build resilience to current and projected weather- and climate-related impacts, such as floods, droughts, long-term water scarcity, sea level rise, and the increased frequency and intensity of major storms. By building resilience to increasingly harsh or unpredictable climatic conditions and the effects of extreme weather events, programs reduce the risk of damage, loss of life, and broader instability that are exacerbated by lack of preparedness. Helping developing countries manage climate- and weather-related risks protects decades of progress in reducing poverty and bolsters economic growth in vulnerable countries.
- **Clean Energy** programs support the development of energy services that promote cleaner air, increase energy access and security, and reduce or avoid GHG emissions. By helping create a policy framework for low-carbon economies and providing technical and financial assistance, these programs leverage additional sources of public and private financing and encourage future replication.
- **Sustainable Landscapes** programs protect the world's remaining tropical forests, support more resilient and sustainable agricultural practices, and enhance land use governance around the world. By helping developing countries reduce deforestation, improve sustainable land management, and promote climate-smart agricultural practices, programs reduce GHG emissions by addressing root causes of deforestation and ensure a level playing field for sustainably produced forest products, including from the United States.

To support these objectives, the FY 2017 Budget requests \$1.3 billion for the GCCCI, of which \$352.2 million is for the U.S. Agency for International Development (USAID), \$631.7 million is for the Department of State (including \$500.0 million for the Green Climate Fund (GCF)), and \$350.4 million is for the Department of the Treasury. The Department of the Treasury's request includes \$250.0 million for the GCF and \$146.6 million for the Global Environment Facility (GEF), of which approximately \$87.9 million is anticipated to contribute to the GCCCI.

The GCCI played a critical role in leveraging action by other countries and helped pave the way for global emission reductions through the historic Paris Agreement at the 21st Conference of the Parties (COP-21) to the UN Framework Convention on Climate Change (UNFCCC) in December 2015 (Agreement). Through the GCCI, the United States provided support to developing countries in preparing their plans for national actions to respond to climate change (called “Nationally Determined Contributions”). The Agreement creates a comprehensive framework for global action under which all countries will act to reduce emissions. The GCCI will continue to support mitigation and adaptation efforts of developing countries by mobilizing climate finance and providing access to data, tools, and skills-based capacity building. These investments not only address emissions and put the globe on a path to cleaner development but also enable the United States to play an active role in helping vulnerable countries develop effective responses to climate change impacts.

State/USAID Programs

Overview

Request by Pillar and Fiscal Year (State/USAID, excluding GCF)

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request
TOTAL	478,000	*	483,900
Adaptation	173,900	*	181,323
Clean Energy	180,600	*	196,631
Sustainable Landscapes	123,500	*	105,946

Request by Pillar and Account (State/USAID, excluding GCF)

(\$ in thousands)	FY 2017 Request	DA	ESF	IO&P
TOTAL	483,900	310,300	115,300	45,500
Adaptation	181,323	141,800	35,023	4,500
Clean Energy	196,631	93,000	66,631	37,000
Sustainable Landscapes	105,946	75,500	26,446	4,000

Agency Priority Goal: Low-Emission Development Strategies

The Low-Emission Development Strategies (LEDS) program serves as the focus of the State/USAID Agency Priority Goal for climate change and is a prominent example of inter-agency coordination through the GCCI. Through the Enhancing Capacity for LEDS (EC-LEDS) program and the LEDS Global Partnership (LEDS-GP), the United States works with 26 countries and a network of more than 160 government and non-governmental organizations around the world to support the development and implementation of long-term, economy-wide strategies for sustainable, low-emissions economic growth. This approach involves producing GHG inventories, supporting the development of policies, and implementing cost-effective climate actions that are both good for a country’s development and for reducing GHG emissions. LEDS proved instrumental in helping many developing countries craft their Intended Nationally Determined Contributions (INDCs) in advance of the Paris Agreement. By September 30, 2017, LEDS is expected to achieve 100 country or regional milestones, which will contribute to significant, measurable progress toward achieving domestic and international GHG reduction targets. Achievement of these milestones will also strengthen the capacity of 4,000 developing country government officials and practitioners through participation in the LEDS Global Partnership.

USAID Overview

USAID will invest \$352.2 million in FY 2017 in global climate change programs. In accordance with USAID's Climate Change and Development Strategy, USAID pursues three objectives: 1) Accelerate the transition to low emission development through investments in clean energy and sustainable landscapes ; 2) increase the resilience of people, places, and livelihoods through investments in adaptation; and 3) strengthen development outcomes by integrating climate change in USAID programming, learning, policy dialogues, and operations.

USAID will deepen its engagement in countries that are large global emitters and well-placed to make big changes in how they power their economies. This will include investments in Clean Energy programming in Asian countries in support of the Asia-Pacific region rebalance and African countries to integrate Power Africa and LEDS activities. Strong government signals and low-carbon policies, coupled with the continued drop in solar and wind energy costs, is expected to lead to increased private sector investment in clean energy. USAID also will focus on improving the enabling environment in economies that are relatively smaller and less business-friendly so they are not left behind in the global transition to clean energy solutions.

USAID will address the major causes of deforestation by working with governments, the private sector, and NGOs to improve business practices and land-use management to reduce tropical deforestation and increase economic growth. This includes partnerships with companies to realize the commitments made to stop commodity-driven tropical deforestation under the Tropical Forest Alliance 2020.

To strengthen the resilience of countries contending with a fast-changing climate, and to support the implementation of adaptation priorities and good practices, USAID Adaptation programs will make existing climate data, scientific information, outlooks, tools, and services more accessible to decision-makers and individuals around the world, including to support national adaptation planning processes, which are a fundamental aspect of building resilience. USAID will continue to support the Global Resilience Partnership and work to integrate and leverage Agency efforts related to climate change adaptation and resilience. GCCI central and regional programs will contribute to implementation of Executive Order 13677 regarding Climate-resilient International Development by providing accessible climate change information and technical guidance, in particular to missions and programs lacking in-house climate change expertise.

Department of State Overview

The Department of State will invest \$631.7 million in the GCCI. This includes \$500.0 million for the GCF and \$131.7 million for core GCCI programming through the Bureaus of Oceans and International Environmental and Scientific Affairs, Energy Resources, and International Organization Affairs. Department of State funding supports targeted bilateral and plurilateral initiatives as well as key multilateral institutions on climate change. Department of State programs will continue to reinforce U.S. diplomatic efforts through initiatives with key countries such as China and India, and strategically targeted diplomatic initiatives such as the Climate Smart Food Security initiative, the National Adaptation Plans Global Network, the Climate and Clean Air Coalition, and the Clean Energy Ministerial. The Montreal Protocol Multilateral Fund provides support for developing countries to transition away from ozone-depleting substances (ODS); many of those substances are also potent GHGs. The United States will continue to support the UN Framework Convention on Climate Change (UNFCCC), the principal forum for multilateral climate cooperation. Continued U.S. support for the Intergovernmental Panel on Climate Change (IPCC) and the intergovernmental Group on Earth Observations is vital to ensure that the climate-related decisions we make domestically and internationally are based on the best available science. U.S. support for the IPCC advances state-of-the art assessments of climate change science and

technology, including through enhanced understanding of global observation systems, climate modeling, building resilience to climate impacts, and mitigating the emissions that cause climate change. The Department of State's ability to work with key developing countries through these programs supports U.S. leadership and is crucial to shaping effective global approaches to both mitigation and adaptation.

Adaptation: Building Resilience to Climate-Related Impacts and Disasters

The FY 2017 request includes \$181.3 million for Adaptation programs administered through State and USAID, in addition to the GCF. Adaptation programs help countries adapt to the impacts of climate change, protect hard-won development gains against the impact of extreme weather events, and contribute to stability and sustainable economic growth. Building resilience is a critical investment that reduces future needs for expenditure on disaster response. The United States will double its grant-based, public climate finance for adaptation through both bilateral and multilateral channels by 2020.

USAID Adaptation Programs

USAID will use \$147.3 million to help 23 countries and nine regions that are most vulnerable to climate change. Under its Climate Change and Development Strategy, USAID prioritizes small island and coastal states, such as Bangladesh, Dominican Republic, Maldives, Mozambique, and Philippines; least developed countries, such as Ethiopia and Mali; and glacier-dependent states, including Colombia, Peru, and Nepal. The Agency's Adaptation Framework approach prioritizes assistance that furthers a country's development agenda while increasing the resilience of people, places, and livelihoods to changes in climate. Through FY 2015, USAID Adaptation programs assisted an estimated 4.9 million stakeholders with making climate-informed decisions and adopting climate-resilient practices. Adaptation programming focuses on making better data available, developing tools and building capacity to make this data accessible and useful for decision-making, improving national and local governance for climate adaptation, and identifying and promoting climate-smart development practices.

USAID's climate adaptation priorities align with good practices for resilience, which include strengthening of adaptation-related institutions, systematic observations and early warning systems, and national adaptation planning. USAID adaptation programs consolidate and improve weather and climate data, and put such information in the hands of those who need it. For example, in Jamaica, USAID supported the development of a drought forecasting tool that increased awareness in advance of the 2014-2015 drought in the Caribbean region. The tool assisted farmers to make harvesting decisions that reduced their losses. SERVIR Global, a partnership with NASA, helps inform national adaptation planning and action by supplying valuable climate and land-use information to decision makers in 37 countries through regional hubs serving Eastern and Southern Africa, the Hindu Kush-Himalaya region, Central America, and the Lower Mekong. In FY 2017, SERVIR expects to launch a new hub in Central Asia. SERVIR has produced more than 60 tailored decision-support tools that integrate satellite data to address flood, frost, and crop forecasting, fire monitoring, disease warning, and other applications, including high resolution land cover maps for eight African countries to provide the first rigorous basis for estimating carbon emissions and supporting sustainable land-use decisions.

USAID Adaptation programs will also continue to improve governance by national and local governments in response to climate change threats. In Indonesia, USAID is helping local water utilities to develop climate-smart water security plans to reduce flooding and improve water supply. In Mozambique, the coastal cities of Pemba and Quelimane are now using an urban information system that draws on climate change vulnerability maps to inform decisions of where to locate new homes and businesses, while a mobile phone-based early warning system developed to help protect the citizens of Pemba and Quelimane is now being used nationwide.

USAID Adaptation programs will also help identify and disseminate effective, adaptive practices. In the Philippines, U.S. assistance in Typhoon Haiyan-affected areas is increasing the resilience of water supply infrastructure that serves many thousands of people, preserving their access to water in the wake of future storms. For instance, in storm-surge and flood-prone areas, water transmission pipes are being elevated or encased using proven design techniques to reduce risk. And in Bangladesh since 2010, USAID has constructed and handed over to school authorities 55 multi-purpose, cyclone shelters with another 45 under development, which will provide shelter to 180,000 people in coastal areas from cyclones, floods, and other natural disasters.

USAID also conducts and promotes climate-risk management, as directed by Executive Order 13677. In FY 2017, GCCI funding will provide guidance, training, tools, platforms for exchanging knowledge and best practices, and targeted technical assistance to USAID missions requiring assistance with climate-risk screening, in-depth assessment, or adjustment. In addition, USAID will incorporate climate resilience into broader development programs using non-GCCI funds. Climate-risk management will help safeguard the billions of dollars of development support that the United States invests in sectors such as health, food security, and infrastructure. In addition, USAID will continue to build upon its climate change integration efforts in key sectors such as agriculture and energy. For example, USAID is supporting the Economic Community of West African States in its efforts to integrate climate change considerations into national agricultural investment plans to increase African food security in the face of climate change.

USAID will incorporate climate change adaptation and humanitarian response work through its Resilience agenda in Asia, the Horn of Africa, and the Sahel. For example, an integrated program in targeted zones of Niger and Burkina Faso in West Africa's Sahel, where chronic poverty, food insecurity, drought, and violent extremism collide, is increasing farmers' capacity to include proven climate change adaptation practices to address many of the biophysical effects expected as a result of climate change. Practices include water harvesting, bio-reclamation of degraded land, conservation farming, farmer-managed natural regeneration, and integrated soil fertility management. Additionally, investments in partnerships such as the Global Resilience Partnership will bring new tools and private-sector players into efforts to reduce the impact of climate shocks and stresses in particularly vulnerable countries by incorporating resilience approaches into humanitarian response and development assistance.

Department of State Adaptation Programs

The Department of State will invest \$34.0 million in Adaptation for core GCCI programs. Through the Climate Smart Agriculture (CSA) for Food Security initiative the U.S. government, working with Canada and Mexico, will address the impact of climate change on agriculture in Central America by integrating climate-smart agriculture into their diplomatic dialogues and providing assistance to catalyze the efforts and investments of governments and other partners in the region around climate smart agriculture. Funding for this initiative is attributed to the Adaptation and Sustainable Landscapes pillars of the GCCI, is aligned with the U.S. Strategy for Engagement in Central America, and will support multilateral climate-smart agriculture activities.

In December 2015, the United States announced \$30.0 million in support for a trio of insurance initiatives: the Pacific Catastrophic Risk Assessment and Financing Initiative, expansion of the Caribbean Catastrophic Risk Insurance Facility to cover Central American countries, and the African Risk Capacity insurance program. This was an important step toward the goal G-7 leaders set in 2015 to increase by up to 400 million the number of people in the most vulnerable developing countries who will have access to insurance against the negative impact of climate change hazards by 2020. The Department may utilize FY 2017 funding to support these programs.

The Department will continue to support the National Adaptation Plans (NAP) Global Network to increase the adaptive capacity of partner countries and advance climate-resilient development globally. This support will work toward achieving the adaptation goals and commitments outlined in the 2015 Paris Agreement. Vulnerable countries will work through the network to strengthen their efforts to mainstream adaptation into national development planning and programs, identify priority adaptation actions for implementation and develop proposals for adaptation funding from multilateral sources, such as the GCF. NAP Global Network activities will help rapidly expand the community of practice on national adaptation planning, promoting an integrated approach to addressing climate risks across key economic sectors and across USAID's broader development portfolios.

The State Department's Adaptation funding may also continue support for the U.S.-India Partnership for Climate Resilience. A portion of the Adaptation funding will support the UNFCCC, including the work of the Adaptation Committee, and the IPCC for research and analysis of climate impacts.

Promoting Clean Energy Investment and Access

The FY 2017 request includes \$196.6 million for Clean Energy programs administered through State and USAID in addition to the GCF. Clean Energy programs reduce or prevent GHG emissions from energy production and consumption through three priority areas: 1) low-carbon energy generation; 2) energy efficiency; and 3) energy sector reforms that are preconditions for sustainable clean energy development, including from the private sector. Investment in energy infrastructure in developing countries is expected to exceed \$30 trillion over the next 25 years. GCCI programs work with developing country partners to develop and deploy clean energy alternatives that support sustainable economic growth and poverty reduction; promote secure, diversified, and cost-effective energy supplies; provide trade and investment opportunities for U.S. firms; and reduce GHG emissions for decades to come.

USAID Clean Energy Programs

The President's Budget requests \$118.5 million for USAID to help 14 countries and six regional programs promote clean energy and energy efficiency technologies and practices. Under its Climate Change and Development Strategy, USAID prioritizes major global emitters, such as India, Mexico, South Africa, and Ukraine; energy-insecure countries with rapidly growing emissions, such as Philippines and Indonesia; and regional leaders, such as Bangladesh and Colombia, which are keen to demonstrate the possibilities of low-carbon growth and renewable energy. USAID support enables clean-energy-related reforms necessary for implementing NDCs and fosters transparency and ambition through GHG accounting, reporting and policy analysis.

USAID missions have increasingly integrated technical assistance on finance mechanisms into their programming, to leverage public and private capital for clean energy. In 2015, for example, USAID helped leverage more than \$120.0 million dollars in private sector investment for clean energy in the Philippines for solar photovoltaics and three biomass power plants. In India, more than \$50.0 million dollars were mobilized by USAID support in designing and implementing innovative financing mechanisms, pilot programs, and implementation of clean energy programs by state and central agencies. In addition, USAID assistance helped prepare India to secure \$36.0 million in project feasibility analysis and lending for clean energy technologies from OPIC and USTDA, specifically for off-grid solar PV, grid-connected rooftop solar, smart grids, grid-connected storage, industrial process efficiency, and cleaner fuels. In support of the Caribbean Energy Security Initiative, USAID will also help improve policies and regulations to attract private sector investment for clean energy development in the Caribbean, capitalizing on the fact that renewable energy is increasingly more affordable than imported fossil fuels.

Greening the Grid, a program drawing on Department of Energy expertise, will continue providing technical assistance to energy system planners, regulators, and grid operators to overcome challenges associated with integrating variable renewable energy sources into the grid, including pilot activities in Jamaica, India, South Africa, and the Philippines. In India, the Partnership to Advance Clean Energy will support clean energy investment at the national and state level by helping to create a policy environment that will attract private investment, and Greening the Grid will ensure that these investments can be scaled and integrated at least cost to the system.

USAID will support developing countries' engagement in Mission Innovation, a global public and private endeavor to reinvigorate and accelerate clean energy innovation scaled to the economic and energy market conditions in developing countries. This will engage developing country and Mission Innovation partners on co-creation and open innovation efforts to research and develop breakthrough clean energy technologies and innovations that can be scaled to varying economic and energy market conditions in participating countries and in the broader world. Through this, USAID will help developing countries design, incubate, and accelerate clean energy technologies that can be scaled into "bankable projects" that enhance and connect energy demand from developing countries to R&D supply, and to entrepreneurs, investors, and businesses that have joined to invest patient capital in early-stage technology development coming out of Mission Innovation countries.

Department of State Clean Energy Programs

The State Department Clean Energy request is \$78.1 million for core programs. FY 2017 priorities for State Department Clean Energy programs include both bilateral and multilateral work. State's bilateral work includes cooperation with China to develop, continue, and expand U.S. participation in the work of the U.S.-China Climate Change Working Group (CCWG), the U.S.-China Clean Energy Research Center (CERC), and other mechanisms. The CCWG includes multiple action initiatives such as heavy-duty and other vehicles; smart grids; carbon capture, utilization, and storage; energy efficiency in buildings and industry; collecting and managing GHG emissions data; climate change and forests; climate-smart / low-carbon cities; and industrial boilers efficiency. The CERC includes multiple research areas including advanced coal technology, clean vehicles, building energy efficiency, and the energy and water nexus. Support for technical dialogue and cooperation on GHG abatement with China was a key factor in China's willingness to make two historic joint announcements with the United States on its climate change actions, which contributed to the successful outcome of the 2015 Paris climate conference. Cooperation with India, the world's third-largest emitter (after China and the United States), will support the U.S.-India Partnership to Advance Clean Energy, which has already mobilized substantial public and private investments in clean energy research and deployment, and adaptation and forest cooperation under the Joint Working Group to Combat Climate Change. Cooperation with Brazil through the U.S.-Brazil Climate Change Working Group will focus on deforestation-reduction efforts as well as clean energy. The State Department will utilize FY 2017 funding to support the Capacity-Building Initiative for Transparency that was established in conjunction with the 2015 Paris Agreement in order to build institutional and technical capacity on measurement, reporting, and verification of progress by developing countries in achieving their national climate targets.

Other multilateral engagement will include initiatives established through the Clean Energy Ministerial (CEM), the first standing forum of energy ministers specifically focused on accelerating a global market transformation for a broad array of clean energy technologies. Initiatives under the CEM focus on improving global energy efficiency standards for appliances, lighting, and buildings; providing web-based interactive expertise to governments on clean energy issues; and sharing best practices on "smart grid" management. CEM's Super-Efficient Appliance Deployment initiative has resulted in the development of 19 new standards or policies globally to improve the efficiency of lighting, television, and ceiling fans. India's recent adoption of just the LED standards under this initiative is expected to result in savings of as

much as 277 terawatt hours of electricity and 254 MMT CO₂e reductions cumulatively (the equivalent of the annual emissions of 54 million cars) by 2030.

LEDS GP builds upon U.S. bilateral assistance by establishing a global knowledge-sharing platform and network of international experts to compare lessons and develop best-practice LEDS approaches. LEDS is at the heart of the U.S. strategy to help developing countries achieve significant emission reductions, including the targets outlined in their NDCs. The Partnership expands the reach of U.S. support provided to developing countries and promotes coordination with other donor efforts.

Clean Energy funding will continue to address short-lived climate pollutants (SLCPs) through the Climate and Clean Air Coalition (CCAC). The United States helped establish the CCAC in 2012; it has grown from seven original partners to 50 countries and 59 non-state partners who work together to reduce emissions of SLCPs including black carbon, methane, and hydrofluorocarbons (HFCs). SLCPs cause more than 30 percent of current global warming, millions of premature deaths, and extensive crop losses. The CCAC has leveraged support from other donors and catalyzed action on cleaner heavy-duty diesel engines, energy-efficient brick kilns, and clean cooking stoves and heating. CCAC also supports ongoing efforts to bolster support for an HFC phase-down amendment to the Montreal Protocol. The Department may also continue to work with U.S. Environmental Protection Agency (USEPA) through the Global Methane Initiative (GMI), which focuses on near-term methane abatement and recovery through partnerships between developed and developing countries with strong participation from the private sector, development banks, and other governmental and nongovernmental organizations. To date, the GMI, led by USEPA, has helped achieve nearly 300 million tons of CO₂-equivalent in reductions from more than 600 projects.

The Montreal Protocol Multilateral Fund (MLF) provides support for developing countries to transition away from ozone-depleting substances (ODS), but many of the substitute substances are potent GHGs, particularly hydrofluorocarbons (HFCs). U.S. leadership under the Montreal Protocol and in the MLF has built a large coalition of support for a Montreal Protocol amendment to phase down HFCs, and governments decided in November 2015 to work to adopt a phasedown amendment in 2016. The request includes an increase for the MLF if an amendment is adopted and in anticipation of such a phase-down, which would result in reductions through 2050 equivalent to approximately two years of current anthropogenic global GHG emissions and potential to avoid half a degree Celsius of warming by 2100. Agreement on an amendment would be one of the international community's most dramatic and concrete climate achievements. Consistent U.S. support to the MLF has been an important element behind the success of the Montreal Protocol, with near universal compliance with reporting and phase-out commitments. From 1991 to 2014 the MLF approved more than 7,190 activities that phased-out over 462,000 tons of ODS in developing countries – integral to the Montreal Protocol's success in reducing global warming more than five times the entire first commitment period of the UNFCCC Kyoto Protocol.

Funding for the UNFCCC, the IPCC, and related bodies continues to support diplomatic and scientific efforts necessary for informing and advancing international action on climate change, including in support of the deployment of clean energy. The Department of State may also support programs focused on leveraging private finance to expand access to clean energy by building on its partnerships with the Overseas Private Investment Corporation and the U.S. Trade and Development Agency on programs such as the Global Climate Finance Facility, the U.S.-Africa Clean Energy Finance initiative, and the U.S.-Asia Clean Energy Program; and the Pilot Auction Facility for Methane and Climate Mitigation that the United States helped launch in partnership with the World Bank. Other programs targeted to enhance access to electricity and investment in clean energy include the Climate Technology Center and Network and the Partnership on Women's Entrepreneurship in Renewables.

Additional Department of State programs will promote enabling environments for investment in clean energy and support renewable energy generation and energy efficiency, including geothermal development, with an emphasis on both developing countries with high renewable energy resource potential and high-emitting countries.

The Department will ensure effective program management through a contract for independent program evaluation, in keeping with the Department's Evaluation Policy, to assess outcomes and performance of climate change foreign assistance programs. State will continue to provide support for technical and administrative assistance (including contractor support) to manage, monitor and coordinate implementation of new and existing programs and activities under the GCCI.

Sustainable Landscapes: Conserving Forests and Promoting Sustainable Land Use

The FY 2017 request includes \$105.9 million for Sustainable Landscape programs administered through State and USAID in addition to the GCF. GHG emissions from deforestation, agriculture, and other land use account for one-quarter of emissions worldwide. In developing countries, this figure is closer to 40 percent. For the least developed countries collectively, more than 60 percent of emissions comes from the land sector. In individual developing countries, the percentage of overall emissions may reach 60-90 percent. Sustainable Landscapes activities often represent the greatest opportunity to reduce emissions in particular countries, and often bolster rural economies and increase the resilience of ecosystems. Sustainable Landscapes programs generate critical benefits ranging from more sustainable food production and generation of rural employment to forest protection and biodiversity conservation.

Targeting emissions through land-use planning and enforcement, reducing incentives for deforestation, restoring productivity of degraded lands, applying climate smart agriculture approaches, and improving management of forests, mangroves, and other productive landscapes can curtail emissions and sustain economic growth over the long term. By helping developing countries better manage and realize the economic opportunities of their lands and natural resources, the United States is ensuring a level playing field for sustainably produced products, including from the United States.

These programs address the drivers of international deforestation and land use change: unsustainable forest clearing for agriculture, poor agricultural practices, illegal logging, poor governance, and a failure to share the economic benefits of sustainable forest and land management with local communities. They seek to engage a wide range of stakeholders – governments, the private sector, indigenous peoples' communities, and civil society – in transforming how land is valued and used. Sustainable Landscapes programming contributes to other development goals – such as economic growth, food security, good governance, and health – and produce the benefits of cleaner air, cleaner water, and increased water availability.

USAID Sustainable Landscapes Programs

USAID will use \$86.4 million to help twelve countries and five regional programs promote sustainable forestry and land-use management and practices. Programs focus on countries and regions in the Amazon, Congo Basin, and other globally important forests. USAID also directs resources to other countries with high emissions from land use that are committed to acting on the problem, including those participating in the EC-LEDS program, including Bangladesh, Mexico, Vietnam, and Zambia.

USAID strengthens countries' ability to monitor and manage their forests and other landscapes at the national and local levels. This national focus is critical to prevent shifting deforestation from one area of the country to another, while a local focus on livelihoods and markets is essential to sustain good practices. –In Guatemala, efforts to increase access to credit and markets in the Maya Biosphere Reserve

resulted in \$25.0 million in total sales of timber and non-timber forest products and created 3,861 full time equivalent jobs. USAID fostered relationships with environmentally conscious U.S. and European businesses that put a premium on Forest Stewardship Council (FSC) certified timber products, maintaining FSC certification for the nearly half million hectares of timber and organic certification of 270,064 hectares of Ramon nut, chicle, and allspice. In Mexico, more than one million tons of carbon dioxide equivalent (CO₂e) from forestry and land use activities were sequestered or reduced as a result of USG assistance. Mexico is actively working to reduce emissions from deforestation and degradation, as well as promoting the role of conservation, sustainable management of forests and enhancement of forest carbon stocks (Reducing Emissions from Deforestation and Forest Degradation (REDD+)).–

To help countries implement their forestry and land use-related LEDS goals and other climate targets, USAID will support a number of global programs, such as SilvaCarbon and the Tropical Forest Alliance 2020 (TFA 2020). USAID will work with a number of other actors under the umbrella of TFA 2020, participating in partnerships with the private sector and civil society in countries such as Indonesia and Colombia, to address high rates of deforestation due to production of palm oil and other commodities. In FY 2015, TFA 2020 launched the Global Secretariat at the World Economic Forum, and USAID supported a new \$8.0 million Global Development Alliance Public Private Partnership in Paraguay to increase sustainability of the soy and beef sectors. USAID is also partnering with TFA 2020 private sector partners to help businesses address critical land tenure and governance challenges in their supply chains with mapping tools that can be shared with other private sector partners.

USAID will identify opportunities for GHG emission reductions from management of agricultural systems and from reducing agriculture’s pressure on forests through support to the Collaborative Group for International Agricultural Research, aligning GCCI and Feed the Future priorities. A key outcome will be country case studies that estimate GHG emissions associated with different agriculture development scenarios– that will inform USAID’s agriculture investment decisions in the future. This analysis studies particular value chains and management practices in different areas of the planet. It seeks to identify barriers to uptake of climate-smart agriculture practices and systems to inform a realistic assessment of potential benefits, including the potential for these practices to also increase resilience to climate change.

Department of State Sustainable Landscapes Programs

The FY 2017 request of \$19.5 million for Sustainable Landscapes programs through the State Department may support the following activities: The interagency SilvaCarbon program will continue helping developing countries construct robust forest monitoring systems and GHG inventories, develop forest and land-use maps, develop baselines for monitoring, and perform robust monitoring and reporting. Experts who receive technical assistance and training through SilvaCarbon also contribute to international initiatives such as the Forest Carbon Partnership Facility. By providing long-term technical support to key countries through advisors placed in-country for several years, the Climate Fellows program will build national capacity to implement REDD+ and other land-based climate programs, preserving forests and reducing GHG emissions.

The Department will support the BioCarbon Fund Initiative for Sustainable Forest Landscapes (ISFL), which brings together public and private sector resources to address the structural drivers of deforestation and degradation in areas where agriculture is a major cause of deforestation and changes in land use. ISFL has been designed to pioneer linkages between forest and agricultural landscapes in country programs, increasing the capacity of developing countries to achieve and monitor mitigation results at a large scale. ISFL supports structural reforms that underpin many mitigation and development efforts related to land use, but which often go unfunded by project-level interventions.

The Department will also support the Forest Carbon Partnership Facility (FCPF), which assists developing countries in their REDD+ efforts by providing value to standing forests. FCPF supports more than 45 developing countries to create the reforms needed for good governance, financial responsibility, and capacity building to ensure reductions in emissions from the land sector. The FCPF's Carbon Fund has helped develop 18 large-scale emissions reductions programs that, if fully implemented, will protect over 134 million hectares of forest and reduce GHG emissions by up to 300 MMT CO₂e cumulatively – the equivalent of taking 64 million cars off the road for a year.

FY 2017 funding will also enable the State Department to build upon a partnership with the U.S. Department of Agriculture on LEDS that will provide integrated support for Clean Energy and Sustainable Landscapes objectives and help countries reduce their GHG emissions from the agricultural sector. State Department funding may also support bilateral cooperation on forests with Brazil and India.

The Green Climate Fund

State requests \$500.0 million for the Green Climate Fund (GCF) as part of a combined Treasury Department and State Department request of \$750.0 million in FY 2017. The United States made a multi-year pledge of \$3.0 billion to the initial resource mobilization of the GCF; the FY 2016 President's Budget requested \$500.0 million.

Program Description: The GCF is a multilateral trust fund designed to foster resilient, low-emission development in developing countries. The GCF uses a range of financial instruments to support projects across all sectors, including transport, water and other infrastructure, energy generation and efficiency, agriculture, and forestry. The GCF also helps countries mobilize private sector capital and strengthen policy environments. Key features of the GCF include:

- A Dedicated Private Sector Facility (PSF): The GCF will dedicate a significant portion of its resources to private sector projects and mobilizing private finance. As an initial step, the GCF has allocated up to \$700.0 million to competitively-selected funding proposals that will target two strategic objectives: 1) supporting micro-, small- and medium-sized enterprises in developing countries that provide innovative products and services, and 2) supporting innovative financial structures that mobilize capital from institutional investors.
- Broad Donor Base: As a core institution in the global effort to increase resilience and reduce emissions, the GCF is supported by a broad donor base, with \$10.2 billion pledged by 46 governments, including nine developing countries, ranging from Mexico to Mongolia, and four cities and provinces. The GCF will develop policies to accept contributions from foundations and the private sector.
- Global Reach: The GCF will work through a large network of public and private partners—including multilateral development banks, private sector entities, non-governmental organizations, and government agencies—to help it reach communities in developing countries worldwide. The GCF's partners or Implementing Entities are required to pass a comprehensive and rigorous accreditation process to ensure that their financial management, fiduciary standards, and environmental and social safeguards meet GCF requirements.
- Transparency: The GCF is one of the most transparent organizations of its kind. The vast majority of Board documents, including project proposals, are publicly available on the GCF website, and over two hundred civil society and business organizations are accredited to view Board meetings live. Recordings of all Board meetings are put in the public domain after the proceedings. The Board includes active observers from both the private sector and civil society.
- Efficient Setup: The GCF is an independent fund based in South Korea with the World Bank serving as its interim trustee, and is designed to work through a network of existing institutions. As such, it can maintain a relatively lean Secretariat and keep overhead costs low.

How the GCF Promotes U.S. Interests

Supporting the GCF advances U.S. interests in four key areas:

- Supporting National Security: Climate change is a threat multiplier that can exacerbate existing threats to international security, such as competition for natural resources, disease, and civil strife. Many of the world's poorest countries are vulnerable to conflict and among the most vulnerable to climate change. By enabling these countries to build resilience and adapt to changing weather patterns, sea level rise, and extreme events, the GCF will help counter security threats that otherwise could require more costly, reactive interventions. The GCF's resilience investments will also help safeguard billions of dollars of U.S. development support in other sectors, especially health, food security, and infrastructure.
- Leveraging Global Action on Climate Change and Clean Growth: Many emerging markets are among the largest emitters of greenhouse gases (GHGs), and their emissions are growing quickly. Enabling them to transition to cleaner energy sources and increased resource efficiency is essential for the success of our collective effort to keep GHG emissions below dangerous levels under the recent Paris Agreement on climate change. The GCF will help support the implementation of the recently-adopted Paris Agreement, in which all countries commit to putting forward successive and ambitious, nationally determined climate targets and reporting on their progress towards them using a rigorous, standardized process of review.
- Developing New Markets and Reducing Risk of Economic Shocks: Fast-growing developing economies are engines of global economic growth, and key trade and investment partners of the United States. By helping countries to secure needed electricity and increase resource efficiency, the GCF will help to develop markets that are ripe for U.S. export and investment. By improving resilience to extreme weather events in more vulnerable economies, the GCF will contribute to reducing risks of economic shocks that can create humanitarian crises.
- Supporting U.S. Firms: In addition to opening new markets for U.S. exports and investment, the GCF can directly support U.S. companies that are well-placed to participate in the particular sectors in which it invests. For example, of the top 30 markets for U.S. renewable energy exports—as determined by the Commerce Department—more than half are eligible for GCF investments. As has occurred in other multilateral environment funds, the GCF is beginning to directly finance some projects that have U.S. sponsors or use U.S. equipment and services.

Meeting the GCF Commitment

The Treasury Department and the State Department request a total of \$750.0 million for the GCF in FY 2017. It is important for the United States to meet its pledge to the GCF for three key reasons:

- U.S. Leadership: The United States currently has a GCF Board seat and is well-positioned to help make the GCF an effective, well-governed institution with strong fiduciary standards and environmental and social safeguards. Failure to meet our funding pledge would impede U.S. efforts to significantly shape the direction of the new institution.
- Financing the GCF Pipeline: As of late 2015, the GCF had received funding proposals totaling \$1.6 billion, and demand for GCF resources continues to grow. A lack of support from the United States would mean that the GCF would be less likely to prioritize and fund the types of projects that are U.S. priorities.
- Mobilizing Other Contributors: U.S. leadership in the GCF is critical to securing resources from other contributors. In 2016, the GCF aims to develop policies to accept contributions from foundations and the private sector, and U.S. leadership is key to garnering their support.

Achieving and Measuring Results

The GCF results management framework includes three core indicators—emissions reductions, beneficiaries of resilience investments, and additional finance mobilized—plus additional sector-specific indicators. The GCF will continuously improve its performance by learning from regular results reporting as well as evaluations undertaken by its Independent Evaluation Unit, which reports directly to the GCF Board.

The GCF has committed \$168.0 million to its first eight projects and programs. Although that is only a small fraction of what the GCF is likely to commit in 2016, the expected results from these projects demonstrate what the GCF is designed to do in the future. The first eight projects are expected to:

- Reduce cumulative emissions by 6.7 million metric tons of carbon dioxide (CO₂) equivalent in aggregate;
- Improve resilience of over 3.5 million individuals who are direct and indirect beneficiaries; and
- Help mobilize \$243.0 million in public co-financing and \$235.0 million in private finance.

Project Examples:

- East Africa: In Rwanda, Kenya, and Ethiopia, more than 59 million people lack access to clean, reliable, and affordable electricity. The GCF worked with Acumen Fund—a U.S.-based impact investor—to establish a private equity fund that will invest in early-stage small- and medium-sized enterprises (SMEs) in East Africa's off-grid solar sector. The GCF is providing an anchor \$20.0 million equity investment in the fund that has a \$100.0 million target size. The equity fund aims to invest in SMEs that collectively will provide clean energy to 15 million people, at least half of whom live on less than \$2.50 per day, and reduce emissions by 1.5 million metric tons of CO₂ equivalent.
- Latin America and the Caribbean: Increasing energy efficiency is one of the most effective options for reducing emissions and boosting productivity, but a lack of available financing has stunted energy efficiency efforts in Latin America and the Caribbean. Led by the Inter-American Development Bank, an energy efficiency green bond program will issue bonds backed by energy efficiency lending portfolios to attract a new source of finance for efficiency projects. Phase I will support projects in Mexico; Phase II will expand the program to Colombia, the Dominican Republic, and Jamaica. The GCF approved \$20.0 million in financing for Phase I and a \$2.0 million technical assistance grant to develop Phase II. The GCF may allocate up to \$215.0 million in partial credit guarantees and loans to support future phases of this innovative financial structure.
- Malawi: Communities and farmers throughout Malawi are highly vulnerable to the impacts of climate change, particularly droughts. Implemented by the United Nations Development Programme (UNDP), a GCF project will invest in early-warning systems and boost the capacity of Malawi's meteorological service to integrate climate data into its forecasts and to disseminate this information to vulnerable farmers and communities. The project aims to increase the incomes and resilience of more than three million Malawians and increase productivity in the agriculture and fisheries sectors. The GCF is providing a \$12.3 million grant, supplemented with \$3.8 million from UNDP and the Government of Malawi.

The GCF supports mitigation and adaptation activities. GCF programming will be determined by the GCF Board, of which the United States is a member. GCF funding is not factored into the GCCI pillar allocations described in this Congressional Budget Justification.

* GCF funding is not currently factored into the GCCI pillar allocations because GCF programming – including decisions about support to mitigation and adaptation activities – will be determined by the GCF Board, of which the United States is a member.

Global Health Initiative

Initiative Overview

The U.S. government is a world leader in global health, saving and improving millions of lives. U.S. global health investments – a signature of American leadership and values in the world – protect Americans at home and abroad, strengthen fragile or failing states, promote social and economic progress, and support the rise of capable partners who can help to solve regional and global problems. The response to global health problems, however, is a shared responsibility that cannot be met by one nation alone. The United States continues to challenge the global community to also provide leadership and to invest more of their own resources in building healthier and more self-sufficient nations.

The Global Health Initiative (GHI) is the Obama Administration's strategy to save lives and create stronger nations. It does this through smart, sustainable health investments that target the symptoms of and pathways out of poverty and provide valuable assistance for American partners to deliver services effectively. Led by the Department of State, the U.S. Agency for International Development (USAID), and the Department of Health and Human Services, and joined by a host of other federal agencies, GHI represents our continuing efforts to coordinate agencies towards shared goals, shared responsibility, and greater impact. Built on existing platforms, including those established by the President's Emergency Plan for AIDS Relief (PEPFAR) and the President's Malaria Initiative (PMI), GHI has achieved a unified approach to the sustained impact of health programs, including by forging deep partnerships and shared responsibility for improved health across the globe through U.S. diplomatic efforts.

For GHI programs administered by the Department of State and USAID, \$8.6 billion is requested in the Global Health Programs (GHP) account, which represents the highest ever non-emergency request.

(\$ in thousands)	FY 2015 Actual ¹	FY 2016 Estimate ²	FY 2017 Request
GLOBAL HEALTH PROGRAMS (GHP)	8,458,110	8,503,450	8,576,500

Neglected Tropical Diseases	100,000	*	86,500

¹ FY 2015 Actual includes \$4.16 million transferred in from the International Organizations and Programs account.

² FY 2016 Estimate reflects the funding level for FY 2016 at the Account level. Detailed allocations below the Account level are not available.

The Vision

The paramount objective of GHI is to achieve major improvements in health outcomes in three key areas: ending preventable child and maternal deaths, creating an AIDS-free generation, and protecting communities from infectious diseases. In partnership with governments, donors, and other multilateral and national health organizations, the U.S. government will accelerate progress toward ambitious health goals to improve the lives of millions while building sustainable health systems.

Ending Preventable Child and Maternal Deaths: The world has made remarkable strides in both public and private efforts toward saving the lives of women and children, yet maternal and child mortality remains a critical problem in developing countries.

The U.S. government continues to lead the charge in renewing the global effort to end preventable child and maternal deaths while building sustainable partnerships. Together with country partners, international organizations, and non-governmental organizations from around the globe, the United States is working towards targets that will truly represent an end to preventable child deaths – with all countries having fewer than 20 deaths per 1,000 live births and fewer than 50 maternal deaths per 100,000 live births by 2035. Achieving these goals will save an additional 5 million children’s lives each year and decrease by 75 percent the number of women who die from complications during pregnancy on an annual basis.

Ending preventable child and maternal deaths is not an outcome of U.S. government assistance alone nor is it solely the outcome of narrowly defined programs in maternal and child health (MCH). Rather, improvements in mortality outcomes are the result of increasingly effective efforts to link diverse health programs – in MCH, in malaria, in family planning’s contribution to the healthy timing and spacing of pregnancy, in nutrition, in HIV/AIDS, and in sanitation and hygiene improvement. All of these efforts contribute to ending preventable child and maternal deaths.

Creating an AIDS-Free Generation: The goal of achieving an AIDS-free generation is a shared responsibility; neither the United States nor any other single entity can accomplish this goal alone. The United States remains committed to: accelerating progress toward the global “90-90-90” targets set forth by the Joint United Nations Program on HIV/AIDS (UNAIDS); the Sustainable Development Goal’s target of ending the AIDS epidemic by 2030; and close collaboration and partnership with host country governments, civil society, multilateral institutions, the private sector, and other stakeholders in these endeavors.

PEPFAR, the largest effort by any nation to combat a single disease, continues to work toward achieving ambitious HIV prevention and treatment targets announced by President Obama by using data to focus on the highest burden geographic areas and populations for maximum impact, while strengthening health systems. With a commitment to transparency and accountability for impact, as well as accelerating access to interventions grounded in the latest science for epidemic control, PEPFAR continues to actively work with partners to control the HIV/AIDS pandemic and, ultimately, achieve an AIDS-free generation.

The FY 2017 request will support targeted global HIV/AIDS efforts by continuing the PEPFAR Impact Fund, directed to countries that take concrete steps to realign their national HIV/AIDS programs using geographic and site-level data, to increase their own share of HIV budgets, and to take greater ownership of data collection and expenditure analysis.

Protecting Communities from Infectious Diseases: In addition to work on ending preventable child and maternal deaths and creating an AIDS-free generation, U.S. government efforts will also continue to combat other infectious diseases that threaten the lives of millions of people each year, including tuberculosis, neglected tropical diseases, pandemic influenza, Ebola, and other emerging threats. The

FY 2017 request includes \$350 million GHP-USAID for programs to fight against – and protect people across the globe from – other infectious diseases.

Achievements:

- As of September 30, 2015, PEPFAR is supporting life-saving antiretroviral treatment (ART) for 9.5 million men, women, and children (of which, 5.7 million are receiving direct support and 3.8 million are benefiting from essential technical support to partner countries).
- In FY 2015, PEPFAR supported HIV testing and counseling for more than 68.2 million people (including more than 14.7 million pregnant women) as well as care and support for more than 5.5 million orphans and vulnerable children.
- As of September 30, 2015, PEPFAR has supported more than 8.9 million voluntary medical male circumcision (VMMC) procedures in Eastern and Southern Africa as well as training (including pre-service training) for more than 190,000 new health care workers in PEPFAR-supported countries to deliver HIV and other health services.
- In 2005, under-five mortality in USAID's 24 priority countries was 71 deaths per 1000 live births; by 2015 it had declined to 47 deaths per 1000 live births.
- To date, Acting on the Call to End Preventable Child and Maternal Deaths has helped spare the lives of 2.4 million children and almost 200,000 mothers.
- In 17 of the 19 President's Malaria Initiative (PMI) countries, significant declines in all-cause mortality rates among children under five have been observed – ranging from 18 percent (in both Liberia and Nigeria) to 55 percent (in Zambia).
- Since its inception, PMI has distributed more than 243 million lifesaving antimalarial treatments and more than 102 million insecticide-treated nets. In FY 2014, more than 18 million people were protected as a result of PMI-supported indoor residual spraying.
- From 2006-2014, over \$8.8 billion of drugs for NTDs have been donated by the pharmaceutical industry to USAID-supported countries, resulting in the delivery of more than 1 billion treatments to over 550 million people through USAID integrated programs.

FY 2017 Global Health Programs (GHP) Request

The GHP account funds health-related foreign assistance managed by the Department of State and USAID. The FY 2017 request reflects a comprehensive and integrated global health strategy to implement GHI by taking the investments made through PEPFAR and PMI, and in MCH, family planning and reproductive health (FP/RH), nutrition, TB, NTDs, and other programs, and expanding their reach by linking individual programs in an integrated system of care.

For all programs, resources are targeted toward countries with the highest need, demonstrable commitment to achieving sustainable health impacts, and the greatest potential to leverage U.S. government programs and platforms, as well as those of other partners and donors.

Ending Preventable Child and Maternal Deaths

The FY 2017 request provides over \$2.2 billion in pursuit of this goal.

Maternal and Child Health (MCH) (\$814.5 million): Funding will support programs that work with country and global partners to increase the wide-spread availability and use of proven life-saving interventions, and to strengthen the delivery systems to help ensure the long-term sustainability of these programs. USAID will extend coverage of proven, high-impact interventions to the most vulnerable populations in high-burden countries.

Funding will support a selection of cost-effective, high-impact interventions, continuing to accelerate the reduction of maternal and newborn mortality, including the introduction and scale-up of new vaccines,

targeted to those children most in need. The FY 2017 request includes \$275.0 million within the overall MCH request for Gavi, the Vaccine Alliance, to support the Administration's four-year \$1.0 billion pledge to this vital partner. Resources for Gavi will support the introduction of new vaccines, especially pneumococcal and rotavirus vaccines, which have the greatest potential impact on child survival. Other priority child health interventions include essential newborn care; prevention and treatment of diarrheal disease, including increased availability and use of household and community-level water, sanitation, and hygiene; and expanded prevention and treatment of pneumonia, particularly at the community level. Resources will be provided to combat maternal mortality with expanded coverage of preventive and life-saving interventions, such as prevention and management of post-partum hemorrhage, hypertensive disorders of pregnancy, sepsis, as well as contributory causes of maternal death such as anemia. Simultaneously, resources will support efforts to build the health systems capability required to provide functioning referral systems and comprehensive obstetric care. The MCH program will also work to leverage investments in other health programs, particularly family planning and reproductive health, nutrition, and infectious diseases. The request provides increased funding for polio programs in Pakistan which were previously requested and funded under the Economic Support Fund account.

Malaria (\$745.0 million): Consistent with the President's call to end the scourge of malaria, FY 2017 resources will increase support for the comprehensive strategy of the President's Malaria Initiative (PMI), which brings to scale a combination of proven malaria prevention and treatment approaches and integrates, where possible, these interventions with other priority health interventions. In addition to the increase to the annual PMI budget, the President's Budget proposes to use \$129.0 million in remaining FY 2015 Ebola emergency funds for malaria programs.

The fight against malaria is making historic gains across sub-Saharan Africa. In countries where insecticide-treated mosquito nets, indoor residual spraying, improved diagnostic tests, and highly effective antimalarial drugs have been scaled up, mortality rates in children under five years of age have fallen markedly. According to the World Health Organization's (WHO's) 2014 World Malaria Report, in Africa, between 2000 and 2013, the estimated number of malaria cases in all age groups decreased from 174 million to 163 million.

The U.S. government's financial and technical contributions, through PMI, have been key in this remarkable progress. In the nearly 10 years since it was launched, PMI has garnered recognition as a highly effective program that successfully combines solid support at the country level with global leadership on malaria prevention and control with other funding and technical partners. In 17 of the 19 PMI countries (Angola, Benin, the Democratic Republic of the Congo, Ethiopia, Ghana, Kenya, Liberia, Madagascar, Malawi, Mali, Mozambique, Nigeria, Rwanda, Senegal, Tanzania, Uganda, and Zambia) where at least two data points are available from national household surveys, significant declines in all-cause mortality rates among children under five have been observed – ranging from 18 percent (in both Liberia and Nigeria) to 55 percent (in Zambia).

While a variety of factors are influencing these mortality declines, malaria prevention and control efforts are playing a major role in these reductions. Ninety percent of all malaria deaths occur in sub-Saharan Africa, and the vast majority of these deaths are among children under five. The request provides increased resources for malaria programs to expand PMI. USAID, through PMI, will continue to scale up malaria prevention and control activities and invest in strengthening delivery platforms in up to 27 African countries as well as support the scale-up of efforts to contain the spread of multidrug-resistant malaria in the Greater Mekong region of Southeast Asia and the Amazon Basin of South America. PMI will support host countries' national malaria control programs and strengthen local capacity to expand the use of four highly effective malaria prevention and treatment measures, including indoor residual spraying, long-lasting insecticide-treated mosquito nets, artemisinin-based combination therapies to treat acute illnesses, and interventions to prevent malaria in pregnancy, and pilot new proven malaria control

strategies as they become available. Funding will support work with countries to meet pre-elimination and elimination criteria in key sub-national areas. Funding will also continue to support the development of new malaria vaccine candidates, antimalarial drugs, new insecticides, and other malaria-related research with multilateral donors.

Family Planning and Reproductive Health (\$544.0 million): Funding will support programs that improve and expand access to high-quality voluntary family planning services and information as well as other reproductive health care and priority health services. An estimated 222 million women in the developing world have an unmet need for family planning, resulting in 53 million unintended pregnancies annually. Family planning (FP) is an essential intervention for the health of mothers and children, contributing to reduced maternal mortality (through preventing unintended pregnancy), healthier children (through breastfeeding), and reduced infant mortality (through better birth spacing). Activities will be directed toward enhancing the ability of couples to decide the number, timing, and spacing of births and toward reducing abortion and maternal, infant, and child mortality and morbidity. Activities will also support the key elements of successful FP programs, including mobilizing demand for modern family planning services through behavior change communication; commodity supply and logistics; service delivery; policy analysis and planning; biomedical, social science, and program research; knowledge management; and monitoring and evaluation. Priority areas include leveraging opportunities to expand services through MCH and HIV platforms; contraceptive security; community-based approaches; expanding access to voluntary long-acting and permanent contraceptive methods; promoting healthy birth spacing; and focusing on cross-cutting issues of gender, youth, and equity. The request provides increased funding for voluntary family planning programs in Pakistan which were previously requested and funded under the Economic Support Fund account.

Nutrition (\$108.5 million): Good nutrition is central to successful development and is the defining link between the Global Health and Feed the Future Initiatives. Undernutrition contributes to almost half of all the deaths of children under five by undermining their health and development. A stunted child is 4.6 times more likely to die from infectious diseases compared to a non-stunted child. Undernutrition leads to irreversible losses to children's cognitive development, resulting in lower educational attainment and lower wages. USAID expands evidence-based approaches to nutrition and supports innovative new approaches that will improve outcomes for the most vulnerable populations. Activities focus on the prevention of undernutrition through integrated services. These include nutrition education to improve maternal diets, nutrition during pregnancy, exclusive breastfeeding, and infant and young child feeding practices; diet quality and diversification through fortified or biofortified staple foods, specialized food products, and community gardens; and delivery of nutrition services such as micronutrient supplementation and community management of acute malnutrition.

Vulnerable Children (\$14.5 million): Funding for the Displaced Children and Orphans Fund supports projects that strengthen the economic capacity of vulnerable families to protect and provide for the needs of their children, strengthen national child protection systems, and facilitate family reunification and social reintegration of children separated during armed conflict, including child soldiers, street children and institutionalized children. Support for implementation of the Action Plan on Children in Adversity is also included under Vulnerable Children. Children in adversity include those affected by HIV/AIDS, in disasters, or who are orphans, trafficked, exploited for child labor, recruited as soldiers, neglected, or in other vulnerable conditions. This effort integrates models of assistance and measures results to help ensure that children ages 0-18 not only survive, but also thrive.

Creating an AIDS-Free Generation

The GHP account is the largest source of funding for PEPFAR and this account is overseen and coordinated by the Department of State's Office of the U.S. Global AIDS Coordinator and Health Diplomacy. The request includes \$6,000.0 million (\$5,670.0 million GHP-State and \$330.0 million

GHP-USAID) for country-based HIV/AIDS activities; technical support, strategic information, and evaluation support for international partners; and oversight and management. PEPFAR implementation is a broad interagency effort that involves the Department of State, USAID, the Peace Corps, and the Departments of Health and Human Services, Defense, Commerce, and Labor, as well as local and international non-governmental organizations, faith- and community-based organizations, private sector entities, and partner governments.

Integrated HIV/AIDS Prevention, Care, and Treatment and Other Health Systems Programs (\$4,193.5 million, including \$3,957.5 million in GHP-State and \$236.0 million in GHP-USAID): These resources will support PEPFAR core activities that will advance progress toward sustainable control of the HIV epidemic using a programmatically- and geographically-focused approach in countries with greatest need and, ultimately, achieving an AIDS-free generation. Funding supports a combination of high-impact HIV interventions, focusing on: combination prevention, including antiretroviral treatment (ART), voluntary medical male circumcision, prevention of mother-to-child transmission (PMTCT), and provision of condoms; orphans and vulnerable children, including holistic services for families; neglected and hard-to-reach populations, such as children, adolescent girls and young women, and other key affected populations; and health systems, which includes human resources for health, commodity procurement, supply chains, and laboratory systems.

The GHP-USAID request contributes to PEPFAR's efforts to support the global HIV/AIDS response by targeting resources to meet the critical needs of USAID field programs and by providing technical leadership worldwide. Funding supports centrally driven initiatives that catalyze new interventions at the field level, translate research findings into programs, and stimulate scale-up of proven interventions. GHP-USAID field resources leverage larger contributions from multilateral, international, private, and partner country sources by providing essential technical assistance for health systems strengthening, sustainability, capacity building, and country ownership. In addition to country programs, USAID also will continue to support the development of advanced product leads.

International Partnerships (\$1,489.0 million, including \$1,395.0 million in GHP-State and \$94.0 million in GHP-USAID): PEPFAR will continue to expand multilateral engagement with the goal of leveraging the work of multilateral partners to maximize the impact of country programs. Funds requested in GHP-State will support a \$45.0 million contribution to UNAIDS and a \$1,350.0 million contribution to the Global Fund to Fight AIDS, Tuberculosis, and Malaria. This request for the Global Fund, when combined with \$243 million in FY 2016 funds above the President's pledge to the Global Fund's Fourth Replenishment, will allow the United States to contribute nearly \$1.6 billion by 2017 towards a Fifth Replenishment contribution. The GHP-USAID request will support the Commodity Fund, which is used to procure condoms, HIV vaccine development, and major research with worldwide impact, including microbicides research activities.

Oversight and Management (\$197.5 million in GHP-State): FY 2017 resources will support costs incurred by multiple U.S. government agency headquarters including: supporting administrative and institutional costs; management of staff at headquarters and in the field; management and processing of cooperative agreements and contracts; and the administrative costs of the Office of the U.S. Global AIDS Coordinator and Health Diplomacy.

Technical Support, Strategic Information, and Evaluation (\$120.0 million in GHP-State): Funding will be used for central technical support and programmatic costs and strategic information systems that monitor program performance, track progress, and evaluate the effectiveness of interventions. This will increase transparency, oversight and accountability across PEPFAR and its interagency partners. PEPFAR aims to support the expansion of the evidence base around HIV interventions and broader health systems strengthening in order to support sustainable, country-led programs. While not a research organization,

PEPFAR works with implementers, researchers, and academic organizations to help inform public health and clinical practice. Technical leadership and direct technical assistance activities (including scientific quality assurance) are supported for a variety of program activities, including treatment, prevention, and care, as well as cross-cutting efforts such as human capacity development, training for health care workers, and supply chain management.

Protecting Communities from Infectious Diseases

TB (\$191.0 million): Funding will support programs that address a disease that is the leading cause of death and debilitating illness for adults throughout much of the developing world. Globally, 1.5 million people die annually from TB, and there are 9 million new cases of TB each year. There are also approximately 480,000 cases of multi-drug resistant (MDR) TB each year, which are difficult to cure and are often deadly. USAID program efforts focus on early diagnosis and successful treatment of the disease to both cure individuals and prevent transmission to others. Funding priority is given to those countries that have the greatest burden of TB and MDR-TB, consistent with the goals and objectives of the Administration's National Action Plan for Combating Multidrug-Resistant Tuberculosis. Country-level expansion and strengthening of the global Stop TB Strategy will continue to be a focal point of USAID's TB program, including increasing and strengthening human resources to support the delivery of priority health services such as Directly Observed Treatment, Short Course (DOTS) implementation, preventing and treating TB/HIV co-infection, and partnering with the private sector in DOTS. In particular, USAID will continue to accelerate activities to address MDR-TB and extensively drug resistant TB, including the expansion of diagnosis and treatment, and infection control measures. USAID collaborates with PEPFAR, other U.S. government agencies, and the Global Fund to integrate health services and strengthen delivery platforms to expand coverage of TB/HIV co-infection interventions.

Neglected Tropical Diseases (NTDs) (\$86.5 million): More than one billion people worldwide suffer from one or more neglected tropical diseases that cause severe disability, including permanent blindness, and hinder growth, productivity, and cognitive development. USAID focuses the majority of its NTD support on scaling-up preventive drug treatments for seven of the most prevalent NTDs - schistosomiasis, onchocerciasis, lymphatic filariasis, trachoma, and three soil-transmitted helminths. USAID programs use an agency-tested and WHO-approved integrated mass drug administration delivery strategy that will target affected communities using drugs that have been proven safe and effective and can be delivered by trained non-health personnel. Through USAID partnerships with pharmaceutical companies, the vast majority of drugs are donated, valued at close to \$1 billion each year. Expanding these programs to national scale will support the acceleration of global efforts to eliminate lymphatic filariasis and blinding trachoma globally. USAID will continue to work closely with the WHO and global partners to create an international NTD training course and standardized monitoring and evaluation guidelines for NTD programs, and ensure the availability of quality pharmaceuticals.

Global Health Security (\$72.5 million): In our globalized world, no country is more than a flight away from a dangerous pathogen, underscoring the critical nature of the Global Health Security Agenda. The Ebola epidemic in West Africa demonstrates the potential perils of any country with weak disease prevention, detection, and response capacities, particularly in geographic areas where new public health threats are likely to emerge. To accelerate progress toward a world safe and secure from infectious disease threats, in partnership with other nations, international organizations and public and private stakeholders, the State Department and USAID seek to prevent avoidable epidemics, detect threats early, and respond rapidly and effectively to disease outbreaks. Nearly 75 percent of all new, emerging, or re-emerging diseases affecting humans at the beginning of the 21st century originated in animals (zoonotic diseases), underscoring the need for the development of comprehensive disease detection and response capacities that span the traditional domains of animal health, public health, ecology, and conservation. In particular, activities will expand surveillance to address the role of wildlife in the

emergence and spread of new pathogens; enhance field epidemiological training of national partners; and strengthen laboratory capability to address infectious disease threats. Using a “One Health Strategy,” professionals from public health, medicine, veterinary medicine, and wildlife conservation will be engaged to strengthen their capacity to monitor and respond to animal viruses that are becoming threats to public health.

GHP Country-Specific Allocations

Assistance provided through the GHP sub-accounts (GHP-State and GHP-USAID) will support GHI principles, improving health outcomes by working with partner countries to build a sustainable response by investing in health systems and promoting innovation. Each of the countries and investments reflected in the chart that follows is essential for achieving the outcomes and objectives envisaged in GHI. The FY 2017 requests for GHP funding are further described in the respective country and program narratives elsewhere in the Congressional Budget Justification and Annexes. Additional details of the HIV/AIDS programs can also be found in the PEPFAR CBJ Supplement.

Gender

Initiative Overview

Overview

To achieve successful outcomes for U.S. foreign policy priorities, including eradicating extreme poverty, stability, prosperity, and peace, the FY 2017 foreign assistance budget request supports U.S. promotion of gender equality and advancement of the political, economic, social, and cultural status of women and girls.

Evidence supports this strategic imperative. Research indicates that investments in women's employment, women's and girls' health, and education are correlated with a range of positive outcomes, including greater economic growth and children's health and survival. A growing body of evidence shows that women bring a range of unique experiences and contributions to decision-making on matters of peace and security that lead to improved outcomes in conflict prevention and resolution. Furthermore, engaging women as political and social actors can alter policy choices and make institutions more representative and better performing. Advancing the status of women and girls is not simply the right thing to do. It is the smart thing to do.

Policy Framework

Today, a range of policies reflect this strategic focus on gender equality and advancing the status of women and girls to support U.S. foreign policy objectives. The U.S. National Security Strategy specifically recognizes that countries are more peaceful and prosperous when women are accorded full and equal rights and opportunity, and that, when those rights and opportunities are denied, countries often lag behind. The Department of State and the United States Agency for International Development's Joint Strategic Plan (JSP; 2014) and Quadrennial Diplomacy and Development Review (QDDR; 2015) identify and integrate a focus on gender equality, making women an integral part of U.S. diplomacy and development—not simply as beneficiaries, but as agents of peace, reconciliation, development, growth and stability.

To realize the vision outlined in the National Security Strategy, the JSP and the QDDR, the Department of State and USAID issued policy guidance on *Promoting Gender Equality to Achieve our National Security and Foreign Policy Objectives* (2012) and *Gender Equality and Female Empowerment (GE/FE) Policy* (2012), respectively. In 2014, Secretary Kerry issued additional policy guidance on *Promoting Gender Equality and Advancing the Status of Women and Girls*, reemphasizing the commitment to gender equality as a top strategic priority. Complementary in scope, these policies require that gender equality be integrated into policy development, strategic and budget planning, program design and implementation, management and training, and monitoring and evaluation of results. USAID followed up the release of its GE/FE Policy with a standalone chapter on gender integration (ADS 205) in the Agency's manual of operational policies and procedures.

In addition, the Department of State and USAID are lead agencies in the implementation of two United States strategies, one to strengthen conflict resolution and peace processes through the inclusion of women, and another to enhance prevention and response to gender-based violence around the world. In December 2011, the United States issued a National Action Plan on Women, Peace, and Security (WPS), with an Executive Order directing its implementation. The plan outlines commitments to accelerate, institutionalize, and better coordinate efforts to advance women's participation in peace negotiations, peace-building, conflict prevention and decision-making institutions; protect women and girls from gender-based violence; and ensure equal access to relief and recovery assistance in areas of conflict and insecurity.

The Strategy to Prevent and Respond to Gender-based Violence (GBV) Globally, released in August 2012 -- and accompanied by an Executive Order directing its implementation -- marshals U.S. expertise and capacity to address gender-based violence more effectively and establishes a government-wide, multi-sector approach that identifies, coordinates, integrates and leverages current efforts and resources. The USAID Vision for Action to End Child Marriage was released shortly thereafter and is a pillar of the U.S. Strategy to Prevent and Respond to GBV Globally. The Vision is focused on strengthening implementation efforts and results/programming on early and forced marriage in the next three to five years, and focuses both on prevention and response to early and forced marriage because this practice undermines efforts to promote sustainable development and disadvantages girls in numerous and significant ways.

As mandated per both Executive Orders, 2015 marked the three year review to the National Action Plan for Women, Peace and Security and the Strategy to Prevent and Respond to Gender-Based Violence Globally.

In addition, the U.S. government is preparing to launch the interagency Adolescent Girls Strategy, with input from State, USAID, Peace Corps and MCC, to ensure that adolescent girls are educated, healthy, economically and socially empowered, and free from violence and discrimination, thereby promoting global development, security, and prosperity.

Gender in Strategic Planning and Budgeting

Pursuant to the U.S. policy framework requiring a strategic focus on gender equality to achieve foreign policy goals, gender is integrated into foreign assistance strategic planning and budgeting processes. Under the QDDR, Department Policy Guidance on Gender Equality, and USAID's Gender Policy, State and USAID Embassies, Missions, and Bureaus develop multi-year strategies and incorporate the findings of gender analyses into those strategies. A focus on gender equality and female empowerment must be integrated into the following strategic planning documents, as applicable to a particular Mission or Bureau:

- USAID's five-year Country Development Cooperation Strategy, which serves as a plan for implementing PPD-6 and the QDDR in a given country;
- State/USAID multi-year Integrated Country Strategies that also articulate priorities in a given country and request that Missions, where applicable, complete a gender annex;
- Three-year State Functional and Bureau Strategies that articulate priorities for a functional bureau and outline necessary tradeoffs; and
- Three-year State/USAID Joint Regional Strategies, which outline priorities within a region.

In addition, in 2011, State and USAID revised the performance and budgetary definition of the Gender Key Issues to allow for consistent reporting in budget and performance documents and better alignment with international donor reporting. *Key Issues* refer to Administration and congressional priorities that cut across multiple areas of U.S. foreign assistance (e.g., gender, science and technology, and sustainable institutional capacity building). Key Issue data are collected through narratives and attributed funding levels that detail why a Mission or Bureau is working in a certain area, what it has accomplished in that area, and how activities advance broad policy goals represented by the Key Issue.

The Gender Key Issues revision improved State and USAID's ability to report on planned expenditures and programmatic results related to gender equality, female empowerment, and gender-based violence. In combination with a set of specific indicators that were developed to strengthen gender-related performance reporting, the revision also enhanced the ability to communicate about the effectiveness of gender equality investments to stakeholders. There are now three linked Gender Key Issues, and in response to evaluation requirements outlined in the President's Executive Order on the National Action Plan on Women, Peace, and Security (WPS), a fourth independent Gender Key Issue was designed to cover WPS.

The four Gender Key Issues include:

- ***Gender Equality/Women's Empowerment-Primary***, which includes activities where gender equality or women's empowerment is the principle goal of the activity and fundamental in the activity's design, results framework, and impact;
- ***Gender Equality/Women's Empowerment-Secondary***, which encompasses activities where gender equality or women's empowerment purposes, although important, are not among the principal reasons for undertaking the activity, but are integrated into key parts of the activity;
- ***Gender-Based Violence (GBV)***, which includes activities aimed at preventing and responding to GBV, that results in physical, sexual, and psychological harm to either women or men, girls or boys. Forms of gender-based violence include, but are not limited to, female infanticide; child sexual abuse; sexual coercion and abuse; neglect; domestic violence; elder abuse; and harmful traditional practices such as child, early and forced marriage, "honor" killings, and female genital mutilation/cutting; and

Women, Peace, and Security (WPS), which includes activities that advance peace and security for all by fully integrating women and girls as equal partners in preventing conflict, reducing instability and building peace; protecting women from gender-based violence; promoting women's engagement and the integration of gender perspectives in conflict prevention and mitigation, early warning, preparedness, or response planning and activities; and ensuring equal access to relief and recovery assistance, in countries affected by conflict, crisis, and insecurity.

FY 2017 Budget Request: Advancing National Security and Foreign Policy Goals by Advancing Gender Equality and the Status of Women

In the FY 2017 request, \$1.3 billion is attributed to Gender as a Key Issue, with overall gender attributions broken out as follows:

- \$248.9 million for Gender Equality/Women's Empowerment-Primary
- \$930.9 million for Gender Equality/Women's Empowerment-Secondary
- \$157.2 million for Gender-Based Violence

The FY 2017 request includes \$133.5 million to advance the empowerment and protection of women and girls in crisis- and conflict-affected environments. These programs seek to strengthen women's participation as political leaders, as well as their capacity as citizens to constructively engage the government in key democratic processes and to contribute to community-based conflict mitigation efforts. In Afghanistan, for example, resources will continue to strengthen women-led civil society groups to develop networking and communications skills and to advocate for women's rights and welfare.

At the intersection of education and gender, and in collaboration with the Office of the First Lady, the Department of State and USAID are requesting a total of \$75.0 million of dedicated funding for the Let Girls Learn (LGL) initiative. The funding includes \$35.0 million in Development Assistance to be used by USAID for the continued development and implementation of the interagency LGL Challenge Fund. Led by USAID's Office for Gender Equality and Women's Empowerment, this effort will bring together agencies within the U.S. government and external partners to collaborate on integrated solutions and approaches to keeping adolescent girls in school. The remaining \$40.0 million in Economic Support Funds is being requested for Afghanistan for USAID to develop programs and activities that support the education of adolescent girls in that country. In addition, Let Girls Learn involves continued support for the President's Emergency Plan for AIDS Relief (PEPFAR) interventions to reduce HIV infections in young women. These and other investments deepen the U.S. commitment to adolescent girls, helping girls and young women thrive and play a fuller role in their communities and economies.

Investments in women and girls' health, education, and economic opportunities seek to support conditions for stable societies in countries affected by conflict and transition. For example, in order to identify GBV as a cause and consequence of societal breakdown and insecurity and to prevent and respond to this global scourge, programs will mobilize and empower women and men to prevent and mitigate such

violence; work with communities to address norms that perpetuate the acceptability of gender-based violence, and challenge harmful gender-based attitudes and practices; support policies and programs to prevent and respond to gender-based violence; increase access to psychosocial, legal, and health services; and support protection for women, children, and other vulnerable populations in conflict and humanitarian emergencies. The Secretary's Office of Global Women's Issues' resources will support programming in interagency-identified focus countries in which the U.S. government will implement a comprehensive approach to the prevention of and response to gender-based violence.

Additional programs will promote women's participation in decision-making positions in the security and justice sectors, including peace-building; support partnerships between policy and community members, with a particular emphasis on including women; and support access to justice, including for survivors of gender-based violence. Funding will support programs that provide training for women working in judicial and security sectors, and gender sensitization and GBV training for judicial and law enforcement officials.

Elevating the status of women in foreign assistance to promote peace and security is just one example of how the U.S. is maximizing dollars and promoting national security and foreign policy objectives. Efforts to integrate gender equality into programs in order to maximize outcomes are clear throughout the FY 2017 budget request – from the Global Health Initiative, which has a particular focus on women, girls, and gender equality in order to improve health outcomes, to the Feed the Future Initiative, which has integrated gender equality and female empowerment objectives into strategy, program design, and monitoring and evaluation.

In addition, S/GWI will continue to lead the Department's integration of gender into operations, diplomatic activities, and foreign assistance programs. S/GWI's foreign assistance resources will be used to continue implementation of the U.S. National Action Plan on Women, Peace and Security and the U.S. Strategy to Prevent and Respond to Gender-based Violence Globally. Efforts will include promoting women's participation in reconciliation and peace processes in post-conflict and conflict-affected countries; protecting women and girls from violence; and reducing barriers affecting adolescent girls, including early and forced marriage.

Working in tandem with State, USAID is requesting foreign assistance funding to implement USAID's Gender Equality and Female Empowerment Policy and accelerate women's leadership activities throughout the Agency. The majority of funding will be programmed to support efforts to reduce gender disparities in access to resources, prevent and respond to GBV, as well as to promote women's leadership and decision-making by developing new activities, and scaling up best practices. USAID will identify Missions poised to implement catalytic activities and provide them with the technical assistance to support integration of these goals into existing portfolios.

Funding will also support innovative partnerships that will leverage other donor and non-governmental resources to advance the rights of women and girls globally; support women's economic empowerment including their increased participation in the job market and as entrepreneurs; increase women's and girls' access to technology; prevent and respond to child, early, and forced marriage and other forms of gender-based violence; and address other gender issues. Foreign assistance will also support specific programmatic objectives related to Women, Peace, and Security. Key interventions in this area will focus on providing practical and strategic support for women's participation in peace processes, political transition, reconstruction, or security initiatives; increasing the protection of women and girls from conflict and crisis-related GBV; promoting women's participation and leadership in efforts to build resilience to recurrent crisis, conflict, and insecurity, such as activities to engage women and girls in community-level violence prevention, countering violent extremism, and adaptation to climate-related shocks/challenges; and strengthening the capacity of civil society actors, including women's organizations, working to address critical gender equality and female empowerment issues in fragile or transition environments.

State Bureau of Arms Control, Verification, and Compliance (AVC)

Foreign Assistance Program Overview

The Comprehensive Nuclear-Test-Ban Treaty (CTBT) is an important Presidential priority and an integral part of the Administration's nuclear nonproliferation and arms control strategy. AVC works with foreign governments and international organizations, including the Preparatory Commission (PrepCom) for the Comprehensive Nuclear-Test-Ban Treaty Organization (CTBTO), to put into place the Treaty's verification regime in order to acquire monitoring data and information as a basis for U.S. compliance determinations and to encourage Parties' compliance with their legal obligations once the Treaty enters into force. Maintaining the U.S. level of contribution toward the annual assessment and additional contribution-in-kind activities are currently the most visible elements of U.S. support for this important treaty.

Request by Account and Fiscal Year

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease

Nonproliferation, Antiterrorism, Demining and Related Programs	32,000	*	32,000	-

Nonproliferation, Antiterrorism, Demining and Related Programs (NADR)

CTBT International Monitoring System (IMS)

As a signatory state to the CTBT, the United States receives an assessment ("dues") annually, as determined by a modified United Nations Scale of Assessments, for its contribution to fund the approved budget of the PrepCom. Additionally, because U.S. nationals are employed by the PrepCom's Provisional Technical Secretariat (PTS), it receives an assessment for reimbursement of U.S. income taxes paid by the organization on those employees' salaries in accordance with a tax reimbursement agreement with the United States. The PrepCom is charged with the establishment, operation, and maintenance of the IMS, a worldwide network of 321 seismic, hydroacoustic, infrasound and radionuclide sensing stations designed to detect nuclear explosions worldwide. The data produced by the IMS are an important supplement to U.S. National Means and Methods to monitor for nuclear explosions. In addition, the organization is continuing to develop the on-site inspection element of the CTBT's verification regime, which, after entry into force of the Treaty, will enable the fielding of inspection teams to investigate ambiguous events to determine if they were nuclear explosions that contravene the basic obligation of the Treaty.

Key Interventions:

- The CTBT on-site inspection (OSI) regime involves the deployment of a 40-person team with several tons of equipment to remote areas to carry out a suite of scientific measurements in the field. To aid in the development of this regime, the PrepCom carried out an Integrated Field Exercise in 2014 (IFE14) in Jordan. This exercise built on the previous large-scale Integrated Field Exercise conducted in 2008 in Kazakhstan, as well as numerous tests focused on individual aspects of an OSI. The PrepCom is currently in the process of assembling a detailed evaluation of IFE14 to identify where to focus subsequent OSI development work.
- The IMS is a large-scale, globally distributed system of individual sensing stations. Each station

consists of several large pieces of equipment that must be maintained, repaired, and replaced on an ongoing basis to ensure that data are provided consistently with high quality. The PrepCom is in the process of testing a logistics system, based on the practical experiences of network operation that can provide cost-effective, timely equipment servicing and replacement.

- Rigorous and reliable analysis of quality data is at the core of CTBT verification efforts. The International Data Centre (IDC) is critical to the CTBT's ability to provide information that Member States need to establish whether an ambiguous event has taken place and whether such an event may indeed have been a nuclear explosion. The IDC's current design is based on 1990's computer hardware technology and software. A major project of the PrepCom is a redesign of the IDC to move the software from proprietary, commercially available software and dependencies to an open-source software platform designed for modern computer hardware.
- A system of digitally signing IMS data at the station has been deployed to provide validation of data integrity. The PrepCom is currently implementing a public key infrastructure for managing the encryption keys for signing the data and validating commands sent to the IMS stations. The PrepCom is also progressively implementing validation of the digital signatures for an increasing number of stations into operational data handling processes.
- The development of the IDC has reached the phase where a validation and acceptance test plan needs to be developed. This validation and acceptance test is the capstone that will allow States to verify the capabilities of the IMS-IDC system, to validate that the system fully meets their expectations as an element of the Treaty verification regime, and for them to accept it as an operational system. This capstone requires extensive and rigorous testing, and the validation and acceptance test plan will spell out the necessary testing and the metrics against which it will be measured. The PTS has developed an initial draft of the plan, and is now beginning the task of working with PrepCom members to refine the plan and ensure that it will be a satisfactory and acceptable test series. This work will also involve a series of tests to assess the current state of the system and provide baselines for measurement.

CTBT PrepCom

In addition to making contributions to cover assessments, additional voluntary contributions, which may be provided as in-kind support, will expedite completion of all elements of the CTBT's verification regime, and increase the capability of the regime to contribute to U.S. National Means and Methods for nuclear explosion monitoring. U.S. support provided by this additional funding assists the PTS in increasing the effectiveness and efficiency of the Treaty's verification regime. The Nuclear Testing Verification and Monitoring Task Force, consisting of representatives from the Departments of State, Energy, Defense, and the Intelligence Community, consults with the PTS and identifies projects to assist with the PTS's most pressing needs. Current and future projects fall into the following categories: improving the radionuclide component of the IMS; supporting the development of on-site inspection expertise, techniques, equipment and procedures; supporting the evaluation of the Integrated Field Exercise carried out in late 2014; enhancing IMS waveform technology; enhancing maintenance support for the IDC; supporting the re-engineering of the hardware and software infrastructure of the IDC; and assisting selected States to develop capable National Data Centers.

Key Interventions:

- One of the most confounding factors for the CTBT IMS radioxenon monitoring network is the release of xenon and iodine from facilities producing medical and industrial isotopes, in particular molybdenum-99, by fission. Funds will assist PTS efforts to engage medical isotope producers to use techniques to reduce their xenon emissions, provide information on such emissions to the IDC, and begin defining how medical isotope data should be used when it is received by the IDC.

- Atmospheric Transport models are used to map detections at IMS radionuclide stations back to potential source regions, and also to predict how a debris cloud or noble gas plume will move across the monitoring network, providing a forecast of expected detections. Due to the mathematical characteristics and computational complexities of these models, accurately assessing their uncertainties in a rigorous theoretical manner is potentially intractable. Using known releases of radioactive tracers could provide a means of empirically determining model uncertainty. Data from stack monitoring at isotope production and other nuclear facilities provides specific release data from existing sources without doing additional deliberate releases. Funds will also support the use of stack monitoring data for this atmospheric modelling work.
- Funds will support continued development of regional seismic models for use with Regional Seismic Travel Time software provided to the PTS to give the IDC state of the art capability to seamlessly merge regional seismic and teleseismic data.
- Funds will also enable continued contractor support for the re-engineering of the International Data Centre hardware and software infrastructure.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: The PTS provides regular monthly reports to member States on IMS station metrics including the status of station construction, certification, and maintenance; data volume and data quality received from each IMS station; the number of events detected by the IMS stations; the number of radionuclide samples analyzed at Treaty-designated radionuclide laboratories; the results of laboratory proficiency tests; volume of data and products transmitted to each member state; and many other indicators of system performance. Many indicators are also available on a continuous, near-real-time basis through the online Performance Reporting Tool through a secure web portal. These activities, together with PTS activities to develop the On-Site Inspection element of the verification regime, are also briefed to the PrepCom member States by PTS officials. As a PrepCom member State, the United States does not directly participate in the PTS monitoring and evaluation activities; however, the U.S. does closely track reporting on these activities to ensure funds are being effectively managed and that development efforts are producing a robust and effective verification regime.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: As a Member State, the United States makes use of current performance reporting by the PTS and its proposed activities for the coming year to participate in establishing a program of work and determining the PrepCom budget each year, setting priority areas for expenditures and directing actions to address performance issues. The United States selects projects for voluntary contributions in kind based upon an assessment of where performance improvements can be made via such contributions.

Relating Past Performance to FY 2017 Plans: The PrepCom budget is based on the consensus priorities set by the Member States and reflected in an approved biennial program of work, which in turn determines the amount of each State's annual assessment.

State Bureau of Conflict and Stabilization Operations (CSO)

Foreign Assistance Program Overview

CSO advances the Department of State's understanding of violent conflict through analysis and planning; monitoring, evaluation, and learning; and targeted, in-country efforts that help the U.S. government anticipate, prevent, and respond to conflict and promote long-term stability. FY 2017 funds will support atrocity prevention (AP) efforts including research, learning, field activities and programs. It is the Department's only funding request specifically for atrocities prevention. Other foreign assistance funds are sometimes used to support these objectives, but often part of other broader programs, rather than programs primarily designed for atrocities prevention purposes. In 2012, President Obama identified atrocity prevention as a "core U.S. national security interest," and established the interagency Atrocities Prevention Board (APB) to identify and address atrocity risks. Since then, CSO has helped build the State Department's strategy on atrocities prevention and serves as the Department's Atrocities Prevention Secretariat.

FY 2017 is the first time the Department has requested a dedicated foreign assistance budget line for CSO. These funds will contribute to: 1) achieving country impact in at-risk countries; 2) institutionalizing atrocities prevention through training, tools, and lessons; and 3) engaging with bilateral, multilateral, and civil society partners on atrocity prevention.

Request by Account and Fiscal Year

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
TOTAL	-	*	5,000	5,000
Economic Support Fund	-	*	5,000	5,000

Economic Support Fund (ESF)

Economic Support Funds will allow CSO, along with the Department, the Board, and the interagency, to launch three to four new country cases. Each case will involve a field assessment, a risk mitigation strategy, adjustments to existing programs, new interventions, and rigorous monitoring and evaluation. CSO's monitoring and evaluation is a key part of the bureau's efforts to develop more effective approaches to managing extreme forms of violence. While there is a broad understanding of the factors that increase atrocity risk, the U.S. government still has limited evidence about what works to reduce atrocity risk, what does not, and why.

Specifically, the funds will support the continuing efforts in Burundi as well as support new engagements in Kenya and in the Democratic Republic of the Congo (DRC).

Key Interventions:

- ESF funds will be used to support the close out of CSO's four-year Burundi work, including for program support, in-country travel, and final monitoring and evaluation for the programs, including a focus on AP lessons-learned.
- CSO will also use FY 2017 ESF to support Embassy Nairobi to mitigate elections-related atrocities risks in Kenya during the run-up to Kenya's 2017 election. CSO will support analytical efforts in areas at high risk for violence, join interagency assessments, and launch programs in support of Embassy Nairobi's elections strategy. Within the electoral violence risk context, CSO will also assist Mission Kenya's efforts to mitigate risks for ethnic conflict.

- CSO will use ESF to develop a \$1.0 million program through an implementing partner to establish and early warning-early response mechanism in one or more key locales in order to mitigate violence risk related to national elections planned in FY 2017. This program will complement diplomatic engagement to address violence risk at the sub-national and national levels.

In addition to Burundi, DRC, and Kenya, focus countries, with FY 2017 ESF, CSO will launch targeted programs in other countries that are experiencing violence or are potentially at risk for atrocities, including the Central African Republic, Burma, Libya, Lebanon, and Yemen.

CSO will also use FY 2017 ESF to support the following activities:

Key Interventions:

- CSO will fund participation by international partners in the Stabilization Leaders Forum to participate in atrocity prevention training developed by CSO and interagency partners.
- Work with international and civil society partners to disseminate best practices and encourage sustained attention on what they can do to prevent atrocities.
- Undertake initiatives arising from a conference on atrocity prevention sponsored by CSO in spring 2016 that focuses on educating international partners on programmatic lessons learned and training in AP best practices; continue convening roundtables with civil society colleagues on how to develop programs to prevent mass atrocities.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: CSO believes evaluation and monitoring are essential to assessing performance, making midcourse adjustments when needed, informing programs, documenting impact, and formulating sound policy. CSO has supported rigorous monitoring and evaluation in the past and will continue to apply the same rigor to programs implemented with the requested \$5.0 million. In FY 2014 and FY 2015, CSO monitoring and evaluation included:

- Monitoring and evaluation of two Syria programs, the Integrated Community Security Program and the Access to Justice and Community Security Program (July 2015)
- Together with the State Department Bureau of Near East Affairs, CSO conducted a joint evaluation of media and governance programs in Syria (August 2015)

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: CSO's monitoring and evaluation activities resulted in the following management, process, and programmatic improvements:

- Real-time feedback to multinational efforts to strengthen the moderate opposition's ability to provide security, justice, and unbiased media to populations in territory it controlled.
- Development of new bureau standards for personnel deployment, analysis, planning, programs, and learning.
- Training a cadre of evaluation specialists within the bureau as well as creating an external roster of monitoring and evaluation experts to flexibly meet the bureau's requirements.
- Innovation with regard to real-time monitoring to inform programmatic decision-making.
- Establishment of a mechanism whereby evaluation usage is ensured, and findings and recommendations are employed as appropriate.

With the FY 2017 funding request, CSO expects to help the Department of State and the APB select priority countries based on the level of risk and opportunity for impact. In these countries, CSO will lead atrocity-specific analysis, using the State Department/USAID atrocity assessment framework, and coordinate atrocity prevention planning with relevant embassies worldwide.

State Bureau of Counterterrorism (CT)

Foreign Assistance Program Overview

The United States has made significant strides over the last decade in degrading al-Qa'ida's (AQ) core leadership, but we continue to face threats from an evolving and dynamic terrorist landscape. These have become more geographically dispersed, as evidenced by the rise of the so-called Islamic State of Iraq and the Levant (ISIL) in Iraq and Syria and its global affiliates, the movement of an unprecedented number of foreign terrorist fighters (FTF), and an increase in ISIL-inspired and other lone offender attacks by radicalized individuals in Europe and elsewhere. Weak or failed governance, associated in part with the ongoing instability linked to the Arab Spring uprisings, continues to provide an enabling environment for violent extremist groups, notably in Yemen, Syria, Iraq, Libya, Nigeria, Somalia, and parts of South Asia. In addition, Iran continues to sponsor terrorism, especially through its Islamic Revolutionary Guard Corps–Quds Force and Lebanese Hizballah.

In his May 2014 West Point speech, President Obama spelled out his vision for sustainable U.S. counterterrorism efforts in this complex threat environment, focused on strengthening governmental, non-governmental, and multilateral partnerships. Effectively addressing the evolving terrorism challenges will require strong, capable and diverse partners who have both the political will and the ability to disrupt and degrade terrorist networks. Our partners play a critical role in defeating ISIL in Iraq and Syria, mitigating the threat posed by tens of thousands of FTFs, many of whom will return to their home countries in the years ahead, and combating other regional terrorist groups. Cooperation from partners is also essential to reducing terrorist fundraising and financial flows, strengthening border security, countering violent extremist recruitment and radicalization to violence, and addressing the conditions that make communities susceptible to violent extremism in the first instance.

Countering violent extremism (CVE) is increasingly recognized as critical component of a comprehensive and sustainable counterterrorism strategy. The United States is working with governments and non-governmental partners to address the spread of violent extremism and the conditions that make communities susceptible to violent extremism, including ISIL's potent brand of terrorism. The White House Summit on Countering Violent Extremism in February 2015 and follow-on process has mobilized international support for a multi-stakeholder action agenda to address the drivers of violent extremism. This action agenda includes partnerships with international organizations, national and local governments, civil society, religious leaders, the private sector and affected communities. Building on this momentum, Secretary Kerry has committed to elevate CVE as a priority within the Department of State and to utilize the CT Bureau as a central locus for efforts to defining and pursuing CVE objectives.

CT works to strengthen partnerships, civilian capacity, and information-sharing around the world to counter evolving terrorist threats and prevent the spread of violent extremism. CT designs, manages, and oversees foreign assistance to build the civilian capabilities of foreign government partners to counter terrorism and violent extremism in an effective, sustainable fashion. CT seeks to build law enforcement and judicial capabilities to mitigate attacks, disrupt terrorist transit, and arrest, investigate, prosecute, and incarcerate terrorists in accordance with the rule of law. To bolster these efforts, CT seeks to promote the leadership of other countries to build capacity in third countries in their regions. CT also seeks to strengthen partnerships and initiatives involving government and non-governmental actors to counter sources of violent extremist messaging, narratives, and recruitment.

Request by Account and Fiscal Year

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
TOTAL	127,618	*	181,000	53,382
Overseas Contingency Operations	30,040	*	98,000	67,960
Economic Support Fund	20,000	*	59,000	39,000
Nonproliferation, Antiterrorism, Demining and Related Programs	10,040	*	39,000	28,960
Enduring/Core Programs	97,578	*	83,000	-14,578
Economic Support Fund	12,150	*	6,000	-6,150
Nonproliferation, Antiterrorism, Demining and Related Programs	85,428	*	77,000	-8,428

Economic Support Fund (ESF)

ESF funds are a crucial tool in CT's efforts to counter violent extremism. The main goal of CT's CVE programming is to deny terrorism new recruits by preventing radicalization to violence, intervening to disrupt active radicalization and recruitment, and promoting the rehabilitation and reintegration of former violent extremists. CT accomplishes this goal by: (1) building resilience among communities at risk of recruitment and radicalization to violence, including community partnerships with law enforcement; (2) countering violent extremist narratives and messaging; (3) increasing partner nation government political will and capacity to pursue CVE strategies; (4) countering radicalization and recruitment in prisons; and (5) promoting rehabilitation and reintegration of former violent extremists. Our efforts continue to focus on countering radicalization and recruitment related to ISIL and FTFs, while addressing long-term drivers of violent extremism in line with the White House CVE Summit's Action Agenda.

Working with USAID and other partners, CT develops and supports programs that can build the resilience of particular communities and populations to violent extremist radicalization and recruitment. This includes providing positive alternatives to at-risk communities and providing alternative peer networks and opportunities for at-risk youth. ESF funds will be used to provide training to youth in leadership and community engagement, and in the creative uses of media for CVE. Again, building off the CVE Summit process, we will support local civil society organizations, educators, religious leaders and women to prevent and intervene in radicalization through community engagement activities. Women can provide a first line of defense against radicalization and recruitment to violence. ESF funds will be used to help partners develop and implement counter-radicalization and recruitment plans- including national CVE strategies which can play a significant role in framing and guiding country-level CVE efforts. CT is increasing its focus on building national and local government CVE capacity, which is essential for the sustainability of our efforts.

CT also supports programming to discredit violent extremist messaging and support positive, alternative narratives. ESF funds will be used to support influential civil society leaders as they work to undermine the appeal of violent extremist groups, especially ISIL and AQ affiliates, and to delegitimize their narratives; our support will continue to amplify local voices that undercut the legitimacy of violent extremists, including victims and survivors of terrorism, former violent extremists and foreign fighters, and civil society and religious leaders.

Key Interventions:

- ESF will be used to expand CVE's counter-narrative and counter-messaging programming to delegitimize the ideology, narratives, tactics, and recruitment efforts of ISIL and other violent extremist groups, targeting in particular communities in the Levant, Gulf, North Africa, Western Balkans and Southeast Asia that are significant sources of foreign fighters. This will focus on the amplification of local voices to: (1) counter violent extremist narratives online, via traditional media, and through direct engagement; (2) enhance their technical capacity to reach broader audiences regarding the threat of violent extremism; and (3) promote their own, positive alternative narratives.
- ESF will be used to strengthen civil society efforts to address violent extremist radicalization and recruitment in specific communities, with a focus on regions where there is active terrorist recruitment.
- ESF will support civil society and government efforts to prevent and intervene in radicalization and recruitment to violent extremism - as well as to support rehabilitation and reintegration of violent extremists and returned and returning foreign fighters, particularly on the community level.
- CT will leverage ESF to continue to support *Hedayah*, the international center for CVE excellence in Abu Dhabi, as it delivers specialized CVE training to relevant government institutions and civil society groups. *Hedayah* capacity building efforts will pay particular attention to supporting implementation of the GCTF's de-radicalization initiative, as well as existing GCTF CVE good practices.
- CT will also continue to use ESF funds to support the work of the Global Community Engagement and Resilience Fund (GCERF), the multilateral CVE grant-making fund based in Geneva. GCERF funds small-scale, community-based projects in a range of countries affected by ISIL and other violent-extremist radicalization. GCERF CVE programming areas include women's empowerment, education, civil society, youth and media.
- Funds will also be used to support ESF-related, CVE program development, program management, and monitoring and evaluation.

Economic Support Fund (ESF) - OCO

Counter Terrorism Partnerships Fund (CTPF): \$59.0 million in ESF Overseas Contingency Operations (OCO) funds will enable the United States to significantly expand our partnerships and programs to address the full life cycle of radicalization to violence in key regions. This \$59.0 million request is complementary to the \$21.0 million request for NADR-ATA-OCO funds under the CTPF.

Countering and preventing violent extremism is a critical part of our addressing the increasingly diffuse and dynamic threat environment that we face. In line with the White House CVE Summit Action Agenda, this funding will enable us to significantly expand CVE activities in the following areas:

- Strengthening the role of women and youth;
- Strengthening community-police dialogue, trust, and partnerships;
- Weakening the legitimacy of violent extremist messaging and promoting alternative narratives;
- Amplifying religious and civil society voices against violent extremism;
- Preventing radicalization in prisons and rehabilitating and reintegrating violent extremists;
- Promoting political and economic opportunities for communities vulnerable to radicalization; and
- Enhancing development and stabilization efforts in communities susceptible to violent extremism.

Efforts to prevent and counter violent extremism will be based on the most current assessments and will prioritize those areas where threats are acute, including where safe-havens already exist, places associated with emerging threats, and areas where terrorists exploit underlying political and socio-economic weaknesses.

Precise programming allocations and key interventions will be determined by an interagency process based on our assessment of the threat, our partners' capabilities, and critical civilian gaps.

Nonproliferation, Antiterrorism, Demining and Related Programs (NADR)

CT's NADR-funded programs are designed to cultivate civilian partners around the world capable of dealing with terrorist challenges within their borders effectively within a rule-of-law framework. In weak states, terrorists can cultivate safe havens and operate across borders, thereby threatening national and regional stability. CT designs, oversees, and manages programs to build the capacity of civilian actors to detect, disrupt, and deter terrorist activities, as well as prosecute and incarcerate terrorist suspects while respecting human rights and engaging vulnerable communities. CT's NADR programming focuses on countries and regions that serve as sources of financing, recruitment, transit, or safe haven for terrorist organizations and individuals affiliated with such groups.

There are five major anti-terrorism programs funded through the NADR accounts and managed by CT: the Anti-Terrorism Assistance (ATA) program, the Counterterrorism Engagement with Allies (CTE) program, the Counterterrorism Financing (CTF) program, the CVE program, the Regional Strategic Initiative (RSI), and the Terrorist Interdiction Program (TIP).

ATA: From prevention of terrorist attacks to responding to and mitigating terrorist attacks, ATA helps partner nations build critical capabilities of law enforcement personnel across a wide spectrum of counterterrorism skills. NADR/ATA funds will continue to provide training courses, consultations, mentorships, seminars, and equipment relevant to investigations, border security, protection of critical targets, leadership and management, regional coordination and cooperation, critical incident response and management, and cyber security. As terrorist networks continue to adjust their tactics and strategies, ATA will continue to adapt and refine its counterterrorism training initiatives to meet evolving threats. The justification for country-specific ATA funding levels can be found in the regional perspectives section of the Congressional Budget Justification. This funding request, totaling \$30.0 million in FY 2017, covers crucial program support and administration costs that allow the ATA program to remain dynamic and state-of-the-art in order to address evolving terrorist threats.

Key Interventions:

- ATA funds requested will support new course development, including course revisions and rewrites, course evaluations, IT software for various visual specialist projects, and ongoing curriculum development/oversight-related travel.
- ATA funds totaling approximately will be used for program administration and support, including telecommunications, shipping, multimedia services, translations, and fleet management. Funds will also support the ATA classroom and boardroom audio-visual equipment, various systems equipment, and general supplies for training activities, and will fund contractor salaries, travel, and management of the ATA warehouse, where materials procured for train and equip programs are staged and inspected for quality control and compliance with applicable laws and regulations before being transported to end users.
- Funds will also go towards conducting capabilities assessments and program evaluation and monitoring activities, to ensure that programs are building the capacity of partner nations and CT is meeting its stated goals and objectives.
- Additional funds will be used for training delivery oversight to purchase critical training support equipment, legally mandated End Use Monitoring of equipment containing controlled items, and FTE management travel cost associated with the Training Delivery Divisions need to conduct oversight of instructional course delivery and quality control of instructor presentations/capabilities.

CTE: CTE program funds are used to build the capacity of regional, multilateral, and international bodies to promote effective counterterrorism policies and good practices, as well as build political will and capacities among foreign government officials and civil society. Working with and through regional and multilateral bodies has multiple benefits by increasing the engagement of U.S. partners and allies,

reducing the financial burden on the United States, and enhancing the legitimacy of U.S. and partner counterterrorism efforts. In FY 2017, CTE funding will support a spectrum of CT initiatives aimed at building the capacity of foreign partners as well as regional and multilateral bodies to: (1) effectively and fairly dispose of terrorism cases through a range of criminal justice tools; (2) counter the global phenomenon of foreign terrorist fighters by implementing UNSCR 2178 (3) strengthen border security, including through enhanced traveler screening and information-sharing; (4) address the life cycle of radicalization to violence; and (5) implement the UN Global CT Strategy and UN Security Council resolutions related to counterterrorism.

CTE funds help ensure the necessary international architecture is in place to address evolving terrorism threats, particularly by investing in the Global Counterterrorism Forum (GCTF) and related institutions. Since its launch in 2011, the GCTF brings together civilian-focused CT policymakers and practitioners from different national departments and agencies to set priorities, mobilize resources, and assist partners in becoming more capable. GCTF continuously identifies essential CT priorities and trends and develops good practices in a variety of CT disciplines as a way to help guide and inform countries' responses to the emerging threats and trends. In addition, the GCTF is an important venue for identifying new capacity-building opportunities and facilitating improved coordination among donors in an effort to develop more coherent and strategic international engagement in key countries and regions. The Forum has inspired the establishment of three international institutions, all of which now exist as independent institutions: International Institute for Justice and the Rule of Law (IIJ), GCERF, and *Hedayah*. CTE either directly or indirectly supports efforts to promote these institutions and build their capacity to play an integral role in countering terrorism and violent extremism.

Key Interventions:

- CTE funding will support programs at the IIJ in Malta to train police, prosecutors, parliamentarians, judges, and prison officials from transition countries on a variety of criminal justice topics.
- CTE funding will support the GCTF's Administrative Unit, which plays a key role in the operations of the Forum. In addition, funding will support some of the GCTF's six working groups (Criminal Justice and Rule of Law; Detention and Reintegration; Foreign Terrorist Fighters; CVE; Sahel Region Capacity-Building; and Horn of Africa Region Capacity-Building).
- CTE funding will continue to support innovative and responsive efforts that are implemented by multilateral and regional organizations, such as but not limited to the UN's Office on Drugs and Crime Terrorist Prevention Branch, the UN's Counterterrorism Implementation Task Force, the UN Counterterrorism Centre, the Organization for Security and Cooperation in Europe, and the Intergovernmental Authority on Development. A portion of this funding will support CTE program development, program management, and monitoring and evaluation.

CTF: CT uses a range of tools and programs to isolate and weaken terrorist groups and their support networks. The Bureau leads Department of State efforts to designate terrorist organizations and individuals, including freezing their financial assets and blocking their financial transactions. CT also helps build the capacity of foreign partners to detect illicit funds, especially those from terrorist organizations emanating from, transiting through, or entering their countries, by helping them identify deficiencies in their national anti-money laundering (AML) and countering the financing of terrorism (CFT) regimes and building knowledge and skills to address those deficiencies. In addition to providing practical training, CTF's capacity building programs emphasize mentorship.

The CTF program will focus primarily on "priority" countries: those affected by terrorist financing who have the political will to address the problem. CTF funding will be used to help host countries build their AML/CFT legal frameworks to meet the international standards established by the Financial Action Task Force (FATF) and the UN, including establishing and implementing sound financial regulatory systems covering both the formal and informal sectors; developing effective financial intelligence units

that can identify illicit financing, analyze suspicious transactions, and disseminate information; and equipping law enforcement agencies, prosecutors, and judges to investigate and develop evidence to prosecute and adjudicate AML/CFT cases.

CT will work with federal agencies such as the Department of Justice's Office of Overseas Prosecutorial Development, Assistance, and Training and Asset Forfeiture and Money Laundering Section, the Federal Bureau of Investigation, the Department of the Treasury's Financial Crimes Enforcement Network, the Internal Revenue Service, and the Department of Homeland Security's Homeland Security Investigations to implement these objectives, along with non-governmental organizations. In addition, some CTF programs will be targeted to address specific challenges relating to foreign terrorist fighters and kidnappings for ransom (KFR).

Key Interventions:

- CT will continue to fund CTF-focused Resident Legal Advisors at U.S. embassies in priority countries who focus on building national and regional AML/CFT legal frameworks.
- CT will also use funds to implement training that involves assessments, training, mentoring, and train-the-trainer components to bolster and sustain the capacity of priority countries to investigate and prosecute terrorist financing, to stem illicit cross-border financial crimes, and to strengthen the capacity of those countries to confiscate and properly dispose of assets from TF investigations.
- Funds may also be used to international organizations, NGOs, and federal agencies to provide assessments, typologies, and mentoring.
- A portion of the funds will be used for program development, program management, and monitoring and evaluation.

CVE: CT uses NADR funding to build the CVE capacity of law enforcement and criminal justice practitioners, complementing ESF-funded programs. NADR-funded community-oriented policing projects support law enforcement in trust-building activities with at-risk communities through mentoring, leadership, and violence-prevention activities. CT will focus these efforts in key countries dealing with ISIL and other violent extremist recruitment. CT will continue to use NADR funds to provide technical assistance to justice sector officials on countering radicalization and recruitment in prisons and promoting the rehabilitation and reintegration of incarcerated violent extremists and returned and returning foreign terrorist fighters. We will also place more focus on supporting criminal justice prevention and alternative approaches to those who have been radicalized or recruited but have not yet mobilized to commit or support terrorist acts.

Key Interventions:

- NADR funds will expand CVE's community-oriented policing efforts in countries where ISIL and other violent extremists are actively recruiting and radicalizing, and where CVE-specific police engagement with at-risk communities is not otherwise supported; CT will closely coordinate with INL in key countries of overlap. These efforts will support implementation of the GCTF Good Practices on Community Engagement and Community-Oriented Policing as Tools to Counter Violent Extremism.
- CT will use NADR to build law enforcement capacity to: (1) use traditional and social media to develop and disseminate counter-narratives or messages to violent extremist ones; (2) partner with civil society on CVE initiatives; and (3) coordinate and work with non-law enforcement civilian ministries and agencies on CVE activities; illustrative, non-law enforcement government partners include ministries of education, youth, religious affairs and social development.
- CT will also continue to use NADR to support training for prison and detention officials on how to recognize and mitigate signs of radicalization to violence in their facilities, as well as training in how to work with incarcerated terrorists to disengage from violent extremist behavior and sustain that disengagement post-release.

- Funds will also support NADR-funded CVE program development, program management, and monitoring and evaluation.

TIP: CT uses TIP funding to provide a state-of-the-art border security system, known as the Personal Identification Secure Comparison and Evaluation System (PISCES), and associated host-nation training to 18 key CT priority countries to help them identify, disrupt, and deter terrorist travel. In FY 2015, approximately 200,000 passengers per day were processed through PISCES systems around the world. In FY 2015, the number of Ports of Entry (POEs) using upgraded biometric PISCES systems to process travelers increased from 102 to 110, making 74 percent of active PISCES POEs biometrically enabled. The increased use of biometrics has greatly strengthened the ability of PISCES partner countries to detect or deter terrorists traveling under alias identities or false documentation. They have also further constrained terrorist groups' efforts to plan and implement operations, and to establish safe havens.

TIP funding will support the expansion of PISCES programs to other high-CT-priority countries, potentially including Cameroon, Tunisia, Jordan, Moldova, Kuwait, Albania, Nepal, Albania, and the Philippines, as resources, security, and political conditions permit. In FY 2015, Comoros became the 19th country to sign a Memorandum of Intent (MOI) to accept the deployment of the PISCES system. CT has received an increasing number of requests by current partner nations for additional PISCES installations and enhanced capabilities for PISCES to interface and network with host nation and international databases. In FY 2015, TIP continued to deploy PISCES portable systems, a transportable and self-contained version of the PISCES system, to partner countries in East Africa, Macedonia, Iraq, and Afghanistan. This portable system is a cost-effective way for partner nations to expand border screening to remote locations lacking the facilities and infrastructure needed to support a fixed PISCES system. TIP funding will be used to expand the use of such portable systems at key land border-crossing points, in addition to development work associated with enhancing the existing software baseline with new features. In FY 2015, TIP piloted a back-up solar power generation system at two locations in Kenya. Upon successful completion of the solar pilot, the program intends to selectively expand the use of solar power at PISCES installations at remote locations where commercial power is unreliable or unavailable.

Key Interventions:

- With the requested funds, CT will support software and hardware upgrades needed to maintain the system as a state-of-the-art border control system in existing partner countries, offer PISCES to new partners, selectively expand the PISCES footprint based on CT priority, and respond to partner requests for new information sharing capabilities.
- After the September 2013 Westgate Mall attack in Kenya, PISCES partner nations including Kenya, Uganda, and Tanzania indicated interest in system enhancements that would allow them to share selected data regionally in a secure, near real-time environment. In response, TIP has invested \$2 million in FY 2014 NADR funds to develop and pilot a capability in PISCES for International Information Sharing Partnerships (IISP). With the IISP, PISCES would establish a multinational platform to support enhanced CT cooperation.
- TIP will expand the deployment of second and third generation PISCES Portable systems in key CT partner nations, with an emphasis on East, West Africa and the Middle East.
- Based on results of a planned pilot for an Advanced Passenger Information (API) capability, TIP will incorporate API capability into the PISCES baseline and offer it to PISCES partner nations on a cost-sharing basis.
- A portion of requested funding will support TIP program development (including the option of providing a U.S.-generated watch list), program management, and monitoring and evaluation.

Nonproliferation, Antiterrorism, Demining and Related Programs (NADR) - OCO

Counter Terrorism Partnerships Fund (CTPF): Building upon the FY 2016 CTPF program, this \$21.0 million in NADR-OCO funds will build sustainable partnerships and employ targeted interventions to contain, counter, and prevent terrorism and violent extremism as part of the CTPF initiative. The request builds on existing authorities but provides the Department with flexibility to transfer funds to other State Department foreign assistance accounts to support three strategic objectives: (1) Preventing and Countering Terrorist Safe Havens; (2) Addressing Foreign Fighter Flows; and (3) Countering Iranian-Sponsored Terrorism. Additional funding for CTPF (\$59.0 million) is also requested under the ESF account to allow the United States to broaden partnerships with other governmental actors, sub-national authorities, and civil society organizations in these regions that can help provide the necessary civilian security to those most vulnerable to brutal terrorist actions and prevent radicalization to violent extremism.

NADR-ATA-OCO CTPF Funds will be used to support partner efforts to counter terrorist recruitment networks in the Middle East, North Africa and the Sahel, the Horn of Africa, South and Central Asia, and other select regions. These projects will be calibrated to address complex threats and local conditions. Programs will build the CT capacity of our law enforcement and justice sector partners to respond to and manage terrorist threats in a rule of law framework, and more broadly address the underlying conditions fueling violent extremism. CTPF funds will be targeted towards regions, countries, communities, and other relevant actors where a serious or emerging terrorist threat exists that endangers U.S. interests, is likely to destabilize a viable partner, or will undermine regional stability.

Funds will be used to support partner efforts to stop the radicalization and recruitment of foreign fighters to join groups such as Al-Nusrah or the Islamic State of Iraq and to prepare for foreign fighters' potential return. Funds will support efforts to help partner governments develop and implement appropriate legal regimes, address terrorist travel via targeted train and equip programs, and expand ongoing GCTF initiatives and rehabilitation programs.

Funds will also be used to build law-enforcement capacity to counter Hizballah's external networks, assist governments in countering Iranian and Hizballah-related terrorist financing and illicit activities (including through the development of sanctions regimes), and enable key partners to limit Iran's ability to build effective terrorist networks and militia forces, such as Kata'ib Hizballah and Asai'ib al-Haq, as well as constrain their reach.

Precise programming allocations and key interventions will be determined by an interagency process based on our assessment of the threat, our partners' capabilities, and critical civilian gaps.

RSI: RSI allows the State Department and its missions abroad to develop programs that can fill strategic gaps not covered by other enduring programs and promote more regional initiatives and goals. For example, CT is currently using RSI funding to support implementation of a regional strategy to counter Boko Haram in the Lake Chad Basin region. CT will continue to use RSI funds to address the most urgent and emergent terrorism challenges the U.S. and our allies face. CT uses RSI funding to foster regional law-enforcement cooperation and advance innovative capacity-building programs.

Key Interventions:

- CT will support programming to fill gaps in regional strategies to enhance law enforcement CT efforts and to counter terrorist radicalization and recruitment.
- Assistance and mentor-based training to foreign prosecutors, investigators, and judiciary to develop capacity to better investigate, prosecute, and handle terrorism and complex crime cases.
- Support for regional initiatives tackling priority CT issues such as countering the foreign terrorist fighter threat, kidnapping for ransom, and border security.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: CT remains committed to improving the monitoring and evaluation (M&E) of its activities and continues to make strides in managing for results. Over the past two years, the Bureau has established sub-regional strategic planning groups that have established discrete strategic objectives for which program managers are developing theories of change. This has been of critical assistance in the start of the monitoring and evaluation cycle – program planning – and provides a framework within which CT will be able to conduct both programmatic and strategic evaluations to determine progress towards these objectives.

CT has two funded two large-scale evaluations in FY2015 and plans to fund another two to three in FY 2016. CT's evaluation of the Foreign Emergency Support Team (FEST) will be completed before the end of the CY2015, and is the first evaluation of CT's Operations Office. CT's comprehensive evaluation of the ATA program, the first of its kind to examine the entire process from strategic planning to implementation and management/administration, will conclude in April 2016. CT is also planning on evaluations of the CVE program, as well as other larger areas of CT activity. In addition to the bureau-level evaluations, several of CT's individual projects have funding set aside for discrete project evaluations, the results of which will inform and improve future CT programming.

Highlighted below are specific examples of monitoring and evaluation activities conducted by CT programs over the last year:

- The ATA program conducted 11 capabilities assessments in FY 2015 that looked at ATA assistance in each country at all levels, from policy and strategy to implementation and operations, including partner nation political will and sustainability of the training provided. These assessments were designed to inform the overall direction of a country program and ensure the country program is being implemented effectively given the country's unique law enforcement system.
- Independent evaluations were also carried out for twelve ATA courses in FY 2015. Evaluations measure all aspects of learning and focus on whether the course goals and learning objectives are properly reflected in course content and the Course Design. The findings, best practices, and lessons learned have been incorporated into course and curriculum design and will improve ATA's ability to achieve results.
- CT and DS created a new country planning initiative, derived from CT's sub-regional strategic planning effort. The new Country Implementation Plans outline realistic and measurable program objectives, and identify the supporting activities necessary to achieve these objectives. This approach will facilitate greater program awareness and a more enhanced ability to monitor activities and progress.
- CVE programming continues to require 5 percent of project budgets be dedicated to monitoring and evaluation. In addition, several of the projects have summative evaluations included in the budget, which will provide much needed insight into this high-priority area of programming.
- TIP endeavors to schedule a managerial visit to each PISCES country on an annual or a bi-annual basis depending on the country's priority and prevailing security conditions. During these managerial visits, program managers meet with Embassy and host nation officials to seek candid feedback on system performance, discuss planned system improvements and agree on a work program and schedule for the coming year. These managerial visits allow for closer monitoring, evaluation, and alignment of U.S. and host nation program goals.
- Starting with projects funded with FY 2014/2015 CTE funding, CT urges continuous monitoring and evaluations through detailed project monitoring plans that include indicators, data collection methods, frequency of data collection, baseline data and project targets. Moreover, CT is actively encouraging implementers funded with CTE to include in project budgets sufficient funding to undertake independent mid-project and final evaluations. Furthermore, CT staff conducts site visits and monitoring trips to gauge program activities. The staff provides detailed feedback to the implementers to utilize in the project.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: CT recently stood up an Office of Strategy, Plans, and Initiatives (SPI) to review on an ongoing basis how the Bureau's programs and activities are advancing the Bureau's strategic goals, strategic objectives, and performance goals. In FY 2016, SPI will oversee a contract to enhance the Bureau's capacity to monitor and evaluate its overall progress toward achieving overarching and region-specific strategic goals and objectives.

CT has funded two evaluations that will have direct impact on budget and programmatic choices, and plans in the coming year to fund another two to three evaluations of similar scope and impact on the Bureau approach and resources. CT's evaluation of the CT/OPS office of the Foreign Emergency Support Team (FEST), which will be completed before the end of the CY 2015, will yield both staffing and budgetary recommendations that will shape that office for the coming years. This evaluation is examining the FEST and how it has been used, and not used, over the past decade to provide recommendations on how CT should staff and fund the FEST.

The second ongoing evaluation, a comprehensive evaluation of the Antiterrorism Assistance (ATA) program will provide guidance on three levels – strategic, programmatic, and administrative – and should result in adjustments to the budget, planning and program implementation processes. That evaluation will conclude in April 2016, and it is expected that recommendations will substantially alter portions of the program, and result in a more informed and consistent strategic planning process and more effective program implementation and management.

CT is also planning on large-scale, holistic evaluations of the CVE program, as well as other larger areas of CT activity, possibly to include CTF programming. As with the FEST and ATA evaluations described above, CT will request that the evaluators provide critical insights and guidance on programmatic design and direction. In addition to the bureau-level evaluations, several of CT's individual projects have funding set aside for discrete project evaluations, the results of which will inform and improve future CT programming. This is especially useful for CVE programming, which is a challenge that is both relatively new and difficult to address. These individual project evaluations will ensure that subsequent efforts have benefitted from the knowledge and insights learned by these projects.

In response to growing requests by partner nations for a capability to screen for terrorists in remote areas where infrastructure is inadequate to support a standard fixed PISCES system, TIP commissioned a competitiveness study by an outside contractor. From the study options presented, management chose to pilot three platforms: PISCES Lite, PISCES Portable, and PISCES Mobile, with each subjected to rigorous lab and domestic field testing. PISCES Lite, the largest and most complicated of the three options, ranked low on cost/benefit and reliability analysis and was dropped from further consideration before it was deployed overseas. PISCES Portable and PISCES Mobile were successfully field tested in FY 2013 in Tanzania and Kenya. Evaluations from the field from host nation end users has led to the consolidation of the PISCES Portable system from two hardened cases to one which has been lightened to enable it to be transported as checked luggage. Given the operational success of the PISCES Portable in two African countries in FY 2014, the program plans to purchase significant numbers of the improved PISCES Portable units in FY 2015 to meet growing host nation demand.

CT program managers and leadership conduct regular site visits, the majority of which yield information that improves programming and in some cases the broader policy objectives. Some examples:

- A recent site visit to a Partner Nation led to removal of two strategic objectives and a refocus of the other objectives on more discrete, priority areas.
- Site visits to North Africa led to the development of comprehensive country strategies for Tunisia, Morocco and Algeria that more coherently address identified gaps in each of those countries counterterrorism agencies.
- A trip to Indonesia resulted in the development of a comprehensive border and information sharing country program to address gaps in Indonesian interagency, and international collaboration and on this vital cog in the struggle to detect, deter, report, and prosecute the illicit travel of foreign terrorist fighters.

State Democracy, Human Rights, and Labor (DRL)

Foreign Assistance Program Overview

Promoting freedom and democracy and protecting respect for human rights around the world are central elements of U.S. foreign policy. DRL has the policy lead within the U.S. government for advancing human rights and democracy. In support of these goals, DRL conducts foreign assistance programs, primarily in support of civil society partners to help build sustainable democratic institutions that respect the rights of all citizens. DRL's foreign assistance supports activities in all areas of the Governing Justly and Democratically Objective, with a specific focus on human rights and civil society programming. DRL will continue to focus its activities in countries where governments commit egregious human rights violations, democracy and human rights advocates are under pressure, and governments are undemocratic or in transition. The bureau's programmatic strategy is to work with local civil society, including independent media, to enable those already striving to strengthen democratic institutions and promote accountability.

Request by Account and Fiscal Year

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
TOTAL	78,500	*	75,000	-3,500
Democracy Fund	75,500	*	-	-75,500
Economic Support Fund	3,000	*	75,000	72,000

Economic Support Fund (ESF)

DRL supports the efforts of reformers in new and fragile democracies, strengthens democratic institutions, promotes respect for the rule of law in crises, and develops rule of law infrastructure to protect human rights. When space for civil society and democratic actors opens, DRL programs maximize those opportunities by expanding on work with civil society and governments to build the capacity and expertise necessary to realize the full potential for democracy of these countries. With respect to transitional justice, DRL strives to restore the relationship between citizens and the state in countries where a legacy of gross human rights violations impacts individual and community participation in democratic processes.

Key Interventions:

- The Global Transitional Justice Fund will continue to fund innovative programs to support accountability for human rights violations and atrocities. Programs will help to combat impunity and create the foundation for stable democratic transitions by engaging citizens in transitional justice processes that restore their relationship with formerly abusive state institutions.
- U.S. assistance will provide support to political parties to strengthen their issue-based work with constituencies for which civil society organizations advocate.
- DRL will continue to fund programs that prevent and mitigate atrocities through urgent conflict mediation and early warning programs, as well as forensic documentation of mass atrocities.
- Activities will assist civil society and other relevant stakeholders to advance fundamental labor rights and acceptable conditions of work in support of the Trans-Pacific Partnership (TPP) agreement between the United States and eleven other countries. DRL will spend \$3.5 million toward this effort, including \$1.5 million for Vietnam, \$1.25 million for Mexico, and \$0.75 million for global funds that will be programmed based on needs at the time.

DRL will continue to provide quick programmatic responses to human rights crises and unforeseen openings to promote positive reforms and promote human rights. DRL will provide U.S. leadership in promoting a free and open Internet and will continue to sustain its support in China.

Other DRL programs will continue to support advocacy for robust legal protections against discrimination and hate crimes; teach tolerance and acceptance; build capacity to advocate regarding human rights issues, and to monitor and document human rights violations; and direct assistance to victims of invidious discrimination and hate crimes.

Internet Freedom:

The FY 2017 request includes \$21.5 million for DRL's Global Internet Freedom programs to support those on the front lines advancing a free and open Internet. Programming is guided by the Department of State's Internet freedom strategy, in consultation with Congress. Assistance is divided into four priority areas: (1) technology to enable open and uncensored access to information and communication; (2) helping users, particularly in hostile environments, both online and offline to better protect themselves by enabling them to share content with each other and the outside world through digital training and support, thereby lessening the opportunity for interference by repressive regimes; (3) supporting policy and advocacy projects that target countries with sufficient political space for advocacy but which are moving in a non-democratic direction on Internet freedom; and (4) overall research on the state of Internet freedom and evaluations of existing Internet freedom initiatives. For FY 2017, DRL intends to use \$5.0 million to support a new programming effort – the Leading Internet Freedom Technology (LIFT) initiative – which would take advantage of unique opportunities to support promising next-generation anti-censorship and secure communication technologies in the context of new and acute cyber threats.

The total amount of the FY 2017 Internet freedom request is \$30.5 million. This funding is allocated across two bureaus within the Department of State, with \$21.5 million in DRL and \$7.0 million in the Near East Affairs Bureau's Near East Regional Democracy program, as well as \$2.0 million for the US Agency for International Development.

Key Interventions:

- DRL will support core technologies and software libraries that can be easily integrated with existing anti-censorship tools to make them more effective and secure.
- LIFT will catalyze a generational leap in technologies that counter Internet repression.
- DRL will sponsor digital safety trainings, tools, and materials that teach journalists and human rights activists how to guard their communications to avoid politically motivated reprisals.
- U.S. assistance will support strategic Internet freedom advocacy mentoring to organizations that have an opportunity to positively influence policy in countries where freedom of expression online is at risk.
- Publication of reports on the state of Internet freedom in different countries and corporate social responsibility with respect to technology and human rights.

Rapid Response Funds:

The United States will provide \$9.0 million in DRL funds to support a range of rapid response programs that provide quick financial and technical support to human rights defenders, civil society organizations, as well as individuals who are severely persecuted for their religious beliefs, sexual orientation, or gender identity.

Key Intervention:

- DRL will support the following rapid response funds in FY 2017: Lifeline (provides emergency assistance to civil society organizations); Dignity for All (for LGBT activists); Justice Defenders (to

assist human rights lawyers); Protection for Journalists Initiative (to provide training on how to operate safely in difficult environments); and the Global Gender-Based Violence Initiative (for survivors of the most egregious cases of gender-based violence).

China:

The United States will provide \$10.0 million in DRL funds to support the development of civil society, rule of law, freedom of information and expression, and public participation. These efforts will work toward developing a fair legal system in China and transparent and accountable governance, and will bolster the ability of Chinese citizens to participate meaningfully in government decision-making. It also will fund a range of projects that complement U.S. policy of principled engagement and emphasize areas where financial support from the Chinese government is improbable, i.e. protecting populations at risk. Programs will promote the rights of the most marginalized members of Chinese society, including ethnic minorities, religious minorities, migrant workers, persons with disabilities, and Lesbian, Gay, Bisexual and Transgender (LGBT) persons.

Key Intervention:

- The United States will fund programs that support the rule of law and civil society, including religious freedom, labor rights, and the rights of vulnerable populations. Programs will help China's legal system become more transparent, fair, and accessible—such as through developing the legal profession and empowering workers to negotiate with employers—and support civil society's efforts to give voice to citizens' needs, including through strengthening civil society organizations' technical skills.

International Religious Freedom:

The United States will provide \$3.75 million in DRL funds to support international religious freedom programming. DRL will support interfaith cooperation and counter religious intolerance and violent extremism by supporting programs that help civil society and governments develop and implement legal and policy protections to safeguard religious freedom. Programs also will help to ensure accountability for religious-based violence, advocate for legal protections for religious minorities, and promote societal respect for religious diversity. DRL also will provide support and resources to religious freedom defenders and victims of religious freedom abuses in countries where governments persecute, harass or silence individuals for their beliefs. Other programs will address expressions of intolerance, apostasy laws, and anti-blasphemy laws. DRL funding has helped increase public awareness of religious freedom issues through media outlets and opinion makers.

Key Intervention:

- DRL will support programs to address intolerance, apostasy laws, and anti-blasphemy laws that restrict religious expression. DRL will fund efforts to facilitate religious leaders and youth from different faiths to effectively cooperate with one another and promote inter-faith collaboration, specifically in conflict-prone regions.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: In FY 2015, DRL staff conducted site visits of grants in more than 30 countries and as well as domestic site visits of grantees headquartered in the United States. Since DRL maintains a robust program portfolio in Pakistan, China and, the Bureau uses foreign assistance to support program monitors based in Beijing, Islamabad and in Baghdad, Basra and Erbil to supervise program activities and monitor grantees.

DRL requires grantees to develop comprehensive monitoring and evaluation plans, and provide quarterly narrative reports on program activity progress. DRL is providing technical assistance to some of the newest organizations to enable them to measure impact and capture the results of their work. To assess the effectiveness and results of programs, DRL strongly encourages all grantees to include an external evaluation (mid-term and/or final) in their work plan.

In FY 2015, DRL conducted several external evaluations assessing niche DRL programs at the portfolio level. DRL developed a comprehensive results framework and performance management plan on our work in the most closed societies, and assessed the effectiveness of programming in DRL's areas of expertise. Several external evaluations awarded at the end of FY 2015 are underway. In addition, DRL initiated technical assistance to grantees implementing programs in difficult operating environment to build their monitoring and evaluation skills. Finally, a portion of program funds will be used to facilitate grant administration to ensure program accountability, and to monitor grants worldwide.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: During DRL's reviews of ongoing grants, the Bureau's Program Management staff assesses how well each grant is progressing relative to its proposed objectives and examines the successes and challenges of each grant with their grant officer representative. These discussions inform DRL's annual planning process and prioritization of the use of available funding. The annual review identifies challenging or problematic programs, and highlights successes and good practices that can potentially be implemented in another country or region. Grantees that include a mid-term evaluation in their work plan are encouraged to consider the evaluator's recommendations and make adjustments to the project activities to improve results. DRL reviews the recommendations and lessons learned from final evaluations conducted on any grants.

The findings and recommendations from the independent evaluations commissioned by DRL inform programmatic decisions. DRL has adopted the practice of using the evaluation findings of program portfolios to shape the development of a results framework or at least a program strategy for those portfolios. The results framework or program strategies are serving as the basis for determining what types of projects that DRL will support in the upcoming years. DRL has strengthened its efforts to become more inclusive and responsive to marginalized populations as a direct result of the FY 2015 evaluation of our foreign assistance work with marginalized populations. DRL is also designing its forensic and transitional justice programs more effectively after an external review of our programs in this domain.

Bureau for Energy Resources (ENR)

Foreign Assistance Program Overview

ENR programs support improved energy sector governance and transparency, technical engagement to address challenges involved in developing unconventional gas resources, power sector reform and development to support the expansion of access to electricity, and clean energy development through the creation of enabling environments for investment in renewable generation. Together, these programs counter poverty and lack of development resulting from a lack of access to energy, poor resource development, or both. ENR programs support and complement key diplomatic and policy engagements and Administration and Department initiatives, including the North American Leaders Summit, U.S. Strategy for Engagement with Central America, Caribbean Energy Security Initiative, U.S.-Asia Pacific Comprehensive Energy Partnership, Lower Mekong Initiative, Global Climate Change Initiative, good governance components of Power Africa, U.S.-Mexico High Level Economic Dialogue, U.S.-Colombia High Level Partnership Dialogue, and Connecting the Americas 2022.

Request by Account and Fiscal Year

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
TOTAL	8,685	*	17,000	8,315
Economic Support Fund	8,685	*	17,000	8,315

Economic Support Fund (ESF)

ENR directs ESF funding to countries where energy assistance needs go unmet by other donors or where non-U.S. government assistance can be best leveraged, stretching ESF for greater impact. ENR energy assistance programs are integral parts of our diplomatic and technical engagements in priority countries and regions such as Ukraine, Central America, and the Caribbean. These programs directly support ENR's strategic goals of promoting clean and sustainable energy by mobilizing finance, and promoting stability, transparency, and reform of global energy markets. ENR's ESF further promotes American leadership in renewable energy and energy efficiency under the clean energy pillar of the Global Climate Change Initiative and in the President's Climate Action Plan, through the development of enabling environments for investment in renewable energy generation and improved efficiencies in power markets, transmission, distribution, and end use.

Strengthen Energy Sector Governance, Access, and Reliability in Emerging Economies and Build Governments' Capacity to Safely and Sustainably Develop and Utilize their Energy Resources

Key Interventions:

- The Power Sector Program (PSP – \$6.5 million) assists countries in expanding energy access, stimulates development and deployment of renewable energy, and brings financial solvency to power sectors through targeted technical assistance. Lack of access to a reliable and sustainable energy supply is a significant source of insecurity and an impediment to economic growth in many developing countries. PSP assistance stimulates the flow of private capital into emerging power markets by strengthening regulatory and economic frameworks and supporting power links between countries. In the Western Hemisphere, PSP assistance will advance low carbon and less carbon intensive development, including natural gas; renewable energy development, such as geothermal; and electrical interconnection. It will strengthen the regional energy market in Central America and promote energy efficiency and renewable energy development and trade. U.S. assistance in Asia will provide legal,

technical, economic, and regulatory analysis and assistance to enable the development of regional markets, investment in power and gas infrastructure, regional regulatory planning for sustainable development, integration of clean energy and energy efficiency, and power trade. In Africa, the PSP will support optimizing the use of low-carbon resources, facilitating national and regional interconnection, building regulatory and governance capacity, and increasing investment in power sector infrastructure, complementary to programming by Power Africa. The PSP supports reforms that foster cross border trade and help to develop frameworks that bolster the efficacy of the Southern African Power Pool. Increased power trade among Southern African countries will enable more efficient resource development and enable progress towards a transcontinental electricity grid.

- The Energy Governance and Capacity Initiative (EGCI – \$5.5 million) assists countries with emerging or rapidly expanding oil and gas sectors on sustainable and transparent sector management to benefit national economic development. U.S. assistance will provide legal and technical guidance to support the implementation of reforms and policies that will promote good governance in the energy sector and promote a commercial environment that attracts responsible investment. Such assistance may include technical training in oil and gas resource identification, resource assessment methodology, best practices related to geological/geophysical data analysis; environmental management, land use planning and leasing; and financial management issues associated with energy development, including revenue forecasting, collection issues, and budgeting processes.
- Global Climate Change Initiative (GCCII - \$4.0 million) programs promote the development of enabling environments for investment in clean energy. ENR will support renewable energy generation and energy efficiency with an emphasis on both developing countries with high clean energy resource potential and high-emitting countries in which gains can be made from fuel switching and improved energy efficiency. This includes continuation of the Geothermal Development Program (GEODE), which will further U.S. foreign policy objectives to combat climate change, increase energy access, combat energy poverty, and strengthen energy security. The GEODE will partner with universities, U.S. government agencies, and international donors focused on geothermal development to help developing countries: 1) explore financial hedging instruments for early stage geothermal project financing; 2) support the use of new or innovative technology to reduce risk during exploration; 3) provide technical, policy, and project management capacity building, including land management training.
- The Unconventional Gas Technical Engagement Program (UGTEP – \$1.0 million) assists countries seeking to develop their unconventional natural gas resources safely and responsibly. It helps governments understand the complexities associated with resource management; the need to develop appropriate legal and regulatory frameworks; and the unique safety, environmental, and social challenges associated with resource development. The UGTEP may provide assistance related to unconventional gas opportunities in Asia, the Middle East, Europe and Eurasia, the Western Hemisphere, and in South Africa.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: ENR's program implementation is informed and improved by ongoing monitoring and evaluation of its programs.

- ENR requires implementing partners to provide quarterly performance and financial reports, including performance analysis that describes activities undertaken and progress toward the objectives outlined in the work plan for each country based upon the criteria noted in interagency agreements, grants, and contracts.
- ENR's UGTEP was evaluated in FY 2015. Results included recommendations to build on established interagency coordination and ensure that the UGTEP aligns its human and financial resources to best meet objectives.
- ENR's PSP will be evaluated in FY 2016.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: ENR is implementing recommendations from the UGTEP evaluation on improving the effectiveness of interagency coordination; focusing on the components of UGTEP programming host governments find most useful; and matching the number of countries to UGTEP capabilities.

- Based on monitoring recipient needs and in-country circumstances, EGCI assistance to Somalia will shift away from legal support and toward resource and revenue sharing assistance as, (1) resource and revenue sharing arrangements are needed for a successful petroleum law and (2) the World Bank will provide legal support assistance.
- The PSP has strengthened donor coordination through the development of coordination matrices for Central America, Vietnam, and the Caribbean for PSP and counterparts in respective organizations. The coordination matrices help to ensure that different donors' activities are complementary.

Detailed Objective Descriptions

Strengthen Energy Sector Governance, Access, and Reliability in Emerging Economies and Build Governments' Capacity to Safely and Sustainably Develop and Utilize their Energy Resources:

U.S. assistance will promote stability, transparency, and reform within the global energy sector and support bilateral engagements with governments of countries that are emerging and rapidly expanding producers to improve the capacity to manage the technical, financial, legal, regulatory, environmental, and social aspects of upstream hydrocarbon sectors; engage governments seeking to develop their unconventional natural gas resources safely and responsibly in order to build capacity to develop appropriate legal and regulatory frameworks and to address the complexities and unique safety, environmental, and social challenges associated with these resources; and provide targeted technical assistance to expand energy access, stimulate the development and deployment of renewable energy and energy efficiency, and bring solvency to power sectors. Together, these programs counter poverty and slow economic development resulting from a lack of access to energy, poor resource development, or both.

A sizable proportion of the world's population lacks basic access to energy services. Countries without access to a reliable and sustainable energy supply experience reduced economic growth in relation to their potential. During the next 25 years, the world will need trillions of dollars in new investments in electricity generation, transmission, and distribution in order to meet global demand and replace aging systems. Establishing policies that create an enabling environment for private sector investment and pave the way for large-scale infrastructure is critical to accelerating market transformation. Geothermal energy accounts for less than 0.5 percent of global power supply despite its advantage as a baseload renewable resource that can combat climate change and enhance grid reliability. Creating an enabling environment for global geothermal development is essential considering: 1) the unique manner in which geothermal energy can complement other renewable energy technologies; 2) the significant investment requirements in power sector generation needed to sustainably meet global demand during the next 20 years; 3) the pressure that new development of conventional resources places on our climate.

U.S. assistance will also address traditional sources of generation. Although oil and gas endowments provide countries tremendous opportunities for economic growth, they can be difficult for governments to manage responsibly for national benefit. The unique technical and economic factors associated with natural resource extraction make this sector particularly prone to corruption, mismanagement, and conflict, which can create a cycle of underdevelopment from which it can be difficult to escape. Governments need the institutional capacity and political will to manage these sectors responsibly. The increasing use of natural gas in the global energy mix, which has been brought about partly by the ramp up of unconventional gas production in the United States, presents opportunities for greater diversification of gas markets and strengthening global energy security and economic stability as well as achieving environmental risk mitigation objectives. The unique U.S. experience with respect to its shale gas development, combined with its long-standing development of tight gas and coal bed methane, has made the United States well positioned to share lessons learned and best practices for responsible development of unconventional gas resources.

Global AIDS Coordinator and Health Diplomacy (S/GAC)

Foreign Assistance Program Overview

The U.S. President's Emergency Plan for AIDS Relief (PEPFAR) represents America's commitment to saving lives and changing the very course of the global pandemic and the shared responsibility of all global partners toward achieving an AIDS-free generation. After more than a decade, PEPFAR is in what may be its most challenging, but exciting, phase yet—focusing on sustainable control of the epidemic. The FY 2017 request reflects the ongoing U.S. commitment to PEPFAR, consistent with the PEPFAR Stewardship and Oversight Act of 2013, a bipartisan law signed by President Obama on December 2, 2013. As the largest component of President Obama's Global Health Initiative (GHI), PEPFAR activities will continue to be carefully and purposefully integrated with those of other health and development programs where diseases are geographically overlapping and synergies are possible. Implementation of PEPFAR is led by the Office of the U.S. Global AIDS Coordinator and Health Diplomacy (S/GAC). PEPFAR's foreign assistance budgets for countries are included in the respective operating unit narratives, and a table describing all PEPFAR assistance is also provided below. Additional details on activities to be undertaken under this program will be provided by S/GAC in a Supplemental Justification, which shall form an integral part of the Congressional Budget Justification and its annexes. In FY 2017, PEPFAR will continue to work in close collaboration and in partnership with host-country governments, civil society, multilateral institutions, the private sector, and other stakeholders toward sustainably controlling the HIV/AIDS epidemic.

Request by Account and Fiscal Year

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
TOTAL	2,071,494	*	2,114,419	42,925
Global Health Programs - State	2,071,494	*	2,114,419	42,925

Global Health Programs (GHP)

S/GAC oversees the implementation of PEPFAR through the Departments of Defense, Health and Human Services (HHS), Labor, State, Treasury and Commerce, as well as Peace Corps, and the U.S. Agency for International Development (USAID). PEPFAR efforts are increasingly linked to those of other important Presidential initiatives in the areas of health and development, such as the President's Malaria Initiative and Feed the Future. Given the high rates of HIV and tuberculosis (TB) co-infection, PEPFAR support for tuberculosis/HIV (TB/HIV) programs is also linked with other U.S. TB programs overseas.

In FY 2017, PEPFAR will continue to support the Obama Administration's commitment to the goal of achieving an AIDS-free generation. This will include by pursuing the bold course that President Obama set by announcing new PEPFAR HIV prevention and treatment targets for 2016 and 2017 at the United Nations General Assembly in September 2015, including for the first time a reduction in HIV incidence in young women. PEPFAR is committed to meet the President's challenge that, by the end of 2017, PEPFAR will support 12.9 million people with life-saving treatment—nearly doubling the number of individuals supported on treatment by PEPFAR from 2013 to 2017; provide a cumulative total of 13 million male circumcisions for HIV prevention; and reduce HIV incidence by 40 percent among adolescent girls and young women within the highest burden geographic areas of ten sub-Saharan African countries—the first time ever that the U.S. government has set such a target.

To reach these ambitious new targets and to help partner country attain the Joint United Nations Programme on HIV/AIDS' (UNAIDS) ambitious 90-90-90 global goals—90 percent of people with HIV diagnosed, 90 percent of them on anti-retroviral therapy (ART), and 90 percent of them virally suppressed by 2020—PEPFAR is employing a data-driven approach that strategically targets PEPFAR resources to the geographic areas and populations with the greatest HIV/AIDS burden, maximizing the impact of these investments. In partnership with organizations, other donor nations, civil society, and multilateral institutions such as the Global Fund to Fight AIDS, Tuberculosis and Malaria (Global Fund), the U.S. government will continue to play a leadership role in ending this devastating epidemic.

The FY 2017 request will support targeted global HIV/AIDS efforts by continuing the PEPFAR Impact Fund, directed to countries that take concrete steps to realign their national HIV/AIDS programs using geographic and site-level data, to increase their own share of HIV budgets, and to take greater ownership of data collection and expenditure analysis.

In FY 2017, to advance progress toward controlling the epidemic and, ultimately, achieving an AIDS-free generation, PEPFAR is committed to sustain and expand its efforts. Led by its strategic vision—PEPFAR 3.0—we are using data to do the Right Things, in the Right Places, Right Now. This means expanding access to a combination of HIV/AIDS prevention, treatment, and care services that are most effective and efficient in preventing new HIV infections and saving lives. This includes: prevention of mother-to-child HIV transmission (PMTCT), ART, voluntary medical male circumcision (VMMC), HIV counseling and testing (HCT), and condoms. It also means targeting our resources and HIV/AIDS services to the geographic areas and populations with the highest HIV/AIDS burden, including at the sub-national level. Finally, it means positioning countries to control their epidemics faster than they would otherwise. Globally, with business as usual, the world is headed toward 28 million new HIV infections in the next 15 years; conversely, by using data to focus HIV/AIDS efforts and act with urgency, the global community can fundamentally change the course of the epidemic.

Children, adolescents, young women, and other key populations will remain a priority for PEPFAR's investment and action in FY 2017. PEPFAR will accelerate efforts to prevent HIV infections and ensure treatment among those who need it most. This includes through PEPFAR's ongoing implementation of the its Accelerating Children's HIV/AIDS Treatment (ACT) initiative, which aims to provide 300,000 more children with access to lifesaving ART by the end of 2016, and its DREAMS Partnership, which aims to reduce new HIV infections in adolescent girls and young women in 10 countries. In the first year PEPFAR has increased the treatment of children by more than 150,000, keeping on track to achieving our focused goal. All of PEPFAR's efforts will be data-driven from the national level down to the most granular site level where the services are being provided to best guide programmatic decision-making and strengthen sustainability and quality. PEPFAR also will expanded access to viral load testing to ensure that individuals have effective treatment, increase its transparency with data to support mutual accountability and innovation, and address stigma and discrimination, including harmful laws and policies that reduce access to essential health services including for HIV.

In FY 2017, the U.S. government, through its support for PEPFAR and its contributions to the Global Fund, will continue to be the leader in the global HIV/AIDS response. Yet, no single entity can achieve an AIDS-free generation alone. All partners must share responsibility and strengthen their resolve to make this possible. PEPFAR will further strengthen its partnerships with host governments, other donor nations, the private sector, civil society, including the faith community, and multilateral institutions. PEPFAR also will pursue and monitor greater, deeper, and broader engagement of those most affected by the epidemic to improve program accountability and impact. In addition, PEPFAR will enhance its focus on sustainability—ensuring that when countries have scaled up interventions and reached epidemic control, the services, systems, financing, and policies required to maintain that control are readily available to PEPFAR beneficiaries and partner countries.

Working closely with its partners, PEPFAR has saved and improved millions of lives. As of September 30, 2015, PEPFAR is supporting life-saving ART for 9.5 million men, women, and children (of which, 5.7 million are receiving direct support and an additional 3.8 million are benefiting from essential technical support to partner countries). In FY 2015, PEPFAR supported HIV testing and counseling for more than 68.2 million people (including more than 14.7 million pregnant women) as well as care and support for more than 5.5 million orphans and vulnerable children. Further, as of September 30, 2015, PEPFAR has supported more than 8.9 million VMMC procedures in Eastern and Southern Africa as well as training (including pre-service training) for more than 190,000 new health care workers in PEPFAR-supported countries to deliver HIV and other health services.

Thanks to these collective efforts, an AIDS-free generation is no longer a distant dream – it is in sight. Yet, PEPFAR’s work is far from done. Every week, more than 2,800 children and 20,000 adults die from HIV/AIDS. Every week there are nearly 35,000 new HIV infections nearly 7,000 per week in young women. We can and must do even better. In FY 2017, working together—with a focus on doing the right things, in the right places, right now—we will.

International Partnerships: The U.S. government’s bilateral and multilateral investments continue to build upon a long-term and sustainable approach to combating AIDS, TB, and malaria. Through mutually-supportive and increasingly-integrated programming, PEPFAR, the President’s Malaria Initiative (PMI), and the bilateral TB programs work closely with key partners, including the Global Fund, World Health Organization (WHO), and United Nations agencies led by the Joint United Nations Program on HIV/AIDS (UNAIDS). In addition, PEPFAR and PMI have strong partnerships with non-governmental organizations, including faith- and community-based organizations, other national governments, and the private sector.

The U.S. government continues to use its leverage as a donor and member of the Global Fund and UNAIDS governing bodies to ensure the complementarities of both organizations and the momentum and impact of the international response. More broadly, PEPFAR continues to expand multilateral engagement with the goal of strengthening these institutions and leveraging the work of multilateral partners to maximize the impact of country programs.

The Global Fund to Fight AIDS, Tuberculosis, and Malaria (Global Fund): The Global Fund is an essential partner in the fight against HIV/AIDS, tuberculosis (TB), and malaria. The U.S. government’s contribution to the Global Fund helps achieve our bilateral program results, reach more people with quality services, leverage contributions from other donors, expand the geographic reach of our investment, and promote shared responsibility among donors and implementers in financing a country’s response to the three diseases. The U.S. government—a founding member of the Global Fund and its first and largest donor—continues to play a leadership role in ensuring the success of this important international effort, principally through the continued push for increased efficiency, impact, and value for money at the Global Fund through all stages of its funding model.

The FY 2017 budget request includes \$1.350 billion for the U.S. contribution to the Global Fund. This request, when combined with \$243 million in FY 2016 funds above the President’s pledge to the Global Fund’s 4th Replenishment, will allow the United States to contribute nearly \$1.6 billion by 2017 towards a Fifth Replenishment contribution. This is the first year of the Global Fund’s Fifth Replenishment period (2017-2019) and the request reinforces to traditional and new donors the U.S. government’s confidence that the Global Fund is a smart investment as they consider pledges. It also coincides with implementation of the Global Fund’s next five-year strategy for 2017-2021.

The Fifth Replenishment and five-year strategy come at a pivotal time in the fight against the HIV/AIDS, TB, and malaria, particularly as all partners work to end the three epidemics by 2030 in accordance with SDG 3. To reach these targets, the U.S. government will work with the Global Fund Secretariat and partners to ensure the next strategy focuses on doing the right things, in the right places, right now. Successfully reaching targets hinges on other partners joining the U.S. government in meeting our shared responsibility to politically and financially support the Global Fund.

The Joint United Nations Program on HIV/AIDS (UNAIDS): The U.S. government plays an active role in the governance and oversight of UNAIDS through its participation as a Member State in UNAIDS Programme Coordinating Board (PCB) meetings. In this forum, the U.S. government continues to promote evidence-based policies that ensure effective and efficient use of funds and resources to respond to the global HIV/AIDS epidemic.

The FY 2017 budget request includes \$45.0 million for UNAIDS. The UNAIDS Secretariat coordinates the efforts of UN agencies to mobilize political and financial resources, advocate for political and policy change, hold donors and other stakeholders accountable for results, and empower agents of change, including civil society, to make available strategic information for planning to ensure that resources are targeted where they deliver the greatest impact. UNAIDS also engages national leadership in support of country-owned responses that are integrated with national health and development efforts.

PEPFAR continues to work closely alongside UNAIDS. In FY 2017, PEPFAR and UNAIDS will ensure strong coordination at the HQ, regional, and country levels to operationalize the UNAIDS Fast-Track approach towards the achievement of the 90-90-90 targets. The UNAIDS Fast-Track approach is highly aligned with PEPFAR's mission and provides an important advocacy platform for moving domestic and other HIV resources towards the most impactful investments.

Technical Support/Strategic Information/Evaluation: The FY 2017 request of \$120.0 million includes funding for central technical support and programmatic costs, as well as strategic information systems that monitor program performance, track progress, and evaluate the effectiveness of interventions, increasing transparency, oversight and accountability across PEPFAR and its interagency partners. Through these programs and systems, PEPFAR works to support the expansion of the evidence base around HIV interventions, as well as broader health systems strengthening in order to support sustainable, country-led programs. While not a research organization, PEPFAR works with implementers, researchers, and academic organizations to help inform public health and clinical practice. Technical leadership and direct technical assistance activities (including scientific quality assurance) are supported for a variety of program activities, including: antiretroviral treatment, prevention (including sexual transmission, mother-to-child transmission, medical transmission, and testing and counseling), and care (including programs for orphans and vulnerable children and people living with or affected by HIV/AIDS), as well as cross-cutting efforts such as human capacity development, training for health care workers, and supply chain management.

The World Health Organization (WHO): The U.S. government continues to build a collaborative relationship with the WHO aimed at achieving the 90-90-90 targets to realize the vision of ending the AIDS epidemic. Collaboration is focused on the following seven Shared Strategic Priorities: HIV testing, enrollment in care, sustaining treatment and care, pediatric treatment and eliminating mother-to-child transmission, prevention and services for the most affected, joint TB and HIV programs, and strategic information. The U.S. government and WHO utilize the Shared Strategic Priorities to guide WHO and PEPFAR's allocation of resources and the development of shared goals. PEPFAR is working closely with WHO to improve the organization's transparency. PEPFAR is also working closely with WHO to ensure that technical assistance provided by the U.S. government and WHO in support of the Global Fund is complementary.

Technical support funding is allocated based on Partner Progress Reviews that examine each existing partner's progress in reaching its objectives, its accomplishments to date, its financial pipeline, and how its progress in implementing its activities aligns with the *PEPFAR Blueprint*. A portion of PEPFAR's technical support funding is also used to develop public-private partnerships to leverage the resources and core expertise of international and local companies, and assist country programs as they also look to expand the role of the private sector.

Oversight and Management: Funding is requested to support the operational costs incurred by headquarters offices of the multiple U.S. government agencies that implement PEPFAR, including support of administrative and institutional costs, management of staff at headquarters and in the field, management and processing of cooperative agreements and contracts, indirect costs of supporting PEPFAR programs, and the administrative costs of S/GAC.

The following table shows overall U.S. PEPFAR Assistance:

President's Emergency Plan for AIDS Relief			
(\$ in millions)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request
HIV/AIDS Bilateral	5,220	*	5,210
<u>State and USAID HIV/AIDS</u>	<u>4,650</u>	<u>*</u>	<u>4,650</u>
USAID GHP HIV/AIDS	330	*	330
State GHP HIV/AIDS	4,320	*	4,320
<u>HHS HIV/AIDS</u>	<u>562</u>	<u>*</u>	<u>560</u>
CDC HIV/AIDS	128	*	128
NIH HIV/AIDS Research	434	*	432
<u>DOD HIV/AIDS</u>	<u>8</u>	<u>*</u>	<u>-</u>
TB Bilateral	242	*	195
USAID GHP TB	236	*	191
Other USAID TB (TBD)	6	*	4
Global Fund Multilateral	1,350	*	1,350
State GHP	1,350	*	1,350
PEPFAR TOTAL	6,813	*	6,755
For FY 2016, detailed allocations for State-USAID below the Account level are not available.			

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: PEPFAR is expanding the collection of information regarding program evaluations and assessments for FY 2015, relative to data collected in FY 2014. This information will improve and strengthen the ability to evaluate performance and to lay the groundwork for improved program effectiveness and efficiency as the PEPFAR initiative continues to evolve:

- **Program Evaluations**: More than sixty PEPFAR-funded evaluations have been completed to date. Forty-three evaluation reports are currently publically available. In addition, the PEPFAR Evaluation Standards of Practice, a common definition of evaluation and list of eleven standards of practice to which all PEPFAR evaluations must adhere are published on the PEPFAR website (see www.pepfar.gov). All future PEPFAR evaluations should adhere to these standards.
- **Annual Program Results**: In FY 2015, 32 countries and four regional platforms submitted Annual Program Results (APR) reports to headquarters documenting program results achieved during the

fiscal year. Countries reported results on up to 23 programmatic and 8 national indicators, based on the activities funded. The FY 2015 APR results were measured against targets set in the country operational plans, regardless of what fiscal year funds were used to reach those targets. Furthermore, six and twelve month site-level data were analyzed in conjunction with epidemiologic data to ensure PEPFAR programs are focusing on delivering and scaling up services in alignment with the distribution of the burden of disease in country and within prioritized populations.

- **Expenditure Analysis:** In FY 2015, PEPFAR continued to institutionalize its pioneering expenditure tracking and analysis (EA) methodology into routine reporting. In this last year, all PEPFAR programs produced annual financial indicators for use in financial monitoring and analysis. EA data for FY 2015 will represent all programs and all countries, providing the first indications of EA trends.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: Costing and scenario-based modeling continues to play an important role at both the country level and in headquarters planning:

- The routine annual reporting of the EA exercise provides new data and financial indicators, (i.e., U.S. government unit spend per result (patient on treatment for one year; person tested and identified positive for HIV; etc.) for country team managers to use as a planning tool to gain greater efficiencies. These data are available to be analyzed and utilized to measure performance in association with budgets. In pilot studies, program managers have reported that the data have allowed for a better assessment of the efficiency of partners, especially if they are responsible for multiple outputs. The greatest utility for these data are at the local level, where they can be considered in the complexity and location of service delivery sites and the magnitude of complementary funding supports. Use of the data also promotes more strategic alignment of PEPFAR funds with those of host nation governments and other donors by better defining PEPFAR spending by region and program area. FY 2015 data will allow the monitoring of trends in these results (although with only two data points), and how expenditures mirror the realignment of program effort toward the defined high disease burden areas. This information is critical to ensure the appropriate shifts in programming in concert with the larger framework of the pivot.
- The analysis of program achievements at the site level for HIV testing together with an enhanced review of the epidemiologic data in country has allowed PEPFAR programs to critically assess programs that have tested zero positive patients or have had a low yield of positives tested within the past 6 or 12 month periods. PEPFAR teams have been asked to carefully reexamine the support being provided to these sites and to discontinue support to low-yield sites, if necessary, to ensure the focus is where the epidemic is and that resources are targeted accordingly. This will allow for the re-focusing of resources and expansion of high impact services to the areas and populations where the greatest impact can be made. This same practice will occur using the FY 2015 data to document progress in the program shifts defined in the previous year. If anomalies are identified, these will trigger a closer examination of country data and development of appropriate remediation to these problems.

State International Narcotics and Law Enforcement Affairs (INL)

Foreign Assistance Program Overview

The mission of the Department of State's Bureau of International Narcotics and Law Enforcement Affairs (INL) is to minimize the impact of international crime and illegal drugs on the United States and its citizens. This is accomplished through the effective use of foreign assistance and by fostering global anti-crime cooperation. INL assists U.S. partner nations in developing the capacity to administer their own criminal justice systems under the rule of law and helps to stabilize transitioning societies and counter violent extremism (CVE) through criminal justice sector development and reform.

Through foreign assistance programs, the United States strengthens conditions for peaceful development in transitioning countries and reduces political grievances that can be a driver of violent extremism; builds the capacity of U.S. partners in the security and criminal justice sectors; and supports multilateral, regional, and bilateral efforts to address transnational criminal activities. In close collaboration with other federal agencies, U.S. state and local criminal justice organizations, non-governmental organizations, international partners, multilateral organizations, and the private sector, INL designs and develops specialized programs to meet individual country requests and requirements and helps governments take responsibility as partners.

Request by Account and Fiscal Year

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
TOTAL	155,821	*	147,220	-8,601
Overseas Contingency Operations	7,500	*	-	-7,500
International Narcotics Control and Law Enforcement	7,500	*	-	-7,500
Enduring/Core Programs	148,321	*	147,220	-1,101
International Narcotics Control and Law Enforcement	148,321	*	147,220	-1,101

International Narcotics Control and Law Enforcement (INCLE)

INL's centrally-managed programs counter threats affecting citizen security, from transnational crime groups, violent extremism, drug trafficking organizations, and other illegal networks. Specific components include:

Alien Smuggling and Border Security: The FY 2017 request will continue prior efforts with international and regional organizations and the U.S. inter-agency to support global programs and regional activities around the world to reduce freedom of movement by violent extremists and other illicit organizations. Programs will deliver foreign assistance training and technical assistance projects in the following areas: (1) raise global border security and related anti-crime capacity; (2) raise international standards in border security; (3) help countries adopt and implement these standards; (4) combat the smuggling of migrants and support implementation of the UN Convention Against Transnational Organized Crime (UNTOC) Protocol Against the Smuggling of Migrants by Land, Sea and Air; (5) foster international cooperation and coordination; and (6) build the capacity of law enforcement and border security institutions.

Anti-Money Laundering and Financial Crimes: With FY 2017 funds, INL will continue to support global and regional capacity building programs, working with international and regional organizations, the U.S. inter-agency, and/or the private sector.

Key Interventions:

- Training and technical assistance will promote the following: 1) helping countries adopt and effectively implement the Financial Action Task Force standards; 2) improvement of international information sharing and cooperation related to financial crime investigations and prosecutions; 3) enhanced capacity in asset forfeiture, maintenance, and disposition; 4) development and promulgation of information-sharing networks to further jurisdictions' cooperation; 5) enhancement of jurisdictions' ability to ascertain and address their specific anti-money laundering/countering the financing of terrorism risks; and 6) building countries' ability to use financial patterns and information to detect and dismantle criminal threat enterprises and organizations of all kinds, including by conducting and carrying forward strategic analysis.
- Develop the capability of both regulators and law enforcement in the areas of pursuing investigations and prosecutions, analytical capacity, and stopping cross-border crimes. Such programs will respond in other ways as appropriate to threats as they arise, addressing the threat to the U.S. and the international financial system posed by money launderers and terrorism financiers.

Criminal Justice Assistance and Partnership (CAP): With FY 2017 funds INL will provide criminal justice technical expertise on international law enforcement, corrections, training, justice issues and security sector reform and countering violent extremism. Criminal justice systems failing to serve the needs of their community, that are abusive and ineffective, can push an individual towards a violent ideology. Subject matter experts will assist U.S. embassies and missions to assess, plan, implement, and measure the impact of INL assistance programs that help reform criminal justice systems. INL will tap into U.S. criminal justice expertise available through outreach and INL partnerships with courts, prosecutors, law enforcement, ports, corrections departments and organizations; and help bring that expertise to bear in INL programs around the world. To further support and improve the quality of INL programs, funds will also focus on pre-deployment training for INL advisors, promote the participation of women in INL programs, and continue to refine the quality of curricula that support INL program efforts.

Critical Flight Safety Program (CFSP): CFSP ensures the safety, structural integrity, and functionality of INL aircraft fleet deployed and operated to support various country aviation programs of the Department of State. CFSP increases safety for aircrews and personnel and extends service life of the aircraft; reduces excessively high costs for maintenance, components, and parts; increases operational readiness rates; sustains mission success; and accomplishes continuous long-term depot maintenance cycles for the aircraft fleet.

Cybercrime and Intellectual Property Rights: FY 2017 funds INL will develop and fund innovative law enforcement capacity building programs consistent with the President's International Strategy for Cyberspace and the goals set by the White House Intellectual Property Enforcement Coordinator. These training programs will target foreign law enforcement entities in key developing countries to address "gaps" in their capacity and laws. INL will also continue to support a program to place Intellectual Property Law Enforcement Coordinators (IPLECs) in locations around the world. The regional IPLECs help coordinate U.S. training assistance in their region while also mentoring partner enforcement agencies and fostering cross border cooperation. INL will also seek synergies among its cybercrime, intellectual property, and other programs, given the expanding role cyber criminals can play in facilitating other kinds of crime.

Demand Reduction: INL will support regional training on effective methods to prevent and reduce drug use and related violence, including but not limited to violent extremism, as substance use disorders can render populations more vulnerable to radicalization or recruitment by violent organizations. INL's demand reduction activities help address the National Drug Control Strategy funding priorities.

Key Interventions:

- Facilitate host-country development of national-level mechanisms to credential addiction counselors and prevention specialists.
- Support the continued development of gender-sensitive training curricula for women with substance use disorders as well as related technical assistance, research and demonstration programs.
- Fund the development and implementation of the world's first drug treatment and prevention protocols for drug addicted children and adolescents as well as effective drug-free community coalition programs, which bring citizens together to prevent and reduce drug use and crime among youth. INL will also support an empirically-based impact/outcome evaluation of a treatment initiative designed to reduce drug use and related problems.

Fighting Corruption: With FY 2017 funds, INL will sustain efforts to implement the United Nations Convention against Corruption (UNCAC) and other international anti-corruption frameworks that contain binding legal standards. Programs will support efforts to expand the multilateral fight against kleptocracy and continue U.S. government participation in multilateral anti-corruption monitoring mechanisms.

Key Interventions:

- Support the Review of Mechanisms of the UNCAC, the Inter-American Convention against Corruption and the Council of Europe Group of States Against Corruption, as well as a similar regional treaty and non-treaty frameworks.
- Continue to provide support for regional initiatives, which bring together like-minded countries for targeted multi-country trainings, peer learnings, and policy mentoring. This will be complemented by subject-matter specific programming that benefits from high-level commitments and attention in fora such as the G20, G7, APEC and other frameworks.
- Support, as required, for joint regional activities including support of priority bilateral relationships. Funds will continue to support programs that advance objectives related to kleptocracy/grand corruption, such as programming for international cooperation on asset recovery.
- Develop or expand programs, as required, partnering with the private sector and/or civil society. Reduce the personal experiences with corruption, including paying fees for government services, which can be a driver of violent extremism.

International Law Enforcement Academy (ILEA): The FY 2017 request will support the work of the established ILEAs in Bangkok, Budapest, Gaborone, Roswell, and San Salvador, as well as continuing to pursue the development of a new ILEA in the Middle East and North Africa region. These institutions provide relevant, timely and quality training to counter transnational criminal activities, including wildlife trafficking and CVE. INL will fund the U.S. government contribution to the operations expenses for these facilities and support staff and oversight costs, in addition to the course related costs for development and delivery of the ILEA curricula. INL will also support the White House's Shared Security Partnership initiative by facilitating regional cooperation and capacity building through strategic training for criminal justice officials at the West Africa Regional Training Center in Accra, Ghana. Funding will also support operating, staff and oversight expenses for the facility.

Key Intervention:

- U.S. assistance of \$1,000,000 for combating wildlife trafficking will continue INL programming in support of regional training for wildlife investigations at the International Law Enforcement Academies in Bangkok and Gaborone.

Interregional Aviation Support: FY 2017 funds will sustain centralized aviation services in support of INL's overseas aviation programs in Central America, Colombia, Peru, Pakistan, and Afghanistan,

including central management and oversight of technical functional areas such as operations; training; flight standardization; safety; maintenance; and logistics; and a centralized system for acquiring, storing, and shipping parts and commodities in support of all of these overseas locations. This program provides professional aviation services to INL's programs overseas, including counternarcotics and border security program elements in the Stabilization Operations and Security Sector Reform program area.

International Organizations: The FY 2017 request will continue to support the UN Office on Drugs and Crime (UNODC) and the Organization of American States' Inter-American Drug Abuse Control Commission (OAS/CICAD). UNODC and OAS/CICAD programs strengthen foreign government justice sector capacity so they can attack drug trafficking and transnational crime groups directly, disrupting organizations, arresting their leaders, and seizing assets. Programs through UNODC and OAS/CICAD will also enhance international cooperation among states to help eliminate safe havens for criminal groups.

Key Intervention:

- Facilitate conferences and other meetings open to member states, thus beneficiaries may include all assistance eligible 179 State parties to the UN Convention against Transnational Organized Crime, 184 State parties to the 1961 UN Single Convention on Narcotic Drugs, 183 State parties to the 1971 UN Convention on Psychotropic Substances, 188 State parties to the 1988 UN Convention against Illicit Traffic in Narcotic Drugs and Psychotropic Substances as well as the 34 member states of the OAS.

International Organized Crime: With FY 2017 funds, INL programs will work to advance the objectives of the President's National Strategy to Combat Transnational Organized Crime, through programs to strengthen international partnerships and capacities; facilitate the sharing of information and best practices across jurisdictions; build international cooperation and public-private partnerships; and raise awareness and/or understanding of the costs of transnational organized crime on communities, governments, and economies. FY 2017 funding will also support the strengthening of organizational and operational capacity and cooperation regionally to combat wildlife trafficking in source, transit and destination countries.

Key Intervention:

- Support to focus on training and technical assistance on: 1) strengthening legislative frameworks; 2) enhancing law enforcement and investigative capabilities; 3) supporting cross border law enforcement cooperation and 4) developing prosecutorial and judicial capacity.

International Police Peacekeeping Operations Support (IPPOS): IPPOS is an initiative to support countries to prepare for deployments of well-trained and equipped specialized police units and individuals to peacekeeping and stabilization operations. Police deployments to multilateral operations help to stabilize conflict-affected areas quickly and support the implementation of UN Security Council mandates. FY 2017 funds will help build partner countries' capacity to train and deploy police peacekeepers in a timely manner, support equipment and training center needs, continue to develop internationally-accepted doctrine and training standards, and assist the UN and regional organizations with the coordination, policy, and projects related to the improvement of policing in peacekeeping operations.

Washington-Based Program Development and Support: The FY 2017 request will ensure sufficient domestic management, contract, and financial oversight and internal controls to administer and oversee INL's programs. This funding will cover the annual costs of direct hires, consultants, and contracted support personnel; travel and transportation; equipment rentals; communications and utilities; and other support services including procurement and financial management.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: In accordance with the Department's Bureau Evaluation Policy, INL developed a Bureau Evaluation Plan, laying out all priority evaluations that will place through FY 2018. In FY 2015, INL conducted three evaluations which yielded a total of 49 recommendations which focused on strategic planning and alignment and monitoring and evaluation efforts, amongst others.

The following evaluations are expected to be completed in FY 2016:

- Central America Regional Security Initiative: Counternarcotics, Rule of Law and Human Rights
- Philippines: Stability Operations and Security Sector Reform
- West Bank/Gaza: Stability Operations and Security Sector Reform

INL anticipates completion of the following evaluations in FY 2017:

- Peru: Counternarcotics
- West Bank/Gaza: Rule of Law and Human Rights

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: Evaluations are essential to INL's ability to measure and monitor program performance; make programmatic decisions; document impact; identify lessons learned; determine return on investment; provide inputs for policy and planning; and achieve greater accountability.

INL's monitoring and evaluation activities have resulted in the following management initiatives and process and programmatic improvements:

- Development of four program management guides to inform INL program design and implementation
- Development of a Human Capital Development Plan to establish a professional development program for INL employees
- Drafting of over 100 Standard Operating Policies and Procedures relevant to audits/reviews, budget formulation, budget execution, contract administration, human resources, and monitoring
- Expansion of field training and knowledge-sharing platforms to better inform program managers and leadership on the status of projects and programs
- Positive performance evaluations of INL's demand reduction programs led to the replication of the projects in other regions and countries

With the FY 2017 request, INL expects to achieve the following key programmatic impacts:

- CAP: Program offices and INL sections overseas will continue to rely heavily upon police, justice, and corrections team expertise for initial and follow-up assessments and recommendations for operational implementation of criminal justice sector reforms, which are critical for U.S. government CVE efforts.
- Demand Reduction: INL will continue to assist the international community by reducing drug consumption, through collaborative efforts with the Colombo Plan or OAS-CICAD, and in reducing the income that criminal organizations derive from narcotics-trafficking and threats to the health and welfare of fragile states.
- ILEA: Based on ILEA's international reputation, foreign countries will continue to rely on the program's expertise in both building leadership/management skills for their criminal justice leaders and developing their law enforcement capabilities to address threats and challenges posed by transnational criminal organizations and terrorist/insurgent groups.

Program Development and Support (PD&S)

INL's PD&S funds ensure domestic and overseas administrative operations, oversight, and management associated with all INL foreign assistance programs. INL is requesting \$170.068 million in PD&S funds in the FY 2017 CBJ. INL PD&S costs include:

- **U.S. Personnel** - The overseas PD&S budget pays salaries and benefits of U.S. Direct Hire, contractual, and When Actually Employed program oversight, management, and administrative personnel.
- **Non-U.S. Personnel** - The overseas PD&S also covers salaries, benefits, and allowances for non-U.S. personnel such as Locally Engaged Staff who support and administer numerous programs at Post.
- **International Cooperative Administrative Support Services (ICASS)** - The ICASS program makes available a full range of administrative services at overseas posts. These include motor pool operations and vehicle maintenance, travel services, reproduction services, mail and messenger services, information management, reception and telephone system services, purchasing and contracting, human resources services, cashiering, vouchering, accounting, budget preparation, non-residential security guard services, and building operations. ICASS fees are charged proportionally to all Embassy tenants based on mission size.
- **Program Support** - INL's program support ensures an adequate level of administrative support for bureau operations and includes: office equipment purchases and rentals, telephone services, printing and reproduction, contractual services, materials, supplies, furnishings and equipment. Program support also includes staff travel.

International Organizations (IO)

Foreign Assistance Program Overview

The FY 2017 request of \$332.9 million for the International Organizations and Programs (IO&P) account will advance U.S. strategic goals across a broad spectrum of critical areas by supporting and enhancing U.S. multilateral engagement, as well as leveraging resources from other countries. The United States provides voluntary contributions to international organizations to accomplish transnational goals where solutions to problems can best be addressed globally, such as protecting the ozone layer or safeguarding international air traffic. In other areas, such as development programs, the United States can multiply the influence and effectiveness of its own assistance through support for international programs.

Request by Account and Fiscal Year

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
TOTAL	340,010	*	332,900	-7,110
International Organizations and Programs	340,010	*	332,900	-7,110

International Organizations and Programs (IO&P)

International Civil Aviation Organization (ICAO): ICAO's Aviation Security Program strengthens worldwide civil aviation security by enabling ICAO to evaluate the security of national civil aviation systems, provide assistance to countries not currently meeting international standards, and promote tighter counterterrorism measures. Funds for the ICAO Aviation Security Program will support the activities of the Universal Security Audit Program. Regular audits are essential to the maintenance and security of the international civil aviation system. U.S. support for ICAO helps States and regions address areas in which security measures are lacking and build capacity to maintain appropriate security measures. FY 2017 funding will help ICAO increase the number of countries that fully comply with international security standards and practices. U.S. contributions to this program will advance the Department's strategic objective of Overcoming Global Security Challenges through Diplomatic Engagement and Development Cooperation.

Hague Conference on Private International Law (HCOPIL): The U.S. contribution to HCOPIL will support technical assistance implementation work for countries implementing conventions to which the United States is a party, including the 1980 Hague Convention on the Civil Aspects of International Child Abduction and the 1993 Hague Convention on Protection of Children and Co-operation in Respect of Intercountry Adoption. This voluntary contribution directly supports the United States' continuing efforts to support the multilateral process established by The Hague Abduction Convention for U.S. citizens attempting to return children from foreign countries where they have been wrongfully abducted. This contribution would also support the Adoption Convention by providing safe, legal and transparent adoptions of children by U.S. citizens who chose to adopt internationally. A contribution to the Voluntary Fund support HCOPIL's efforts to provide technical assistance and other expertise to help promote the implementation and operation of The Hague children's conventions and other Hague agreements.

International Maritime Organization (IMO) and Regional Cooperation Agreement on Combating Piracy and Armed Robbery against Ships in Asia (ReCAAP): The U.S. contribution to IMO will support the

activities of the Maritime Security Program, which helps promote and maintain maritime security worldwide, including by combating piracy. The U.S. contribution supports long-range identification and tracking of vessels, container security, international shipping and port facility security, and counter-piracy activities and training. FY 2017 funds will support assessments of countries' implementation of the International Ship and Port Facility Security Code. This helps maritime nations maintain marine infrastructure resilience and combat piracy at sea. These funds may also support IMO security audits – which will be mandatory for all IMO Member States in 2017, many of which remain unaudited - that identify security gaps and necessary improvements to inform IMO's work. U.S. contributions to the Maritime Security Program will advance the Department's strategic objective of Overcoming Global Security Challenges through Diplomatic Engagement and Development Cooperation.

FY 2017 funding for ReCAAP will allow the continued participation and favorable standing of the United States in the ReCAAP Information Sharing Center, which facilitates sharing of information on incidents of piracy and armed robbery at sea. U.S. contributions to ReCAAP advance the Department's strategic goals of ensuring safety and security of international civilian shipping and supporting broader objectives of the Rebalance strategy (promoting respect for international law and standards of behavior, improving good governance, deepening relations with allies, partners and emerging powers, and building regional maritime domain awareness and security capacity).

Organization of American States (OAS) Fund for Strengthening Democracy: The OAS Fund for Strengthening Democracy mobilizes international efforts to support democracy and the protection of human rights in the Western Hemisphere. The Fund has succeeded in providing critical financial support for special OAS missions to address political crises in OAS Member States through conflict resolution, electoral observation missions and technical assistance missions. FY 2017 funds will help the Fund's efforts to strengthen democratic institutions, including legislatures, judiciaries, electoral bodies and political parties at both the national and subnational level, in accordance with the principles enshrined in the Inter-American Democratic Charter. The Fund also provides critical funding for the protection and defense of human rights in the region through its annual contribution to the Inter-American Commission on Human Rights (IACHR), which seeks to strengthen the IACHR and the inter-American human rights system at a time when some governments seek to undermine the region's democratic gains. The Fund also advances U.S. policy objectives to address increasing challenges to freedom of expression by funding the work of the Office of the Special Rapporteur for Freedom of Expression which sheds light on violations by governments in the region. U.S. funding also supports OAS political missions when crises emerge in OAS member states in order to preserve democracy and the rule of law. FY 2017 funds provide the U.S. Mission to the OAS with leverage to advance OAS reforms, consistent with the "Organization of American States Revitalization and Reform Act of 2013" (P.L. 113-41).

United Nations Democracy Fund (UNDEF): UNDEF provides targeted support to promote democracy through projects to advance civil society, including in nations where the United States has limited influence. UNDEF provides small grants to non-governmental organization projects that promote democracy, human rights, and fundamental freedoms, including in priority areas such as women, youth, and free media – all critical to democratic governance. FY 2017 voluntary contributions to UNDEF will advance U.S. values, global stability, security, and positive political evolution to democratic systems of governments worldwide. U.S. contributions to UNDEF will advance the Department's strategic goals by allowing the United States to maintain its strong influence and in addition will continue U.S. participation on the UNDEF Advisory Board.

United Nations Office of the High Commissioner for Human Rights (OHCHR): OHCHR promotes and protects human rights worldwide through its well-respected human rights monitoring, advocacy, and technical assistance. Through its 13 country and regional offices, and new offices as needed, including in Honduras, OHCHR works closely with partners at the country and local levels in order to ensure that

states implement their international human rights obligations and commitments. OHCHR supports human rights treaty bodies and the special procedures mandates of the Human Rights Council (including top U.S. priorities such as the commissions of inquiry for Syria and Democratic People's Republic of Korea and the special rapporteurs on Iran and Belarus). This contribution to OHCHR's core budget will support the office's efforts to build states' capacity to promote and protect human rights, to advocate on behalf of victims of human rights violations and abuses, and to monitor human rights situations globally. The U.S. contribution will also enable OHCHR to support activities such as additional human rights monitoring missions to supplement peacekeeping missions.

United Nations Voluntary Fund for Technical Cooperation in the Field of Human Rights: Through the Voluntary Fund, OHCHR provides technical assistance, capacity building, and other expertise to help promote and protect human rights globally. The U.S. contribution to the Voluntary Fund will sustain the UN's activities to share expertise and best practices on human rights and integrate the issue of human rights into countries' legal, political, and social frameworks. The Voluntary Fund will also continue to contribute to the promotion of human rights in countries hosting UN peacekeeping missions, increasing the likelihood of a successful outcome and long-term stability.

United Nations Voluntary Fund for Victims of Torture (UNVFVT): The UNVFVT provides funds to organizations providing psychological, medical, social, legal, and financial assistance to victims of torture and members of their families. The goals of the UNVFVT are to help victims of torture cope with the after-effects of the trauma they experienced, reclaim their dignity, and become reintegrated into society. The UNVFVT is widely recognized as an effective mechanism for meeting the needs of victims of torture, strengthening civil society, and promoting accountability. U.S. contributions to the UNVFVT will support its direct assistance to the victims of torture, addressing urgent needs of survivors of victims in countries including Syria, Iraq, and Cambodia, and underscoring the commitment of the United States to eliminate the practice of torture worldwide.

United Nations Population Fund (UNFPA): With programs in nearly 150 countries, UNFPA provides family planning, reproductive health, and maternal health services which are key elements of global health and contribute to the U.S. comprehensive strategy for sustainable development. These health goals are linked to other critical U.S. foreign policy goals such as empowering women, protecting the environment, building democracy, and encouraging broad-based economic growth. This contribution to UNFPA's core budget will support programs that have a vital impact in expanding access to voluntary family planning and reducing global maternal and child mortality, particularly in sub-Saharan Africa and South Asia where death rates are highest. UNFPA focuses on the following core areas with special emphasis given to poor and vulnerable populations: gender equality and women's empowerment, including addressing gender-based violence and discrimination; maternal and reproductive health including HIV prevention; adolescents and youth services, including comprehensive sexuality education; and employing data on population dynamics to help governments' base policies on demographic evidence.

United Nations Children's Fund (UNICEF): UNICEF strives to ensure the survival and well-being of children throughout the world. UNICEF focuses on seven priority areas: Health; HIV/AIDS; Water, Sanitation, and Hygiene; Nutrition; Education; Child Protection; and Social Inclusion, which are critical to the success of the 2030 Sustainable Development Goals. This contribution will support the core budget of UNICEF, which supports the infrastructure needed to develop local institutional capacity and provide goods and services directly to the world's most disadvantaged and excluded children and their families. Core funding also contributes to UNICEF's efforts to coordinate and harmonize its operations with other UN agencies, and to strengthen transparency and accountability, including through results based management. Core funding also enables UNICEF to quickly respond to crises, the number and scale of which has been unprecedented in recent years.

United Nations Junior Professional Officer (JPO) Program: U.S. participation in the JPO program advances the Department's strategic goal of placing highly qualified American citizens in positions within the UN and its entities that are of strategic interest to the United States. The Bureau of International Organization Affairs has participated in the JPO program since 2012. Currently, there are three Department of State funded JPOs at the UN, all of whom are working in critical assignment areas. For example, a U.S. funded JPO working in the Conduct and Discipline Unit of the Department of Field Support develops guidance and provides oversight of the UN's efforts to eliminate sexual exploitation and abuse of vulnerable people by UN peacekeeping personnel, an initiative that the United States supports and regards as critical to the credibility and success of UN peacekeeping. Other Department bureaus and U.S. government agencies participate in JPO programs at the Food and Agriculture Organization of the UN (FAO), the International Atomic Energy Agency (IAEA), and the UN Refugee Agency (UNHCR), among others. Selected JPOs are young professionals hired at the entry level for assignments that are typically two years in duration. JPOs serve as international civil servants and are considered staff members of the international organization.

International Development Law Organization (IDLO): IDLO promotes the rule of law in developing countries. IDLO has expertise in institution building, promoting access to justice and legal empowerment; knowledge of diverse legal systems; and extensive research on rights and justice. This contribution to IDLO's core budget will support its substantive goals to promote well-functioning, responsive legal institutions; empowering citizens to be aware of their rights and to be able to access judicial and legal services; legal systems that enable fair, sustainable development outcomes, helping to build confidence in the justice sector by supporting legal and institutional reforms and promoting good governance, particularly in countries emerging from conflict or moving towards democracy. IDLO has implemented programs for the U.S. Department of State in Central America, Eastern Europe, West and East Africa, and Asia. In Afghanistan, a U.S. funded project trained prosecutors nationwide on the implementation of the country's new violence against women legislation. IDLO's new program in Ukraine is enabling reform of the Prosecutor General's Office to emphasize efficiency and transparency. IDLO's new program in Honduras is working to reduce the homicide rate through the formulation of a juvenile justice policy and the training of justice sector workers to support the rehabilitation and reintegration of detainees and prisoners.

International Chemicals and Toxins Programs: Activities related to international chemicals management and toxic substances protect human health and the environment, including the health of American citizens who are impacted by poor management of chemicals abroad. Support for these activities is particularly important now with the anticipated entry into force of a binding agreement on mercury and ongoing policy negotiations under the Montreal Protocol on addressing alternatives to ozone depleting substances. This contribution will support a range of UN Environment Program-linked activities related to chemicals, waste, and ozone layer protection, including: the new Minamata Convention on Mercury, the UNEP Mercury Program; the Vienna Convention and its Montreal Protocol for the Protection of the Ozone Layer; the Stockholm Convention on Persistent Organic Pollutants, Rotterdam Convention on Prior Informed Consent, Basel Convention on Trans-boundary Movement of Hazardous Wastes; and the Strategic Approach to International Chemicals Management.

International Conservation Programs: International Conservation Programs support multilateral conventions and organizations that promote and implement science-based measures to conserve and sustainably manage the Earth's economically and ecologically important ecosystems, natural resources, and species. Recent successes by the conventions and organizations include commitments and activities to combat wildlife trafficking, slow deforestation, enhance food security, improve the scientific basis on which to make policy decisions, and strengthen civil society. International Conservation Programs supports the ongoing implementation of eight multilateral conventions and organizations that help developing countries counter pressures that undermine conservation, coordinate global efforts to avoid

gaps and duplication in activities, and preserve the good standing and influence of the United States in these organizations. Programs supported under this contribution include the: Convention on International Trade in Endangered Species of Wild Flora and Fauna, United Nations Convention to Combat Desertification, Ramsar Convention on Wetlands of International Importance, International Tropical Timber Organization, Forest and Farm Facility hosted by the UN Food and Agriculture Organization, United Nations Forum on Forests, International Union for the Conservation of Nature, and Intergovernmental Platform on Biodiversity and Ecosystem Services.

Monitoring and Evaluation (M&E): In compliance with existing regulations and standards on monitoring and evaluation, M&E funds will be used to identify trends, measure changes, and capture knowledge to improve program performance, promote effectiveness, and increase transparency. Findings will foster learning and help to promote improvements in program planning and design. Evaluations will supplement existing methods including independent assessments to ensure broad coverage of recipients of contributions to international organizations and programs, and will focus on recipient organizations' results achieved through planned programs and projects, including compliance by member states with commitments made pursuant to treaties, conventions, and other multilateral agreements where fulfillment of those commitments is necessary to achieve the intended results of the programs and projects. Where practical, evaluations will be undertaken jointly with other U.S. government agencies or donor countries to share burden and expense. This contribution will also support the Multilateral Organization Performance Assessment Network (MOPAN). MOPAN's mission is to evaluate the effectiveness of major multilateral organizations receiving official development assistance by generating, collecting, analyzing and presenting relevant and credible information on the organizational and development effectiveness of evaluated organizations. The Organization for Economic Cooperation and Development (OECD) provides a fixed secretariat function for MOPAN, and facilitates knowledge sharing on multilateral aid effectiveness with OECD's Development Assistance Committee. By evaluating multilateral organization performance jointly with other donor countries through mechanisms such as MOPAN, the United States minimizes the cost and duplication of bilateral reviews, achieves maximum effect by leveraging common goals, and reduces the burden on organizations. MOPAN will evaluate a total of 26 multilateral organizations at headquarters and in about 30 program countries over a four-year period spanning 2015-2018.

UN Framework Convention on Climate Change (UNFCCC)/ Intergovernmental Panel on Climate Change (IPCC): U.S. leadership in the UN Framework Convention on Climate Change (UNFCCC), the Intergovernmental Panel on Climate Change (IPCC), Global Climate Observation System (GCOS), and the Intergovernmental Group on Earth Observations (GEO) is a key component of the Global Climate Change Initiative (GCCII). Funds for the UNFCCC will help ensure that countries around the world mitigate greenhouse gas emissions; promote transparency, including measurement, reporting, and verification; and foster low-emission climate-resilient development consistent with the new international agreement reached in 2015 applicable to all countries. U.S. support for the IPCC advances state-of-the-art assessments of climate change science and technology, including through enhanced understanding of global observation systems, carbon sequestration, and climate modeling and their implications. Funding to the Global Climate Observing System (GCOS) ensures continued coordination of climate observations around the world and will contribute to GCOS's annual status report, planning for implementation and related technical panels and regional workshops that are necessary for the effective and efficient collection and archiving of global climate observations. U.S. support for GEO contributes to the global effort to promote timely and open access to earth-observing data, which bolsters national capacities to prepare for and respond to climate change as well as natural disasters. This funding also enables the United States to support OECD work on tracking climate finance, which is critical to understanding and enhancing the effectiveness, private sector leverage, and transformational impact of U.S. international support.

Montreal Protocol Multilateral Fund: The Multilateral Fund for the Implementation of the Montreal Protocol (MLF) helps developing countries meet their obligations to phase out ozone-depleting substances (ODS). The Montreal Protocol is generally considered the most successful Multilateral Environmental Agreement in existence, with universal adoption of binding commitments. As a structure for sharing the burden of the ODS phase-out, the MLF plays a critical role in achieving compliance that is credited with turning the momentum toward a restoring the ozone layer by the middle of the 21st Century. This contribution will also support activities that assist developing countries achieve targets in their plans toward implementation of a 35% reduction of hydro chlorofluorocarbons (HFCs) by 2020. Given the recent agreement of Montreal Protocol Parties to address HFCs, funding will support new work on ODS alternatives such as import and export licensing requirements, reporting systems, inventories, and national-level policy development. This HFC-related funding will be made available if a Montreal Protocol HFC phasedown amendment is adopted.

Organization of American States (OAS) Development Assistance Program: The OAS Development Assistance Program protects America's security and prosperity by helping citizens of Latin American and Caribbean (LAC) countries pursue a development path toward poverty eradication and away from extremism through technical cooperation programs that provide policymakers and economic actors in LAC countries with tools and skills to address country-specific challenges. The sharing of best practices from these programs contributes to region-wide sustainable development objectives. These programs also advance initiatives adopted by the Presidents and Heads of Government in the Summits of the Americas, as well as initiatives and policies adopted at the Inter-American Ministerial related to labor, energy, competitiveness, education, small and medium enterprises, environmental protection, science and technology, tourism, social development, and culture.

United Nations Human Settlements Program (UN-Habitat): UN-Habitat promotes socially and environmentally sustainable urban areas that provide adequate shelter, access to potable water, sanitation, and health, economic, and social services for all. This contribution to UN Habitat's core budget supports the infrastructure necessary to support UN-Habitat's projects and activities, and also supports management reforms that will improve UN-Habitat's overall ability to meet evolving global urbanization challenges with impacts on political, economic, social, environmental, and health security. In order to help UN-Habitat fulfill its potential as an international organization and a bilateral partner, the Department is working with UN Habitat to improve its management, increase accountability and transparency, and refine its new strategic focus, particularly in project planning and evaluation.

United Nations Development Program (UNDP): UNDP is the lead development agency of the United Nations, focusing on poverty, democratic governance, environment, and crisis prevention and recovery. This contribution to UNDP's core budget will support UNDP's administrative functions and basic development programming, enabling UNDP to deliver assistance programs worldwide and in countries of particular foreign policy interest. UNDP has recently restructured its management, streamlining administrative functions and reassigned headquarters staff to the field to reduce costs and enhance program work. An ambitious restructuring plan has cut staff by 10% overall and 30% in headquarters posts of New York and Geneva, merged two policy bureaus into one, and shifted dozens of positions from management to expert level. The Department is working with UNDP management to strengthen oversight functions at UNDP, including independent evaluation, audit, and ethics offices, to ensure that UNDP programs continue to produce good and measurable results and the organization operates with the highest transparency and accountability standards.

Internet Governance Forum (IGF) Trust Fund: The annual IGF provides a forum for governments, businesses, activists, and users to discuss Internet-related public policy issues on an equal footing. The IGF is a platform for exchanging information and ideas, networking between all stakeholder groups and, sharing best practices. Importantly, the IGF provides a forum for international engagement on Internet

issues, without the need to produce a negotiated outcome document that would exclude the input and views of non-governmental Internet stakeholders, as promoted by some authoritarian countries in order to give governments more control of the Internet. The U.S. contribution will help the United States remain an authoritative voice in the IGF planning and preparatory processes, helping to ensure that IGF remains a multi-stakeholder and balanced global forum for all stakeholders to engage on Internet-related issues.

United Nations Environment Program (UNEP) and Secretariat of the Pacific Regional Environment Program (SPREP): UNEP is the lead UN entity on environmental issues, including helping to shape the international environmental agenda, advocating for the environment, promoting creation and implementation of environmental policy instruments, and assessing environmental conditions and trends. UNEP plays an important role in developing international agreements, facilitating scientific assessment of global, regional, and national environmental conditions, and building capacity in developing countries to implement environmental policy. The bulk of this contribution to UNEP will go to the Environment Fund, which provides core funding for UNEP's program of work in focal areas such as climate change, disasters and conflict, ecosystem management, environmental governance, environmental review, chemicals, waste and air quality, and resource efficiency. This contribution will also support UNEP's work to improve air quality, reduce marine plastic debris, and support national efforts to fight illegal wildlife trafficking, among others.

The Regional Seas Program for the Pacific (SPREP) is closely aligned with, but not administered by, UNEP. SPREP facilitates engagement with Pacific islands on environmental issues of mutual concern, such as global climate change, marine pollution and biodiversity conservation. This contribution will also support UNEP's Caribbean Environment Program's Cartagena Convention for the Protection and Development of the Marine Environment, as well as coral reef programs.

United Nations Entity for Gender Equality and Women's Empowerment (UN Women): UN Women works to advance gender equality and women's empowerment worldwide including increasing women's economic empowerment; ending violence against women; promoting women's leadership and political participation; and advancing women's role in peace and security. This contribution will support UN Women's core budget which supports the infrastructure necessary to for programs in the field and efforts to implement policies and programs that advance the status of women globally. UN Women is working to improve women's political participation by helping break through structural barriers and roll-back discriminatory laws and institutions that limit opportunities to run for office. UN Women is working in an unprecedented number of countries to promote laws and policies against various forms of violence and help women win access to free or affordable essential health, police, justice, and social support services. UN Women also plans to enhance women's ability to secure decent jobs, accumulate assets, and influence institutions and public policies that affect determining growth and development.

United Nations Trust Fund to End Violence against Women (UN Trust Fund): The UN Trust Fund awards high-impact grants – primarily civil society organizations – for projects that reduce and eliminate violence against women and girls. For example, a Trust Fund grantee in Colombia, where up to 70 percent of indigenous women suffer violence, is providing psycho-social and other support to indigenous women who have suffered violence. Another grantee is working to hold law enforcement authorities accountable for responding to violence against women and girls in India. This contribution will expand the UN Trust Fund's efforts to support civil society organizations, governments, and UN country teams to expand access to services of women and girls who have survived violence and strengthen the implementation of laws, policies, and action plans on violence against women and girls.

United Nations Special Representative of the Secretary General for Sexual Violence in Conflict (SRSG): The Office of the SRSG was established by the Security Council in response to the detrimental impact that sexual violence in conflict has on communities and efforts to promote peace and security and

rebuilding once a conflict has ended. The SRSB serves as the United Nations' spokesperson and political advocate on conflict-related sexual violence, as well as the chair of the network United Nations Action against Sexual Violence in Conflict. This contribution may be used to address eight priority countries: Bosnia and Herzegovina; Central African Republic (CAR); Colombia; Cote d'Ivoire; Democratic Republic of Congo (DRC); Liberia; South Sudan and Sudan. While six of the eight priority countries are in Africa, this problem is widespread and the Office of the Special Representative is also engaged on this issue in Asia and the Pacific (in Cambodia for residual cases from the Khmer Rouge period) and the Middle East (Syria).

United Nations Peacebuilding Fund (PBF): The PBF supports programs and organizations that seek to build a lasting peace in countries emerging from conflict. The PBF focuses its funding in four priority areas in post-conflict contexts: support to implementation of peace agreements and political dialogue; promotion of coexistence and peaceful resolution of conflict; revitalization of economic growth; and reestablishing essential administrative services. The PBF currently supports 222 projects in 22 countries, including Burundi, the Central African Republic, the Democratic Republic of Congo, Cote d'Ivoire, Mali and South Sudan. The PBF is one of the most effective multilateral instruments for providing funding needed for activities in countries in and emerging from crisis. Since its establishment the PBF has provided more than \$415 million through almost 300 projects in support of national efforts to build and sustain peace. This contribution will support the peace agreement in South Sudan, expanded UN stabilization work in Somalia outside Mogadishu, institution building activities as UN missions draw down in Liberia and Haiti, and financing of activities related to the Colombian peace process. The PBF advances U.S. strategic priorities of contributing to post-conflict stabilization and strengthening the capacity of governments, national/local institutions and transitional or other authorities.

United Nations Department of Field Support (DFS): DFS provides dedicated logistical support to UN peacekeeping and special political missions in the field, including in the areas of finance, logistics, information communication and technology, human resources and general administration. This support is necessary for personnel in peacekeeping and special political missions to perform their missions 90 percent of procurement and 55 percent of UN Secretariat staff serve in peacekeeping and special political missions in the field. This contribution will support reviews that DFS is conducting of key business processes in response to the recommendations in the High Level Panel Report on Peace Operations. The High Level Panel Report contains a wide array of recommendations that would lead to improvements in the way that the UN Secretariat, including DFS, operates in the field. Promoting reforms such as these will increase the flexibility and responsiveness of field missions that are delivering peacekeeping mandates.

World Meteorological Organization (WMO) Voluntary Cooperation Program (VCP): The VCP promotes technical collaboration by providing equipment, services, training, or education to build capacity of developing countries to produce higher quality data and forecasts related to climate, water, and weather. Such technical collaboration is of high importance to the United States because the National Weather Service relies on meteorological and hydrological data from outside its borders for forecasting severe weather and extreme climate, and for international air travel. Parts of the U.S. national economy, such as shipping, power and agriculture depend on weather and climate data from other parts of the world. This contribution will support activities related to the collection of: critical information on natural and man-made disasters that affect life, safety, water use, and crop yields around the globe; data needs related to civil aviation, marine navigation, and changes in climate and freshwater availability. U.S. contributions to the VCP advance the Department's strategic goal of Strengthening America's Foreign Policy Impact on our Strategic Challenges.

World Trade Organization (WTO) Technical Assistance: The main objective of Trade Related Technical Assistance (TRTA) provided by the WTO Secretariat is to build long-lasting human and institutional

trade capacity and to enhance ownership through training and technical cooperation for WTO Members. TRTA is primarily geared towards government officials from developing and least-developed countries and acceding countries, although the audience can also include representatives from civil society, academia and the private sector. The U.S. contribution to WTO technical assistance trade-related activities serves both to underscore U.S. commitment to the multilateral, rules-based international trade regime, and to help developing countries take advantage of the opportunities to promote growth, combat poverty, and increase stability.

UN Office for the Coordination of Humanitarian Affairs (OCHA): OCHA coordinates the provision of international humanitarian assistance for some 57 million people globally, including people affected by the serious conflicts in Syria, South Sudan, and Yemen crises. Continued U.S. financial support for OCHA's core budget will enable it to strengthen the international humanitarian architecture making it more effective, coordinated, and inclusive. Given the unprecedented number of humanitarian crises, OCHA will continue to implement its strategy to cultivate new humanitarian donors and to engage new governments in international humanitarian assistance work. Moreover, OCHA will continue to strengthen its private-sector engagement, increasing outreach to individual corporations and building relationships with key private-sector institutions and leaders. OCHA will also improve outreach with regional bodies to improve coordination and communication and continue to provide expert policy guidance to UNSC Member States on numerous resolutions, offer expert briefings on protection of civilians, humanitarian access, and other issues, and advance disaster risk reduction efforts, particularly as it pertains to the new framework under negotiation.

Department of Political Affairs (DPA): DPA plays a central role in United Nations efforts to prevent and resolve deadly conflict around the world. DPA monitors and assesses global political developments with an eye to detecting potential crises before they erupt and become costly to contain. DPA provides logistical support for UN envoys who are deployed around the world to facilitate political dialogue in some of the world's toughest political crises. In Libya, the UN's envoy brokered the signing of a historic political framework agreement among the rival parties that will pave the way for the establishment of a unity government. In Syria and Yemen, UN envoys have advanced efforts to bring conflicting parties together for political discussions. In Burundi, the UN's special adviser to the Secretary-General is moderating discussions between the government and opposition forces. And in Burkina Faso, the UN's regional envoy played an essential role in defusing a coup against the transitional government, paving the way for national elections and the formation of a new, democratic government. This contribution will support DPA's capacity for crisis response, ensuring that the United Nations is capable of rapidly deploying mediators and other peacemaking expertise to the field and cooperating more closely with regional organizations on the frontlines of conflicts. Resources will also contribute directly to UN efforts to promote peace and prevent conflict by coordinating UN electoral assistance activities, supporting the Organization's work to prevent terrorism and violent extremism and providing staff support to the UN Security Council.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: U.S. delegates from the IO Bureau and other stakeholders from within the Department and other agencies of the U.S. government regularly attend meetings of the governing bodies and committees of the international organizations and programs funded by the United States. A primary goal of the U.S. delegations is to ensure that international organizations are carrying out programs and activities of interest to the United States.

The United States and likeminded nations have been working to implement needed management reforms at the United Nations and other international organizations. The Department has spearheaded such efforts through its *United Nations Transparency and Accountability Initiative*.

Highlights of recent management reforms include:

- Approval of public access to internal audits of the UNDP, UNICEF, UNFPA, and UN Women;
- Adoption of enhanced whistleblower protections at the WMO.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: In formulating requests for voluntary contributions from the IO&P account, the program officers consider past performance of the organizations and the likelihood that continued U.S. contributions will contribute to successful outcomes by the organizations. For most organizations with which the IO Bureau works closely, IO staff has been advocating continued focus on performance, the adoption and/or refinement of results-based budgeting, and implementation of transparency and accountability mechanisms.

The contributions funded by this account provide funding for multilateral institutions that support global solutions; therefore, it is quite difficult to determine the extent to which the organization's performance is attributable to the U.S. contribution. The overarching priority of foreign assistance through IO&P contributions is to advance U.S. policy by working through results-driven, transparent, accountable, and efficient international organizations. The IO Bureau requests funding for voluntary contributions to organizations and programs through the IO&P account for programs that support U.S. interests and for programs that the United States believes meet minimum standards for accountability, transparency, and performance. The programs to be funded through the IO&P in FY 2017 meet these standards.

State International Security and Nonproliferation (ISN)

Foreign Assistance Program Overview

The proliferation of weapons of mass destruction (WMD) to nation states and terrorists is a direct and urgent threat to U.S. and international security. The Bureau of International Security and Nonproliferation (ISN) leads the Department of State's efforts to prevent the spread of WMD – whether nuclear, biological, chemical, or radiological – and their delivery systems, as well as destabilizing conventional weapons. The Bureau's security assistance programs in this request are vital tools in these efforts. ISN uses these programs to strengthen foreign capabilities to deny access to these weapons and related materials, expertise, and technologies; destroy WMD/missiles and secure related materials; strengthen strategic trade and border controls worldwide; and prevent, prepare for, and respond to a terrorist attack using WMD.

Request by Account and Fiscal Year

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
TOTAL	203,140	*	201,566	-1,574
Nonproliferation, Antiterrorism, Demining and Related Programs	203,140	*	201,566	-1,574

Nonproliferation, Antiterrorism, Demining and Related Programs (NADR)

International Atomic Energy Agency (IAEA): The IAEA is essential to U.S. efforts to prevent nuclear proliferation and terrorism and to promote the peaceful and safe use of nuclear technology around the world. It is in the U.S. national interest to ensure that the IAEA has the resources and capabilities to detect and deter both the diversion of nuclear material to military uses and any undeclared nuclear material or activities. The IAEA's assessed Regular Budget has not kept pace with increased demands on its programs, and so the IAEA depends heavily on the extra-budgetary contributions of IAEA Member States, including the United States. The FY 2017 Request for U.S. voluntary contributions to the IAEA is \$89.8 million. Funds may be used to support the full range of IAEA activities not covered by the IAEA regular budget.

U.S. efforts to ensure compliance with international nuclear obligations -- and to deter noncompliance -- are heavily dependent on IAEA verification activities which, in turn, depend heavily on extra-budgetary support, especially through the U.S. voluntary contribution. In particular, the IAEA requires extra-budgetary support for its essential role in monitoring Iran's nuclear commitments under the Joint Comprehensive Plan of Action (JCPOA) concluded among the United States, China, France, Germany, the Russian Federation, the United Kingdom (coordinated by the European Union), and Iran. Also, as expanding peaceful nuclear energy programs increase demands on the IAEA safeguards program, requested FY 2017 funding will help ensure that the Agency has the financial, technical, and human resources needed to maintain high nonproliferation standards. Of particular importance to the long-term effectiveness of IAEA safeguards is the modernization of the Agency's safeguards information technology (IT) system, which will increase the efficiency of day-to-day work and the security of safeguards information.

IAEA programs that ensure that high standards of nuclear safety are implemented over nuclear materials and facilities also depend on voluntary contributions from the United States and other Member States. The U.S. voluntary contribution likewise provides funding for IAEA activities promoting access to the peaceful uses of nuclear energy, encompassing assistance to countries interested in nuclear power and applications in areas such as human health, water resource management, food and agricultural security, and earth and marine science. Further, the U.S. share of the IAEA's Technical Cooperation Fund and the State Department's support of the IAEA's Peaceful Uses Initiative are funded through the U.S. voluntary contribution. U.S. support in this area, while assisting the IAEA materially in carrying out its full set of activities, also demonstrates concretely the U.S. commitment to the Nuclear Nonproliferation Treaty provisions regarding peaceful cooperation in the field of nuclear energy, and secures political support for nonproliferation and for the IAEA from other Member States.

Key Interventions:

- The United States will provide across-the-board support for the IAEA's Department of Safeguards, including the development and procurement of equipment, training of inspectors and staff, analysis of samples, and the modernization of IT infrastructure. This support is critical to ensuring that the IAEA is able to develop and maintain advanced safeguards technologies and procedures, as well as implement effective safeguards at an ever-increasing number of locations.
- The United States will provide resources to support the IAEA's role in monitoring Iran's nuclear commitments under the JCPOA, essential for verifying that Iran is fulfilling those commitments.
- The United States will support the continued implementation of the IAEA's Nuclear Security Plan for 2014-2017 and other IAEA activities that help keep weapons-usable nuclear material out of the hands of terrorists and carry forward the objectives of the Nuclear Security Summits.
- The United States will support IAEA efforts to promote a systemic approach to nuclear safety, including by: enhancing the ability of countries to regulate their nuclear facilities and radiation activities; strengthening radioactive waste management; ensuring the safe transport of radioactive material; and strengthening the control of radioactive sources. The IAEA is uniquely suited to strengthening nuclear safety measures globally in light of the lessons learned from the accident at the Fukushima nuclear power plant.
- The United States will support IAEA efforts to renovate the Nuclear Applications Laboratories at Seibersdorf, Austria, which are central to the IAEA core mission of helping Member States gain access to nuclear technologies for peaceful purposes. This long-delayed capital investment is partially funded through the IAEA's Regular Budget, but extra-budgetary contributions are required to cover the balance.
- The United States will help the IAEA assist countries interested in nuclear power generation to develop the infrastructure necessary to pursue it under high safety, security, and nonproliferation standards.
- The United States will also provide in-kind contributions that support critical IAEA work, for example, through technology development, analytical support, training courses, and the facilitation of U.S. experts' participation in IAEA meetings abroad, including as instructors. U.S. funding also covers the provision of cost-free U.S. experts to the IAEA in support of all its activities.

Global Threat Reduction (GTR): GTR programs reduce the risk that terrorists or proliferant states will obtain access to WMD-applicable expertise, equipment, and materials. GTR enhances the biological, chemical, and nuclear security of partner countries through programs that secure dangerous pathogens; strengthen capacity to disrupt and deter chemical terrorism threats; reduce insider nuclear threats; and teach security best practices to scientists, technicians, and engineers with WMD-applicable expertise. GTR uses its centrally-managed funds to counter enduring and emerging WMD threats of this kind worldwide. A major focus is on activities that address the Islamic State in Iraq and the Levant (ISIL) and Al Qaeda, their affiliates, and other terrorist groups. In FY 2017, GTR will continue to prioritize resources in high-threat countries where terrorists can exploit materials, equipment, and expertise to

develop WMD. GTR will implement high-impact WMD threat reduction activities in the Middle East and North Africa (to include Egypt, Iraq, Turkey, and Yemen), and South and Central Asia (to include Afghanistan, India, and Pakistan). In FY 2017, GTR activities will also focus on chemical and biological security, as well as appropriate outreach on security issues to the nuclear technical community in priority countries. The FY 2017 Request for GTR is \$67.0 million.

GTR contributes to several Presidential initiatives and priorities, such as the counter-ISIL strategy, the Global Health Security Agenda, the Prague Agenda toward a world without nuclear weapons, and Chemical Weapons Convention universality. In addition to its priority efforts in the Middle East, North Africa, and South Asia, GTR will address threats in Southeast Asia (including Indonesia), Sub-Saharan Africa (including Nigeria), and Latin America (including Brazil). GTR will also continue to engage scientists with dual-use skills in the former Soviet Union through support to the International Science and Technology Center in Kazakhstan and the Science and Technology Center in Ukraine. GTR regularly reviews biological, chemical, and nuclear threat trends and may devote resources to new countries or regions in response to emerging biological, chemical, or nuclear risks. Finally, requested FY 2017 funding will support administrative and travel costs in support of GTR programs.

Key Interventions:

- GTR will prevent the acquisition of dangerous chemicals through its Chemical Security Program (CSP), the U.S. government's primary effort aimed at reducing chemical threats internationally. GTR's robust programming will mitigate chemical threats from ISIL and address emerging threats in new priority countries as needed. GTR activities may include: outreach to law enforcement and chemical distributors to promote best practices to prevent the theft, diversion, or illicit acquisition of weaponizable chemicals; training law enforcement and other government stakeholders to detect, delay, and deter chemical weapons attacks; and engaging scientists having chemical weapons-applicable expertise to reduce the likelihood that they will collude with or inadvertently assist terrorists or proliferant states. CSP will continue to support training for partner country representatives to identify and address national-level chemical security risks, and conduct related investigation and prevention operations; support partner country civil defense authorities to properly use real-time field-deployable chemical agent detectors; strengthen university and industry chemical laboratory capabilities to track, minimize, and secure dual-use chemical materials and equipment; and build awareness of insider theft and diversion risks among chemical laboratory and industry security managers and staff.
- GTR will reduce the threat of terrorist acquisition of biological materials, equipment, and expertise that could be exploited to develop a biological weapon through implementation of its Biosecurity Engagement Program. In FY 2017, GTR activities will include securing pathogens, promoting biosecurity best practices at laboratories that handle or store dangerous biological material, training law enforcement and other government stakeholders to detect and prevent bioweapon plots, and engaging scientists with dual-use expertise to reduce the likelihood that they will conspire with or inadvertently assist terrorists or proliferant states. GTR will also promote responsible bioscience ethics; support secure and safe efforts to detect and control infectious disease; enhance compliance with international biological nonproliferation frameworks and regulations; increase the use of diagnostic practices that reduce bioterrorism risks; strengthen laboratory security for facilities storing dangerous pathogens; promote accountable inventorying of pathogens; and strengthen personnel reliability practices of biological scientists and their institutions. GTR will continue to support trainings and engagements with partner country representatives from the government, non-government, and university sectors to ensure implementation of laboratory biorisk management best practices. GTR's FY 2017 programmatic activities will directly support the Global Health Security Agenda, which prioritizes biosecurity to prevent bioterrorism.
- GTR's Partnership for Nuclear Security (PNS) engages priority country nuclear operators, regulators, and security services to mitigate the risk that non-state actors could divert nuclear material,

technology, or expertise to terrorists or proliferant states. In FY 2017, GTR will assist partner countries to establish trustworthiness programs, mitigate insider threats, and strengthen nuclear security culture practices through technical trainings with nuclear scientists, technicians, engineers, operators, and related security services. These activities may emphasize: applying and assessing nuclear security culture in technical operations; delivering advanced nuclear security culture training (emphasizing strong policies and procedures) for nuclear technical workforces; enhancing security vetting procedures at nuclear facilities; and providing material support for senior facility managers in nuclear technical organizations to implement behavioral observation programs and practical insider threat mitigation strategies.

Weapons of Mass Destruction Terrorism (WMDT): WMDT advances international nuclear security by enhancing global capabilities to prevent terrorist acquisition and use of nuclear/radiological materials. The ongoing occurrence for more than 20 years of nuclear and radiological material trafficking highlights the very real threat that terrorists or other malicious actors are seeking to acquire these dangerous materials. Through the Global Initiative to Combat Nuclear Terrorism (GICNT) and the Counter Nuclear Smuggling Program (CNSP), WMDT works with partner governments to address this threat and improve capabilities to: investigate nuclear or radiological material smuggling; locate and secure materials on the black market; arrest and prosecute those smuggling or seeking to acquire nuclear or radiological material; and respond to a nuclear or radiological terrorist incident. WMDT seeks to strengthen counter-nuclear smuggling capabilities in countries that are vulnerable to nuclear or radiological material smuggling and increase political commitment to nuclear security. These efforts also implement U.S. commitments from the National Security Summits. Recent press reporting that the country of Georgia arrested three people smuggling Cesium shows the impact of WMDT's work to advance Georgia's capacity to investigate, arrest, and prosecute smugglers. The FY 2017 Request for WMDT is \$6.2 million.

Key Interventions:

- Approximately \$1.9 million of requested WMDT funds will be used to lead and monitor the development and implementation of the work program for the GICNT, which the United States (through the ISN Bureau), co-chairs; organize workshops and exercises that promote fundamental best practices in the areas of nuclear detection, nuclear forensics, and emergency response and mitigation; and ensure active participation by partner countries in these events. In FY 2017, the GICNT will play an increased role in implementing key priorities from the Nuclear Security Summit process and will execute activities that build on the outcomes of the June 2016 GICNT Tenth Anniversary High-Level Meeting, where senior leaders are expected to identify emerging nuclear security challenges that would benefit from further GICNT focus. Requested funding will also support the web-based Global Initiative Information Portal, which is the GICNT's secure communications system used to share information and support GICNT activities. In FY 2017, the GICNT will continue to emphasize practical activities, such as workshops, exercises, and experts meetings, to promote the exchange of best practices and lessons learned, and will promote the integration of core capabilities across disciplines and at the national, regional, and international levels. GICNT activities will also focus on key fundamentals for exercise design, implementation, and self-assessments to help partners gain expertise for developing and improving national-level exercise programs. Requested FY 2017 funding will also provide for administrative costs and travel in support of GICNT activities, including for key developing countries.
- Approximately \$4.3 million of the requested funding will be used by CNSP to support capacity-building efforts in priority partner countries to: develop counter-nuclear smuggling investigative skills; develop sustainable nuclear forensics capabilities; strengthen and develop best practices to prosecute nuclear/radiological material smugglers; and develop national nuclear and radiological material smuggling response plans. Specifically, CNSP will use the following types of engagements to further these goals: multilateral trainings, workshops, or forums for prosecutors and judges; and national nuclear/radiological smuggling response plan exercises or drafting sessions.

CNSP will also develop and organize introductory curricula to establish sustainable training programs in partner countries to help develop national procedures to identify, investigate, and arrest criminals attempting to smuggle nuclear/radiological materials. Another key area CNSP will focus on is advancing nuclear forensics capabilities through developing a pilot project to train the next generation of nuclear forensic scientists and providing practical hands-on training. Countries for engagement will include those that have signed Counter-Nuclear-Smuggling Joint Action Plans, as well as others assessed to be vulnerable to nuclear and radiological material smuggling. Requested FY 2017 funding will also provide for administrative costs and travel in support of CNSP projects.

Export Control and Related Border Security (EXBS): To prevent WMD proliferation and destabilizing accumulations of conventional weapons, EXBS helps foreign government partners establish and implement strategic trade controls and related border security systems consistent with international standards. The EXBS program is active in countries that possess, produce, or supply sensitive items and materials, as well as countries through which such items are likely to transit. EXBS assistance focuses on developing partner countries' capacities in five critical areas: legal and regulatory frameworks, interagency-based licensing systems, enforcement procedures and tools, industry outreach mechanisms, and interagency coordination/international cooperation. In FY 2017, EXBS plans to have 55 bilateral partner countries and 14 'graduate' partner countries. Requested funding includes \$18.6 million for the EXBS program's centrally managed funds, which covers the advisor management program; assessments, evaluations, and training; engagement and sustainability efforts; global, regional, and thematic events; equipment maintenance and repair; and general program administration and support. (Note: Justifications for bilateral and regional EXBS program funding can be found in the Regional Perspectives section of this Congressional Budget Justification. The FY 2017 Request for the entire EXBS program is \$60.0 million.)

Key Interventions:

- EXBS will employ approximately 24 in-country advisors, two dedicated EXBS Advisor positions for South Asia, and 47 locally-employed staff who coordinate in-country capacity-building efforts, maintain close working relationships with partner governments, provide support to Washington-based program managers, and ensure EXBS assistance is used to good effect. In addition, EXBS will employ approximately 15 specialized trainers who assist in the delivery of customized trainings for partner countries on an as-needed basis.
- EXBS will periodically assess strategic trade control systems in existing and prospective partner countries.
- EXBS will update existing training materials, as well as develop new training materials, to ensure its technical assistance keeps pace with a dynamic and evolving threat environment.
- EXBS will sponsor global, regional, and thematic conferences that focus international attention on pressing strategic trade and border control issues, such as catch-all controls, brokering, transit and transshipment, intangible transfer of technology, and financing of proliferation-related activities. A portion of the program's centrally managed funds may be used to provide assistance to countries for which bilateral funds are otherwise unavailable.
- EXBS will assist partners that have otherwise 'graduated' from the program to prevent backsliding and conduct limited engagement with countries for which bilateral funds are otherwise not requested, including Bahrain, Croatia, Cyprus, Czech Republic, Estonia, Hungary, Kuwait, Latvia, Lithuania, Malta, Poland, Qatar, Romania, Saudi Arabia, Slovakia, Slovenia, Taiwan, the United Arab Emirates, and other countries as needs arise. This focus on sustainability continues to demonstrate good results, as EXBS graduate partners increasingly take on mentor and regional leadership roles, providing training, sharing of best practices, and facilitating cross-border exchanges to support and reinforce EXBS bilateral assistance programs.
- EXBS will maintain equipment previously provided to partner countries and provide technical support for users of the Tracker automated licensing system, which is specifically designed to assist

foreign government officials with administering national export control systems. A portion of the program's centrally managed funds may be used to provide equipment, including to countries for which bilateral funds are otherwise unavailable.

- EXBS will leverage the clout and access of international and multilateral organizations, such as the UN Office on Drugs and Crime, the World Customs Organization (WCO), and the multilateral export control regimes, by supporting their efforts to strengthen their capacity to establish and help countries implement international norms for strategic trade controls. For example, EXBS has funded development and delivery of enforcement tools by the WCO, including development of a cargo targeting system, best practices guidance, and enforcement training. A portion of the program's centrally managed funds may be used to cover participation of international and multilateral organizations in EXBS activities, and to fund the participation of EXBS partner countries and other countries in activities hosted by multilateral organizations.
- EXBS will support analytical efforts of academic and non-governmental organizations to further develop mechanisms and tools that enhance the ability of EXBS partner governments to effectively regulate strategic trade, including internal compliance tools, end-user screening tools, and targeting tools. A portion of the program's centrally managed funds may be used to commission research that supports EXBS capacity-building objectives, including studies to illustrate economic benefits resulting from implementation of comprehensive strategic trade controls in transshipment countries, proliferation typologies studies, and program measurement and program evaluation studies.
- EXBS will support development of an international pool of experts that will provide targeted legal, licensing, and enforcement technical consultations to EXBS partner countries to supplement EXBS bilateral assistance.
- EXBS will develop and utilize program measurement tools and evaluation efforts to ensure that EXBS assistance is reaching its objectives.
- EXBS will fund appropriate administration and oversight costs, including travel, in support of program goals and objectives.

In addition to these program centrally managed activities, requested FY 2017 bilateral and regional funding will support priorities such as:

- Providing inspection and detection equipment for border areas in Ukraine and Georgia, and increasing support to the Baltic Republics in detecting and interdicting WMD and related items at the borders.
- Expanding efforts to strengthen border security in the Middle East, and establishing transit/transshipment and brokering controls to prevent proliferation.
- Advancing legal/regulatory controls on the export, transit, and transshipment of dual-use items in Southeast Asia, and strengthening enforcement capacity.
- Promoting harmonization of strategic trade controls with multilateral export control regimes in South Asia, and increasing enforcement capacity to detect, interdict, and prosecute illicit trade.
- Supporting select EXBS partner countries as they transition from assistance recipients to assistance providers.

The Nonproliferation and Disarmament Fund (NDF): The NDF supports U.S. diplomatic efforts worldwide to halt the spread of WMD, their delivery systems, and destabilizing conventional weapons systems, through carefully selected proposals that are vetted through the U.S. government nonproliferation community, approved at the Department's Under Secretary level, and notified to Congress. The NDF is a contingency fund that responds rapidly to vital nonproliferation and disarmament opportunities, circumstances, or conditions that are unanticipated or unusually difficult. Requested funding of \$20.0 million for FY 2017 will allow the NDF to continue its efforts to destroy, eliminate, demilitarize, or neutralize weapons and enabling materials; support interdiction activities, the safeguarding of sensitive materials, and border security; and support other high-priority projects to halt and deter the proliferation of WMD and destabilizing conventional weapons.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: GTR examines both the impact of programmatic activity and partner country progress towards prototypic WMD security end-states. Annually, GTR funds the use of a metrics tool that measures the biological, nuclear, and chemical security culture in priority countries. These data provide a snapshot of national and institutional progress towards a robust and sustainable security culture that would reduce the risk that terrorists or proliferators could obtain WMD-applicable expertise, equipment, and materials. GTR also contracts an annual effectiveness study that provides a comprehensive and systematic evaluation of the impact of GTR's chemical, biological, and nuclear security programs within a particular country. In addition to these two main mechanisms, GTR activities include after-action evaluations, before- and after-activity assessments, and other tools to better understand the effectiveness of GTR's WMD threat reduction activities.

WMDT collects standardized and specific evaluation data upon completion of each GICNT activity to obtain feedback, identify key best practices and future priorities, and assess partner nations' intent to utilize lessons learned and best practices to enhance their national capabilities for combating nuclear terrorism. WMDT develops internal after-action reports to evaluate the effectiveness of activities in meeting stated objectives. In addition, WMDT develops products that highlight an activity's key outcomes, best practices, and next steps that are made available on the GICNT's web portal and shared at future activities to benefit all partners, including those unable to attend the activity. For CNSP, WMDT conducts post-event evaluations and analysis, formal evaluative reports at the completion of events, surveys several months after events have been completed, and post-project assessments to determine if project objectives were met. WMDT analyzes each of these GICNT and CNSP reports and products to make budgetary decisions and to design follow-on activities that build on each event's success and address remaining gaps and challenges identified by partners.

EXBS monitoring and evaluation is a four-level process. On the operational level, EXBS collects regular activity-level performance data from its implementing partners using a standardized activity performance monitoring survey. These metrics assess the effectiveness of EXBS training content and delivery in meeting participants' needs and inform future selection of EXBS training methods and tools. For example, EXBS conducts surveys of conference participants to determine if the substance and focus of the conference reflected current nonproliferation challenges and produced increased understanding and improved cooperation. EXBS uses this performance feedback in planning future training and conferences. Second, EXBS annually collects uniform program-wide data to feed into indicators that measure progress achieved in each partner country in each of the assistance pillars. These indicators assess the development of new legal measures, evidence of licensing, engagement with domestic industry, cooperation with partners, and evidence of export control investigations and prosecutions. Third, EXBS conducts periodic external assessments of national strategic trade control systems in partner countries using the Revised Assessment Tool (RAT) methodology (an EXBS-funded and -developed tool). The RAT employs a 419-point survey to assess a given country's legal authorities, licensing, enforcement, and industry outreach capabilities for conformance with international standards. The RAT methodology allows longitudinal evaluation of progress in assessed EXBS partner countries and is used for internal planning purposes in tailoring EXBS assistance to close remaining gaps. Starting in FY 2016, RAT assessments will also formally analyze each country's system against EXBS graduation criteria. Finally, EXBS conducts periodic performance evaluations; the EXBS Advisor program is the subject of the most recent one.

To ensure tight management controls, the NDF has requested annual audits by the Office of the Inspector General that began in March 2014. The 2014 audit focused on programmatic management, contracting, and integrity of financial data. The 2015 audit focused on select management controls, project

implementation, and financial controls. Currently, the NDF uses up to five percent of its fiscal year appropriated funds for administrative and operational purposes. In addition, the NDF project close-out team reviews projects on which work has been completed. NDF's finance team's review, in conjunction with the project managers' oversight, demonstrated efficient project monitoring and evaluation, resulting in the timely closure of completed projects, and the return of approximately \$66.0 million to NDF availability to date. The office has also embarked on an automated financial data reconciliation process, which will enable it to continue to improve the quality and accuracy of its monetary resources.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: GTR utilizes the metrics tool to inform the allocation of budgetary resources to areas of greatest threat. Last year, GTR obtained baseline data for a select group of priority countries. Over time, GTR's evaluation studies will highlight progress towards building a sustainable WMD security culture and may also identify countries where strategic reassessment is needed. To date, effectiveness studies have demonstrated the efficacy of GTR's multi-pronged approach of engaging government stakeholders to encourage national standards and reform, and also training and supporting scientists and professional societies at the institutional level. For example, in partner countries where national legislation is weak, GTR is strengthening security culture at key institutions and facilities. GTR works in countries with austere and dynamically evolving security environments. On a year-to-year basis, changing governments and active terrorist threats can impede or reverse previous progress.

WMDT draws from prior year evaluations to improve the design and conduct of both GICNT and CNSP activities, products, and workshops. For example, based on an identified need to promote interagency cooperation and communication within a national response framework, GICNT continues to focus its activities on cross-disciplinary training exercises that highlight model ways of addressing issues. Also, based on evaluation feedback, GICNT has continued to: incorporate more opportunities for participants to be involved in the development of exercises and outcomes documents; share products, guidance, and other important background materials with registered participants in advance of an event to enable effective preparation; and distributes 'take-home' versions of tabletop exercises for all participants to organize exercises domestically following the GICNT events. GICNT is also developing thematic series of events to ensure continuity between each event in the series and that all activities build upon one another strategically to continue enhancing partners' capabilities. WMDT uses prior-year surveys and after-action reports to inform budget decisions about new CNSP-funded engagements and to modify trainings and workshops to meet goals. CNSP has begun using follow-up surveys of trained personnel to identify who has shared the information with their colleagues and how they are applying the lessons learned to their daily work. These surveys have assisted with identifying: further areas of training need; if the training fills gaps; and if a return on investment can be identified with trained individuals applying or passing on the training they received. WMDT also considers whether CNSP projects have aided in qualifying countries as a 'regional expert,' thereby enabling them to share their experiences and expertise within multilateral fora such as the GICNT.

Proliferators and their networks operate globally, seeking vulnerable points in the global supply chain to exploit. EXBS assistance is designed to develop national capabilities to effectively regulate trade in controlled items, prevent or interdict illicit trafficking, and identify and penalize violators. To that end, EXBS evaluates the type of threats to be addressed and the effectiveness of the remedies identified to address these threats. EXBS conducts national RAT assessments to determine supplier and diversion risks in EXBS partner countries, examine existing national legal authorities and institutional capabilities to manage these risks, and propose recommendations for EXBS action to prevent proliferation of sensitive goods, technologies, and equipment. In this way, RAT assessments help influence prioritization of EXBS resources to implement specific types of activities in every partner country. In FY 2016, EXBS will conduct a total of 16 comprehensive RAT assessments of strategic trade control systems, including ten in-country assessments and six 'tabletop' assessments. At a minimum, each

comprehensive assessment will address laws, regulations, institutions, implementation, and training in the areas of licensing, enforcement, government outreach, and international commitments. The reports will also assess the implementation and enforcement of export control legislation/regulations in the existing Free Trade Zones.

EXBS assessment data indicate that implementation of advanced strategic trade controls -- such as catch-all controls, intangible technology transfer controls, and transit/transshipment controls -- remains challenging for many EXBS partner countries. As a result, EXBS is prioritizing development of institutional capabilities to implement and enforce such controls. EXBS performance monitoring data has generated programmatic investments in two areas that EXBS will continue to pursue in FY 2017. The first is expanding EXBS offerings in industry outreach, including: updating or developing new end-user screening and risk management tools and internal compliance measures for industry use; expanding outreach to key industry sectors at risk of exploitation by proliferators, such as financial institutions; and educating its EXBS Advisors about best practices in industry outreach to enable them to become effective advocates of reform. Second, EXBS is leveraging efforts of international organizations to sustain effective implementation and enforcement of strategic trade controls. To that end, EXBS will continue to extend its collaboration with international and multilateral organizations, including the UN Office on Drugs and Crime and the World Customs Organization, to promote norms compliance and development of operational tools that help countries achieve those norms. For example, in FY 2016, EXBS will fund the second global strategic trade enforcement exercise organized by the World Customs Organization to enable EXBS partner governments to generate leads in the investigation of strategic trade control violations.

Office of U.S. Foreign Assistance Resources

Foreign Assistance Program Overview

The Office of U.S. Foreign Assistance Resources (F) was established in 2006 to strengthen the Secretary's ability to oversee and coordinate all State and USAID foreign assistance.

ForeignAssistance.gov

The public database maintained at www.ForeignAssistance.gov is a key element of the U.S. government's commitment to improve U.S. foreign assistance transparency. This data collection effort will make foreign assistance more effective and increase accountability. It also enables the U.S. government to meet both domestic and international transparency commitments, such as the *U.S. Overseas Loans and Grants, Obligations and Loan Authorizations* Congressional report and International Aid Transparency Initiative (IATI) reporting. To accomplish these goals, this program collects detailed foreign assistance data in a standard and timely way from all U.S. government agencies that fund or implement foreign assistance, and presents it to the public through user-friendly graphics and in machine-readable formats. Funds will continue to support agencies in institutionalizing quarterly, comprehensive foreign assistance data reporting. Funds will also be used to develop educational materials and support outreach efforts to raise awareness, increase accessibility, and build the capacity of stakeholders to use the data.

Foreign Assistance Evaluation Activities

F coordinates reporting on State and USAID foreign assistance evaluation activities as well as oversees the implementation of the Department of State's evaluation policy on behalf of the Deputy Secretary of State. In this role, F provides overall guidance and technical assistance in implementing the policy - working with bureaus on best practices and lessons learned. Funds for evaluation activities will be used to support an evaluation funds competition to F directed evaluations and/or systematic reviews of emerging issues as well as collaborative evaluations.

Request by Account and Fiscal Year

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
TOTAL	31,500	*	4,031	-27,469
Overseas Contingency Operations	30,000	*	-	-30,000
Complex Crises Fund	30,000	*	-	-30,000
Enduring/Core Programs	1,500	*	4,031	2,531
Economic Support Fund	1,500	*	4,031	2,531

Economic Support Fund (ESF)

\$2.75 million in program funding is being requested to improve aid transparency by supporting the continuity of the www.ForeignAssistance.gov Program. \$1.3 million in program funding is being requested to support evaluation activities, including collaborative evaluations.

Key Interventions:

- Funding for www.ForeignAssistance.gov supports the collection and standardization of detailed planning, financial, and programmatic foreign assistance data from all U.S. government agencies that fund or implement aid programs to improve aid transparency, aid effectiveness, and accountability.
- Funding also supports the regular maintenance and operations of the public-facing website, www.ForeignAssistance.gov, as well as improving the website's functionality, user experience, and educational materials.
- Funding ensures that the U.S. government is supporting and engaged with stakeholder groups on complying with the IATI requirements including producing consistent, machine-readable reports.
- Funding also supports an evaluation funds competition aimed at supporting F directed evaluations and/or systematic reviews of emerging issues and encouraging collaborative evaluations within State and other agencies.
- Funding supports F directed evaluations and/or systematic reviews of emerging issues in foreign assistance.

State Office to Monitor and Combat Trafficking in Persons (J/TIP)

Foreign Assistance Program Overview

Combating trafficking in persons is a U.S. government priority and a key issue for the Department of State. U.S. foreign assistance funding requested by J/TIP supports programs addressing the “3Ps”: prosecution of traffickers; protection of victims; and prevention of human trafficking. Human trafficking is modern slavery and deprives people of their basic human rights, threatens our national security, yields negative public health and economic consequences, creates instability in families and communities, corrupts and distorts global supply chains and economic markets and undermines the rule of law. The Office’s mission of leading the United States’ global efforts to combat modern slavery supports the Department’s and USAID’s Joint Strategic Goal of Advancing Democracy and Human Rights and Strengthening Civil Society, as well as the QDDR Strategic Priorities of Promoting Open, Resilient, and Democratic Societies and Advancing Inclusive Economic Growth.

Request by Account and Fiscal Year

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
TOTAL	20,723	*	20,723	-
International Narcotics Control and Law Enforcement	20,723	*	20,723	-

International Narcotics Control and Law Enforcement (INCLE)

The Office to Monitor and Combat Trafficking in Persons (J/TIP)’s strategic priorities include: strengthening foreign governments’ effectiveness in fighting human trafficking; advancing anti-trafficking policies and strategies within the Department of State and in the United States, multilateral, and private sectors; and supporting civil society and private sector efforts to combat modern slavery. Foreign assistance programs provide one of the primary tools to advance these goals. J/TIP’s foreign assistance aligns with the Department’s strategic goals to counter threats to the United States and the international order and to advance civilian security around the world. It supports U.S. government efforts to help foreign governments become more stable, prosperous, and democratic.

J/TIP’s FY 2017 funding priorities are guided by the findings of the annual *Trafficking in Persons Report (TIP Report)*, with the goal of assisting those countries on the lower tiers of the *TIP Report* (Tier 2, Tier 2 Watch List, and Tier 3) to achieve compliance with the Trafficking Victims Protection Act’s (TVPA) minimum standards for the elimination of trafficking in persons. Resources are directed to countries that demonstrate political will to address the deficiencies noted in the *TIP Report*, but lack the economic resources and technical expertise to do so.

Anti-Trafficking Programming

The Office administers a competitive grant process and looks to fund non-governmental organizations (NGO) and public international organizations (PIO) that demonstrate expertise in anti-trafficking activities. J/TIP works closely with the Department’s functional and regional bureaus, U.S. embassies, the Department of Labor, and USAID to strategically select country and regional programs to implement anti-trafficking programs.

Key Interventions:

- U.S. assistance will support a range of NGO and PIO programs with an emphasis on cross-cutting projects – those that address multiple elements of the 3Ps. The Office’s programming is aimed at strengthening government responses in Tier 3 and Tier 2 Watch List countries, as well as some Tier 2 countries.
- Funding will prioritize projects that lead to self-sustaining anti-trafficking programs or that train government officials and/or local NGO staff to become trainers.
- Funding will also advance prevention and protection-focused programming in countries such as Burma, Central African Republic, DRC, Ethiopia, Honduras, India, Kyrgyzstan, Malaysia, Mexico, Niger, Papua New Guinea, Solomon Islands, Tajikistan, and Thailand.
- U.S. assistance will continue to train law enforcement and criminal justice sector personnel to more effectively investigate, prosecute, and hold criminally liable those involved in human trafficking. The Office advance prosecution-focused programming in countries such as Bangladesh, Belize, Belarus, Burma, DRC, Egypt, India, Laos, Mali, Morocco, Nepal, Niger, Papua New Guinea, Solomon Islands, South Africa, Suriname, Thailand, Tunisia, and Ukraine.
- U.S. assistance will also seek opportunities for regional programming, including in: East Africa; the Lake Chad Basin Region (Nigeria, Cameroon, Chad, Niger); the Sahel; Southeast Asia; and Central America.

Training and Technical Assistance (T&TA)

J/TIP’s T&TA provides targeted assistance to enhance foreign government and/or civil society capacity to combat human trafficking. For example, many T&TA projects focus on strengthening legal and institutional mechanisms for combating trafficking or training law enforcement and judicial sector officials who are involved in combating the crime. T&TA requests typically come from partner governments or U.S. embassies seeking assistance on behalf of their host governments. T&TA is generally focused on countries ranked as Tier 2, Tier 2 Watch List, and Tier 3 in the most recent *TIP Report*. The FY 2017 request will allow J/TIP to respond, in a timely and targeted manner, to anti-trafficking needs in a specific country or region.

Key Interventions:

- U.S. assistance will prioritize foreign assistance consistent with the needs articulated in the most recent *TIP Report* and focuses on countries with a ranking of Tier 3, Tier 2 Watch List, and in some cases, Tier 2, where governments have the political will to improve their response to trafficking, but lack the economic resources and technical expertise to address the problem.
- Funding will provide support to develop, strengthen, or implement legislation that would adequately hold traffickers accountable for their crimes and provide necessary protections to victims.
- Funding will also maintain targeted training to enhance victim protection, increase victim identification, and support the establishment of national referral mechanisms and institutionalization of human trafficking data collection and reporting frameworks.
- U.S. assistance will support targeted training to enhance the capacity of criminal justice officials to conduct victim-centered investigations and prosecutions. In particular, J/TIP will emphasize targeted law enforcement training and technical assistance to help build stronger trafficking cases for prosecution.

Emergency Victim Assistance Fund

The Violence Against Women Reauthorization Act of 2013 amended the TVPA to establish the creation of an emergency fund to respond to urgent global needs. This fund enables J/TIP to respond globally to provide rapid emergency assistance to victims - often within hours or days. The fund is also available for broader Department and U.S. government crisis response efforts. The FY 2017 request will continue to support these activities.

Key Interventions:

- U.S. assistance will continue to partner with the International Organization for Migration (IOM) to implement emergency victim assistance response funding.
- Through IOM, U.S. funding will provide emergency assistance on a case-by-case basis for individuals identified as trafficking victims overseas. Services may include: shelter; medical treatment; psychological support; and legal aid, as well as family tracing, repatriation, and reintegration assistance.

Administration and Oversight (A&O)

J/TIP leverages support from non-U.S. government resources to magnify the impact of its resources and avoid duplication of effort. J/TIP uses its A&O to ensure effective oversight and successful implementation of its foreign assistance programming. The FY 2017 request will continue to support these activities.

Key Interventions:

- U.S. assistance will support contractor staff.
- U.S. assistance will also fund external evaluations to examine the effectiveness of at least two projects in accordance with the Department's Evaluation Policy.
- Funds will increase its internal process and performance evaluations on its smaller grant projects as it implements its evaluation strategy.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: J/TIP understands the necessity of using INCLE funding as efficiently as possible. When determining which programs to fund, the Office conducts a rigorous methodological review to ensure the programs' goals are achievable.

Close oversight of awarded projects enables J/TIP to ensure effective use of foreign assistance. Performance monitoring and assessment is accomplished through: routine desk audits and/or site visits that include management and technical assistance; reviewing regular programmatic and financial progress reports; and frequent and routine correspondence with grantees. With FY 2017 funds, J/TIP plans to continue these project monitoring practices. In general, the Office's monitoring plans call for projects to be visited at least once per program cycle, which means that approximately one third of J/TIP's grants will receive on-site monitoring in FY 2017. Oversight also includes the use of common performance indicators for all anti-trafficking programs. Analysis of these indicators is used to identify the most effective programs and information about best or promising practices, which are disseminated to others in J/TIP and within the U.S. government to those who are working on anti-trafficking issues.

The Office continues to implement the Department's Evaluation Policy and developed an office evaluation strategy for FYs 2015-FY 2017.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: J/TIP seeks to strengthen results-based management in its budget and programmatic decision-making processes. Toward that end, it is working to leverage the outcomes of its own monitoring and evaluation efforts as well as data collected by J/TIP implementing partners through their monitoring and evaluation processes. The Office has recruited a Franklin Fellow to refine the Office's evaluation methods and recommend improvements to better quantify their impact. J/TIP is also working with the Under Secretary for Civilian Security, Democracy, and Human Rights (J) Planning, Performance, and Resources unit to institutionalize monitoring and evaluation systems and processes that are standardized to the extent possible across J bureaus and offices.

In implementing its evaluation strategy, J/TIP will focus its FY 2017 evaluation efforts on the U.S.-Ghana Child Protection Compact (CPC) Partnership, which is a flagship program. The Office is working with its CPC Partnership stakeholders to establish a programmatic baseline and plans to fund an external performance evaluation in FY 2017, as well as a final evaluation when the program is completed. The Office will also select at least one more long-term project for an external evaluation during FY 2017. Finally, J/TIP is working with its current and prospective implementing partners to better measure the outcomes of short-term T&TA projects.

State Oceans and International Environmental and Scientific Affairs (OES)

Foreign Assistance Program Overview

OES addresses some of the world's greatest challenges and opportunities: climate change, global health, sustainable oceans, the illegal trade in wildlife and timber, pollution, pandemic preparedness, environmental sustainability, and cooperation in science, technology, and innovation. Foreign assistance programs focus on strengthening partnerships and building institutional capacity so that partners are equipped with tools to take action on environmental and health issues. OES programs support U.S. efforts to address climate change, combat wildlife trafficking and illegal logging, protect vital fisheries resources, support actions to reduce marine pollution and study ocean acidification, promote a level playing field with free trade partners, encourage conservation and sustainable natural resource management and pollution reduction including decreasing mercury emissions, inspire youth to innovate and pursue entrepreneurial activity, address global health challenges by improving capacity and response, and support collaborative scientific partnerships and global engagement in science, technology and innovation. Targeted engagement in strategic regions of the world, such as the Lower Mekong and sub-Saharan Africa, builds partnerships and encourages cooperation on shared challenges such as natural resource management and climate change.

Request by Account and Fiscal Year

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
TOTAL	140,422	*	632,294	491,872
Economic Support Fund	140,422	*	632,294	491,872

Economic Support Fund (ESF)

Concerted Action to Achieve Deep Cuts in Greenhouse Gas Emissions: Climate Change (\$582.2 million): The OES request supports investments in adaptation, clean energy, and sustainable landscapes through the Global Climate Change Initiative (GCCCI). The GCCCI helps countries achieve their climate and development goals by growing their economies in a way that reduces greenhouse gases (GHGs), builds their resilience to climate-related impacts and disasters, and mobilizes investment for the climate and clean energy solutions of the future. GCCCI programs also promote broader development and diplomatic objectives. These programs produce important additional benefits for food security, poverty reduction, health, sustainability, economic development, and regional stability, all of which benefit the U.S. security and economic interests, boost the global economy, and further the Sustainable Development Goals.

Key Interventions:

- **Green Climate Fund (GCF)**: The FY 2017 request includes \$500 million for the GCF through OES as part of a combined Treasury Department and State Department request of \$750.0 million. The United States pledged \$3 billion, not to exceed 30 percent of total confirmed pledges, to the initial resource mobilization of the GCF. The GCF is a multilateral trust fund designed to foster resilient, low-emission development in developing countries. The GCF uses a range of financial instruments to support projects across all sectors, including transport, water and other infrastructure, energy generation and efficiency, and land use, including agriculture and forestry. The GCF also helps countries mobilize private sector capital and strengthen policy environments. Additional information on the GCF is available in the GCCCI narrative in this CBJ Appendix.

- OES Adaptation Programs (\$29.5 million): Through the Climate Smart Agriculture for Food Security initiative the U.S. government, working with Canada and Mexico, will address the impact of climate change on agriculture in Central America by integrating climate-smart agriculture into their diplomatic dialogues and providing assistance to catalyze the efforts and investments of governments and other partners in the region around climate smart agriculture. Funding for this initiative is attributed to the Adaptation and Sustainable Landscapes pillars of the GCCI, is aligned with the U.S. Strategy for Engagement in Central America, and will support multilateral climate-smart agriculture activities.

In addition, vulnerable countries will work through the National Adaptation Plans (NAP) Global Network to strengthen their efforts to mainstream adaptation into national development planning and programs. NAP Global Network activities will help rapidly expand the community of practice on national adaptation planning, promoting an integrated approach to addressing climate risks across development portfolios, and will support developing countries' efforts to develop proposals for funding from multilateral sources such as the GCF. OES adaptation funding may also continue to support the U.S.-India Partnership for Climate Resilience. Funding may also be used to support climate risk insurance initiatives, providing coverage to help respond to severe climate-related events in developing countries.

- OES Clean Energy Programs (\$37.1 million): OES's support for technical dialogue and cooperation on GHG abatement with China was a key factor in China's willingness to make two historic joint announcements with the United States on its climate change actions, which contributed to the successful outcome of the 2015 Paris climate conference. OES will continue and expand the work of the U.S.-China Climate Change Working Group, the U.S.-China Clean Energy Research Center, and other bilateral mechanisms. OES will also support the U.S.-India Partnership to Advance Clean Energy, which has already mobilized substantial public and private investments in clean energy research and deployment, and related cooperation under the Joint Working Group to Combat Climate Change. Cooperation with Brazil through the U.S.-Brazil Climate Change Working Group will include a focus on clean energy. FY 2017 funds will also support the Capacity-Building Initiative for Transparency in order to build institutional and technical capacity on measurement, reporting, and verification of progress by developing countries in achieving their national climate targets.

Initiatives established through the Clean Energy Ministerial will continue to improve energy efficiency standards for appliances, lighting, and buildings, provide web-based interactive expertise to governments on clean energy issues, and support sharing best practices on "smart grid" management. The Low Emission Development Strategies Global Partnership (LEDS GP), together with the Enhancing Capacity for LEDS program is at the heart of the U.S. strategy to help developing countries achieve significant emission reductions. The LEDS GP builds upon U.S. bilateral LEDS assistance by establishing a global knowledge-sharing platform and network of experts to compare lessons and develop best-practice LEDS approaches.

The Climate and Clean Air Coalition will reduce emissions of short-lived climate pollutants (SLCPs) including black carbon, methane, and hydrofluorocarbons. SLCPs cause more than 30 percent of current global warming, millions of premature deaths, and extensive crop losses. The State Department may also continue to work with the Environmental Protection Agency through the Global Methane Initiative, which focuses on near-term methane abatement and recovery.

OES may continue to support programs focused on leveraging private finance to expand access to clean energy by building on its partnerships with the Overseas Private Investment Corporation and the U.S. Trade and Development Agency on programs such as the Global Climate Finance Facility, the U.S.-Africa Clean Energy Finance initiative, and the U.S.-Asia Clean Energy Program; and the

Pilot Auction Facility for Methane and Climate Mitigation that the United States helped launch in partnership with the World Bank. Other programs targeted to enhance access to electricity and investments in clean energy include the Climate Technology Center and Network and the Partnership on Women's Entrepreneurship in Renewables.

OES will ensure effective program management through a contract for independent program evaluation to assess outcomes and performance of climate change programs. OES will continue to utilize ESF to provide support for technical and administrative assistance (including contractor support) to manage, monitor and coordinate implementation of new and existing ESF-funded activities under the GCCI.

- OES Sustainable Landscapes Programs (\$15.5 million): OES will support the interagency SilvaCarbon program, which helps developing countries construct robust forest monitoring systems and GHG inventories, develop forest and land-use maps, develop baselines for monitoring, and perform robust monitoring and reporting. By providing long-term technical support to key countries through advisors placed in-country, the Climate Fellows program builds national capacity to preserve forests and reduce GHG emissions. FY 2017 funding will enable the State Department to build upon a partnership with the U.S. Department of Agriculture on cross-cutting programming on Low Emission Development Strategies that will support Clean Energy and Sustainable Landscapes objectives and help countries reduce GHG emissions from the agricultural sector. OES may also support bilateral cooperation on forests and deforestation reduction with Brazil through the U.S.-Brazil Climate Change Working Group and with India under the Joint Working Group to Combat Climate Change.

OES will support the BioCarbon Fund Initiative for Sustainable Forest Landscapes (ISFL), which brings together public and private sector resources to address the structural drivers of deforestation and degradation in areas where agriculture is a major cause of deforestation and changes in land use. ISFL has pioneered linkages between forest and agricultural landscapes in country programs, increasing the capacity of developing countries to achieve and monitor mitigation results at a large scale. Finally, OES will support the Forest Carbon Partnership Facility (FCPF), which assists developing countries in building capacity and designing plans for their Reducing Emissions from Deforestation and Forest Degradation (REDD+) efforts and thereby providing value to standing forests. FCPF supports more than 45 developing countries to create the reforms needed for good governance, financial responsibility, and capacity building to ensure reductions in emissions from the land sector.

Strengthened Science, Space, Technology and Innovation Partnerships

Key Interventions:

- Global Science Partnership Programs (GSPP): GSPP teaches technical and business skills to scientists, engineers, researchers, and innovators to advance their careers and ability to address key global challenges. GSPP builds an understanding of the importance of science, technology, and innovation in knowledge-based economies and builds connections in the international scientific community. For example, the project on advancing careers of women in science in Africa has led to those who received training conducting similar networking and skills building trainings in their countries after the initial event. GSPP spurs economic growth, fosters transparency and accountability, and promotes prosperity and stability.
- Global Innovation through Science and Technology Initiative (GIST): GIST will use \$2.4 million to empower youth to be engines of economic growth through technology entrepreneurship skill development, mentorship, and financing opportunities. By helping science and technology entrepreneurs acquire skills and financing, the United States can spur economic development and

shared prosperity, forge valuable partnerships, and broaden the reach of the U.S. innovation ecosystem. The program reaches entrepreneurs in over 130 emerging economies around the world through an online interactive platform, a global competition, on-the-ground training activities, and mentorship. Since its launch in 2011, GIST has engaged with more than 2.8 million innovators and entrepreneurs around the world, providing training to over 5,000 startups that have generated more than \$110.0 million in revenue.

Strengthened Environmental, Conservation, and Natural Resource Policies that Advance U.S. Interests

Key Interventions:

- Trade and Environment: OES will use \$24.15 million to support the U.S. trade agenda by implementing environmental cooperation programs, of which \$17.65 million will support Trans-Pacific Partnership (TPP) countries and \$6.5 million will support other free trade agreement (FTA) partner countries (Guatemala, El Salvador, Honduras, Nicaragua, Costa Rica, Dominican Republic, Panama, Peru, Colombia, Morocco and Jordan). OES will fund U.S. contributions to support environmental FTA commitments, including secretariats and other programs that increase public participation, strengthen environmental laws, bolster enforcement of those laws, and improve private sector environmental performance, among other things. OES will rapidly deploy foreign assistance to support new TPP partners, strengthening their compliance with environmental provisions, securing the strategic partnership, and opening markets for U.S. business. Strong environmental cooperation helps create a more level playing field for U.S. business and promote markets for U.S. exports of environmental goods and services. Since 2004, the United States has worked with our FTA partner countries to implement 714 policies, laws, or regulations that promote sustainable natural resource management, conservation, and environmental protection.
- Regional Initiatives: Regional Initiatives complement U.S. diplomatic efforts to address environmental and scientific challenges through international partnerships in strategic regions, such as the Lower Mekong and the Arctic. Efforts include the regional Environment, Science, Technology and Health (ESTH) Hub program, under which our embassies identify and engage in strategic programming with partner governments, regional institutions, the private sector, or civil society to promote cooperation in environmental, science, and health issues. Activities fostered under this programming build international cooperation in areas such as combatting wildlife trafficking, promoting marine conservation, and collaborating to improve public health.
- Mercury: Mercury is a toxic chemical with significant negative health effects, particularly for children and women of childbearing age. All 50 states have active advisories urging residents to exercise caution when consuming certain fish due to their high levels of methylmercury. An estimated 70 percent of the total mercury deposited in the United States comes from global sources. Improving the ability of developing countries to reduce mercury pollution will benefit U.S. public health. U.S. assistance of \$0.7 million under this program catalyzes greater global action to reduce transboundary mercury pollution from the most significant sources during this particularly critical time as countries establish the necessary domestic measures to enable ratification and implementation of the Minamata Convention on Mercury, concluded in 2013. The activities funded by the OES Mercury Program will help reduce mercury emissions, with a focus on the artisanal and small-scale gold mining sector, the largest source of transboundary mercury pollution. Programs will establish and strengthen sustainable initiatives in key countries to improve their chemicals management capacity, facilitate effective implementation of the Minamata Conventions, reduce demand for mercury, and increase capacity to develop and implement comprehensive mercury emission reduction strategies. The OES Mercury Program will continue to leverage substantial outside resources, including from the Global Environment Facility and from local governments and NGOs, making its financial impact at least seven times greater than allocated funds.

Clean, Safe, Secure and Sustainably Managed Oceans and Polar Regions

Key Interventions:

- South Pacific Tuna Treaty: OES will use \$21.0 million to meet an annual commitment under an Economic Assistance Agreement (EAA) associated with the 1987 South Pacific Tuna Treaty. The U.S. commitment under the EAA is fulfilled through funding support to the South Pacific Forum Fisheries Agency, which distributes the assistance to countries in the South Pacific. This assistance supports sustainable use of fisheries resources, increased food security, and enhanced relations with Pacific Island states. It has also benefited the U.S. economy by promoting access for U.S. vessels to some of the most lucrative fishing grounds in the world, which in turn supports employment opportunities for Americans. The funding will ensure the United States can meet its commitments to Pacific Island partners and maintain U.S. engagement in the region as work continues to renew or restructure the South Pacific Tuna Treaty, which will promote American jobs and economic development in the Pacific Region.
- Ocean: Assistance will promote actions that sustain fish stocks, reduce marine pollution, and address ocean acidification by developing partnerships in international fora with the private sector, NGOs, international organizations, and other countries. Sustained growth in carbon dioxide emissions contributes to ocean acidification, which threatens fragile marine ecosystems and the coastal economies that rely on fisheries, ecotourism, and related economic opportunities provided by these unique environments. By collaboratively engaging with international partners, this programming will address these challenges by sharing best practices, identifying the mutual benefits of oceans resources, and catalyzing action through education, technical knowledge sharing, and cooperation.

Improved Water Quality and Access

Key Intervention:

- Global Water Programs: The United Nations Food and Agriculture Organization estimates that by 2025, more than two-thirds of the world's population are likely to be living in water-stressed conditions that will impact social and economic development. Water scarcity and poor water quality increase disease, undermine economic growth, limit food production, and threaten peace and security in many regions of the world where the United States has strong strategic interests. Utilizing \$0.7 million OES will focus on building international political commitment and catalyzing action to increase access to safe drinking water and sanitation, improving water resources management (including for food and energy production), and promoting cooperation on shared waters in regions where water is, or may become, a source of tension. This will include supporting diplomatic and civil society efforts to promote peace and cooperation in key regions like the Nile and Mekong, and partnerships that strengthen U.S. capacity to address international water challenges.

Increased Pandemic Preparedness and Improved Global Health

Key Intervention:

- OES Health Programs: Public health emergencies cost lives and threaten economic stability, national security, and the development potential of nations. FY 2017 programs will strengthen health systems to respond to public health threats, particularly infectious disease events. OES health programming consists of targeted training of key partners to improve global capacity to detect, assess, report, and respond to public health emergencies, in keeping with the interrelated priorities of advancing global health security, fully implementing the International Health Regulations, and strengthening global capacity for emergency response to infectious disease outbreaks. Proactive U.S. involvement in global health can aid in predicting emerging challenges and improving understanding of the interconnectedness of factors affecting the health of humans, livestock, wildlife, and the environment.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: OES continues to strengthen internal capacity for managing and evaluating performance. Site visits to monitor program progress have strengthened the rigor and documentation of those reviews. OES will continue to utilize ESF to provide support for technical and administrative assistance (including contractor support) to manage, monitor, and coordinate implementation of new and existing ESF-funded programs and activities. OES will continue to train personnel in evaluation management, methods, and design, and will remain focused on strengthening the process of awarding, monitoring, and evaluating all financial instruments.

Beyond regular assistance monitoring, several notable monitoring and evaluation activities were undertaken in FY 2014 and FY2015:

- OES entered into a contract for a formative evaluation to support the validity and reliability of performance measurement monitoring across all GCCI pillars and funded projects to support data quality and outcomes. This three-year evaluation activity will underpin data quality relative to the reporting and monitoring of programmatic outcomes. An ongoing evaluation of the OES trade and environment capacity building program continues to strengthen the impact of programming by working directly with project implementers. Results to date include the development and implementation of standardized data collection and reporting templates, as well as customized indicators and project management plans, which have enhanced the effectiveness of implementers in achieving program impacts.
- Two ongoing evaluation contracts established at the end of FY 2014 include: (1) a review of the Climate Renewables and Deployment Initiative and the Clean Energy Ministerial that addresses achievements of these programs in order to document outcomes and identify approaches that resulted in notable successes under the current program models; and (2) an evaluation of the approach and methodology used by the Nexus Dialogue on Water Infrastructure Solutions program relative to intended outcomes and the identification of improvements for similar policy-focused programs in the future. These two evaluations were in their final stages at the beginning of FY16. Final reports were received in January 2016.
- The U.S.-Africa Clean Energy Finance initiative evaluation awarded at the end of FY 2015 will inform State and interagency partners on the performance and outcomes of the program and how it has led to increased investment and infrastructure in clean energy and reduced greenhouse gases. An evaluation of the Lacey Act Amendment programs will study the effectiveness of OES program activities and how they fit with the rest of the U.S. government's effort to combat illegal logging. Evaluation results are expected at the end of FY 2016.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: The evaluation of mercury reduction and storage programs provided useful feedback for strengthening the design of future programs, including preliminary scoping and initiation and data capture and reporting. Insights gained from this evaluation are assisting program offices in the design, solicitation, selection, and implementation of future projects. OES is further strengthening grantee reporting by identifying opportunities for grantee training, and will continue to work with highly qualified local implementers to strengthen local capacity to address mercury in artisanal and small-scale gold mining.

OES initiated a multi-year, third-party formative evaluation to support high quality performance measurement monitoring across all GCCI pillars to help ensure high quality results across all projects. While the formative evaluation is ongoing, interim work has strengthened the data collection and management systems and processes utilized by program implementers and provided comprehensive assessment of data quality under GCCI standard performance indicators. These efforts have informed and contributed to the development and incorporation of improved data collection guidance into reporting and reinforced program monitoring activities, ultimately supporting high quality results reported under the GCCI.

State Political-Military Affairs (PM)

Foreign Assistance Program Overview

Funds requested for PM will support ongoing efforts to create a more peaceful and secure world by enabling U.S. partners to deter aggression; restore international peace and security in the wake of conflict or disaster; reduce the illicit proliferation of arms; secure borders against illegal trafficking and transit; and ensure that security forces operate in accordance with international human rights laws and norms. In accordance with this goal, security assistance activities build legitimate, sustainable, and enduring partner capabilities that improve the ability of friendly nations to address crises and conflicts associated with state weakness, instability, and disasters; and to support stabilization following conflict – which in turn will increase the security of the United States. The request will accomplish the stated goals primarily by supporting efforts to train and equip foreign military forces for legitimate self-defense, as well as peace operations and counterterrorism operations. The request also will support peace and stability worldwide by responding to the security and humanitarian threats posed by obsolete, unstable, or poorly-secured/maintained weapons and munitions stockpiles, including man-portable air defense systems (MANPADS), landmines and other unexploded ordnance.

In addition to the funds noted below, the request includes transfer authority to allow the Department to contribute additional funding to the Global Security Contingency Fund (GSCF) in FY 2017, as required. The GSCF is a shared Department of State-Department of Defense authority that provides for joint program funding, formulation, planning, and approval of programs designed to address emergent challenges and opportunities in a partner's security sector in order to enhance that country's capabilities to conduct border and maritime security, internal defense, and counterterrorism operations; or to participate in or support military, stability, or peace support operations, consistent with U.S. foreign policy and national security interests. In FY 2017, the Departments of State, in concert with the Department of Defense, will continue to implement the GSCF authority and execute GSCF programs in multiple countries while monitoring and evaluating their impact.

Request by Account and Fiscal Year

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
TOTAL	205,454	*	189,141	-16,313
Overseas Contingency Operations	39,165	*	20,100	-19,065
Foreign Military Financing	7,000	*	-	-7,000
Peacekeeping Operations	32,165	*	20,100	-12,065
Enduring/Core Programs	166,289	*	169,041	2,752
Foreign Military Financing	69,575	*	70,000	425
International Military Education and Training	5,510	*	5,500	-10
Nonproliferation, Antiterrorism, Demining and Related Programs	24,849	*	18,000	-6,849
Peacekeeping Operations	66,355	*	75,541	9,186

Foreign Military Financing (FMF)

FMF resources will be used for two purposes: First, FMF will support administrative costs for worldwide military assistance and sales, allowing the U.S. government to enhance the ability of allies to participate in coalition, humanitarian, peacekeeping, counterterrorism, and counter-insurgency operations. Funds will pay for administrative costs at overseas security assistance organizations (SAOs); U.S. military unified commands, military department headquarters, and training activities; and at the Defense Security Cooperation Agency. FMF administrative funds cover the costs related to implementation of the unified command administration and overseas SAO activity, including operational costs, salaries, travel costs, and International Cooperative Administrative Support Systems (ICASS) and local guard costs, in support of the FMF and IMET programs, End-Use Monitoring (EUM), Excess Defense Articles (EDA) transfers, drawdowns associated with section 506(a) of the Foreign Assistance Act, the former Military Assistance Program, and other military assistance and sales programs. These funds also cover certain Department of State administrative costs, such as oversight travel and program monitoring and evaluation.

Key Interventions:

- The FY 2017 request of \$67.0 million supports the operating costs required to administer military assistance and sales programs in security assistance offices overseas.
- \$3.0 million supports the PM Bureau's efforts to monitor and evaluate military grant assistance programs.

International Military Education and Training (IMET)

IMET resources will be used to support the administrative costs of implementing the IMET program to promote regional stability and defense capabilities through professional military education and other training. IMET administrative funds support U.S. military education and training facilities, including general costs, salaries, course development, and curriculum development, in particular at three dedicated expanded IMET (E-IMET) school houses: the Center for Civil-Military Relations, the Defense Institute of International Legal Studies, and the Defense Institute for Medical Operations.

Key Intervention:

- The FY 2017 request of \$5.5 million primarily supports operating costs and curriculum development at the E-IMET school houses.

Nonproliferation, Antiterrorism, Demining and Related Programs (NADR)

Funds requested for the Nonproliferation, Antiterrorism, Demining and Related Programs (NADR) Conventional Weapons Destruction (CWD) centrally managed resources support activities vital to national security by reducing the dual threats of illicit availability of conventional weapons and accidental explosion of conventional munitions, as well as supporting foreign policy goals to remediate unexploded ordnance (UXO). This request supports a continuing priority program to reduce the global threat of illicitly-held or at-risk man-portable air defense systems (MANPADS) through safe and effective reduction. This funding also will cover global CWD capacity building efforts (such as developing training aids and standards to help partner nation security forces improve physical security and stockpile management (PSSM) capacity); emergency response funding to help partner countries mitigate risks from potentially dangerous depots and safely remove and dispose of materials following catastrophic detonations and other incidents at these facilities; other operations to address emergency CWD requirements, urgent weapons destruction projects, and unforeseen needs world-wide; and administrative expenses (including program management staffing support, programmatic evaluations, program-related travel, and miscellaneous administrative fees). These programs complement bilateral, multilateral and regional CWD programs in over 40 countries that reduce threats associated with landmines and other explosive remnants of war; destroy poorly-secured, unstable, or otherwise at-risk conventional weapons and munitions stockpiles; and improve PSSM and related practices to reduce the threats of illicit weapons proliferation and humanitarian disasters.

Key Interventions:

- The FY 2017 request will support reducing the risks associated with excess, poorly-secured, and otherwise at-risk MANPADS, which, if diverted to violent extremist organizations or terrorists and utilized against civilian or military aviation, could have disastrous security and economic consequences.
- The request will also allow the United States to respond rapidly to emerging conventional weapons-related threats posed by unforeseen political developments and conflicts; enhance partner nation CWD capabilities; and provide emergency assistance to mitigate the humanitarian consequences of conventional weapons-related disasters (such as catastrophic munitions depot explosions).

Peacekeeping Operations (PKO)

PKO resources will support peace operations, counterterrorism, and maritime security capacity building programs. The request includes funds for the Global Peace Operations Initiative (GPOI), which strengthens international capabilities to effectively execute United Nations (UN) and regional organization peace operations. GPOI is the primary global mechanism to address the U.S. government's commitments to build peace operations capacity in partner countries, many of whom pledged additional forces and capabilities at the 2015 Summit. FY 2017 GPOI funds will continue to build sustainable, self-sufficient peace operations training capacity in partner countries and provide support (including equipment and technical assistance) to enable countries to deploy to UN and regional peace operations. Additionally, FY 2017 GPOI funds will support the development and employment of critical enabling capabilities (e.g., logistics, engineering, medical capabilities), as well as promote the role of women in peace operations. Finally, funds will continue to underwrite an evaluation and metrics mechanism, including measures of effectiveness, to ensure GPOI is achieving its goals efficiently and effectively.

PKO funds will also support the new Maritime Security Technical Experts Program (MSTEP) which will support advisory and training support for select maritime security capacity building efforts globally.

Finally, PKO funds will also support the Security Governance Initiative (SGI), an initiative designed to support security sector reform with the six SGI partner countries (Ghana, Kenya, Mali, Niger, Nigeria, and Tunisia) announced at the 2014 U.S.-Africa Leaders Summit. Funds will concentrate on institutional reform, with a heavy focus on the proper role of the military, civil-military relations, and respect for human rights. Support may include training, advisory support, and non-lethal equipment. PKO funds will also support monitoring and evaluation of the PKO-funded pieces of the SGI program.

Key Interventions:

- \$61.0 million in the FY 2017 request will support the Department of State's dedicated global peacekeeping capacity building program, GPOI.
- The FY 2017 request includes \$20.1 million to increase military counterterrorism capacity in key TSCTP partner countries.
- The FY 2017 request includes \$0.5 million to support training and advisory maritime security requirements as part of MSTEP.
- The FY 2017 request includes \$14.0 million to support security sector reform as part of the SGI.

Peacekeeping Operations (PKO) - OCO

PKO OCO funds will continue to support the military capacity building component of the Trans-Sahara Counterterrorism Partnership (TSCTP) program, a multi-faceted initiative designed to counter terrorist threats, strengthen regional capacity, promote interoperability, and facilitate coordination between West and North African nations. Increased funds will help address the more recent threat of Boko Haram. PKO funds for TSCTP will support advisory assistance, military professionalization efforts related to CT

capacity building, modest infrastructure improvement, and training and equipping of counterterrorist military units in the West and North African regions. PKO funds will also support monitoring and evaluation of the TSCTP program.

Key Intervention:

- The FY 2017 request includes \$20.1 million to increase military counterterrorism capacity in key TSCTP partner countries.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: In FY 2017, PM will expand its monitoring and evaluation program designed to improve the overall effectiveness of the military assistance activities funded through the FMF and IMET accounts. Started in FY 2015, the bureau's FMF/IMET monitoring and evaluation program is being built on three primary components. First, PM is implementing a system for monitoring strategic indicators over time to identify changes in the strategic-level security environment and to inform strategic programming decisions and to serve as high-level measures to guide assessment and evaluation. Second, PM is guiding the development and monitoring of a set of military capability indicators, to help refine military assistance program objectives at the country level. Lastly, a set of targeted performance evaluations will be explored to examine the impact of military assistance activities on specific partner country security capabilities, identify lessons learned for improving security assistance, and help determine whether U.S. program activities or other factors contribute to the changes in the established country level objectives.

Since its inception in 2005, GPOI has employed a full-time contracted Evaluation Team to assess the efficiency and effectiveness of GPOI program activities. The team works in close collaboration with program managers and GPOI implementers to gather verifiable, auditable data; identify program areas needing improvement; and help formulate objective-oriented policy solutions. Using a combination of site visits, field-generated reporting, electronic training rosters, evaluation forms, inventory records, and routine communication with implementers, the team captures a comprehensive qualitative and quantitative picture of GPOI program activities.

PM's approach to CWD monitoring and evaluation is a combination of formal reporting, independent host government reviews, and field visits. All CWD implementing mechanisms (grants, cooperative agreements, and contracts) contain specific objectives against which implementers must report quarterly using standardized metrics. PM/WRA has developed a standard operating procedure for creating monitoring and evaluation plans tailored to reflect the degree of risk associated with a given award, and contain the oversight mechanisms necessary to mitigate risks to acceptable levels while minimizing taxpayer risks. Each issued grant and cooperative agreement must have an accompanying risk assessment and monitoring plan regardless of dollar value, duration, or scope. On program substance, host government agencies (national mine action centers for humanitarian demining and relevant security agencies for small arms/light weapons projects) will independently inspect the implementer's work and certify its completion, either verifying or disputing the progress cited in the implementer's quarterly program report. Additionally, PM program officers and U.S. embassy officials conduct frequent field visits to current and past project sites to verify reporting accuracy. On technical monitoring, PM/WRA conducts on-site visits to substantiate sound financial management, program progress, and compliance with laws, regulations, and policies.

When GSCF projects are designed and planned through the interagency consultations, stakeholders and implementers identify and agree to stated GSCF outcomes and indicators to be monitored and evaluated by a third-party contractor. During FY 2016, monitoring and evaluation frameworks are being

developed and/or implemented for GSCF-funded projects in the Philippines and Ukraine, as well as Regional West Africa (Cameroon, Chad, Niger, and Nigeria) project to counter the threat of Boko Haram and some activities under the African Peacekeeping Rapid Response Partnership initiative (Rwanda, Tanzania, and Uganda) under the GPOI program. This framework includes the collection of baseline data at the point of project commencement, monitoring of funded activities, and will enable PM to assess GSCF activities and evaluate their impact and performance.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: The monitoring and evaluation of global and bilateral FMF and IMET programs will focus on tracking high-level evidence of movement toward the achievement of specific predetermined strategic objectives, as well as systematic past performance, through in-depth evaluations. Monitoring will help establish activity baselines, performance tracking, and to identify areas for more in-depth evaluation. Evaluations, once completed, provide insight into progress toward stated goals, but also how the security assistance activities create changes that support desired outcomes. The monitoring and evaluation of FMF and IMET programs will be used to improve the overall effectiveness of military grant assistance, inform resource allocations, and provide accountability by ensuring that resources address requirements that serve broader U.S. foreign policy objectives and promote U.S. interests around the world. These efforts will also place significant emphasis on the development of baseline analyses, with a goal of gathering evidence for assessing the impact of security assistance activities.

Since FY 2005, the GPOI program, through training and equipping activities, has facilitated the deployment of over 200,000 peacekeepers from its partner countries to numerous UN and regional peace operations around the world. As a result of this success, the GPOI program has shifted its focus more toward increasing national peacekeeping capacity building. While FY 2017 funds will continue to provide training, equipment, and sustainment of peacekeeping troops, activities will focus on strengthening the capabilities of partner countries to train their own peacekeeping units by supporting the development of national peace operations trainer cadres and training centers, and by supporting enhancement of critical enabling capabilities that address identified UN and regional peace operations gaps. GPOI's evaluation/metrics mechanisms have enabled PM to identify the types of assistance each GPOI partner requires to become self-sufficient. This enables the United States to target resources for those activities that would fill the gaps that currently prevent GPOI partners from becoming self-sufficient in peace operations training. As a result of the evaluation of specific activities in certain countries, the Department of State has reprogrammed GPOI funding from some countries to others that have been more successful.

FY 2015 TSCTP PKO launched a monitoring and evaluation program to evaluate the effectiveness of prior year and current year TSCTP PKO programs. FY 2015 was focused on post-baseline assessments, designing the result and performance monitoring framework and creating an interagency portal. M&E efforts occurring in FY 2016 will help inform future TSCTP PKO funded allocations and programs.

Through the CWD program and its precursors, the United States has provided humanitarian mine action assistance to more than 90 countries since the inter-agency program's formal inception in 1993. When a country reaches the assistance "end state," either it has developed sustainable, indigenous mine-action capacity to independently handle any remaining landmine issues or it has achieved "mine-impact free" status (free from the humanitarian impact of landmines and other explosive remnants of war). Since 2000, the program has directly helped 23 countries to achieve mine-impact free status or otherwise develop self-sufficient mine action capabilities. The CWD program also has made substantial progress in fighting the illicit trafficking of SA/LW and conventional munitions. Since 2003, the program has reduced over 34,000 MANPADS, and destroyed 1.8 million SA/LW, and 95,000 tons of munitions worldwide.

State Population, Refugees and Migration (PRM)

Foreign Assistance Program Overview

Today's humanitarian crises are unprecedented, both in severity and duration. Through PRM's global programs, the U.S. government seeks to protect and assist the world's most vulnerable people, including refugees, conflict victims, internally displaced persons (IDPs), stateless persons, and vulnerable migrants. With MRA funding, the United States is the leading donor to key multilateral responders, including the Office of the United Nations High Commissioner for Refugees (UNHCR), the International Committee of the Red Cross (ICRC), the United Nations Relief and Works Agency for Palestine Refugees in the Near East (UNRWA), and the International Organization for Migration (IOM). PRM's humanitarian diplomacy helps to get aid and protection to those in dire need, and to promote long term solutions such as voluntary return, local integration, and resettlement. PRM manages the Refugee Admissions Program, which resettles refugees throughout the United States. PRM's other responsibilities include shaping international migration policy in an era of increasingly complex migration trends. PRM advances international population policies that improve women's health through its bilateral and multilateral diplomacy and its work with the United Nations Population Fund (UNFPA). Finally, PRM collaborates with Department of State regional bureaus, USAID, the World Bank, and other stakeholders to integrate humanitarian relief and development assistance, and ensure that development planning includes populations of concern.

Request by Account and Fiscal Year

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
TOTAL	3,109,000	*	2,848,600	-260,400
Overseas Contingency Operations	2,127,114	*	1,916,003	-211,111
Emergency Refugee and Migration Assistance	-	*	40,000	40,000
Migration and Refugee Assistance	2,127,114	*	1,876,003	-251,111
Enduring/Core Programs	981,886	*	932,597	-49,289
Emergency Refugee and Migration Assistance	50,000	*	10,000	-40,000
Migration and Refugee Assistance	931,886	*	922,597	-9,289

Emergency Refugee and Migration Assistance (ERMA)

The ERMA fund enables the President to provide humanitarian assistance for unexpected and urgent refugee and migration needs. The FY 2017 enduring request of \$10.0 million will allow the United States to respond quickly to urgent and unforeseen needs of refugees and other populations of concern in areas where Overseas Contingency Operations (OCO) has not generally been utilized to date.

The FY 2017 request also includes \$40.0 million under the OCO heading for needs related to populations impacted by conflict. Details of the FY 2017 OCO request for ERMA are addressed in the OCO chapter.

Emergency Refugee and Migration Assistance (ERMA) - OCO

The ERMA fund enables the President to provide humanitarian assistance for unexpected and urgent refugee and migration needs. The FY 2017 OCO request of \$40.0 million will allow the United States to respond quickly to urgent and unforeseen needs of refugees and other populations of concern, with a particular emphasis on populations impacted by conflict.

Migration and Refugee Assistance (MRA)

The world is struggling with humanitarian crises that are unprecedented, both in severity and duration. Through PRM's global programs, the U.S. government seeks to protect and assist the world's most vulnerable people including refugees, conflict victims, IDPs, stateless persons, and vulnerable migrants. Programs funded through the MRA account save lives and ease suffering, uphold human dignity and reflect the American people's steadfast belief in assisting those in need. By also helping to stabilize volatile situations, this assistance forms an essential component of U.S. foreign policy. The FY 2017 enduring MRA request of \$922.6 million will fund contributions to key multilateral organizations such as the UN High Commissioner for Refugees and the International Committee of the Red Cross, and to non-governmental organizations that address pressing humanitarian needs overseas and resettle refugees in the United States. Programmatically, these resources will focus on areas where OCO has not generally been utilized to date, including for administrative costs, and the U.S. Refugee Admissions Program. MRA-funded programs meet basic needs to sustain life; protect and assist to the most vulnerable, particularly women and children; assist refugees with voluntary repatriation, local integration, or permanent resettlement in a third country; and foster the humane and effective management of international migration policies.

The FY 2017 request also includes \$1,876.0 million under the OCO heading for humanitarian needs, with a particular emphasis on populations impacted by conflict. Details of the FY 2017 OCO Request for MRA are addressed in the OCO chapter.

Key Interventions:

- **Overseas Assistance:** MRA programs aim to save lives and ease suffering, protect vulnerable populations, achieve durable solutions for those displaced by conflict, and exert leadership in the international community. Through \$307.6 million in funding, PRM provides humanitarian assistance in response to complex emergencies and protracted displacement, as well as supports the voluntary return and local integration of refugees and IDPs. PRM-supported programs are designed to identify and protect the most vulnerable, such as single heads of households, children, the elderly, and the disabled to ensure that they have equal access to life-sustaining goods and services. Strategies to protect the beneficiaries from harm and to protect their rights are incorporated into multiple sectors including: water, sanitation and hygiene, shelter, food, health and nutrition, education, livelihoods, and camp management. Coupled with diplomatic efforts, these programs seek to: prevent the forcible return of refugees to a place where their lives or freedom would be threatened; negotiate access for humanitarian agencies to operate safely and reach people affected by conflict; resolve protracted refugee situations; prevent and reduce statelessness; promote adherence to international humanitarian and human rights law; and help vulnerable people maintain their dignity by advocating for opportunities that promote self-sufficiency. In addition, PRM's core support to multilateral partners allows them to respond quickly and effectively when a crisis hits.
- **Refugee Admissions:** Resettlement is a key element of refugee protection and an important solution when repatriation and local integration are not possible. The United States has the world's largest resettlement program and welcomes the most vulnerable refugees from many backgrounds. The \$567.5 million will fund international and non-governmental organizations to help refugees and certain other categories of special immigrants to resettle in communities across the United States.
- **Humanitarian Migrants to Israel:** The \$7.5 million funding request will help find durable solutions for populations of concern by maintaining U.S. government support for relocation and integration of Jewish migrants, including those from the former Soviet Union, Eastern Europe, and Africa, to Israel.
- **Administrative Expenses:** PRM oversees all programs funded through MRA enduring and OCO appropriations, as well as any funding drawn from the U.S. Emergency Refugee and Migration Assistance (ERMA) account. The \$40 million in funds requested for FY 2017 will ensure strong monitoring and oversight of critical humanitarian programs. The largest portion of administrative expenses will cover the salary, benefits, and travel costs of U.S. direct hire staff, including regional refugee coordinators posted in U.S. embassies around the world.

Migration and Refugee Assistance (MRA) - OCO

The FY 2017 MRA–OCO request of \$1,876.0 million will fund humanitarian assistance to meet basic needs, including emergency shelter, medical care, protection and assistance to the most vulnerable, such as survivors of gender-based violence, with a particular emphasis on populations impacted by conflict. These funds will support multilateral organizations, including the UN High Commissioner for Refugees and the International Committee of the Red Cross, and non-governmental organizations as they respond to the immense needs of conflict victims. MRA–OCO programs aim to save lives and ease suffering, protect vulnerable populations, achieve durable solutions for those displaced by conflict, and exert leadership in the international community. PRM provides humanitarian assistance in response to complex emergencies and protracted displacement, as well as supports the voluntary return and local integration of refugees and IDPs. PRM-supported programs are designed to identify and protect the most vulnerable, such as single heads of households, children, the elderly, and the disabled to ensure that they have equal access to life-sustaining goods and services. Strategies to protect the beneficiaries from harm and to protect their rights are incorporated into multiple sectors including: water, sanitation and hygiene, shelter, food, health and nutrition, education, livelihoods, and camp management. Coupled with diplomatic efforts, these programs seek to: prevent the forcible return of refugees to a place where their lives or freedom would be threatened; negotiate access for humanitarian agencies to operate safely and reach people affected by conflict; resolve protracted refugee situations; prevent and reduce statelessness; promote adherence to international humanitarian and human rights law; and help vulnerable people maintain their dignity by advocating for opportunities that promote self-sufficiency.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: PRM continued to strengthen monitoring and evaluation of its humanitarian programs in FY 2015. Activities included:

- An annual week-long Monitoring and Evaluation Training Workshop for new Washington-based and overseas staff. In 2015, the course included segments on effective desk and field monitoring of NGOs and international organizations; monitoring protection and humanitarian aid programs in and out of camps, and in dangerous environments; programs aimed at stopping sexual exploitation and abuse; and collaboration with development agencies.
- Monitoring and evaluation trainings offered to PRM staff throughout FY 2015 also covered unique protection and assistance needs of disabled people, livelihoods programming, enhanced monitoring for high risk partners, and techniques for understanding and using evaluations.
- A third party contract to monitor PRM-funded programs in Iraq that are located in areas difficult for U.S. government employees to visit due to security restrictions.
- Independent external evaluations:
 - o Completed: PRM funded an evaluation of its livelihoods programming in Ethiopia and Burundi. Findings noted that livelihoods programming often lacked assessments needed to effectively improve beneficiaries' economic well-being. Recommendations outlined strategies for making better decisions on livelihoods programming with NGO and IO implementers.
 - o Ongoing and Started: PRM awarded a contract for an external evaluation to examine best practices in promoting accountability and preventing malfeasance at Refugee Support Centers (RSCs) in Jordan, Egypt, Turkey, Ecuador and Kenya. These centers play a critical role in refugee resettlement. PRM also commissioned an evaluation on the effectiveness of its programs to better equip the Government of Colombia to protect and assist internally displaced persons.
 - o Planned: At the end of FY 2015, PRM issued a request for proposals for an evaluation exploring the effectiveness of education, health, and shelter services for Syrian refugees in Turkey, Lebanon and Jordan.
 - o PRM evaluation reports and follow-up action plans are publicly available on the State Department website: <http://www.state.gov/j/prm/policyissues/prmfund/234850.htm>

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices:

- As a result of its evaluation of livelihood programming, PRM instituted substantial changes in its guidelines for NGOs applying to Notice of Funding Opportunities, including new requirements for programs implementing livelihoods programming. The evaluation also produced tools for drafting notices of funding opportunities, reviewing proposals, and field monitoring. Findings also informed PRM's dialogue with and monitoring of UNHCR as it takes significant steps to improve access to livelihoods for refugees living in camps and cities around the world.
- PRM expanded its use of standardized indicators for performance management of NGO programs. Previously only programs in the health and livelihoods sectors used standardized indicators. In FY 2015 the Bureau established standardized indicators for programs in the areas of protection, shelter and settlements, WASH, nutrition and food security and core relief items.
- Informed by the utility of PRM's third party monitoring in Iraq, PRM proceeded with plans for a third party monitoring contract in Afghanistan.
- PRM enhanced requirements on accountability to affected populations. NGOs submitting both proposals for PRM funding and quarterly reports are now required to include detailed information on how beneficiary feedback will be collected and used to inform program decisions throughout the life cycle of a program. PRM is working with other donors and its major IO partners to establish requirements for IO reporting on accountability to affected populations.
- Although the evaluation of Refugee Support Centers is still underway, the RSC in Istanbul is taking steps based on interim recommendations. The RSC simplified and streamlined messaging to refugees on the resettlement process; clarified and strengthened mechanisms for its staff to submit anonymous and confidential reporting of malfeasance; developed plans for yearly Code of Conduct refresher courses; and created a formal policy for fund-raising to support particularly vulnerable refugees.

Assistance Programs in Africa

(\$ in thousands)	FY 2015 Actual ¹	FY 2016 Estimate ²	FY 2017 Request	Increase / Decrease
Migration and Refugee Assistance	15,000	*	-	-15,000
Migration and Refugee Assistance - Overseas Contingency Operations	600,520	*	500,000	-100,520

¹ In addition, a portion of the FY 2014 MRA Overseas Contingency Operations was used to provide protection and humanitarian assistance to refugees, internally displaced persons, and conflict victims in Africa.

² In addition, a portion of the FY 2015 MRA Overseas Contingency Operations funds will be used to provide protection and humanitarian assistance to refugees, internally displaced persons, and conflict victims in Africa.

The FY 2017 MRA request for Africa will enable the Bureau to support programs and operations that save lives and ease the suffering of African refugees, IDPs, and victims of conflict and statelessness. Africa is home to nearly 4.8 million refugees and asylum seekers and 12 million IDPs. Eighty-five percent of Africa's refugees and IDPs have fled from crises in Burundi, the Central African Republic (CAR), the Democratic Republic of Congo, Eritrea, Libya, Mali, Nigeria, Somalia, South Sudan, and Sudan. Those countries' neighbors absorb most of these refugees, sometimes hosting refugees from more than one country. Chad, for example, is simultaneously coping with refugees from Nigeria, the CAR, and Sudan's Darfur region, while Ethiopia is hosting refugees from Eritrea, Somalia, South Sudan, and Sudan. Refugee numbers have risen by more than one million since the start of 2014, as conflicts raged in the CAR, South Sudan, Nigeria, and most recently Burundi. North African countries are also hosting growing numbers of Syrian refugees as well as Sub-Saharan refugees and migrants trying to reach Europe. Chaos in Libya has prompted and provided opportunities for many to attempt dangerous Mediterranean crossings. MRA funds will support UNHCR's operations to provide protection and assistance and find durable solutions for populations of concern in nearly every country across the continent. The request also will support ICRC operations in over 40 countries in Africa to protect and assist conflict victims and to promote compliance with international humanitarian law. Humanitarian needs are expected to remain high in FY 2017 due to stubbornly protracted conflict and violence in such places as South Sudan and the DRC. At the same time, PRM and the organizations it supports see opportunities for refugees to voluntarily return home, even in parts of Somalia, and to be locally integrated in countries like Zambia. Top priorities include maintaining first asylum, keeping refugee and IDP sites secure and neutral, preventing gender-based violence in all its forms, achieving humanitarian access in conflict zones, biometrically registering refugee populations for protection and accountability purposes, reaching minimum standards of assistance for those people who need aid, promoting self-reliance whenever possible, achieving maximum social cohesion between refugees and hosts, and sustaining voluntary returns by helping ensure that basic services are available when and where refugees return home.

Assistance Programs in East Asia

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Migration and Refugee Assistance	72,875	*	54,600	-18,275

The FY 2017 MRA request will enable humanitarian partners to save lives and alleviate suffering in the East Asia region by funding programs that protect and assist refugees, asylum seekers, IDPs, stateless persons, and other victims of conflict. These include Burma's Rohingya and Kachin populations, who continue to face persecution and violence, highly vulnerable North Koreans outside the Democratic People's Republic of Korea (DPRK), Uighurs throughout the region, and the growing number of urban refugees and asylum seekers in detention in Thailand and Malaysia.

Burmese are the single largest IDP, refugee, and asylum seeker group in East Asia. Conflict and systematic persecution continue in Rakhine, Kachin, and northern Shan States in Burma. More than 816,000 Burmese refugees, asylum seekers, and other persons of concern are scattered throughout Thailand, Malaysia, Indonesia, Bangladesh, India, and China; more than 800,000 stateless Rohingya remain in Burma's northern Rakhine State and some 560,000 are IDPs or living in IDP-like situations in Burma. The FY 2017 MRA request will help UNHCR and ICRC improve humanitarian conditions for Burmese, Rohingya, and other vulnerable ethnic minorities within Burma, for those displaced by conflict, and the growing number who are urban refugees, asylum seekers, and vulnerable migrants in Thailand, Malaysia, and elsewhere in the region. Continued MRA support will enable international and non-governmental organization partners working in Bangladesh, Malaysia, and along the Thailand-Burma border to meet the basic humanitarian needs of refugees and asylum seekers until conditions within Burma allow for their safe, voluntary, and sustainable return. The Bureau will lead by engaging in humanitarian diplomacy and advocacy with the Burmese government to address root causes of displacement and with host governments in the region to protect the rights of refugees, IDPs, and vulnerable migrants.

Assistance Programs in Europe

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Migration and Refugee Assistance	59,385	*	-	-59,385
Migration and Refugee Assistance - Overseas Contingency Operations	-	*	32,900	32,900

The FY 2017 MRA request will address ongoing humanitarian needs of displaced and vulnerable people in Ukraine, the Balkans, and the Caucasus. It will also help non-Syrian refugees in Turkey. In addition to providing humanitarian aid, overseas assistance programs in Europe will support efforts to strengthen asylum regimes and reduce statelessness. Over 3.2 million people in Europe, the Caucasus, and Central Asia are displaced or stateless, and nearly one million refugees and migrants fleeing violence and strife in the Middle East, Afghanistan and Africa transited through the Western Balkans in CY 2015, and migration through the region is likely to continue. The requested FY 2017 funding will provide protection and assistance to save lives and alleviate suffering in a region coping with ever larger numbers of people who will need support and opportunities for integration.

Ongoing violence in Eastern Ukraine has driven nearly 1.9 million people from their homes and left 3.1 million in need of assistance inside the country and across the region. MRA-funded programs will help internally displaced persons, conflict victims, and refugees in neighboring countries get access to emergency assistance, social services, shelter, livelihoods, and psychosocial programs to foster self-sufficiency. This request will also support IDP returns to Eastern Ukraine, where possible, and aid vulnerable IDPs in Georgia who are unable to return to the occupied regions of Abkhazia and South Ossetia.

In the Balkans, MRA funded programs will provide assistance to the over 360,000 people uprooted by the Balkan conflicts of the 1990s who have not returned home. This includes thousands of Roma, Ashkali, and Egyptian minorities who remain in need of durable solutions.

Funding within the Europe line includes support for UNHCR's refugee status determination operation in Turkey, its largest in the world.

Assistance Programs in the Near East

(\$ in thousands)	FY 2015 Actual ¹	FY 2016 Estimate ²	FY 2017 Request	Increase / Decrease
Migration and Refugee Assistance	72,000	*	-	-72,000
Migration and Refugee Assistance - Overseas Contingency Operations	864,220	*	1,270,203	405,983

¹ In addition, a portion of FY 2014 MRA Overseas Contingency Operations funds was used to provide protection and humanitarian assistance to refugees, internally displaced, and conflict victims in the Near East.

² In addition, a portion of the FY 2015 MRA Overseas Contingency Operations funds will be used to provide protection and humanitarian assistance to refugees, internally displaced, and conflict victims in the Near East.

The FY 2017 request will maintain core support for UNHCR, ICRC, and UNRWA activities throughout the Near East region, supporting the Bureau's primary goal of providing humanitarian assistance that saves lives and eases suffering. It will fund protection and assistance programs for Iraqi refugees, conflict victims, and displaced persons inside Iraq. It will also sustain essential humanitarian programs run by international organization and NGO partners in Jordan, Syria, Lebanon, and Turkey to meet Iraqi refugees' basic needs. The crisis in Iraq continues to worsen. The UN estimates that as of December 2015, 8.6 million Iraqis inside the country need assistance and 3.2 million are internally displaced. The request anticipates growing needs of vulnerable Iraqis, particularly IDPs, due to ongoing conflict and displacement.

The conflict in Syria has left more than 250,000 dead and approximately 13.5 million in need of humanitarian assistance. Roughly 6.6 million Syrians are displaced inside the country, and more than four million are refugees. The fighting rages on, and military activity has surged, despite recent steps toward a political solution. PRM's FY 2017 request anticipates ongoing and significant humanitarian needs as millions of Syrian refugees remain in neighboring states or try to reach North Africa and Europe. Millions of IDPs and conflict victims will continue to lack regular access to food, health care, clean water, sanitation, and adequate shelter and their situation is likely to continue to deteriorate. PRM funding will help address the effects of this protracted crisis, including the pressing need to educate refugee children, provide psychological counseling, and aid communities that host refugees as their resources dwindle and local infrastructure becomes overwhelmed. The FY 2017 request will maintain robust support to the Syrian humanitarian response efforts, primarily through the OCO request. PRM funding, in keeping with the Bureau's goal to exert humanitarian leadership in the international community, will prioritize support to UNHCR, UNRWA, and ICRC to reinforce their critical response roles inside Syria and the region. Funding will also support the work of additional international organizations, UN agencies and NGOs, assisting refugees and conflict-affected individuals in neighboring countries.

The FY 2017 request includes support to UNRWA. UNRWA provides education, health care, relief and social services, and emergency assistance to approximately 5.2 million Palestinian refugees in Gaza, Jordan, Lebanon, Syria, and the West Bank. The United States is UNRWA's largest bilateral donor and MRA funding to UNRWA is essential to the organization, which remains an indispensable counterweight to extremism and a force for stability in the region. FY 2017 funding will support UNRWA's General Fund, the Emergency Appeal for Gaza and the West Bank, and UNRWA's response to the Syria crisis.

The FY 2017 request also includes support for approximately 2.5 million Yemeni IDPs and millions of conflict victims affected by the conflict. This aid will focus primarily on providing shelter, food and water, medical care, and protection, primarily through UNHCR and ICRC, as well as other international organizations.

Assistance Programs in South Asia

(\$ in thousands)	FY 2015 Actual ¹	FY 2016 Estimate ²	FY 2017 Request	Increase / Decrease
Migration and Refugee Assistance	16,460	*	-	-16,460
Migration and Refugee Assistance - Overseas Contingency Operations	101,372	*	72,900	-28,472

¹ In addition, a portion of the FY 2014 MRA Overseas Contingency Operations funds was used to provide protection and humanitarian assistance to refugees, internally displaced, and conflict victims in South Asia.

² In addition, a portion of the FY 2015 MRA Overseas Contingency Operations funds will be used to provide protection and humanitarian assistance to refugees, internally displaced, and conflict victims in South Asia.

Afghanistan and Pakistan remain top foreign policy priorities given increased violence and insecurity. The FY 2017 request will continue support for Afghan refugees and returnees displaced throughout the region, for Pakistanis displaced internally and for Pakistanis who have sought refuge in Afghanistan to escape violence in Pakistan. Afghanistan has an estimated population of more than 1 million IDPs, and some 2.5 million Afghan refugees live in Pakistan and Iran, making them one of the largest refugee populations in the world. The FY 2017 request includes funding to meet basic needs of Afghan refugees, returnees, and IDPs. At the same time, MRA funded partners will continue to work with the Afghan government to transition international humanitarian programs to local and national authorities. The security situation in Pakistan is also expected to remain uncertain in FY 2017. As of late 2015, more than 1.2 million people remained internally displaced and nearly 240,000 Pakistanis had fled to Afghanistan to escape military operations in the northwest. While access remains challenging, humanitarian assistance helps instill confidence in civilian-led government institutions and mitigates the influence of extremists.

Humanitarian protection and assistance programs in South Asia also address the needs of Tibetan and Bhutanese refugees, asylum seekers, and stateless populations in Nepal, Tibetan and Sri Lankan refugees in India, returning refugees and internally displaced persons in Sri Lanka, and urban refugees and asylum seekers in all three countries. The FY 2017 request will continue to meet the basic needs of the Tibetan community in Nepal including protection and reception services for safe transit of Tibetan refugees to India and support for infrastructure, livelihoods, education, and water and sanitation for the longer-staying refugee community. Three-quarters of the estimated 10,000-13,000 long-staying Tibetans who have lived in Nepal for decades have no identity documents, and the estimated 3,500 with registration cards have no legal right to work, access education, or other legal rights. In India, assistance for Tibetans will continue to meet the health and education needs of the population with an increasing focus on livelihoods and long-term sustainability. In Sri Lanka, FY 2017 humanitarian programs will focus on urban refugees and asylum seekers given their precarious status and vulnerability to deportation and refoulement.

Assistance Programs in the Western Hemisphere

(\$ in thousands)	FY 2015 Actual ¹	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Migration and Refugee Assistance	47,765	*	45,300	-2,465

¹ In addition, \$7.0 million of re-programmed ESF funds was used to provide protection and humanitarian assistance to Colombian refugees and internally displaced persons.

Decades of ongoing violence in Colombia has displaced more than 6.5 million people, approximately 12 percent of Colombia's population. The MRA request supports protection and assistance for an estimated 30,000 newly displaced Colombians inside Colombia and for more than 350,000 Colombian asylum seekers and refugees in Ecuador, Venezuela, Panama, and Costa Rica. The Colombian government and the Revolutionary Armed Forces of Colombia (FARC) have made significant progress toward peace, however most observers predict a spike in violence following the signing of a peace agreement as other armed actors fight for territory and resources previously controlled by the FARC. The FY 2017 request recognizes significant resources the Government of Colombia is devoting to the reintegration of IDPs as the country continues to implement its Victims and Land Restitution law. The legislation provides immediate, emergency and transition humanitarian assistance to victims of the conflict, eighty-five percent of who are IDPs. Given this commitment by the Colombian government, MRA funding will focus on supporting Colombian refugees in neighboring countries and providing replicable model programs for IDPs in Colombia. The FY 2017 request also supports efforts to strengthen refugee protection in Ecuador, Venezuela, Panama and Costa Rica, countries with the highest populations of Colombian refugees in Latin America.

The FY 2017 request will also fund the regional programs of UNHCR, IOM, and ICRC to protect and assist other refugees, stateless persons, asylum seekers, internally displaced persons, and other vulnerable migrants throughout the region. This includes unaccompanied children from El Salvador, Guatemala, and Honduras. PRM funding to IOM and UNHCR in Mexico and Central America will support capacity building for Central American and Mexican officials and civil society to identify, screen, protect, and assist vulnerable migrants, and will strengthen the Mexican government's asylum system. In the Dominican Republic, PRM funding to IOM and UNHCR will assist civil society, international partners, and the Dominican government in aiding vulnerable migrant communities and those at risk of statelessness. The FY 2017 request enables the U.S. Department of State to meet its commitment to support the Migrant Operations Center at the Guantanamo Bay Naval Base under Executive Order 13276. The Department is responsible for migrants determined to be in need of protection and assistance with their initial resettlement in third countries.

Protection Priorities

(\$ in thousands)	FY 2015 Actual ¹	FY 2016 Estimate ²	FY 2017 Request	Increase / Decrease
Migration and Refugee Assistance	178,882	*	186,587	7,705
Migration and Refugee Assistance - Overseas Contingency Operations	146,002	*	-	-146,002

¹ In addition, a portion of the FY 2014 MRA Overseas Contingency Operations funds were used to respond to emergency needs.

² In addition, a portion of FY 2015 MRA Overseas Contingency Operations funds will be used to respond to emergency needs.

The FY 2017 MRA request supports the core capabilities of key humanitarian partners to protect and assist refugees, internally displaced persons, stateless populations, and vulnerable migrants. It also advances the U.S. government's broader UN reform agenda by promoting changes that will help these partners prevent and respond to conflict. MRA funds support the headquarters operations of UNHCR and the ICRC, providing these critical responders with the flexibility to act quickly and effectively when crises erupt, maintain staffing and monitoring in increasingly insecure environments, and enhance accountability through results-based management reforms. This request supports global humanitarian and U.S. government priorities, such as increasing the capacity of multilateral and NGO partners to address gender-based violence, protect vulnerable women, children, and lesbian, gay, bisexual, and transgender (LGBT) refugees; improve the humanitarian response in cities and towns; apply best practices in collecting, analyzing, and using beneficiary feedback; and use of innovative research and independent evaluations to build the evidence base for effective humanitarian programming and diplomacy.

The FY 2017 MRA request also makes it possible to respond to emergencies in a fluid humanitarian environment where needs reached record levels in 2015. PRM programmed more than \$260 million in FY 2015 from the Protection Priorities Emergency Needs line to respond to turmoil, conflict and displacement in Iraq, Nigeria, Burundi, Yemen, Sudan, South Sudan, and Libya, and elsewhere.

Migration

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Migration and Refugee Assistance	27,265	*	21,110	-6,155

The FY 2017 request supports the U.S. government objectives of protecting and assisting asylum seekers and other vulnerable migrants, advancing orderly and humane migration policies, and enhancing security and stability and promoting fundamental human rights. MRA funds support national and regional efforts to build the capacity of governments to develop and implement effective migration policies, to protect and assist asylum seekers and other vulnerable migrants and to discourage irregular migration. Record numbers of people are on the move everywhere. The increase in mixed populations of refugees, asylum seekers, stateless persons, unaccompanied children, and victims of human trafficking, make this funding all the more vital. The 2015 European migration and refugee crisis shined a spotlight on migration issues and created opportunities for needed reforms. These include steps to modernize international institutions and advance national efforts to make international migration more safe, orderly and humane. The FY 2017 request provides modest but essential funding for assistance to some of the most vulnerable migrants, primarily through the International Organization for Migration (IOM). These include programs to protect and assist victims of xenophobic attacks, human trafficking, and other human rights abuses. The FY 2017 request also includes funds for the U.S. government's assessed contribution to IOM.

Administrative Expenses

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Migration and Refugee Assistance	38,000	*	40,000	2,000

The FY 2017 request includes resources to cover the administrative expenses of the Bureau of Population, Refugees, and Migration (PRM). Administrative funds support salaries, travel expenses, and other necessary administrative costs. These funds allow the Bureau to effectively and responsibly manage humanitarian assistance programs funded through the Migration and Refugee Assistance (MRA) account and enable the Bureau to conduct the diplomacy that is essential in advancing U.S. government humanitarian objectives.

In FY 2017, the Bureau expects to continue overseeing programs in protracted humanitarian situations across the globe. These programs aid Burmese refugees in Thailand, Colombian refugees in South and Central America, Afghan refugees in Pakistan, among others. The Bureau also expects to continue supporting significant emergency humanitarian operations in Syria, Iraq, Yemen, South Sudan, and elsewhere. PRM's emergency response depends on adequate administrative support to carry out needs assessments and oversee operations. When crises emerge, Bureau staff is often deployed to U.S. embassies in the region, working with host governments and implementing partners to advance U.S. foreign policy objectives and provide sound oversight and management of foreign assistance programs. The FY 2017 request level reflects the increased requirements necessary to ensure effective management, monitoring, and evaluation of the response to mounting global humanitarian needs. Performance management remains at the heart of the Bureau's mission, and enables it to provide funding according to need and to meet the simultaneous imperatives of providing assistance that is effective, efficient, and sustainable. The FY 2017 request provides continued investment in staff necessary to effectively manage assistance programs to meet the needs of the largest number of people displaced by conflict since World War II. It includes an active monitoring and evaluation training program to enable staff to better assess the impact of U.S. government programs. With this request, the Bureau's administrative costs remain low, at less than 2 percent of the overall MRA request of \$2,798.0 million.

Humanitarian Migrants to Israel

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Migration and Refugee Assistance	10,000	*	7,500	-2,500

Since 1973, the U.S. government has helped vulnerable Jewish migrants from the former Soviet Union (FSU), Eastern Europe, Africa, and the Near East, resettle in Israel. The FY 2017 MRA request for Humanitarian Migrants to Israel supports this relocation and integration of humanitarian migrants through the United Israel Appeal (UIA). In FY 2017, the Jewish Agency for Israel (JAFI), UIA's implementing partner, expects to bring approximately 11,000 migrants to Israel from Russia, Ukraine, Ethiopia, and other countries. U.S. Department of State funding supports services for these migrants, including pre-departure assistance, travel to Israel and short-term or transitional housing for vulnerable migrants, particularly for Ethiopians. The funding also provides language, preparatory, and vocational education, including for unaccompanied youth, as well as independent monitoring of the program.

Refugee Admissions

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Migration and Refugee Assistance	394,254	*	567,500	173,246

Achieving durable solutions for refugees, including third-country resettlement, is a critical component of the U.S. Department of State's work. The FY 2017 request will support the U.S. Refugee Admissions Program. This is an important humanitarian undertaking. It demonstrates America's compassion for the world's most vulnerable refugees, those who cannot be locally integrated or safely return home. MRA resources will be used to fund the costs of processing refugee applications overseas, and provide transportation, and initial reception and placement (R&P) services to all refugees admitted through the program. These include housing, furnishings, clothing, food, medicine, employment, and social service referrals. The FY 2017 request will support the admission of larger numbers from many nations, including Syrians, Iraqis, Congolese, and Somalis, and provide additional funding to bolster UNHCR's capacity to complete more refugee referrals. The request includes a modest increase in the R&P grant to keep pace with inflation and maintain adequate support for refugee families during their initial weeks in the United States.

The U.S. Department of State implements the program by providing funding to non-governmental organizations for both overseas processing and domestic reception and placement services. The International Organization for Migration also receives MRA funds to conduct overseas processing and medical screening in some locations and for transportation-related services for all refugees resettled in the United States.

The number of refugees to be admitted in FY 2017 will be set after consultations between the Administration and the Congress before the start of the fiscal year, although Secretary Kerry announced in September 2015 that the Administration would seek to admit at least 100,000 refugees in FY 2017. The request also includes funding to provide refugee benefits to Iraqi Special Immigrant Visa (SIV) applicants and their families as mandated by the Refugee Crisis in Iraq Act of 2007 and to Afghan SIV applicants and their families as mandated by the Afghan Allies Protection Act of 2009.

Emergency Refugee and Migration Assistance (ERMA)

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
Migration and Refugee Assistance	50,000	50,000	10,000	-40,000
Migration and Refugee Assistance - Overseas Contingency Operations	-	-	40,000	40,000

The ERMA Fund enables the President to provide humanitarian assistance for unexpected and urgent refugee and migration needs worldwide. The FY 2017 request of \$50.0 million will allow the United States to respond quickly to urgent and unexpected needs of refugees and other populations of concern.

Over the past five fiscal years, an average of \$30.7 million was drawn from ERMA annually to address unexpected refugee and migration needs.

In **FY 2015**, there was no funding drawn from the Fund.

In **FY 2014**, \$50.0 million was drawn from the Fund:

- \$50.0 million provided shelter, health care, education, and protection to internally displaced persons (IDPs) in South Sudan and South Sudanese refugees in neighboring countries.

In **FY 2013**, \$15.0 million was drawn from the Fund:

- \$15.0 million provided shelter, health care, education, and protection to internally displaced persons (IDPs) in Syria and Syrian refugees in neighboring countries.

In **FY 2012**, \$36.0 million was drawn from the Fund:

- \$10.0 million provided shelter, protection, and health and nutrition assistance to IDPs in Mali and Malian refugees throughout the region.
- \$26.0 million addressed the humanitarian needs of Sudanese refugees in South Sudan and Ethiopia who fled conflict in the Southern Kordofan and Blue Nile States of Sudan.

In **FY 2011**, \$52.6 million was drawn from the Fund:

- \$12.6 million addressed the needs of those displaced as a result of violence and insecurity in Côte d'Ivoire, including shelter, protection, and water/sanitation support.
- \$15.0 million supported humanitarian needs resulting from unrest in Libya, including emergency evacuation of third country nationals.
- \$15.0 million provided assistance and protection to those affected by conflict in Côte d'Ivoire and Libya.
- \$10.0 million provided critical humanitarian assistance to Somali refugees in Ethiopia, Kenya, and Djibouti, including emergency nutritional support, access to water, health care, and essential non-food items.

Special Representatives

Foreign Assistance Program Overview

The Department of State's Ambassador-at-Large for Global Women's Issues, and the Special Representatives for Cyber Issues and Global Partnerships promote human dignity, equality, economic growth and international cooperation. Funds requested for these offices will support activities that seek to enhance social dialogue, inclusion, and cooperation between the public and private spheres.

Request by Account and Fiscal Year

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
TOTAL	14,100	*	16,000	1,900
Economic Support Fund	14,100	*	16,000	1,900

Economic Support Fund (ESF)

Ambassador-at-Large for Global Women's Issues (S/GWI): S/GWI's request of \$10.0 million includes up to \$5.0 million to continue the Global Women, Peace, and Security Initiative (GWPS) and up to \$5.0 million for gender-based violence (GBV) programing. Funds requested for GWPS will support programs that promote women's participation in peace-making and security, protect women and girls from violence and exploitation, and enable women to participate in reconciliation and peace processes in post conflict and conflict countries. Funds for GBV activities will implement the objectives of the U.S. Strategy to Prevent and Respond to Gender-Based Violence Globally, including to help create, support, and expand program efforts in interagency-identified focus countries in which the U.S. government will implement a comprehensive approach to the prevention of and response to GBV. In support of a strategic approach to adolescent girls and the interagency Let Girls Learn initiative, S/GWI resources will also address the challenges adolescent girls face, such as cultural norms about the options available to girls, lack of economic opportunity, and harmful practices such as early and forced marriage and female genital mutilation/cutting.

Office of the Coordinator for Cyber Issues (S/CCI): The S/CCI request of \$5.0 million will support Department of State training and capacity building efforts designed to implement the President's *International Strategy for Cyberspace*. This will support the U.S. commitment to an open, interoperable, secure, and reliable information and communication infrastructure that supports international trade and commerce, strengthens international security, and fosters free expression and innovation. The United States seeks a cyberspace environment that rewards innovation; empowers individuals; strengthens communities; builds better governments; expands accountability; safeguards human rights and fundamental freedoms; enhances personal privacy; and strengthens national and international security. S/CCI will use the requested foreign assistance funds to conduct training and direct capacity building programs related to performing cybersecurity due diligence, strengthening Internet governance and public policy, developing the Internet and ICTs for economic growth, deterring cybercrime and promoting norms and confidence building measures in cyberspace.

Special Representative for Global Partnerships (S/GP): The S/GP request of \$1.0 million will broaden the efforts to engage private sector and civil society partners to achieve foreign policy objectives and development goals. This includes funding to continue S/GP's Leveraging, Engaging, and Accelerating Partnerships (LEAP) Fund piloted in FY2015. LEAP incubates new partnerships and scales up existing

partnerships that directly advance the Secretary's top policy priorities, such as climate change, countering violent extremism, and global health. LEAP allows S/GP to help other operating units leverage private sector resources and enables S/GP to socialize and institutionalize within the Department the model of using partnerships to do development, in direct support of the State-USAID Joint Strategic Goal Framework. Funding will also continue current programs to harness the power of diaspora communities to promote development in their countries of heritage; fostering entrepreneurship; developing solutions to international oceans issues in developing nations; and engaging in outreach to promote STEM education in developing nations. Funding will also support the growing startup and innovation ecosystems across Africa, the Middle East, Latin America. S/GP will continue to convene and leverage private sector funds to expand activities into other countries and sectors, catalyze new projects to create innovative solutions, collaborate with our partners to maximize the impact of projects, and cultivate new partnerships and networks in the world as well as work with other bureaus and agencies throughout U.S. government, in order to institutionalize public-private partnerships.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: S/GWI grantees must demonstrate that monitoring and evaluation (M&E) procedures are in place before receiving funds. S/GWI provides assistance to implementing partners to create effective M&E plans. S/GWI requires interim reporting on all funded projects, and tracks projects' specific indicators via the S/GWI Program Monitoring and Reporting System. External evaluation is required with detailed explanations for monitoring each project objective against results' indicators. Building on evaluations conducted in 2016, S/GWI will continue joint evaluations with regional and functional bureaus and offices on gender programming. S/GWI collaborates with its colleagues in Washington and in embassies around the world at each stage of the grant cycle. This includes reviewing grantees' quarterly reports for accuracy, adopting proper mechanisms for open communication, and providing the tools and resources needed to conduct meaningful site visits to assess the implementation of grant activities. In FY 2017, S/GWI will continue to provide regional trainings to stakeholders and anticipates conducting up to ten site visits for programs supported under the Full Participation Fund and GWPS.

S/CCI grantees must demonstrate and include monitoring and evaluation procedures in their work plans before receiving funds. By utilizing the foreign assistance funds received in FY2013 and FY2014, S/CCI continued to develop and implement a cybersecurity capacity building project in Sub-Saharan Africa. This project aims to increase the overall level of cybersecurity preparedness and response capability in international partners by supporting the development of Computer Security Incident Response Teams (CSIRTs). S/CCI continues to receive monthly reporting on activities, progress and funding that are used to monitor each project objective against the result indicators/deliverables. In the initial stage of the project, to assess and frame future engagements, S/CCI required from the grantee a written report on existing entities and any efforts currently underway to develop CSIRTs in Sub-Saharan Africa, as well as case studies of previously developed CSIRT capabilities in identified region(s) and countries. Utilizing the findings from the previous fiscal years, the grantee has identified Ghana and Cote d'Ivoire as target countries to engage in CSIRT development and plans to continue identifying more countries and sub-regions within Sub-Saharan Africa which can facilitate the expansion of CSIRT engagement.

S/GP develops monitoring and evaluation plans for all of its grantees. S/GP completed its first evaluation on The Global Alliance for Clean Cookstoves (GACC) partnership followed by an in-house, no-cost evaluation of its Fishackathon initiative. The results of the Fishackathon evaluation are helping inform the planning process for the third annual Fishackathon. In addition, the evaluation on GACC broadly evaluated the process of forming a successful partnership from beginning to end and S/GP is

taking the results and incorporating them into general partnership planning. In Africa, S/GP plans to monitor the usage of online tools, participation, and investments in a partnership to encourage technology entrepreneurship on the continent. In addition, the office plans qualitative and quantitative assessments of new programs launched from the IdEA platform, an S/GP partner, including business competition programs, science and technology partnerships, and volunteer and philanthropy partnerships.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: S/GWI conducted a retrospective evaluation of small grants awarded in FYs 2010/2012 to assess the effectiveness of projects and to develop recommendations for future funding cycles. The evaluation found that projects that address gender-based violence (GBV) should ensure the intervention includes an economic empowerment component; it is key to incorporate capacity building or skills training to provide women with the means and confidence to take action against violence. The evaluation also revealed the importance of integrating GBV support systems and resources through program work by making multiple inter-linked services available. GBV programs with interlinked services like legal linked with medical or medical linked with social services proved to be an effective approach for beneficiaries as opposed to stand alone mechanisms. Findings such as these serve as best practices, enabling S/GWI to program effectively and contributing to S/GWI's decision to dedicate resources specifically to GBV programming in FY2017. The FP Fund aimed to increase both the number of females who reported more self-efficacy and the number of community members who agreed with the concept that males and females should have equal access to social, economic, and political opportunities. Only interventions that yield results will continue to receive funding. In FY 2016, S/GWI conducted a joint evaluation with the Africa Bureau on women, peace and security programs in Africa. Findings from this evaluation will inform future Global Women, Peace, and Security investments both in Africa and other regions. S/GWI also plan to evaluate four regional posts and two domestic offices which received FP Funding.

S/CCI will use monitor and evaluation results to inform programmatic choices in focus countries and/or regions in Sub-Saharan Africa. S/CCI will leverage the information and experience of the U.S. Interagency, colleagues in U.S. Embassies, and the reports and case studies by the grantee to direct and align the project implementation with other complimentary U.S. government funded programs. This kind of monitoring will provide the basis for discussions between the grantee and S/CCI to determine where in Sub-Saharan Africa, countries and/or regions, CSIRT capacity building activities (i.e. trainings, technical assistance) would be most fruitful given existing capabilities and political environments, and where further assessment is needed.

S/GP will continue monitoring all S/GP partnerships and programs to assess and ensure all partnerships are functioning as they should be. S/GP also will use the results of the evaluation as a roadmap to assist in the strategic planning process of partnerships at large. There is no structure or formula that will determine how a partnership will succeed and the findings and partnerships model that will come out of the evaluation will further aid in the process. In addition, S/GP will develop strategic guidelines from the successes and failures of our public-private partnerships, which help inform future decisions and actions.

USAID Bureau for Food Security (BFS)

Foreign Assistance Program Overview

Although global hunger continues to decline, nearly 800 million people suffer from chronic hunger, while 45 percent of child deaths worldwide are attributable to undernutrition. The Feed the Future (FTF) initiative is the United States' contribution to a global effort that supports country-owned processes to improve food security. As the lead agency for the President's FTF initiative, the U.S. Agency for International Development (USAID) coordinates the United States' whole-of-government approach to addressing global hunger and undernutrition.

BFS leads the Agency's work to reduce poverty and hunger by accelerating agriculture-led growth and achieving nutrition outcomes, with a particular focus on smallholder producers, collaborating with a diverse group of private-sector and civil-society partners to ensure that resources are aligned to achieve these objectives. BFS programs advance FTF objectives of poverty alleviation and reduction in child stunting by using science and technology to address critical agricultural challenges, by leveraging private sector investments across the agricultural value chain, and by providing USAID Missions with technical support to implement comprehensive food security programming at the country level. BFS additionally works to reduce long-term vulnerability to food insecurity, specifically in the Horn of Africa and the Sahel, through programs that build household and community resilience to production, income, and market disruptions. The Bureau works with partner countries to strengthen their capacity to plan, budget, monitor and consult with stakeholders concerning food security and nutrition. BFS ensures that cross-cutting issues such as nutrition, climate smart agriculture, gender, and natural resource management are integrated into both Mission strategic plans and country implementation.

BFS also supports the New Alliance for Food Security and Nutrition, a public-private partnership platform established during the U.S. G-8 presidency in 2012, to leverage responsible private investment in agriculture through specific commitments from African governments, development partners, and private companies. BFS supports the objectives of the New Alliance through FTF funding and program commitments that promote policy reforms, help to mobilize responsible private sector investments, and build mutual accountability and inclusiveness.

Request by Account and Fiscal Year

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
TOTAL	342,660	*	330,200	-12,460
Development Assistance	342,660	*	330,200	-12,460

Development Assistance (DA)

BFS will provide technical and operational leadership to the FTF initiative, which has the objective of reducing the numbers of people living in extreme poverty and suffering from hunger and undernutrition. The Bureau's efforts will focus on the provision of high quality technical assistance and other support to U.S. Missions implementing FTF; monitoring and evaluation; facilitating partnerships with the private sector, other donors, and civil society stakeholders; and supporting targeted research to develop and scale up technologies and interventions that have the greatest potential to sustainably reduce hunger and poverty.

Increased Accountability and Learning through Evidence of FTF Results and Impacts

Key Interventions:

- \$18.0 million is requested for Monitoring and Evaluation activities, including developing statistical systems of partner countries to improve the quality and frequency of agricultural data collection and use.
- FTF will strengthen the capacity of partner countries to collect and analyze valid and reliable statistics for strategic planning, including economic and agricultural productivity indicators, demographic data and other measures of the country's status and welfare.
- Funding will support program evaluation, performance monitoring, and knowledge-sharing activities that provide critical empirical evidence to inform programming and investment decisions across the FTF.
- BFS will conduct impact evaluations to determine the measurable effects of innovative FTF investments and identify development approaches that are highly efficient and cost effective. BFS will conduct performance evaluations to examine the results, constraints, and lessons-learned from FTF project implementation. In support of the FTF Learning Agenda, BFS will support platforms that capture new learning in food security and agricultural development, disseminate it among practitioners, USAID mission staff, country partners and other donors, connecting those actors and improving their knowledge base to improve development outcomes around the world. Using a knowledge-driven approach to food security and agricultural development, efforts will extend and multiply the impact of learning developed through agricultural development research and practice.
- In 2015, BFS created new tools to strengthen FTF accountability and learning, such as the launch of the Abbreviated Women's Empowerment in Agriculture Index, the creation of two new guidance volumes on FTF surveys and evaluations, and additional functions to tag geographic information of activities in the initiative monitoring system. BFS provided technical assistance and oversight to 18 focus missions to conduct surveys and analyze data that assess impact to date in target areas; BFS funded and managed surveys in seven of those focus countries.

Inclusive Agriculture Sector Growth through Market-based Innovation, Partnerships, Technologies and Policies

Key Interventions:

- In FY 2017, \$37.5 million is requested to support the development of market and partnership innovations. USAID will continue to collaborate with other donors and the private sector to address food safety issues to advance trade, improve public health, and enhance food security and nutrition outcomes. Funding will support public-private alliances in sustainable agriculture and improved food security and nutrition by promoting inclusive market growth.
- FY 2017 funding will support Mission-level diagnostic work on enabling and constraining factors related to the agribusiness enabling environment, provide rapid mobilization of expert teams, and develop and implement training and knowledge management.
- FY 2017 funding will be used to identify opportunities for nutrition interventions and partnerships with the private sector at each stage along the value chain, from food production to storage, processing to distribution, retail, marketing and food preparation.
- In FY 2015, USAID increased private sector investment in the agricultural sector, promoted scaling and commercialization of new agricultural technologies, and improved the agricultural enabling environment. In order to achieve these objectives, USAID focused on four areas: finance, investment, and risk; public-private partnerships; commercialization of technologies and innovations; and markets and trade.
- In FY 2015, USAID launched a partnership to provide working capital loans to small and medium enterprises in the agriculture sector across Sub-Saharan Africa that work directly with smallholder farmers growing local food crops. Also in FY 2015, USAID supported a multi-donor effort designed

to demonstrate how specific products and services can expand the reach of financing for smallholder farmers. Activities include targeted market research, product development and testing, and investment facilitation in the smallholder finance market.

- FTF's Partnering for Innovation activity enables entrepreneurs to bring new, shelf-ready technologies that benefit smallholder farmers into markets. In FY 2015, three new private sector partnerships were awarded with \$1.2 million of USAID's resources, which leveraged an additional \$4.5 million in private sector funds. In total, 15 technology commercialization awards have been made since the start of the activity.

Transformed Production Systems and Improved Nutrition

Key Interventions:

- \$144.4 million is requested to support Research & Development.
- FY 2017 funding will support agriculture and food security policy research, capacity development, and scaling of interventions and technologies that help smallholder farmers increase productivity and production, adapt to climate change and build resilience. This will be accomplished through developing new climate-resilient cereal and legume varieties with enhanced yield, stress tolerance and disease resistance; identifying new approaches to increasing the production and consumption of critical, nutrient-rich legumes and animal source foods to boost household nutrition and incomes, especially for women; and by helping farmers assess and adopt water and labor saving innovations, such as improved irrigation practices and appropriately scaled-machinery.
- Research on the production and processing of safe, nutritious agricultural products will be closely linked to extension and outreach, and to an ongoing learning agenda on factors affecting household nutrition, with a goal of preventing undernutrition, especially in women and children. The research and learning agenda includes improving access to and utilization of fruits, vegetables, meat, fish, dairy and legumes, and understanding the influence of environmental factors, such as water contamination and mycotoxins, which may contribute to stunting through their impact on the immune system and the body's ability to utilize nutrients.
- FTF Innovation Labs will draw on the expertise of top U.S. universities and developing country research institutions to tackle some of the world's greatest challenges in agriculture and food security. Funding will support research, capacity development, and scaling of safe and effective technologies that address current and future challenges posed by a changing climate and the need to feed a growing global population. No less than \$32.0 million of the FY 2017 request will support the FTF Innovation Labs.
- FY 2017 funding will harness U.S. scientific expertise and emerging molecular tools to develop new animal vaccines, and crops and animals resistant to pests and diseases that cause significant production losses in FTF countries, but also potentially in the United States.
- Through a transformative approach focused on the entire farming system, FY 2017 funding will support research on technology development and sustainable integration of small-scale irrigation, mechanization, crop and animal diversification, resource-conserving technologies, and geospatial analysis in critically important smallholder production systems.
- Funds will support analyses of African regional trade, inputs, land and other policies and the development of regional action plans to promote trade and economic opportunities and efficient markets for smallholders. Funding will also support research on a suite of policy impact studies, farm-level land and input studies, and new research on policy enabling environments to promote agricultural value chains.
- FY 2017 funding will support the capacity of scientists, educators, researchers and policy-makers and will strengthen agricultural research, education, and extension institutions, ensuring that food and agriculture systems in developing countries are capable of meeting new climate and food security challenges, and that women, especially, are poised to provide leadership in agricultural research, private-sector growth, policy development, education, and extension services.

- FY 2017 funding will continue to support the adoption of key agriculture technologies at scale through public and private partnerships, and will increase the sustainability of supply of new seed varieties by supporting seed enterprises and seed companies to promote, sell and deliver these improved varieties.
- USAID will continue to incorporate climate smart agriculture to reduce the effect of climate variability on agricultural productivity, while also promoting climate resilient international agricultural development and food security. USAID will continue to invest in nutrition sensitive agriculture that promotes nutrient-rich value chains and sustain gains in nutrition to reach FTF's ambitious stunting reduction targets.
- In FY 2015, the FTF Innovation Lab for Grain Legumes worked to improve the long-term potential for children and economies to grow strong and healthy. In Guatemala, the Innovation Lab and its partners increased production of nutritious beans using improved soil fertility and pest management practices, distributed disease-resistant bean varieties adapted for high elevations, and improved harvest and incomes for smallholder farmers. In Malawi, where nearly half of children under the age of five are stunted, the Innovation Lab brought physicians and scientists together to investigate whether consuming beans and cowpeas – as a complement to other traditional staples like maize, cassava and sorghum – can help reduce disease-related malnutrition in young children by improving gut health.
- In FY 2015, partners made progress in demonstrating effectiveness and adapting technologies to developing country farming systems. Partners at Cornell University and the Bangladesh Agricultural Research Institute completed the first year of commercial release of a genetically engineered insect resistant eggplant in Bangladesh, significantly reducing the use of hazardous pesticides.
- Research co-funded by USAID and the Bill and Melinda Gates Foundation led to the development of an innovative approach to addressing Africa-wide constraints on seed supply in FY 2015. This approach was vetted widely with global and African seed experts and will achieve major improvement in seed policy and seed systems in up to twelve African countries.
- BFS assisted Missions to expand their scaling efforts during FY 2015, including sorghum and millet varieties in Mali, improved seeds and conservation agriculture in Zambia, and maize and legumes in Tanzania, based on sustainable intensification research outputs supported by BFS in previous years. Over 10,000 rural households directly participate in sustainable intensification research providing a robust foundation for field validation of results, which are then scaled up to achieve population-scale impacts.
- In FY 2015, continued in-depth engagement at leadership level with the African Union and the New Partnership for Africa's Development has helped shape a workable approach to implementing the ambitious Comprehensive African Agriculture Development Programme (CAADP) heads of state goals for African agriculture, food security, climate smart agriculture, nutrition, and trade.
- Political commitments – such as through the New Alliance for Food Security, CAADP commitments, Burma's newly elected reform government, and the Central American Central American Integration System political commitment on food security provide opportunities for strong program, civil society, and private sector engagement on key policy issues critical to achieving FTF goals.
- In Bangladesh, USAID engaged with key decision-makers within the Ministry of Agriculture and funded technical capacity building activities. The resulting, policy improvements strengthened sanitary and phytosanitary capabilities and improved the country's ability to prevent and combat threats to the health of both humans and agricultural crops.
- The African Women in Agricultural Research and Development Program (AWARD), is a professional development program that strengthens the research and leadership skills of African women in agricultural science, empowering them to contribute more effectively to poverty alleviation and food security in sub-Saharan Africa. In FY 2015, 215 African women agricultural researchers benefited from professional development through mentorship, leadership training, and scientific skill development. This program is co-funded by USAID and the Bill and Melinda Gates Foundation,

with seventy-five U.S. universities participating in training degree candidates.

- In FY 2015, the Cereal Systems Initiative for South Asia (CSISA) project worked to expand access to sustainable intensification technologies that benefit farmers, such as mechanization and irrigation, aquaculture and seed distribution. Through the CSISA Mechanization and Irrigation project in Bangladesh, resource-conserving and labor saving farm machines such as axial flow pumps, seed and fertilizer drills, rice transplanters and reapers have been introduced in southern Bangladesh.
- Modernizing Extension and Advisory Services, an extension capacity development platform, addressed gaps in extension delivery systems, strengthened the capacity of front-line extension agents in market-oriented skills, and strengthened agricultural IT platforms as extension tools in FY 2015. Agricultural education and training (AET) capacity development best practice publications were developed and disseminated on the topics of women in AET, challenges and opportunities for AET in post-conflict sub-Saharan Africa, and agricultural vocational education in developing countries.

Strengthened Planning and Implementation of Food Security and Resilience Programming

Key Interventions:

- The FY 2017 request includes \$106.0 million for economic resilience programs that will expand economic opportunities for vulnerable populations, including improving and diversifying livelihoods and increasing the range of microfinance options, such as insurance and savings. These programs will help to reduce vulnerability to production, income, and market disruptions related to droughts, floods, and food price volatility, as well as longer-term stresses such as population pressure and climate change. They also strengthen the health and nutrition of vulnerable populations and will help bolster community-based disaster risk management, enabling vulnerable households and communities to more effectively manage the next shock that will inevitably come.
- Within the economic resilience programming, \$80.0 million is requested for the Community Development Fund (CDF) to support community-based development activities in chronically food insecure populations to complement Title II non-emergency food assistance, including for monetization, in those cases where in-kind food assistance is not a necessary component of the program or local procurement of food is more appropriate and efficient. CDF resources are provided to partners eligible for Title II funding and are targeted to vulnerable communities in areas with high concentrations of chronic hunger, helping to bridge humanitarian and development objectives through expanded support for productive safety nets, livelihood diversification, microfinance and savings, and other programs that reduce vulnerability to production, income, and market disruptions.
- FY 2017 funding will support technical analysis; training; knowledge generation and management; innovation partnerships, such as the Global Resilience Partnership with the Rockefeller Foundation and the Swedish International Development Agency; and global learning exchanges. Funding will also ensure that gender and nutrition are effectively addressed and incorporated into programs aimed at improving food security and building resilience.
- Funding will provide technical support to local, national, and regional institutions that are helping to build the resilience of vulnerable and food insecure populations.
- The FY 2017 request includes \$24.3 million for country support to allow BFS to (1) support USAID missions in developing effective and impactful FTF programs through targeted technical assistance and learning; (2) help countries develop an enabling policy environment for private investments that lead to increased agricultural productivity and more efficient markets; (3) help to implement USAID's Gender Equality and Female Empowerment policy throughout FTF programs in Washington and in the field; (4) test and scale new technologies, management practices, and communication methods; (5) improve nutrition practices through a broad spectrum of activities; (6) support the continued scale up of climate smart agricultural practices. FY 2017 funding will also support the development and implementation of voluntary standards that provide avenues for local producers to improve the quality and increase the value of their products in order to access local, regional and global markets.
- In FY 2015, CDF programming in Uganda helped improve access to markets and financial services

for over 14,000 farmers. These programs also expanded the reach of health and nutrition behavioral change programs to over 10,000 men and women, helped dramatically reduce conflict incidence, and helped establish youth leadership forums. In Malawi, CDF programs helped establish over 70 commercially oriented farming groups, as well as increased access to village savings and loans, identified sites for watershed management, and expanded the reach of extension services on conservation best practices and 265 health and nutrition care groups. The program in Malawi also helped to mitigate the impact of flooding through seed distribution to enable replanting and ensure the viability of the subsequent season's crops.

- In FY 2015, funding supported the Horn of Africa Resilience Learning Platform (RLP), which works with regional organizations in East Africa to develop strategies for coping with food insecurity and promotes long-term solutions as a buffer against shocks. The RLP delivered a number of critical studies on livelihood diversification and the use of in-built contingency mechanisms that enable development programs to address acute humanitarian needs known as Crisis Modifiers. The RLP also convened a series of regional learning events on resilience for USAID and development partners.
- FY 2015 funding supported the Global Resilience Partnership between USAID, the Rockefeller Foundation and the Swedish International Development Agency. The Global Resilience Partnership's first global resilience challenge resulted in 18 awards to challenge teams made up of academic, private sector, and non-governmental organization partners to test and scale innovations to help build resilience to recurrent crises in the Horn of Africa, Sahel, and Asia.
- FY 2015 funding also supported programs aimed at improved food security and building resilience in Haiti, Guatemala, Niger, Burkina Faso, Malawi, Uganda and Nepal through the CDF. These programs support the transition from humanitarian relief to sustainable development through their focus on people and places that are subject to recurrent crisis. By reducing the need to monetize food assistance, these resources also increase the availability of Title II emergency food aid — contributing to USAID's ability to effectively respond to food security crises world-wide.
- FY 2015 Economic Resilience funding enabled the expansion of activities in Nepal into areas impacted by the April 2015 earthquake, as part of USAID's developmental response to that devastating event.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: BFS undertook several monitoring and evaluation activities in FY 2015:

- Monitoring and evaluation funds were used to conduct two rounds of population surveys in FTF countries, assess and build partner country agricultural data and statistical systems, and design and conduct data collection for 14 rigorous impact evaluations.
- In FY 2015, USAID commissioned an inventory and synthesis of all performance evaluations conducted of FTF investments to date. The synthesis examines and integrates findings from approximately 200 evaluations conducted by interagency partners under the framework of the FTF Learning Agenda.
- In FY 2015, USAID promoted use of the Gender Integration Framework (GIF) tool to identify constraints to achieving women's empowerment in the agriculture sector and the programmatic approaches to best address these constraints. The GIF builds on the logic and results of the innovative Women's Empowerment in Agriculture Index (WEAI), which tracks women's empowerment and gender parity across five domains (production, resources, income, leadership, and time use).
- In FY 2015, USAID made continued improvements to the FTF Monitoring System (FTFMS), the interagency platform for performance monitoring of FTF investments at projects. For example, a geo-tag function was added to the FTFMS to allow users to see where activities are operating within a country and better link activity results with other data within the country. Over 1,000 users across FTF reported data on over 500 activities in the FTFMS during FY 2015.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: The monitoring and evaluation activities conducted by BFS informed the following actions and decisions regarding the FY 2017 budget:

- Monitoring and evaluation findings will support revisions to country funding levels, based on programmatic and financial performance, to ensure that funding is focused in areas and activities demonstrating the greatest potential to reduce levels of poverty and stunting. It will also focus on nutrition sensitive agriculture to sustain gains in nutrition and to reach FTF's ambitious stunting reduction targets.
- As data on impact indicators are received and analyzed, progress against the FTF goals of reducing poverty and stunting will be assessed and plans will be developed for adjusting country strategies and program implementation to most effectively use resources and achieve country-level targets across the initiative.
- Climate change is bringing new challenges to the agriculture sector. Utilizing the best available science to understand the effect of climate variability on agricultural productivity in FTF assisted countries, FTF will continue to support agricultural development approaches that use resources efficiently, protect and conserve the environment, utilize the best practices and technologies available, and reduce the risk for smallholder farmers.

Detailed Objective Descriptions

Increased Accountability and Learning through Evidence of FTF Results and Impacts: BFS leads the M&E function for the FTF initiative. Funding supports program evaluation, performance monitoring, and knowledge-sharing activities that provide critical empirical evidence to inform programming and investment decisions.

Inclusive Agriculture Sector Growth through Market-Based Innovation, Partnerships, Technologies and Policies: FTF aims to significantly reduce hunger, poverty, and malnutrition. This requires improving agricultural productivity, expanding markets and trade, and increasing the economic resilience of vulnerable rural communities. Success requires a system that facilitates access to inputs, finance (including tools for managing risk), and markets for all stages of the value chain. By leveraging private-sector resources and expertise, FTF will increase commercialization of technologies, improve the agriculture and nutrition enabling environment, and promote inclusive market growth.

Transformed Production Systems and Improved Nutrition: Investments in agriculture and food security research respond to critical global and regional priorities and generate a continuous flow of new technologies and other innovations—and better host country policies—that lead to higher levels of productivity, nutritional security and incomes for small- and medium-scale producers in FTF countries. The FTF Research Strategy guides USAID's agriculture and food security research investments and promotes expanded collaboration among U.S. university-led FTF Innovation Labs, the Consultative Group on International Agricultural Research, national and regional agricultural research systems, and the private sector.

BFS also provides technical assistance to field missions in scaling results, addressing climate change, and integrating nutrition and gender into food security programming. HICD interventions through fellowship programs, institutional strengthening mechanisms, and the FTF Innovation Labs help to build sustainable partner country capacity to build the agricultural sector.

Strengthened Planning and Implementation of Food Security and Resilience Programming: BFS provides overall leadership on regional and country food security issues such as agricultural inputs and financing, and increasing the role of women in agriculture. BFS supports technical analysis, training, knowledge management, and global learning exchanges; and helps Missions design and implement agricultural, resilience, and nutrition assistance programs.

USAID Democracy, Conflict and Humanitarian Assistance (DCHA)

Foreign Assistance Program Overview

DCHA brings together wide-ranging technical expertise and operational capabilities essential to advancing democracy, building resilience, tackling fragility, and saving lives.

During emergencies, DCHA provides life-saving humanitarian assistance and, in response to large-scale disasters, is able to deploy expert teams that draw upon the full spectrum of the U.S. government's capabilities. DCHA is responding to four Level 3 crises in Syria, Iraq, South Sudan, and Yemen. Level 3 is the UN's designation for the most severe and large-scale humanitarian crises. Humanitarian assistance needs are expected to increase globally.

After a disaster, DCHA promotes a rapid and durable recovery by supporting livelihoods, markets, and the sustainable provision of basic services. DCHA will continue to work with implementing partners and regional bureaus and Missions to evaluate and engage in joint planning in areas or sectors where development programs could address long-term development issues and result in a decreased need for humanitarian assistance. DCHA promotes peaceful political transitions by strengthening civil society and respect for human rights, facilitating reconciliation, supporting effective democratic governance, and fostering the resumption of basic economic activity in countries experiencing political crisis or emerging from authoritarianism or conflict.

With a view toward sustainable peace and development, DCHA addresses underlying grievances that cause instability and conflict, supporting effective governance and the rule of law, and the resumption of basic economic activity in countries that are experiencing political crisis or are emerging from authoritarianism or conflict. DCHA promotes peaceful political transitions by strengthening civil society and respect for human rights, facilitating reconciliation efforts, supporting effective institutional development for greater democratic governance, and supporting the establishment and consolidation of inclusive and accountable democracies.

DCHA's work supports economic, social, and political development, and helps protect development gains from being rolled back by disasters and conflict, thereby furthering U.S. national security. DCHA's commitment to fostering democracy and human rights, and providing humanitarian assistance promotes and reflects core American values. DCHA aims to build resilience to shocks and crises in chronically vulnerable populations as well as to empower and protect the most vulnerable and marginalized groups.

Request by Account and Fiscal Year

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
TOTAL	2,195,103	*	3,246,247	1,051,144
Overseas Contingency Operations	1,355,000	*	1,914,600	559,600

Transition Initiatives	47,000	*	15,000	-32,000

Complex Crises Fund (CCF)

The FY 2017 request of \$10.0 million for CCF will be used to support activities to prevent or respond to political, social, and economic challenges and crises in areas where OCO has not generally been utilized to date. USAID-managed funds are targeted to countries or regions that demonstrate a high or escalating risk of conflict, violence, or instability, or present an unanticipated opportunity for progress in a newly emerging or fragile democracy. CCF is a flexible funding resource enabling the U.S. government to rapidly respond to unforeseen and evolving contexts that if left unaddressed threaten long-term development gains, foreign policy priorities, and national security interests. Projects aim to address and prevent root causes of conflict and instability through a whole-of-government approach and include host government participation, as well as other partner resources. It is a critical tool for prevention activities.

In the past year, CCF funds have provided critical support for programs in Ukraine, Burkina Faso, Central African Republic, Somalia, Sri Lanka, Burma, and Lebanon. In Sri Lanka and Ukraine, CCF funds bolstered political transitions. In the Central African Republic funds have fostered community peace-building and atrocity prevention. CCF is helping to mitigate rising sectarian and host community-refugee tensions in Lebanon. In Burma, it is supporting the return and resettlement of Rohingya households living in camps for internally displaced persons.

Complex Crises Fund (CCF) - OCO

The FY 2017 request of \$20.0 million for CCF-OCO will be used to support activities to prevent or respond to political, social, and economic challenges and crises. USAID-managed funds are targeted to countries or regions that demonstrate a high or escalating risk of conflict, violence, or instability, or present an unanticipated opportunity for progress in a newly emerging or fragile democracy. CCF is a flexible funding resource enabling the U.S. government to rapidly respond to unforeseen and evolving contexts that if left unaddressed threaten long-term development gains, foreign policy priorities, and national security interests. Projects aim to address and prevent root causes of conflict and instability through a whole-of-government approach and include host government participation, as well as other partner resources. It is a critical tool for prevention activities.

In the past year, CCF funds have provided critical support for programs in Ukraine, Burkina Faso, Central African Republic, Somalia, Sri Lanka, Burma, and Lebanon. In Sri Lanka and Ukraine, CCF funds bolstered political transitions. In the Central African Republic funds have fostered community peace-building and atrocity prevention. CCF is helping to mitigate rising sectarian and host community-refugee tensions in Lebanon. In Burma, it is supporting the return and resettlement of Rohingya households living in camps for internally displaced persons.

Development Assistance (DA)

The Center of Excellence on Democracy, Human Rights and Governance (DRG Center): The DRG Center plans to use the requested \$34.1 million to advance high-level Agency priorities in the areas of Global Labor, Vulnerable Populations, Elections and Political Transitions, Civil Society, and Human Rights including Countering Trafficking in Persons (CTIP). These efforts will support the establishment and consolidation of inclusive and accountable democracies, as well as support civil society within the context of democratic backsliding or closing spaces. Through the DRG Center's strategically focused learning agenda, it will also advance thought leadership by applying best practices to development programming and rapid-response technical assistance through a targeted set of global awards. The DRG Center will continue to lead the Agency's integration of DRG principles across all development sectors to amplify impact and sustain results; this approach will help ensure programs are focused on local priorities and are locally-led.

The DRG Center will continue to play an influential and coordinating role across the U.S. government, particularly with the State Department. It will also continually look for collaborative opportunities with NGOs, academic institutions, and increasingly, with private sector actors to help leverage funding. As the Agency's technical experts on democracy, human rights, and governance, the DRG Center will also continue to administer training programs, strengthening technical capabilities in the field and in within the interagency by promoting the latest learning and approaches, including Local Solutions.

Key Interventions:

- The bureau will provide \$23.1 million to contribute to and advance key Administration priorities such as the President's Stand with Civil Society Initiative, Local Solutions, DRG Integration, the Global Women's Leadership Program, C-TIP, LGBTI, Youth, and Indigenous Peoples programming.
- \$1.9 million will provide protection, care and support to vulnerable populations, both child and adult, including civilian victims of war and torture survivors.
- \$4.2 million in funding will support the Elections and Political Processes (EPP) fund to support unanticipated elections and political transitions.
- Funds will be used to leverage host-country based regional organizations to support elections and political transitions through a regional elections and political transitions mechanism.
- The bureau will continue to support the Global Labor Program to promote labor rights as a key element of democratic governance and poverty reduction.
- \$3.0 million will be used to support LGBTI populations by protecting their physical security and political and civil rights and working for the equality of opportunity and non-discriminatory access to public goods and services.
- Funds will be used to curb democratic backsliding and "closing space" and adjust to a rapidly changing civil society sector via the Civil Society Innovation Initiative (civil society Hubs for impact and innovation).
- The bureau will continue to advance work to protect human rights activists, bloggers, journalists, and civil society organizations online through digital security techniques under the Information Safety and Capacity project.
- Activities will include strengthening institutions and systems that enable the rule of law and prevent human rights violations through enhanced security sector accountability, legislative strengthening, local governance and anticorruption.
- The bureau will continue to invest in Women, Peace, and Security focus countries, including advancing women's roles in peacebuilding and transition processes and building resilience to crisis and conflict through women and girls' empowerment.
- The bureau will continue to collaborate with the donor community and leverage partner investments that can enable global-scale up of DRG programming.
- Work will continue across the Agency to implement USAID's Integration Action Plan, signed by the

Administrator in January 2015, which includes integrating DRG principles and practices into other sectors and political economy analysis.

- The bureau will continue to advance the DRG learning agenda based on hard evidence to better inform and program the Agency's over \$2.0 billion dollar investment under GJD. DRG will draw upon lessons learned to continually refine the skills of the DRG cadre and to further advance the incorporation of DRG principles throughout USAID's development portfolio.

Office of Food for Peace (FFP): The request of \$13.9 million in DA funding provides critical support to DCHA's humanitarian and development food assistance programs through technical assistance, training, and early-warning systems. These funds are essential to DCHA's ability to respond to crises effectively, efficiently, and expeditiously.

For technical support, the Food and Nutrition Technical Assistance (FANTA-3) Project helps to strengthen U.S. capacity to design, implement, monitor, and evaluate Title II programs. FANTA-3 research includes community and livelihood resilience in risky environments, agriculture-access-nutrition linkages, integrating food assistance with other U.S. programs, emergency, and therapeutic feeding focusing on the prevention of malnutrition in children under two years of age, and the relationship between gender and food security. Additional support to USAID partners includes the advancement of monitoring and evaluation efforts and capacity building of local partners. DA resources support food security and technical experts on FFP staff, improving the design of new food assistance programs, improving market analysis of food assistance interventions, and providing support to field-based USAID staff.

The Humanitarian Assistance Support Contract (HASC) provides staff support for the award and management of grants and cooperative agreements for emergency and development food assistance programs. HASC staff also assist with the procurement of Title II commodities, communications, and training.

The Famine Early Warning System Network (FEWS NET) provides objective, evidence-based analysis to help government decision makers and relief agencies plan for, and respond to humanitarian crises and produces forward looking reports on more than 36 of the world's most food-insecure countries. FEWS NET currently maintains 22 field offices as well as a remote monitoring network.

Office of American Schools and Hospitals Abroad (ASHA): With a request of \$5.0 million, ASHA will support USAID's mission of partnering to end extreme poverty and promote resilient, democratic societies by providing tangible assistance to civil society institutions that demonstrate the ideas and practices of the United States in health and education abroad. With a focus on science and technology, inclusive civil society, and gender equality and women's empowerment, ASHA projects simultaneously further sustainable development and build greater mutual understanding between the people of other countries and the people of the United States. The FY 2017 funding level is critical to enable ASHA to strengthen institutions through capital improvement projects and the procurement of advanced scientific, medical, and educational equipment.

Key Interventions:

- In Egypt, Lebanon, and the West Bank, funding provides secondary schools and universities with technology for education in the arts, media, and the sciences, allowing students to express themselves, develop a commitment to independent inquiry and the free exchange of ideas and go on to leadership roles in their countries, the region, and globally.
- In Sub-Saharan Africa, funding allows centers of excellence in health and education to become more sustainable and expand their reach, allowing local experts to benefit from exposure to the ideas and practices of the United States and build the capacity of civil society locally to meaningfully improve outcomes in health and education.

Office of Program, Policy and Management (PPM): The FY 2017 request includes \$7.1 million for PPM activities, including \$2.1 million to support the implementation of the U.S. National Action Plan on Women, Peace and Security (WPS). Funds will be used to make strategic investments in USAID WPS focus countries, including: 1) programming that advances women's role in critical peacebuilding and transition processes; strengthens the prevention of and response to gender-based violence in countries affected by crisis; and builds resilience to crisis and conflict through the empowerment of women and girls; and 2) support for training, technical assistance, and monitoring and learning activities that help missions integrate WPS objectives into their broader portfolios. In FY 2017, activities will be designed to address specific gaps, challenges, or opportunities identified in the 2015 review of the U.S. National Action Plan and will build on recommendations, lessons learned, and best practices from mid-cycle portfolio reviews of current WPS programming.

Key Interventions:

- Provide practical or strategic support for women's participation in peace processes, political transition, reconstruction, or security initiatives.
- Increase the protection of women and girls from conflict and crisis-related gender-based violence (GBV) and trafficking in persons.
- Promote women's participation and leadership in efforts to build resilience to recurrent crisis, conflict, and insecurity, such as activities to engage women and girls in community-level violence prevention, countering violent extremism, conflict mitigation, disaster risk reduction, and adaptation to climate-related shocks/challenges.
- Improve accountability for GBV and strengthen holistic access to justice for survivors.
- Strengthen the technical and organizational capacity of civil society actors, including women's organizations, working to address critical gender equality and female empowerment issues in fragile, conflict-affected, and transition environments.

PPM also requests \$5.0 million for global climate change adaptation programming. This programming will contribute to the Presidential Initiative and the USAID Strategy for Climate Change and Development through an integrated bureau-wide focus on the needs of the most vulnerable. DCHA's climate change programming identifies and strengthens fragile systems, and builds resilience for the most vulnerable. In the face of growing impacts of extreme weather, DCHA will support programs in sub-Saharan Africa, Latin America, Asia, and the Middle East that further the Agency's understanding of the connection between climate change, disasters, food security, conflict, and instability and how adaptation strategies can be applied to reduce associated risks and build broader social and institutional resiliency. These climate change investments will be carefully coordinated and integrated with other DCHA investments in humanitarian assistance, disaster-risk reduction, democratization, crisis and recovery, as well as with the Famine Early Warning System. In addition, in compliance with Executive Order 13677, DCHA will support analytic work to assess our development programs for any significant climate change risks and make any needed adjustments to enhance the sustainability of development outcomes.

Key Interventions:

- Build resilience among the most vulnerable by connecting disaster risk reduction efforts with adaptation planning to create sustainable interventions that take into account not just current conditions but expected future circumstances.
- Empower civil society and governments in climate-challenged states to make difficult adaptation decisions in an inclusive, legitimate manner.
- Build the capacity of decision-makers to use climate information to support adaptation measures for the most food insecure.
- Enhance the capacity of the most vulnerable to assess their risks from climate shocks and stresses and design innovative interventions that mitigate harmful effects.

- Improve the Agency's ability to address climate-related drivers of conflict and strengthen sources of resilience to foster stability.

Office of Conflict Management and Mitigation (CMM): The requested FY 2017 funding level of \$3.0 million will support U.S. government foreign policy and national security objectives to prevent and mitigate conflict and violent extremism as envisioned in the 2015 National Security Strategy and Quadrennial Diplomacy and Development Review. CMM supports state-of-the-art peacebuilding approaches, conflict-sensitive development and humanitarian assistance programs, and evidence-based policies and strategies related to fragility, conflict, and violence. CMM's work contributes to supporting inclusive and accountable democracies to advance freedom, dignity, and development, and to enhancing effective, coordinated response to crises, fragility, and political opportunities.

Key Interventions:

- CMM will lead applied research and analysis activities that generate new learning and synthesize existing data to develop technical leadership products that help USAID and other partners in the development and humanitarian assistance communities translate cutting-edge knowledge in conflict, fragility, and resilience into field-based practice and quality results. Work will include country-specific conflict assessments, fragility and instability risk analyses, technical briefs and toolkits.
- CMM will deliver high quality training in analyzing, understanding, and applying conflict and fragility dynamics to support the design and implementation of more effective peacebuilding and sector-specific programming in conflict-affected, fragile states. In addition, these state-of-the-art training materials will be broadly disseminated to support best practices among other partner organizations that implement development and humanitarian assistance activities.
- As part of its strategic agenda to identify and promote evidence-based learning, CMM will continue support for program evaluations that explore the effectiveness of theories of change and related interventions for programming in key areas such as people-to-people peacebuilding and countering violent extremism.
- CMM staff will contribute expert technical assistance and support to USAID operating units and the U.S. government interagency – and will advocate within international fora – to develop and implement policies and programs to lessen conflict, address fragility, and bolster resiliencies at the country and global level.

Global Health Programs (GHP)

The DRG Center will manage \$14.5 million in Global Health Funds to continue to support the Displaced Children and Orphans fund (DCOF), as well as the Center for Children in Adversity (CECA) under the Action Plan on Children in Adversity (APCA). DCOF and CECA programs focus on children affected by war, children with disabilities, and other disenfranchised children by providing support to reinforce coping strategies and work within family and community structures in the midst of conflict, crisis, or economic stress. DCOF has also developed programs to strengthen the economic capacities of vulnerable families to help provide for their children's needs. DCOF is also participating in a pioneering effort to develop and strengthen national child protection systems and is helping build networks of key actors to improve policies and develop state-of-the-art programming.

Key Interventions:

- The FY 2017 request includes \$13.0 million to support the implementation of DCOF and \$1.5 million to support APCA implementation in priority CECA programs globally;
- Funding will be used toward strengthening child protection systems;
- Funding will support networks of key actors to improve policy and programming to benefit vulnerable children and families;
- Funds will also provide CECA coordination of the APCA across nine federal agencies and 30 departments.

International Disaster Assistance (IDA)

The FY 2017 IDA enduring request of \$125.0 million will provide funds to save lives and reduce suffering in, and mitigate and prepare for natural and complex emergencies overseas through food assistance, disaster relief, rehabilitation, and reconstruction assistance, including activities that transition to development assistance programs and disaster preparedness/risk reduction activities, with a focus on areas where OCO has not generally been utilized to date. The IDA request will enable the U.S. government to meet humanitarian needs quickly and support mitigation and preparedness programs, as well as provide emergency food assistance.

The Office of U.S. Foreign Disaster Assistance (OFDA): OFDA will administer \$95.0 million to respond to humanitarian needs resulting from natural disasters, civil strife, food insecurity, and prolonged displacement of populations. Programs support humanitarian responses to disaster-affected and conflict-affected individuals and internally displaced persons, providing a foundation for recovery and the advancement of development and stability. By reducing the impact of disasters, programs alleviate suffering and save lives. This funding level will be used for protracted complex emergencies, disaster risk reduction activities, and responses to new and sudden onset disasters, and related operational costs. With International Disaster funds, the U.S. government provides safe drinking water, basic health services, shelter, household commodities, seeds, tools, and livelihood assistance to tens of millions of people in approximately 70 countries each year.

In addition, USAID is responsible for certain necessary recurring and non-recurring costs for providing U.S. disaster assistance under the Compact of Free Association between the United States and the Republic of the Marshall Islands (RMI) and the Federated States of Micronesia (FSM). Recurring costs are approximately \$1.0 million annually, funded from IDA. These costs include pre-positioning of emergency relief supplies, full-time staff based in the region to coordinate with government officials in both FSM and RMI, and agreements with disaster assistance implementing partners. These funds are in addition to the Development Assistance provided through USAID's Asia Bureau.

Key Interventions:

- OFDA will undertake activities to respond to emergency needs in complex, man-made and natural disasters.
- OFDA will coordinate across USAID bureaus to enhance the resilience of disaster-affected communities and prepare for disasters. Building resilience to shocks and crises in chronically vulnerable populations results in cost savings over the long-term, and effectively leverages and links humanitarian accounts and development investments.

FFP: USAID's FFP will administer \$30.0 million for emergency food response. IDA resources enable the U.S. government to respond effectively and efficiently by using the right tool at the right time to respond to emergency situations and food insecurity with a range of interventions, including local and regional purchase of agricultural commodities, food vouchers, cash transfers, and cash for work programs.

Key Intervention:

- FFP will provide cash-based emergency food assistance in response to natural disasters or new complex emergencies, enabling an immediate response to shocks.

International Disaster Assistance (IDA) - OCO

The FY 2017 IDA-OCO request of \$1.832 billion will provide funds to save lives and reduce suffering in, and mitigate and prepare for natural and complex emergencies overseas through food assistance, disaster relief, rehabilitation, and reconstruction assistance, including activities that transition to development

assistance programs and disaster preparedness/risk reduction activities. The IDA OCO request will enable the U.S. government to meet humanitarian needs quickly and support mitigation and preparedness programs, as well as provide emergency food assistance.

OFDA: OFDA will administer \$1.001 billion of the \$1.832 billion request of International Disaster Assistance (IDA) Overseas Contingency Operations (OCO) funds. The funding will be used to respond to humanitarian needs resulting from natural disasters, civil strife, food insecurity, and prolonged displacement of populations. Programs support humanitarian responses to disaster-affected and conflict-affected individuals and internally displaced persons, providing a foundation for recovery and the advancement of development and stability. By reducing the impact of disasters, programs alleviate suffering and save lives. The funding will be used for protracted complex emergencies, disaster risk reduction activities, responses to new and sudden onset disasters, and related operational costs. With IDA OCO funds, the U.S. government provides safe drinking water, basic health services, shelter, household commodities, seeds, tools, and livelihood assistance to tens of millions of people in approximately 70 countries each year.

Key Interventions:

- Interventions in response to large-scale, protracted emergencies will continue to be a priority in FY 2017. OFDA anticipates that there will be numerous continuing complex emergencies in inaccessible and insecure environments that dovetail with major U.S. government's strategic priorities, including Syria and Iraq.
- OFDA will continue to provide protection assistance, including support for prevention and response to gender-based violence, as an integral part of the vital, life-saving humanitarian assistance IDA supports.

FFP: FFP will administer \$831.0 million for emergency food assistance worldwide. The IDA-OCO request ensures that the U.S. government can efficiently and effectively meet emergent food needs in ongoing complex emergencies and humanitarian crises. IDA-OCO resources allow USAID to support the most appropriate and effective food assistance interventions for these crises such as local and regional purchase of agricultural commodities, food vouchers, and cash transfers.

Key Interventions:

- FFP will continue to provide emergency food assistance in response to complex emergencies in the Middle East (Syria, Iraq, and Yemen), Somalia, the Central African Republic, and West Africa in 2017. In these difficult operating environments, cash-based programming can shorten procurement times or allow implementing partners to support local markets impacted by conflict.
- As vulnerable populations in East and Southern Africa recover from the effects of 2016's El Nino, FFP will use market-based approaches to stimulate recovery and transition activities.
- FFP will provide market based emergency food assistance in response to natural disasters or new complex emergencies, enabling an immediate response to shocks.

P.L. 480 Title II

Title II of the Food for Peace Act authorizes the provision of U.S. food assistance to meet emergency food needs around the world, and funds development-oriented programs to help address the underlying causes of food insecurity. Funding for Title II is appropriated to the U.S. Department of Agriculture and is administered by USAID.

The FY 2017 Title II request includes funding for development programs, complemented by resources requested in the DA account under the Bureau of Food Security's Community Development Fund. Together, these resources support development food assistance programs' efforts to address chronic food

insecurity in areas of recurrent crises using a multi-sectoral approach to reduce poverty and build resilience.

The balance of the FY 2017 Title II request will be used to provide emergency food assistance in response to natural disasters and complex emergencies. In an emergency, when people face severe food insecurity, Title II emergency programs save lives, boost the resilience of disaster-affected communities, and support the transition from relief to recovery. This food, including specialized, processed commodities, provides life-saving assistance and nutritional support to millions of vulnerable people facing disasters and food insecurity overseas.

The request would allow the use of up to 25 percent of these resources, valued at \$337.5 million, for market-based food assistance for emergencies including the local or regional procurement of agricultural commodities, use of food vouchers, or use of cash transfers. This allows USAID to make emergency food aid more timely and cost-effective, improving program efficiencies and performance. It is estimated that these market based approaches will allow USAID to assist approximately two million more emergency beneficiaries annually with the requested resources.

Key Interventions:

- Continue implementation of development food assistance programs in 12 countries while soliciting applications for new development assistance programs in four countries.
- Activities designed to increase the resilience of food insecure communities are routinely integrated into development and emergency food assistance programs.
- FFP will provide specialized food products including ready-to-use foods, and fortified rice, to prevent and treat malnutrition. High energy biscuits will be available for programming in the immediate aftermath of a natural disaster or for displaced populations on the move.
- FFP will continue to meet to food needs in protracted emergency situations into FY 2017.

Transition Initiatives (TI)

The FY 2017 request of \$15.0 million for the TI account will be used to address opportunities and challenges in conflict-prone countries and assist the transition toward sustainable development, peace, good governance, and democracy, with a focus on areas where OCO has not generally been utilized to date.

TI funding will support catalytic programs targeting political crises, preventing and mitigating conflict, and addressing stabilization needs in countries important to U.S. foreign policy. TI funds will support fast, flexible, short-term assistance to help government and civilian partners advance peace and democracy. TI funding will target foreign policy priority countries where OTI acts as a first responder to engage quickly and robustly and where additional contingency funds are less readily available.

Examples of assistance include: addressing underlying causes of instability and violent extremism, support to key transitional processes such as elections and constitutional assemblies, promoting central government responsiveness to local needs, civic participation programs, media programs raising awareness of national issues, and conflict resolution measures.

Transition Initiatives (TI) - OCO

The FY 2017 request of \$62.6 million for the TI-OCO account will be used to address opportunities and challenges in conflict-prone countries and assist the transition toward sustainable development, peace, good governance, and democracy.

TI funding will support catalytic programs targeting political crises, preventing and mitigating conflict, and addressing stabilization needs in countries important to U.S. foreign policy. TI funds will support fast, flexible, short-term assistance to help government and civilian partners advance peace and democracy. TI funding will target foreign policy priority countries where OTI acts as a first responder to engage quickly and robustly and where additional contingency funds are less readily available.

Examples of assistance include: addressing underlying causes of instability and violent extremism, support to key transitional processes such as elections and constitutional assemblies, promoting central government responsiveness to local needs, civic participation programs, media programs raising awareness of national issues, and conflict resolution measures.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: DCHA is currently implementing a second round of Reconciliation Fund evaluation activities, with a focus on better understanding the interaction of religious identities, conflict dynamics, and peacebuilding in people-to-people programs. FY 2017 funding will help support the third round of Reconciliation Fund evaluations managed by the Bureau. The specific technical focus will be determined based on new learning opportunities or evaluation questions that arise during program implementation. FY 2017 funding will also support a rigorous evaluation of a field-based countering violent extremism program in partnership with a USAID mission.

DCHA has completed three impact evaluations (IEs) involving USAID DRG programs in Ghana, Uganda, South Africa, Zambia, Peru, Paraguay, Haiti, and Georgia. Through FY 2016-2017, DCHA will design and initiate up to 10 additional IEs for USAID DRG programs in Asia, Latin America, the Middle East, and Africa. DCHA has also completed 10, and is carrying out an additional 11, performance evaluations on both mission-managed programs, and on DCHA-managed global DRG programs, such as: 1) the Legal Enabling Environment Project aimed at creating environments conducive for non-governmental organizations to operate freely; 2) and the Consortium for Elections and Political Process project, which has provided over \$600.0 million dollars of elections and political process support globally through the National Democratic Institute, the International Republican Institute, and International Foundation for Electoral Systems over the last six years. In addition, DCHA has completed, or is conducting a series of rigorous surveys and has made 12 grants to academics for critical research in the DRG sector, including Countering-Trafficking in Persons programs.

DCHA centrally manages quantitative, population-based baseline evaluation surveys for all new development food assistance programs, funded with Title II and Community Development Fund resources. Additionally, DCHA centrally manages final evaluations, measuring progress against baseline data in key sectors including nutrition outcomes, agricultural production, and economic growth.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: DCHA routinely utilizes Reconciliation Fund evaluation results to identify best practices in people-to-people programming and shape future solicitations. In addition, evaluation findings and recommendations can help inform technical guidance, training materials, and USAID mission program designs related to conflict management and mitigation, as appropriate.

DCHA's DRG-related impact evaluation initiative is answering pressing questions USAID missions have about what works in their programs, what to scale up, and what approaches do not yield optimal results in particular settings. For example, current evaluations examine the relative efficacy of national government versus civil society-advocated anti-corruption efforts; determine what forms of information campaigns increase voter turnout and enable citizens to hold elected officials accountable post-election;

and identify the types of information that catalyze citizens to proactively engage with local government to improve service delivery. These questions are central to the design of many USAID programs. Having rigorous, tested answers will improve the impact of USAID programs.

DCHA anticipates using a new model for development food assistance programming in the Democratic Republic of Congo. Awards issued in 2016 will follow a “Refine and Implement” approach, where baseline data will be used in a consultative process with implementing partners to refine and adjust program activities, delivering better food assistance outcomes over the length of the five-year program. Additionally, the third phase of the Food Aid Quality Review (FAQR) will examine the cost effectiveness and programmatic efficiency of specialized nutritional products and accompanying programmatic interventions in food assistance programming.

DCHA continues to strengthen its management and oversight of CCF activities by requiring a mid-cycle review (a form of performance monitoring) of CCF-country portfolios that are approximately half-way through their implementation. The MPR serve as an important external evaluative process to help make relevant programmatic and management adjustments before the project has ended – a critically important approach in the kinds of rapidly changing environments where CCF typically operates. The mid-cycle review also advances the broader DCHA and USAID Learning Agenda by allowing best practices experienced in one complex operational environment to be employed appropriately across the global CCF portfolio. In FY 2014 and FY 2015, reviews were conducted in Nepal, Jordan, the Maldives, Ukraine, Niger, and the Central African Republic. Reviews of the Burundi and Democratic Republic of the Congo portfolios are planned.

TOTAL FUNDS: FY15 TI: 47,000 FY15 TI-OCO: 20,000 Non-TI: 148,875				
A Macedonia program was also begun at the very end of FY 2015.				
*This adjustment includes: 1) funds from prior fiscal year; 2) funds used in next fiscal year; and 3) collections, recoveries, and reimbursements.				
FY2015: TI/TI-OCO allocations based on \$67 million appropriation. Non-TI funding totals \$148.875 million.				

USAID Economic Growth, Education and Environment (E3)

Foreign Assistance Program Overview

The Bureau for Economic Growth, Education and Environment (E3) provides a global perspective, evidence-based expertise, and sustainable solutions in our sectors to accelerate the U.S. Agency for International Development's (USAID) collective impact on development outcomes.

E3 is the technical leadership and field support hub for worldwide activities in 12 technical sectors. E3 reinforces the Agency's collective impact on development outcomes by providing a global perspective, evidence-based expertise and sustainable solutions to support USAID's programs and policies on economic growth, trade, infrastructure and energy, education, urban services, civil society, natural resource management, global climate change, water, gender equality and women's empowerment. In FY 2017, the Bureau will continue to use data-driven analysis to support Agency design processes and build upon its research and rigorous evaluation agenda to improve the effectiveness of Agency strategies and programs. In support of the Agency's goal of reducing poverty and promoting resilient and democratic societies, E3 has pioneered the use of strategic tools such as the Development Credit Authority (DCA), mobilized private capital and fostered innovation through its management of the Agency's Grand Challenges for Development in education, energy, and water, and a technology challenge in Forestry and Biodiversity. In FY 2017, the Bureau will continue support for the development and use of innovations and strategic tools, while investing in robust evidence-gathering to design cutting-edge programs that ensure achievement of results.

Request by Account and Fiscal Year

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
TOTAL	241,336	*	254,266	12,930
Development Assistance	203,520	*	244,766	41,246
Economic Support Fund	37,816	*	9,500	-28,316

Development Assistance (DA)

FY 2017 funding will support key interventions in a wide range of sectors to achieve Agency objectives.

- **Broad-Based Economic Growth:** In line with the QDDR recommendations, E3 staff will conduct constraints-to-growth diagnostics in selected countries in conjunction with the Department of State and other interagency and international partners to identify barriers to inclusive economic growth. This will help to prioritize interventions that lead to more effective and sustainable results. E3 will also work to support sound economic governance and domestic resource mobilization in partner countries. Technical assistance will help countries to generate taxes and other revenue so that partner countries can take control of their own development. E3 funded assistance will help partner countries ensure that their resources are being used in an efficient and accountable manner that will enhance development in targeted sectors. E3 will provide technical analysis in the form of cost benefit analysis and cost effectiveness analysis to ensure that USAID projects are effective, and improve the livelihoods of the poor and get high value for money. This analysis will take place across a variety of development sectors such as agriculture and health, and will reflect U.S. government priorities such as global climate change.

- Trade: In FY 2017, USAID will support developing countries to help integrate traders into the global trading system and expand trade and economic opportunities. Specifically funds will assist developing country governments to undertake reforms that decrease the time and costs to trade such as streamlining, and increasing predictability and transparency of border procedures. USAID will work collaboratively with international organizations, such as the International Trade Center, International Finance Corporation, and with other U.S. government agencies such as the U.S. Customs and Border Protection and the Trade and Development Agency, to provide developing country reformers access to global expertise related to trade policy and trade facilitation reforms. USAID will use \$5.0 million in FY 2017 funds to pursue public private partnerships to support trade facilitation activities working with the World Economic Forum, the International Chamber of Commerce and the Center for International Private Enterprise. Activities may be implemented in countries which may include special notification countries such as Burma, Cambodia, Guatemala, Honduras, Pakistan and Tunisia.
- Development Credit Authority: In 2017, E3 will use partial credit guarantees to unlock private financing to support USAID development outcomes throughout the world. The \$3.0 million will be used to mobilize up to \$100.0 million in private sector financing into innovative and impactful cross-border transactions, as well as to scale the size and impact of single-country guarantees. E3 anticipates that these guarantees will support a variety of USAID development priorities that include: 1) stimulating private commercial finance to projects and communities that support building resilience to recurrent crises in a manner that reduces chronic vulnerability (i.e., natural disaster, disease, and conflict); 2) mobilizing private capital for small and medium enterprises to expand cross-border trade and deepen financial markets that support the emergence of middle class consumers; 3) supporting the U.S. government priority of tackling global climate change by reducing the risks of lending to projects that improve the management of tropical forests, promote environmentally-friendly agricultural practices, and support sustainable fisheries; 4) expanding critical services (i.e., water, sanitation, health and hygiene) to those living in distressed and vulnerable communities by focusing lending toward project finance in the infrastructure sector; and 5) helping municipalities and sub-sovereign government entities finance their own development (i.e. through guaranteed bond issuances). Additionally, DCA will play an important role in the whole of government effort to expand U.S. engagement in Central America.
- Private Capital and Microenterprise: Using FY 2017 funds, E3 will mobilize private capital to enhance and accelerate the USAID's development objectives. While demand for private investment in developing countries is expanding, mobilizing private capital at scale to support development objectives remains a challenge. Using USAID tools and resources to catalyze investments by financial, corporate, and other private sector partners, E3 will serve as a knowledge hub and service center to support the mobilization of capital and technical know-how from the private sector to further the Agency's mission of ending extreme poverty. E3 will work to strengthen USAID's business model and focus our resources on incentivizing investment from private sector and host country sources of capital in microenterprises, entrepreneurs, infrastructure projects, service providers, and other enterprises that will generate sustainable improvements to the lives of those living in extreme poverty. The Bureau will deepen USAID's knowledge and skills base on how to structure and execute transactions through training, sharing of best practices and hands-on support by prioritizing locally led investment, financial inclusion, and access to finance for small and medium enterprises. E3 will create a network of USAID staff based in overseas missions to ensure that missions have the capabilities necessary to effectively engage with investors and financiers and incorporate private investment into their mission strategies and programming. The Bureau will also work with other U.S. government agencies to accelerate transactions in key sectors and regions. E3 will continue to develop focused partnerships with non-traditional partners, such as pension funds, sovereign wealth funds, philanthropists, and other institutional investors (including from developing countries).

Advisory support will be provided to both governments and the private sector to help incentivize private sector investment opportunities in support of the USAID's goals. E3 will continue to provide technical assistance to innovative projects incorporating microfinance and inclusive finance techniques, and will manage, support, and report microenterprise activities and requirements.

- Infrastructure: Infrastructure provides a critical foundation for inclusive, sustainable growth and is essential to achieving USAID's development objectives across a wide range of sectors including health, education, and the environment. E3 provides broad professional architect-engineer services, post-disaster reconstruction support and construction risk management of the USAID global construction portfolio with an estimated value of more than \$2 billion per year (2014 USAID Construction Assessment). This includes an E3 managed Architect-Engineer Indefinite Delivery Indefinite Quantity contract with a \$600.0 million maximum ordering limit, available to all USAID missions to assist with infrastructure needs. Additionally, E3 provides technical leadership on emerging and cross-cutting infrastructure issues, specifically in the area of energy and urban services. E3 will expand access to clean energy services by enabling private sector investment, modernizing electric utilities, and testing and scaling clean energy solutions and business models. E3 will also pilot work with USAID missions to help the urban poor adapt to the impacts of climate change. E3 will continue to support implementation of the Agency's "Sustainable Service Delivery in an Increasingly Urbanized World" policy by enabling missions to access short- and long-term technical assistance and training to improve urban and local service delivery and governance.
- Education: E3 will leverage its technical expertise, partnerships, and global perspective to guide and influence the education sector in the developing world, advancing the Agency's development outcomes. The Bureau will focus on the three main strategic priorities for USAID investment in the education sector: improving reading skills for children in primary grades; improving the ability of tertiary and workforce development programs to generate workforce skills relevant to a country's development goals; and increasing equitable access to education for learners in crisis and conflict environments. E3 will continue the support that has contributed to the achievements of USAID investments worldwide under the Education Strategy: 30 million individual learners reached in reading programs; 440 thousand youth and adults employed through workforce development programs; and learning opportunities and access to education for 1.1 million children and youth living in conflict or crisis-affected environments who would otherwise be out of school. E3 will promote evidence-based interventions to be used by USAID missions and development partners to develop effective education programming, including through continued growth and support for communities of practice, which have grown over the past year to include over two thousand education practitioners and stakeholders. E3 will support research, evaluations, knowledge management, training, and professional development activities for education sector staff. E3 programs will support education data collection and analysis, with a focus on learning outcomes as well as cost analysis, in order to improve and guide decision-making and interventions. The Bureau will foster and support partnerships with donors, the private sector, and other stakeholders to take on pressing challenges within the sector, including improving and increasing accessibility of global education data, improving the responses to education in emergencies, and increasing the availability of books and high quality teaching and learning materials. E3 will also continue to engage with multilaterals, including the Global Partnership for Education, to leverage funding and improve collaboration.
- Water: In FY 2017, USAID will lead efforts to achieve the goals outlined in USAID's Water and Development Strategy and to implement the provisions of the Paul Simon Water for the World Act of 2014 to increase the number of people gaining access to Water, Sanitation and Hygiene (WASH) services. A communications and knowledge management activity will: promote evaluation, innovation, and research to measure and amplify the development impact of water programs; develop and disseminate detailed information on the Agency's WASH activities, programs and partnerships;

and, identify and promote technical best practices for the sector. E3 will focus its efforts on developing new tools and support mechanisms to strengthen the ability of host countries and USAID missions to sustain water-related investments over time. This will be strengthened by new tools for leveraging public and private financing to support the maintenance of ongoing increased WASH services. A new effort on water scarcity will deepen the understanding of the impact of increasingly variable rainfall in priority countries, and develop approaches for adapting to impact of climate change while ensuring sufficient quantity and quality of water to meet human needs across multiple sectors (including domestic, environmental, agricultural, energy and industrial). E3 will continue to leverage strategic partnerships like the Water and Development Alliance (WADA) with Coca Cola, Sanitation and Water for All (SWA), and the U.S. Army Corps of Engineers Interagency Agreement to access unique technical expertise while maximizing the impact of water and sanitation-related investments. Ongoing sustainability and related monitoring and evaluation activities will meet statutory requirements and enhance the long-term impact of USAID WASH and water management programs. In FY 2017, USAID aims to provide 4,037,653 people with access to improved water and 2,875,055 people with access to improved sanitation. E3 will support research to increase the efficient use of weather for food production and enhance food security.

- Global Climate Change: Developing countries are projected to emit more greenhouse gas (GHG) emissions annually than developed countries starting in 2017 (Battelle Memorial Institute, 2007). Thus, they must be part of the global effort to reduce emissions. Developing countries are also highly vulnerable to the impacts of changing climate and will need to increase their ability to adapt to changing conditions. E3's purpose is to increase Agency and partner country capacity to plan for, develop and implement climate-resilient low emissions development to manage the effects of climate change and drive sustainable economic growth. To that end, E3 will guide and support Agency participation in the U.S. Enhancing Capacity for Low Emissions Development Strategies program (EC-LEDS). E3 also will support the Agency's implementation of Executive Order 13677 on Climate-Resilient International Development, which requires missions to address climate risks in their strategies and project designs. To prepare the Agency for a new climate change and development strategy, E3 will lead a review of the accomplishments and lessons learned from the 2012 USAID Climate Change and Development Strategy. Public-private partnerships will be used to spur investments in cost-effective, low-carbon, energy-efficient and sustainable technologies and practices. In response to field demand, one or more climate change field support mechanisms will be launched to support the design, implementation, and evaluation of missions' climate change and climate change integration programs. E3 will provide global technical leadership or services in quality climate change data and information, private sector and urban climate finance and adaptation, communications, knowledge management, outreach, and training. As the Agency begins to address and manage climate risk at all stages of the program cycle, E3 will continue to provide practical, climate change and development training and disseminate timely and useful climate information and programming guidelines in a variety of formats.
- Adaptation: E3 will use \$25.0 million to support adaptation programs that will strengthen the resilience of climate-vulnerable states; support climate risk management strategies and climate finance readiness; improve access to climate data; and support implementation of actions to reduce the risk of climate impacts. E3 will support the Agency's Resilience Agenda in the Sahel and the Horn of Africa. E3 will use \$7.0 million to help missions meet the climate risk management requirements of the Executive Order on Climate Resilient International Development through training, and tools on climate-risk-screening, in depth-assessment, and adjustment in country development strategies and project designs. E3 will provide \$4.0 million in technical support to missions in about 25 countries in areas such as vulnerability and adaptation assessments, national and municipal adaptation planning, and monitoring and evaluation. E3 will provide support for global climate services, bringing information into proactive decision-making processes in agriculture, water

management, urban planning, and disaster risk reduction. For example, using \$1.5 million through a global partnership with NASA, E3 will increase the use of earth observation information and geospatial technologies in decision-making related to food security, water and disasters, weather and climate, and land use and ecosystems in four regions reaching more than 40 countries. E3 will also support climate risk management strategies, and promote enhanced access to climate finance and climate finance readiness to scale up adaptation action. E3 will identify and test models that strengthen land tenure and resource governance as they relate to successful mitigation and adaptation interventions. E3 will create, expand, and communicate the results of evidence-based knowledge around best land tenure and property rights practices. In response to shifting socio-economic trends, E3 will also develop a program in Climate Change Mitigation and Adaptation in Urban Areas with a possible focus on municipal finance strategies, data and decision support for risk management and planning, and sub-national mitigation and adaptation strategies using \$1.5 million.

- Clean Energy: E3 will use \$16.0 million for clean energy programs. The Paris Agreement on climate change creates a comprehensive framework for global action under which all countries will act to reduce emissions, and countries have submitted “Nationally Determined Contributions” (NDCs), which outline pledged commitments by countries to reduce the growth of greenhouse gas (GHG) emissions. In FY 2017, using \$2.0 million E3's Clean Energy programs will help countries implement their NDCs and Low Emissions Development Strategies (LEDS), prioritizing those opportunities that will have the greatest impact on reducing GHG emissions and have the potential to deliver transformational change. E3 will help missions and partner countries improve, scale-up, and evaluate clean energy investments that not only slow the growth of GHG emissions but increase access to energy and improve air quality and energy security. E3 will support grid integration of renewable energy to ensure that this energy is used, scaled, and continues to attract investment. Support will be delivered via technical assistance, training, and partnerships with U.S. regulators and utilities. Through the Sector Reform and Utility Commercialization Program, E3 will work to build stronger electric utilities and optimize the regulatory and operational environment for clean energy. Through the Powering Agriculture Grand Challenge, the Bureau will continue to support innovative application of clean energy in irrigation, refrigeration, and other agricultural value-added activities. E3 will provide technical assistance to help scale up private sector-led renewable energy and energy efficiency programs and support increased consumer financing and the development of new clean energy business models. Through the Energy Sector Technical Leadership program, E3 is developing a broad range of capacity building training activities to strengthen the expertise of USAID staff and developing country partners.
- Sustainable Landscapes: E3 will use \$14.3 million to support sustainable landscapes programs. In some developing countries, emissions from land use change, deforestation, and agriculture can make up as much as 80 percent or more of current national emissions. These emissions often represent lost and wasted assets due to illegal logging, clearing or breaking land, excessive use of inputs and soil carbon loss. While rural people and many economies depend upon natural resources for their livelihoods, current practices and trends are not sustainable from either the local economy and ecosystem or global emissions' perspective. A landscapes approach can alter the outdated binary choice model of trees or crops by considering interrelated opportunities for food, fodder, alternative livelihoods, rehabilitation of degraded lands, and agroforestry that values forest ecosystems and agricultural productivity, as well as benefits such as water retention, water quality and maintaining carbon storage. Achieving these better development and environment outcomes will require policy reform, demonstration of better practices, and technology to facilitate land management and emissions monitoring. In FY 2017, USAID Sustainable Landscapes programs will provide \$2.0 million to help countries implement their NDCs and LEDS, prioritizing opportunities with the potential to have the greatest impact on reducing GHG emissions (present and future) and have the potential to deliver transformational change. Public-private partnerships to reduce

commodity-driven tropical deforestation will build on this work and help companies reliant on palm oil, timber and other commodities to realize their commitments under the Tropical Forest Alliance 2020 (TFA 2020). The Consultative Group on International Agricultural Research (CGIAR), with E3 support, will conduct essential research on innovations that sequester carbon and reduce emissions from the land sector using \$1.0 million. E3 will work with U.S. government partners in several EC-LEDS countries to improve forest management by increasing information and analysis of data such as forest cover and deforestation trends. E3, with the Environmental Protection Agency, will build capacity in up to 16 EC-LEDS countries to measure and report on their greenhouse gas emissions from land use change. E3's Land Potential Knowledge Systems project will support a long-term, sustainable increase in resilience and land productivity by integrating local knowledge with global datasets and providing options through mobile applications for sustainable intensification of existing lands, restoration of degraded lands and conversion to agriculture only on lands with high land potential productivity and low degradation risk. The Tenure and Global Climate Change Project will carry out assessments to ensure tenure considerations are incorporated into developing national Reducing Emissions from Deforestation and Forest Degradation and LEDS strategies. E3 will continue implementation of a program to measure and enhance the impact of biodiversity and forestry programs through improved knowledge, evidence-based programming, and adaptive management.

- Biodiversity: E3 will continue to lead USAID in implementing Executive Order 13648 and the National Strategy for Combatting Wildlife Trafficking by addressing the increased threat of illicit trade in wildlife. E3 will invest over \$4.0 million in activities that combat wildlife trafficking. Activities will strengthen law enforcement and compliance, promote regional and interagency coordination in combating trafficking, and expand public private partnerships. Since wildlife trafficking is a logistics and transport-intensive activity, E3 will support an innovative partnership to disrupt wildlife trafficking by reducing the use of legal transportation supply chains. E3 will also seek strategic partnerships to improve biodiversity conservation and development through the integration of biodiversity and development as well as wildlife trafficking anti-corruption activities. E3 will utilize an Interagency Agreement with the U.S. Fish and Wildlife Service to access additional technical expertise for biodiversity conservation and wildlife trafficking activities. The Bureau will support the Presidential Initiative on Combating Illegal, Unreported, and Unregulated Fishing and Seafood Fraud, as well as the Lacey Act, which bans trade in illegally sourced wildlife or timber. As USAID's lead in implementing its Biodiversity Policy, E3 will contribute to the integration of biodiversity with other development sectors by supporting increased evidence for the value of biodiversity conservation and will improve the systems, processes and capability within USAID to effectively integrate biodiversity values into development practices. E3 will continue to measure and enhance the impact of biodiversity and forestry programs through improved knowledge, evidence-based programming, and adaptive management. E3's partnership with the Center for International Forestry Research will advance a biodiversity research agenda with respect to the intersection of biodiversity with food security, nutrition and sustainable agriculture. E3 will continue to support training, communications, and knowledge management activities.
- Land Tenure and Resource Management: As a cross-cutting issue, secure land rights and strengthened resource governance are integral to achieving U.S. government development objectives. Specifically, insecure land tenure and weak resource governance has proven to be a significant hindrance to addressing global climate change and has contributed to decreasing biodiversity. Using \$1.5 million in FY 2017 funds, USAID will ensure continued support for high-quality impact evaluations to build the evidence base for the Agency's support to improved land tenure and land governance. Using FY 2017 funds, E3 will leverage strategic private capital resources to enhance and accelerate the Agency's development objectives by disseminating best practices and lessons learned on securing land and resource rights. USAID will carry out integrated activities, through the

Tropical Forest Alliance 2020, that support private sector partners in clarifying the rights and responsibilities of local stakeholders within target commodity supply chains to reduce the pressures that lead to deforestation and forest degradation. Using \$2 million in FY 2017 funds, USAID will continue to strengthen the land and property rights of smallholder farmers, ethnic communities, women, artisanal and small-scale miners, and other vulnerable groups by supporting local organizations, including civil society organizations, that work at the village level on boundary and resource demarcation, land use planning, dispute resolution, and environmental protection. A new land and resources governance effort will also address the impact of land governance on achieving development goals and will use integrated approaches, such as systems modeling coupled with geospatial science and technology, to help understand differences in access to resources, especially for women and other vulnerable populations. E3 will continue to support training, communications, and knowledge management activities by developing new tools to educate host countries and USAID missions on securing land and resource rights. Lack of secure land tenure limits access to formal credit in many regions, which is a significant barrier to achieving inclusive economic growth. In FY 2017, E3 will couple secure land tenure technical assistance with value-added credit guarantees to promote productive land use and increase livelihoods.

- Gender: E3 will continue to provide training, tools and technical support across the Agency, with special emphasis on E3 sectors, to integrate gender equality and female empowerment into USAID initiatives, programs, performance monitoring, and evaluation. E3 will also manage training, strategic communications and knowledge management activities related to gender equality, female empowerment, and gender-based violence. E3 will use \$35.0 million to continue to administer the Let Girls Learn Challenge Fund in support of the whole-of-government Let Girls Learn initiative to address the range of factors that prevent adolescent girls from completing their education by ensuring a quality education, reducing barriers to access, including harmful practices and attitudes, and empowering adolescent girls. Of these funds, up to \$10 million will be available for potential interagency transfers in support of Let Girls Learn. E3 will support transformative, evidence-based breakthroughs and solutions that elevate existing programs, including in areas of conflict and crisis, leverage public-private partnerships, and challenge organizations and governments to commit resources to lift up adolescent girls worldwide. USAID will use \$12.0 million to focus on new and ongoing activities to reduce gender disparities and gender-based violence, as well as to promote women's leadership, by identifying and scaling up best practices and developing new activities for women and girls to realize their rights, determine their life outcomes, and influence decision-making. E3 will provide incentive funds, training, and technical assistance to support integration of these topics into mission portfolios and strategies. Through new and ongoing partnerships, E3 will leverage the expertise and funding of other international donors, non-governmental organizations, and the private sector to generate knowledge, evidence, and activities that promote women's economic empowerment and access to technology; prevent and respond to harmful traditional practices, such as child, early, and forced marriage and other forms of gender-based violence; and address other gender equality issues. An example is the SPRING Accelerator, a partnership with the U.K. Department for International Development and the Nike Foundation, designed to accelerate economic empowerment for 200,000 girls in eight countries in Africa and Asia by delivering technical and financial support to early stage enterprises developing life-enhancing products and services that enable girls to safely learn, earn and save.
- Local Sustainability: E3 seeks to strengthen development outcomes by building host country ownership and aligning development initiatives with the priorities of the local population. The Bureau will foster more sustainable and locally-led development by strengthening the ability and cohesion of networks of local actors such as civil society organizations, cooperatives, credit unions, academic institutions, philanthropies, and professional associations as well as the government and private sector to work together to solve pressing development problems of common interest.

Through the Small Grants Program, the Bureau seeks to test and refine a number of hypotheses related to locally-owned and-led development. Through this program, the Bureau works with competitively selected missions to design and implement programs to pilot these innovative approaches to promoting local sustainability. As the research and development hub of the Local Solutions effort, the Bureau will continue to carry out research concerning ways to identify and capitalize on local capabilities, mobilize local actors and resources to address development issues, and identify ways to effectively monitor and evaluate progress towards local solutions and sustainability. Also, E3 will continue to address key challenges facing cooperatives and credit unions by strengthening their ability to serve their members. The Bureau will refocus the Cooperative Development Program to strengthen the ability of member-owned cooperative organizations and credit unions to better ensure local ownership and sustainability of the projects they carry out. Finally, through the Limited Excess Property Program, the Bureau works in partnership with U.S. and International Private Voluntary Organizations and USAID missions to enable various U.S. government agencies to transfer their surplus supplies and equipment to charitable organizations (such as schools and hospitals) in the developing world, thereby providing a cost-effective way to strengthen local capacity, achieve humanitarian purposes and increase public diplomacy. With just \$450,000, E3 leverages approximately \$30.0 million in excess property contributions.

Economic Support Fund (ESF)

FY 2017 funding will support fiscal transparency, trade facilitation, and trade promotion.

Key Interventions:

- **Fiscal Transparency Innovation Fund (FTIF) Program:** Since 2013, E3 and the Department of State's Bureau of Economic and Business Affairs (EB) have provided assistance to help improve fiscal transparency to over 20 countries. The FTIF funded with \$4.5 million will continue to support projects that enhance: 1) governments' capacity to develop and execute comprehensive, reliable, and transparent budgets; 2) citizens' visibility into state expenditure and revenue programs; and 3) citizens' ability to advocate for specific issues related to government budgets and processes. The FTIF will build on recent progress achieved in partner countries as documented by an external evaluation, including the establishment of routine budgeting procedures, increased fiscal accountability, and improved public understanding of the good governance of public resources.
- **Trade Promotion:** Using \$5.0 million in FY 2017 funds, USAID will help developing countries to reduce the time and cost to trade, spurring economic growth and poverty reduction. Activities will support the adoption of practices that increase transparency and predictability of moving goods, expand opportunities for private-sector input in decision making, and conform to international best practices. Innovative partnerships with local host country business communities, governments, and the international private sector will be crafted to expand and deepen trade and investment opportunities. Activities may be conducted in special notification countries such as Burma, Cambodia, Guatemala, Honduras, Pakistan and Tunisia.

Linkages with the Millennium Challenge Corporation (MCC)

In partnership with the MCC and the Department of State, E3 is also providing leadership on the Partnership for Growth initiative. E3 also supports the USAID Administrator in her role on the MCC and OPIC Boards of Directors.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: E3 conducted several monitoring and evaluation efforts in FY 2015 which are summarized below:

- The Bureau completed its second sectoral synthesis and in-depth review of 117 Agency evaluations published between January 2013 and September 2014 of projects related to E3 technical sectors. This study examined projects results, key lessons learned, areas for improvement, and innovative practices for gender equality, women's empowerment, private sector engagement and governance. The results of this analysis were widely shared with other parts of the Agency to promote utilization. In addition to sector specific findings, a key overall finding of this study was that the quality of evaluations reports has improved on multiple criteria.
- In FY 2015, E3 developed the USAID Global Climate Change Institutional Capacity Assessment, a structured tool for assessing an institution's capacity to address climate change. This tool facilitates performance monitoring and is useful for evaluation.
- In FY 2015, E3 continued to support the development of an impact evaluation for the USAID/Cambodia Save the Children Integrated Nutrition, Hygiene, and Sanitation Program. The resulting evaluation, being implemented through the E3 Analytics and Evaluation mechanism, tests the combined impact of WASH and nutrition integration, which will contribute to the growing body of evidence on the integration of WASH and nutrition as well as specific methods for successful integration.
- E3's Measuring Impact (MI) program combines project evaluations and technical assistance to increase the Agency's capacity to measure and evaluate the impact of biodiversity and natural resource management (NRM) programs. MI provided support to several priority missions for biodiversity, including Peru, South America Regional, Vietnam, and Madagascar for program planning as well as integrated programming. MI launched a cross-mission learning program on sustainable livelihoods, and finalized several research reports on gender and NRM governance, nutrition and wild fisheries, and constituency building for conservation. MI developed an interagency theory of change for combating wildlife trafficking, and identified indicators for missions to report on programming around that theme. MI also sponsored an Ebola mapping event and developed research priorities for risk predictions.
- During FY 2015, E3 continued to manage the coordination and data collection process for impact evaluations in the Kyrgyz Republic and India to generate rigorous evidence in future years on effective solutions for women's entrepreneurship. During FY 2015, the research partner conducted interviews and a survey at the end of the activity in the Kyrgyz Republic. Early evidence suggests that bundled assistance (finance, training, and mentoring) is more effective than the sum of the components alone, and that mentoring is more valued than finance by participants. This learning will be used to influence the design of future projects.
- E3 conducted an evaluation of the Enhancing Capacity for Low Emissions Development program. As a result, two new standard indicators were added to capture development co-benefits and estimate the potential, post-project greenhouse gas (GHG) reductions and sequestrations of USAID's sustainable landscape programs. These and other monitoring and evaluation tools and reports were posted on Climatelinks, a dedicated USAID page on climate change knowledge.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: E3 reached important conclusions and, with field mission support in some cases, took targeted action based on the efforts noted above and similar monitoring and evaluations efforts. For example:

- In FY 2015, E3 conducted a study of the Property Rights and Artisanal Diamond Development (PRADD II) program on land use cover change on an abandoned diamond mining concession in northern Côte d'Ivoire. The spatial analysis led to a more in-depth planning study carried out jointly by PRADD II and the government planning authorities. This latter assessment will contribute to the

clarification of land use and land rights within this diamond mining area and is also redefining the legal status of the land. Dialogues are advancing with the private sector on a possible public-private partnership for the artisanal diamond mining sector in Côte d'Ivoire. The modeling exercise will help determine the most appropriate locations for mining vis-a-vis other land uses. A pilot fish farming venture has successfully expanded from one to three sites in villages in Côte d'Ivoire.

- E3 conducted a mid-term evaluation of the Initiative for Conservation in the Andean Amazon (ICAA) Phase II, USAID's long-term regional initiative to reduce deforestation, promote better natural resource governance and increase the quality and sustainability of the population's livelihoods in the Amazon region. The evaluation found that ICAA was largely delivering on its promise of protecting biodiversity and promoting sustainable livelihoods, but was missing significant opportunities to deepen and expand the program's reach, effectiveness, and sustainability. The evaluation team recommended that opportunities for improved cooperation and coordination be identified and capitalized on immediately and that future phases of the ICAA program anticipate and develop structures for coordinated action. These changes could result in more significant impacts and sustainable outcomes for future iterations of ICAA.
- E3 launched two randomized control trials (RCTs) of education projects in partnership with the Zambia and Ethiopia Missions. These RCTs will produce new evidence about different models of parental and community engagement to improve reading outcomes. All individual level data collected is disaggregated by sex and analyses will include understanding how participation and outcomes vary by student and teacher characteristics.
- E3 conducted a year-long review through its Measuring Impact contract to improve how USAID measures the effectiveness of its Combating Wildlife Trafficking (CWT) interventions. As a result, E3 developed a toolkit elaborating 10 major strategies for CWT, theories of change for each strategy, and indicators for monitoring key results. This laid the groundwork for cross-mission learning initiatives and recommendations as well as two new foreign assistance standard indicators. It also informed thinking on monitoring and reporting progress of the U.S. National CWT Strategy.
- In FY 2015, E3 led the Agency review of USAID's implementation of the U.S. government's Gender Based Violence (GBV) Strategy by conducting content analysis of the GBV Key Issue narratives in past Performance Plan and Reports, a staff survey of internal stakeholders, and an external stakeholder event. This evaluation will be widely disseminated and used to guide future efforts to prevent and respond to GBV. E3 also oversaw completion of a research report on lessons learned to support scale-up of GBV programs. The report was published and launched in Spring 2015, and will be a resource to support USAID staff to design or identify successful projects with future scale-up in mind.

LAB - Global Development Lab

Foreign Assistance Program Overview

The U.S. Global Development Lab is at the heart of USAID's modernization. By leading USAID's drive to apply science, technology, innovation, and partnerships (STIP) to development challenges, the Lab is increasing cost effectiveness and accelerating development impact. It partners with world-class experts from corporations, finance, non-governmental organizations, universities, and science and research institutions to develop answers to specific development challenges – then brings solutions with the greatest evidence of impact, sustainability and cost effectiveness to millions of people. The Lab is implementing its programs under five objectives: Science; Technology; Innovation; Partnership; and Agency STIP Integration. These objectives align closely with the Lab's five centers, which were used as a basis for previous budget justifications, and provide a clearer indication of what the funds are intended to achieve.

The Lab operates through a two-part mission:

- To produce breakthrough development innovations by sourcing, testing, and scaling proven solutions to reach hundreds of millions of people;
- To accelerate the transformation of the development enterprise by opening development to people everywhere with good ideas, promoting new and deepening existing partnerships, bringing data and evidence to bear, and harnessing scientific and technological advances.

Request by Account and Fiscal Year

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
TOTAL	126,000	*	170,000	44,000
Development Assistance	120,000	*	165,000	45,000
Global Health Programs - USAID	6,000	*	5,000	-1,000

Development Assistance (DA)

With DA funds the Lab will disrupt existing development problems with the best innovations (e.g. pay-as-you-go solar home systems), tools (e.g. e-payments, geospatial analysis), and approaches (e.g. tiered-evidence funding, pay for performance, adaptive management) from new and diverse actors; use hard evidence and rapid iteration to continuously improve as the Lab develops the most promising solutions; and work across the Agency and with partners to mainstream proven solutions to reach global impact.

Science Objective: Increased Use of Scientific Research and Evidence to Inform Better Development Policy and Programs and Improve Development Outcomes

Key Interventions:

- The Partnerships for Enhanced Engagement in Research (PEER) program will support approximately 40 new collaborative research projects led by developing country scientists and engineers who are partnered with American scientists. PEER projects will address development challenges and provide tools, technical assistance, and more than 200 research opportunities for students. The Lab will support development-relevant research and help researchers apply their research findings to public

policy. PEER ultimately builds the research capacity of host countries and supports new research to significantly improve the available solutions to development problems.

- USAID will establish a new research and development effort through the Global Climate Change Initiative and the Global Development Lab that will support developing countries' engagement in Mission Innovation, a global public and private endeavor to reinvigorate and accelerate clean energy innovation scaled to the economic and energy market conditions in developing countries. USAID will work with U.S. and developing country universities and academic communities to research and develop clean energy technologies that can be scaled into "bankable projects."
- Through the Higher Education Solutions Network (HESN) and follow-on university partnerships, the Lab will engage universities for sourcing, testing and scaling development interventions and methodologies and tap into research and academic partners to support strengthening the science and technology ecosystem.
- The Lab manages USAID's participation in the American Association for the Advancement of Science (AAAS) Fellowship program. This highly competitive program recruits scientists and engineers to work with federal agencies, contributing their knowledge and analytical skills while learning first-hand about science and technology policymaking. The Agency hosts AAAS scientists in Washington and in Missions overseas, strengthening the Agency's science and technology capacity.

Technology Objective: Advance the Use of Enabling Technologies and Data-Driven Approaches to Empower Underserved Communities and Improve the Effectiveness of the Development Enterprise

Key Interventions:

- USAID will work to overcome barriers that prevent proven solutions such as Digital Financial Services and Real-Time Data management systems from reaching the poor in an entire region or continent.
- The Lab will expand international coalitions around digital development through the newly formed Digital Impact Alliance (formerly called the "mobile hub"), which advances policy solutions to expand digital infrastructure in developing countries. This partnership will offer strategic, collaborative grants and technical expertise, alongside industry and non-profit partners.
- The Digital Inclusion program advances access and use of the internet to enable local communities to improve livelihoods, incomes, and quality of life for their residents and businesses.
- The GeoCenter will provide geographic analyses and other data visualization tools to help USAID Bureaus and Missions with strategic planning and decision making. The Lab will train 150 Agency staff in the application of data analysis for development programming, and provide support to a network of 45 Agency Data Specialists around the world.
- The Lab will expand the use of data-focused innovations such as ground-based sensor technologies for more real-time monitoring and evaluation of development programs and provide tools and technical support for long-term forecasting and scenario analysis.

Innovation Objective: Adoption of High Impact Development Solutions and Effective Use of Innovation Models and Design Practices Increased

Key Interventions:

- The Lab will support new Development Innovation Ventures (DIV) activities across a spectrum of product stages, from proof-of-concept to widespread use. DIV resources create opportunities for entrepreneurs, private companies, academics, and nongovernmental organizations to test and refine solutions to development challenges. Through a tiered-evidence funding approach, DIV manages risk by increasing funding only when a solution has sufficient evidence to demonstrate cost effectiveness, impact, and feasibility to sustainably reach millions of people.

- The global community will continue to incorporate the DIV model into the Global Innovation Fund (GIF), with a consortium of international donors joining forces to provide support, including USAID, DFID, Sida, Australia, and the Omidyar Network.
- The Lab will fund approximately 50 new innovations through the Grand Challenge for Development (GCD) and Innovation Incentive programs. GCDs remove critical barriers to international development progress by calling on the global community to discover, test, and accelerate innovative science and technology solutions to specific global challenges. The Lab will also disseminate innovation incentive programs throughout USAID's portfolio.
- USAID will establish a new research and development effort through the Global Climate Change Initiative and the Global Development Lab that will support developing countries' engagement in Mission Innovation, a global public and private endeavor to reinvigorate and accelerate clean energy innovation scaled to the economic and energy market conditions in developing countries. USAID will help developing countries design, incubate, and accelerate clean energy technologies that can be scaled into "bankable projects."
- The Lab will test and validate new innovation models and design practices, build USAID capacity to integrate innovation design approaches into programming, and strengthen networks and identify new trends that have the potential to transform USAID's work. The Lab will lead efforts to accelerate the integration of innovative evidence-based approaches – such as tiered-evidence funding, pay for performance, and adaptive management – across USAID's portfolio in order to achieve country-specific development objectives more effectively and efficiently.
- The Lab will help innovators address organizational, financial, and market barriers to catalyze the systems change needed for achieving scale. The Lab will continue providing specialized services that enable high-potential innovators to improve their capacity to expand their access to capital, build credibility in the market, and build connections to new partners. The Lab aims to further democratize modern development by creating a global platform that connects innovators with resources, funding, experts, organizations, programs, and information needed to grow, test, and scale an innovation.

Partnership Objective: Accelerate and Scale Development Impact Through Private Sector Engagement, Collective Action Approaches, and Cultivation of Entrepreneurial Ecosystems

Key Interventions:

- The Lab will build partnerships with the private sector and other actors in three main categories: partnerships that source, test, and scale development innovations; partnerships that accelerate entrepreneurship in the developing world by promoting private investment into early stage enterprises that provide local solutions to local challenges; and partnerships that engage new and nontraditional partners in the Agency's priority efforts (e.g. diaspora communities).
- The Lab will provide partnerships-related training and technical assistance to USAID Missions to help them strategically engage the private sector and build partnerships to advance country development and cooperation strategies.
- Partnering with the Rockefeller Foundation to build resilience, the Lab will institute a new model for applying problem analysis, innovation support, and diverse regional and local collaboration to solve complex and interrelated challenges such as extreme poverty, food insecurity and climate shocks.

Agency STIP Integration Objective: STIP Effectively Integrated by Agency Operating Units Overseas and in Headquarters to Help Accelerate the Agency's Sustainable Development Results and Priorities

Key Interventions:

- The Lab collaborates intensively with USAID missions and pillar bureaus to increase impact and cost effectiveness through the strategic application of science, technology, innovation and partnership to

the Agency's development programs. For example, working with the E3 Bureau, in support of the USAID Water Strategy and the USAID Urban Policy, the Lab has focused on developing cost-effective new solutions that improve access to and sustained usage of improved sanitation among low income populations in urban and highly populated peri-urban areas.

- The Lab brings together programs across its portfolio to apply a complementary set of STIP tools and approaches that accelerate progress on Agency priorities and initiatives. Examples include improving West African resilience to health epidemics through information technology; enhancing food security through the use of digital approaches, tools, and innovations; expanding social enterprises that provide household access to off-grid energy; and supporting clean energy research and development to provide a pathway to affordable energy as part of the Global Climate Change Initiative.
- The Lab provides training and advisory services to build the capacity of Agency staff to understand and apply STIP tools in their work.
- The Lab conducts evidence-based analysis of projects to determine whether new STIP approaches and interventions are delivering developmental impact more quickly, cost-effectively, sustainably and are reaching more beneficiaries.
- The Lab also works to ensure effective and efficient program management and to identify innovations in areas of strategy planning, program implementation and support, and monitoring and evaluation.

Global Health Programs (GHP)

Assistance provided through the GHP accounts support the goals and principles of the Global Health Initiative (GHI) to achieve major improvements in health outcomes in three globally shared goals: ending preventable child and maternal deaths, creating an AIDS-free generation, and protecting communities from other infectious diseases. GHP funded Lab programs will support the integration of STIP innovations, tools, and approaches to further the goals and principles of the Global Health Initiative (GHI) to achieve major improvements in health outcomes.

Science Objective: Increased Use of Scientific Research and Evidence to Inform Better Development Policy and Programs and Improve Development Outcomes

Key Interventions:

Maternal and Child Health (MCH) - \$3.0 million

- PEER's health portfolio is aligned with the Global Health Initiative's (GHI) target to reduce under-five mortality rates by 35 percent across assisted countries. This program supports implementation research studies which will help overcome bottlenecks affecting child health and survival. PEER will support partnerships between developing country health scientists and researchers funded by U.S. government science agencies such as the National Institutes of Health, and provide scientific equipment and training to developing country researchers.
- The Lab will partner with leading universities to expand research and to build upon scientific, technical, and business innovations and approaches that address issues such as MCH in rural areas, access to quality, affordable health care delivery and preventive services, and strengthening health systems.

Innovation Objective: Adoption of High Impact Development Solutions and Effective Use of Innovation Models and Design Practices Increased

Key Intervention:

Maternal and Child Health (MCH) & Family Planning and Reproductive Health - \$2.0 million

- DIV health projects will contribute to the GHI strategic focus area of Ending Preventable Child and Maternal Deaths. DIV reviews and funds innovations on a rolling basis, and resulting projects will adhere to the DIV model's focus on evidence, cost effectiveness and pathways to scale.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: The Lab is committed to using rigorous, evidence-based analysis to determine whether interventions are delivering development impact more quickly, cost-effectively, sustainably, and reaching more beneficiaries than traditional approaches, and to use a tiered-evidence investment model across the portfolio.

The Lab has made significant progress in developing and implementing a strategic monitoring, evaluation and learning system to facilitate evidence-based and iterative programming. This includes a performance management system with regular data-driven reviews. Towards this end, the Lab's Office of Evaluation and Impact Assessment (EIA) sets policy and standards for monitoring and evaluating Lab programs to ensure that efforts are guided by rigorous prospective and retrospective impact assessments and evaluations, including randomized controlled trials as appropriate.

The Lab will continue to work with internal and external partners to collaboratively design and test cutting-edge solutions and methodologies to more efficiently and effectively understand and measure the impacts of development programs, especially those that work in complex environments or are focused on science, technology, innovation, and partnership programming. Those that work will be made available throughout the Agency.

Finally, the Lab's scientific research and academic engagement programs are using evidence to inform their next iterations as the first round of programs wind down. In 2016, both the HESN and PEER programs are conducting comprehensive mid-term performance evaluations to understand what is working best, why, and how the Lab should adapt future programs to maximize impact.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: The Lab is using findings to continually refine programs. In FY 2017 Lab funding will support rigorous evaluation and impact assessment across all Lab programs, including more than \$55.0 million for tiered-evidence, pay for results, and related approaches to invest in innovations that have the potential to change millions of lives in developing countries at a fraction of the current costs. USAID is supporting a strategy for advancing and integrating the most effective of these approaches more broadly across the agency to help achieve country-specific development objectives more effectively and efficiently. An example is the DIV program. DIV is designed to advance new development ideas through an open and competitive process that rigorously tests impacts and cost-effectiveness at multiple stages of an activity, with those innovations that prove successful progressing from the conception stage, to development, to testing at scale, and to demonstration of a path to widespread implementation. DIV uses performance and impact data to inform the staged financing of promising innovations.

In DIV, randomized control trials, the "gold standard" of testing, is undertaken by approximately 43 percent of grantees. More than 7,500 innovators have applied to DIV, of which about 73 percent have never worked with USAID before. To date, less than two percent, or 150, of these have been funded, representing significant selectivity. Eleven of the solutions are beginning to scale, and 13 solutions have successfully raised significant commercial capital.

Through its monitoring and evaluation and learning processes, the Lab identified the lack of investment opportunities in developing countries for development innovations as a barrier to testing and scaling new solutions. Thus, in the Partnering to Accelerate Entrepreneurship program, the Lab shifted to look at ecosystems surrounding young enterprises. Twelve partnerships now focus on supporting intermediaries that provide support and financing to high-growth entrepreneurs.

Detailed Objective Descriptions

The Science Objective focuses on increasing the evidence used to design better development solutions through research, scientific tools, and analyses and by investing in the development of host-country science and technology ecosystems. This will strengthen host-country science and technology capacity, including universities and governments, so that host countries can be drivers of their own development. This will also address research gaps, so that USAID and other development programs can be more informed by evidence.

The Technology Objective focuses on harnessing advancements in enabling technologies and data-driven approaches to improve development effectiveness and empower underserved communities. This will increase co-investment in foundational digital platforms, services and analytical tools that benefit underserved communities and drive national economic growth. It will increase the adoption and sustained usage of digital technologies by poor and marginalized populations, and the appropriate application of such technologies amongst development actors. This enhances host country national policies, regulations, and oversight capacity to enable an inclusive digital economy for underserved populations. It also increases the evidence and knowledge of the impact digital and enabling technologies have on international development, identifies gaps in understanding and application, and promotes global consensus around best practices.

The Innovation Objective focuses on identifying high potential innovations and accelerating their adoption for improved development outcomes and increasing adoption of open innovation models within USAID and across the development community. This will increase the number of innovations that address development challenges by attracting new innovators and reaching out to local innovators. It will facilitate growth and sustainability of promising innovations by building evidence of efficacy, enhancing business skills, and increasing opportunities for follow-on funding and adoption. Lastly, it will increase the impact of innovations by identifying a few proven high potential innovations to sustainably scale to improve the lives of hundreds of millions of people.

The Partnership Objective focuses on accelerating and scaling development impact through new or replicable approaches to collaboration and collective action with partners. This will leverage the resources, skills and expertise of the private sector and other stakeholders to drive sustainable development outcomes in strategic areas and/or direct specialized expertise to USAID to advance its development efforts. Through strategic collaboration and collective action, it will also increase capital mobilized for investment in entrepreneurs, address barriers to scaling development innovations and strengthen the entrepreneurial ecosystem to better address development challenges.

The Agency STIP Integration Objective focuses on catalyzing and mainstreaming the use of STIP across USAID to accelerate achievement of the Agency's development objectives and priorities. The funds under this objective will build the capacity of Missions and Bureaus to apply STIP effectively in strategies and programs.

USAID Global Health (GH)

Foreign Assistance Program Overview

GH supports a comprehensive and integrated health strategy towards ending preventable child and maternal deaths, achieving an AIDS-free generation, and protecting communities from other infectious diseases through the Administration's Global Health Initiative (GHI). Improving the health of people in the developing world drives economic growth and the eradication of poverty; supports educational attainment; enables participation in the democratic process; strengthens families, communities, and countries.

In addition to providing technical assistance, training, and commodity support in developing countries, GH will foster increased coordination of U.S. global health efforts, increase public-private partnerships, and lead the adoption of state-of-the-art programming and alignment with national governments and other donors.

Request by Account and Fiscal Year

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
TOTAL	391,822	*	474,169	82,347
Global Health Programs - USAID	391,822	*	474,169	82,347

Global Health Programs (GHP)

To end preventable child and maternal deaths, achieve an AIDS-free generation, and protect communities from other infectious diseases, GH assists countries in the design and implementation of state-of-the-art public health approaches that achieve cost-effective program impacts. GH works to improve access and quality of services for maternal and child health, nutrition, voluntary family planning and reproductive health, and prevents and treats HIV/AIDS, tuberculosis, and malaria. Moreover, GH provides technical assistance for the scale-up of life saving interventions and takes advantage of economies of scale in procurement, technical services, and commodities. To promote sustainability, GH helps expand health systems and the health workforce by adopting and scaling-up proven health interventions across programs and countries. This approach improves health in a manner that fosters sustainable, effective, and efficient country-led public health programs. Finally, to promote a learning agenda, GH funds dissemination of best practices, monitoring and evaluation, expansion of innovative technology and practices, and research on high-impact interventions.

Key Interventions:

- **HIV/AIDS:** As part of the President's Emergency Plan for AIDS Relief (PEPFAR), GH will program \$91.9 million to build partnerships to provide integrated prevention, care, and treatment programs and support orphans and vulnerable children. Programs will be consistent with and significantly contribute to the targets in the PEPFAR Stewardship and Oversight Act of 2013 by providing global technical leadership in prevention, care, and treatment interventions; monitoring and evaluation; health systems strengthening; central procurement of pharmaceuticals and other commodities; and HIV-vaccine applied research and development. Bilateral country programs will be supported through the Global Health Supply Chain (GHSC) program, a new project that will ensure constant and cost-effective availability of essential commodities. GH will continue to support public health evaluations, set the research agenda in the prevention of HIV transmission, provide care for orphans and vulnerable children, and build human capacity to meet essential food and nutrition needs of communities suffering from HIV/AIDS.

- **Tuberculosis (TB):** To advance U.S. partnerships with key countries to scale-up and enhance the effectiveness of their TB programs, GH will program \$38.7 million to support the goals and objectives of the National Action Plan for Combating Multidrug-Resistant Tuberculosis and the Global Plan to Stop TB. Specifically, GH will help improve the tools and approaches available to detect and treat TB, multi-drug resistant TB (MDR-TB) and support national TB programs in their implementation. A focus will be on new and ongoing research, improvements in drug availability and quality, infection control and other prevention strategies, routine surveillance, new diagnostic optimization, and preventing further drug resistance. In coordination with the Office of the Global AIDS Coordinator, GH will expand coverage of TB/HIV co-infection interventions, including HIV testing of TB patients and effective referral; TB screening of HIV patients; implementation of intensified case finding for TB; Isoniazid Preventive Therapy; and TB-related infection control measures.
- **Malaria:** To support the President's Malaria Initiative (PMI), GH will program \$150.0 million for the provision of technical assistance to countries for the scale-up of cost-effective mechanisms to support malaria prevention and treatment programs, such as indoor residual spraying, long-lasting insecticide-treated bed nets, diagnosis and treatment with artemisinin-based combination therapies, and interventions to address malaria in pregnancy. In addition to the increase to the annual PMI budget, the Administration proposes to use \$129.0 million in remaining FY 2015 Ebola emergency funds for malaria programs. GH will work with countries to improve the quality and effectiveness of medicines – in large part by combating the availability of substandard and counterfeit medicines intended to treat malaria. In Southeast Asia, GH will work with regional partners to address the artemisinin-resistant *falciparum* parasite through control and elimination strategies and support additional studies in the region to assess the extent of resistance. GH will provide technical assistance for the surveillance, monitoring and evaluation of the implementation and impact of malaria control interventions at the country level. In addition, GH will support the development of malaria vaccine candidates, new malaria drugs, new public health insecticide-based tools, and other malaria-related operational research, and promote international malaria partnerships. This includes a broad range of partners, most importantly national governments, as well as multilateral and bilateral institutions and private sector organizations.
- **Maternal and Child Health (MCH):** To support efforts to end preventable child and maternal deaths, GH will invest \$81.2 million for programming focused on innovation and expansion of high-impact interventions in 24 countries that account for over 70 percent of child and maternal mortality. GH, in collaboration with its partners, addresses the key MCH interventions, such as improved maternal care during pregnancy, childbirth, and the postpartum period, including new approaches to the control of postpartum hemorrhage and pre-eclampsia/eclampsia (among the leading causes of maternal mortality in the developing world); essential newborn care (including resuscitation and interventions for the complications of pre-term birth) and treatment of severe newborn infection; immunization; prevention and treatment of diarrhea and pneumonia; and interventions to improve sanitation and hygiene. Fistula prevention and rehabilitation will continue to be a priority. GH's support of the final push for polio eradication will also be a significant focus. Programs will be integrated across health areas to achieve greater efficiencies and sustainability and, within the broader framework for Ending Preventable Child and Maternal Deaths, fully leverage programming in malaria, family planning's contribution to the healthy timing and spacing of pregnancy, nutrition, HIV/AIDS, and sanitation and improvement. GH will continue to provide technical leadership globally in support of research and innovation to test and bring to scale new or underutilized low-cost, high-impact interventions. Further, GH will develop the tools and approaches needed to disseminate best practices, and to strengthen health systems and the health workforce to support and sustain these improvements.

- **Family Planning and Reproductive Health (FP/RH):** With resources of \$99.9 million GH will provide countries with technical and commodity support in voluntary family planning and reproductive health. Programs will expand access to high-quality voluntary family planning and reproductive health and information services, directed toward enhancing the ability of couples to decide the number and spacing of births and toward reducing abortion and maternal, infant, and child mortality and morbidity. Specifically, funding will support development of the tools and models to share best practices related to the key elements of successful family planning programs, including commodity supply and logistics; service delivery; effective client counseling and behavior change communication; policy analysis and planning; biomedical, social science, and program research; knowledge management; and monitoring and evaluation. Priority areas include: FP/MCH and FP/HIV integration; contraceptive security; community-based approaches for FP and other health services; access to long-acting and permanent contraceptive methods, especially implants and intra-uterine devices; healthy birth spacing; and crosscutting issues of gender, youth, and equity.
- **Nutrition:** Nutrition is a key point of intersection between food security and health, and is a key outcome for both the GHI and Feed the Future. With \$14.5 million, GH will provide leadership and technical assistance to priority countries in both initiatives to facilitate the introduction and scale up of nutrition activities, with a focus on the first 1,000 days – from pregnancy to a child’s second birthday – to achieve maximum impact. Nutrition activities focus on the prevention of under-nutrition through integrated services that provide nutrition education to improve maternal diets; nutrition during pregnancy; exclusive breastfeeding practices and infant and young child feeding practices; diet quality and diversification through fortified or bio-fortified staple foods, specialized food products, and community gardens; and delivery of nutrition services such as micronutrient supplementation and community management of acute malnutrition. Investments include expanding the evidence base for nutrition to guide policy reform and better nutrition programs; and building capacity to design, implement, and report on food and nutrition programs while strengthening coordination and integration with other programs.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: During FY 2015, GH undertook a management review as well as a full technical portfolio review, in addition to 15 evaluations and assessments, to evaluate programmatic and financial performance, and to make recommendations for future activities. Findings from these efforts significantly informed program and budget decisions, including mid-course corrections, and will guide preparation of future award solicitations. Such findings are currently informing USAID activities, designs and future plans.

USAID has also developed a series of management dashboards to review and evaluate programmatic data. These data enable us to understand which interventions are being supported by USAID in a country, and at what scale. They help us track the interactions that USAID has with other partners and donors, including the country governments. The choices around which interventions to support and which areas to work in are often results of these broader coordination efforts.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: USAID has worked to better understand the interventions that have the most impact on maternal and newborn lives. Newborn deaths represent an increasingly high share of all under-five deaths both globally and in USAID’s 24 priority countries. Likewise, maternal mortality remains stubbornly high in many of the priority countries. While the interventions that save maternal lives are known, for some there is insufficient data on their use in the field, which makes it difficult to model their potential impact despite demonstrated effectiveness. Understanding where information exists and where it is lacking can be an important tool in strengthening programs.

Global Health - International Partnerships

Foreign Assistance Program Overview

GH supports the President's Global Health Initiative (GHI) by funding and participating in international partnerships and programs to improve health in the developing world in a coordinated, efficient, and strategic manner. These programs address health issues related to HIV/AIDS, tuberculosis, global health security, neglected tropical diseases, maternal and child health, nutrition, voluntary family planning, and children in adversity. Activities leverage funds for health assistance, advance technical leadership and innovation, fund research, and promote and disseminate the results of technical innovations that benefit many countries simultaneously.

Request by Account and Fiscal Year

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
TOTAL	496,745	*	549,345	52,600
Global Health Programs - USAID	496,745	*	549,345	52,600

Global Health Programs (GHP)

In FY 2017, funding for international partnerships will significantly contribute to improving health in developing countries. While the Administration emphasizes two key areas where the U.S. government can make a marked difference – ending preventable child and maternal deaths and creating an AIDS-free generation – U.S. government efforts will also continue to protect communities from other infectious diseases from which millions of people die or could die each year including tuberculosis, neglected tropical diseases, pandemic influenza, and other emerging threats. U.S. contributions to international organizations leverage considerably more from other donors and give the United States significant leadership in donor programming for health. The specific international partnerships supported through GH include Gavi, the Vaccine Alliance (Gavi), Microbicides, AIDS Vaccines, the Tuberculosis Global Drug Facility (GDF), Iodine Deficiency Disorders (IDD), and Neglected Tropical Diseases. Funding will support USAID programs in global health security and voluntary family planning by providing technical assistance and other support to developing countries.

Ending Preventable Child and Maternal Deaths

Key Interventions:

- **Maternal and Child Health:** With \$275.0 million to support the introduction of new vaccines through the U.S. partnership with Gavi, funding will be used for the provision of new vaccines – pneumococcal and rotavirus – to address pneumonia and diarrhea, the two biggest killers of children in the developing world. Modeling shows scale-up of these new vaccines could save millions of lives in the next three years. As a public-private partnership, Gavi combines the technical expertise of the development community with the business know-how of the private sector. By pooling demand for new vaccines from the world's poorest countries and providing long-term, predictable financing to meet this demand, Gavi's business model influences the market for vaccines, attracts new vaccine manufacturers, increases competition and, as a result, drives vaccine prices down.

- Family Planning and Reproductive Health: With \$2.8 million, USAID will continue to fund partnerships to strengthen international family planning (FP) organizations, which have a global reach and an extensive, multi-country network of FP clinics, in order to achieve maximum program impact and synergies.
- Nutrition: Iodine deficiency increases child mortality and impairs growth and development. Iodine deficiency in pregnant women contributes to miscarriages, low birth weight, and other complications. With \$2.0 million, USAID programs will support iodine deficiency elimination programs and strengthen salt iodization programs in the world's poorest countries.

Creating an AIDS-Free Generation

Key Intervention:

- HIV/AIDS: The request includes \$94.0 million for programs that will contribute to the achievement of an AIDS-free generation. Funding for microbicides will support ongoing confirmatory studies of the effectiveness of tenofovir gel in reducing HIV infection in women, complete other work necessary for the licensure and implementation requisite for the regulatory approval of tenofovir gel, and prepare for introduction of microbicides in prevention programs. Programs will also support preclinical and clinical studies of promising alternative formulations, including rings and tablets that release tenofovir, dapivirine, and other anti-retroviral drugs. The U.S. contribution to the International AIDS Vaccine Initiative (IAVI) will support pre-clinical HIV vaccine discovery and design, and will advance at least three promising HIV vaccine candidates into early-phase human trials in multiple eastern and southern Africa sites. With this funding, partner-country laboratory, clinical, regulatory, and human capacity will continue to be incorporated into the trials in a sustainable manner to facilitate good clinical and community participatory practices, and with consistent emphasis on informed consent. IAVI continuously promotes gender equity and access to treatment and care in its work to develop safe and effective HIV vaccines for global use, particularly for developing countries hit hardest by the AIDS epidemic.

Protecting Communities from Infectious Diseases

Key Interventions:

- Neglected Tropical Diseases: With \$86.5 million, USAID will use an agency-tested and World Health Organization (WHO)-approved integrated mass drug administration delivery strategy that will target affected communities, using drugs that have been proven safe and effective and can be delivered by trained non-health personnel. The vast majority of drugs are donated by the private sector through partnerships that have leveraged more than \$8.8 billion of in-kind contributions to reduce the burden of seven debilitating NTDs, including onchocerciasis (river blindness), trachoma, lymphatic filariasis, schistosomiasis, and three soil-transmitted helminths. Expanding these programs to national scale will support acceleration of global efforts to eliminate lymphatic filariasis and blinding trachoma globally and onchocerciasis in the Americas. USAID will continue to work closely with the WHO and global partners to roll-out the international NTD training course; ensure the availability of quality pharmaceuticals, standardized monitoring, and evaluation guidelines for NTD programs; and develop approaches for evaluating impact in multi-disease settings. USAID will prioritize scale-up of NTD treatments in currently supported countries to accelerate progress toward the WHO 2020 elimination goals.
- Global Health Security: With \$72.5 million, USAID will implement the Global Health Security Agenda to accelerate progress toward a world safe and secure from infectious disease threats, in partnership with other nations, international organizations and public and private stakeholders. In

our globalized world, no country is more than a flight away from a dangerous pathogen, underscoring the critical nature of the Global Health Security Agenda. The Ebola epidemic in West Africa vividly illustrated the perils of any country having weak disease prevention, detection, and response capacities, particularly in geographic areas where new public health threats are likely to emerge. Nearly 75 percent of all new, emerging, or re-emerging diseases affecting humans at the beginning of the 21st century originated in animals (zoonotic diseases), underscoring the need for the development of comprehensive disease detection and response capacities that span the traditional domains of animal health, public health, ecology, and conservation. USAID seeks to prevent avoidable epidemics, detect threats early, and respond rapidly and effectively to disease outbreaks. In particular, activities will expand surveillance to address the role of wildlife in the emergence and spread of new pathogens; enhance field epidemiological training of national partners; and strengthen laboratory capability to address infectious disease threats using a “One Health Strategy,” professionals from public health, medicine, veterinary medicine, and wildlife conservation will be engaged to strengthen their capacity to monitor and respond to animal viruses that are becoming threats to public health.

- Tuberculosis: With \$16.5 million, USAID will accelerate U.S. partnerships and programs to scale up and enhance the effectiveness of TB programs, further supporting the goals and objectives of the Global Plan to Stop TB. Funding includes the U.S. contribution to the Global Drug Facility (GDF) to continue to procure critical, life-saving TB drugs. The GDF provides a unique package of services, including technical assistance in TB drug management and monitoring of TB drug use, as well as procurement of high-quality TB drugs at low cost. USAID will continue to accelerate activities to address multi-drug resistant and extensively drug resistant TB, including the expansion of diagnosis and treatment, and infection control measures through innovative financing mechanisms. USAID collaborates with the President’s Emergency Plan for AIDS Relief, other U.S. government agencies, and the Global Fund to integrate health services and strengthen delivery platforms to expand coverage of TB/HIV co-infection interventions.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: During 2015, GH conducted evaluations to systematically analyze programs to improve effectiveness and inform decisions about current and future programming. Evaluations included a broad array of programs: maternal and child health, malaria, family planning and reproductive health, HIV/AIDS, and tuberculosis. In addition, GH conducts annual portfolio reviews and communicates results to disseminate best practices globally.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: As a result of evaluations, performance reports, portfolio reviews, and site visits, GH will focus greater resources on proven life-saving interventions to end preventable child and maternal deaths, with increased funding for new vaccines, while continuing programs that protect communities from other infectious diseases. USAID will improve metrics, expand monitoring and evaluations, advance modeling of high impact interventions, and assess their efficiency and effectiveness.

USAID Policy, Planning and Learning (PPL)

Foreign Assistance Program Overview

PPL serves as the lead USAID Bureau in the Agency's efforts to implement comprehensive reforms aimed at restoring the United States as the global leader in international development. To achieve this goal, PPL has identified three key areas in which to focus its efforts. First, PPL will continue to strive for more effective interagency and global engagement around key development issues. Second, PPL will continue to champion the use of evidence-based decision-making and sound policies, as well as a comprehensive strategic planning process, to inform key decisions at all levels. Third, PPL will continue to strengthen Agency policy analysis, cohesion, and leadership on key policy priorities. Since its inception in 2010, PPL has made progress in each of these key areas and is well positioned to lead Agency activities in those areas. This request includes funding to support USAID's evaluation effort and directly support USAID missions' implementation of recommendations and improvements identified in their evaluations.

Request by Account and Fiscal Year

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
TOTAL	19,500	*	25,500	6,000
Development Assistance	19,500	*	25,500	6,000

Evidence-Based Decision-Making Policies and Planning: Through \$23.5 million in funding, PPL is strengthening USAID's ability to use evidence to diagnose and respond to development problems and opportunities to achieve and sustain development results. PPL is elevating the quality and use of monitoring and evaluations across all of USAID and promoting active learning to ensure that sound evidence informs key decisions during strategic planning, project design and implementation. In this role, PPL will continue to strengthen the capacity of USAID missions to meet standards for strategic planning, project design, performance monitoring, evaluation and learning within all activities as part of USAID's Program Cycle.

Evaluation is a key Agency reform area and PPL led the Agency's January 2011 Evaluation Policy launch. Between 2011 and 2015, USAID trained over 1,700 USAID staff in sound evaluation methods and practices, and, as of 2015, PPL also offers training in performance monitoring. Additionally, PPL works to improve collaborating, learning and adapting in USAID missions and with USAID partners.

Key Program Activities: In 2015, PPL continued to deliver targeted training workshops to reinforce performance monitoring standards. PPL put into place support services to build staff and partner knowledge and capacity in project design, learning, and monitoring and evaluation (M&E) standards and practices. Services include an integrated training program in M&E, a cohort of Project Design, M&E and Learning Fellows, and targeted support customized to meet staff and partner needs and knowledge gaps. This Agency-wide effort is serving to standardize sound evaluation, performance monitoring and learning practices throughout all field missions while providing necessary support. As a result, USAID is experiencing an increased use of evaluations and performance monitoring data in support of evidence-based decisions. Nearly all missions now report that evaluations are beginning to inform budget decisions, project design changes and/or mid-course corrections in development programming. In 2017, PPL will enhance support services through improved training and technical assistance for Agency staff in strategic planning and project design to ensure that evidence from monitoring and

evaluations and learning are used more systematically to adapt to new and changing circumstances and to improve the sustainability of USAID results over time.

Use of Monitoring and Evaluation Results in Budget Choices: Based on the results of PPL's monitoring and evaluation activities, requested funding will continue to support the provision of technical assistance to USAID missions in areas of performance monitoring, evaluation and learning, and the use of that data to inform budget decisions through strategic planning and project design processes. It will also make information and practical tools accessible to USAID staff and partners through expansion and maintenance of online learning platforms. Moreover, it will allow for continued improvement and delivery of state-of-the-art training and contracting mechanisms under existing authorities to help staff plan and manage performance monitoring, evaluation and learning efforts. USAID also plans to support evidence and experience summits to facilitate learning from experience across sectors and regions. Finally, USAID will partner with global evaluation leaders, leveraging USAID resources and ensuring Agency evaluation and monitoring practices remain up-to-date.

Requested funding also will support USAID's continued transformation into a learning organization that leverages evidence to improve development outcomes. For example, PPL will continue providing technical assistance to support USAID missions to develop and implement Collaborating, Learning and Adapting (CLA) Plans. PPL implemented CLA Plans as a means to improve program effectiveness through:

- Strengthened internal and external coordination;
- Continuous learning from monitoring and evaluation, analysis and research;
- Leveraging contextual knowledge in collaboration with local thought leaders; and
- Iterative adapting as new learning emerges and local contexts evolve.

USAID will commission a limited number of high-priority cross-cutting evaluations and research to fill knowledge gaps and to report transparently on its performance monitoring and evaluation findings as part of its continued transformation into a more effective learning organization.

Finally, requested funding will continue to support the work of the Program Cycle which is designed to ensure that strategic plans and project designs are based on sound evidence and analysis, and respond to lessons learned during project implementation, performance monitoring and evaluation in order to achieve and sustain results. USAID's evolution as a learning organization that is results-oriented by establishing development and operational policy related to USAID's Program Cycle defines the integral linkages among USAID's core business processes: strategic planning, project design and implementation, monitoring, evaluation and learning.

As a result of these efforts, USAID will continue to improve the effectiveness of USAID programs, and ensure that learning from a wide range of sources, particularly performance monitoring and evaluations, informs policies, budgets, strategic planning, project design and implementation, ultimately achieving improved development results.

Key Interventions:

- PPL will provide technical assistance and creative approaches to build staff capacity in order to institutionalize evidence-based strategic planning and project design processes, elevate the quality of USAID performance monitoring and evaluations, and instill stronger learning practices and adaptive management during implementation.
- With \$5.0 million in funding, PPL will provide resources for missions in the field to support the use of evaluation findings to inform and modify strategic plans and new and continuing projects, in order to improve the link between evaluations and programmatic implementation.

- PPL will design, update and deliver Performance Monitoring and Evaluation training to educate USAID staff and partners on best practices and promising innovations in approaches and methods.
- PPL will develop tools, hold webinars, and facilitate peer learning and networking among USAID staff and implementing partners to further develop and institutionalize collaborating, learning and adapting practices in mission programs.
- PPL will commission evaluations and other analytical work on topics that support and inform Agency priorities, fill existing knowledge gaps to inform USAID programming and budget decisions, and determine the development outcomes and the sustainability of Agency interventions.
- PPL will build global leadership in evaluation and performance monitoring of development programs by partnering with international and regional organizations.

Interagency and Donor Engagement: PPL will use \$1.0 million to lead Agency efforts in advancing the U.S. development policy agenda by building consensus on policy issues among traditional and emerging donors. Moreover, PPL leads Agency efforts to mobilize collective action in furtherance of U.S. development priorities in the international arena. PPL engages in advocacy and key relationship-building by strategically engaging in major multilateral, bilateral and international fora. PPL aligns diverse donors behind common goals, promotes joint action and burden sharing among donors, improves the effectiveness of U.S. foreign assistance and promotes transparency to U.S. taxpayers and to beneficiaries.

Through this type of engagement, USAID expects to advance the following policy issues in FY 2017:

- Development cooperation effectiveness and aid transparency;
- International engagement on implementation of the Sustainable Development Goals (SDGs) and the Addis Ababa Action Agenda on Financing for Development (AAAA);
- Continued leadership on Organization for Economic Co-operation and Development (OECD), Development Assistance Committee (DAC) priorities and the Global Partnership for Effective Development Cooperation (GPEDC); and
- Engagement of new aid providers (such as Brazil, China, Turkey, South Africa and Arab donors), expansion of trilateral cooperation and encouragement of other forms of South-South cooperation.

Key Interventions:

- PPL will fulfill the U.S. government and USAID's international reporting requirements of the OECD/DAC Creditor Reporting System, the International Aid Transparency Initiative (IATI) and Busan data standards and formats. The Bureau will manage USAID quarterly reporting to ForeignAssistance.gov in line with OMB Bulletin 12-01. In so doing, PPL will provide continued Agency and U.S. leadership towards increasing aid transparency efforts and also support of the President's Open Government Initiative.
- PPL will support the completion of a European Union (EU) assessment process which will permit the EU to transfer resources to USAID missions to support common objectives.
- PPL will support GPEDC efforts to review and make further progress related to the Busan commitments.
- PPL will support global implementation of the Sustainable Development Goal Framework and Financing for Development agreements that incorporates key US assistance priorities, including ending extreme poverty, promoting strong democratic and transparent institutions, sustainable energy, gender quality, and increased private sector mobilization and domestic resource mobilization.

Policy Analysis, Cohesion and Leadership: Over the past five years, PPL has deepened its analysis of effective development approaches to accelerate development progress. With \$1.0 million in funding, PPL will continue its goal of strengthening USAID's policy capacity—including developing and assessing the implementation of Agency policies and strategies, conducting policy analysis, and exercising global

policy leadership to ensure USAID remains a premier development agency. For example, in FY 2017 emphasis will be placed on conducting and communicating policy analysis on emerging and persistent development challenges, shaping international development policy processes, and defining Agency-wide positions on new, cross-cutting policy issues, such as harnessing development data to achieve development outcomes, and how to effectively build country capacity in fragile or non-permissive environments. Leveraging opportunities for international policy engagement will continue to be a priority, including through implementing the SDGs and the AAAA, and working within USAID and with partners to achieve the goal of eliminating extreme poverty.

Key Interventions:

- PPL will coordinate and draft in-depth research and analysis in the form of country case studies, discussion papers, and policy papers in support of new and existing approaches to cross-cutting development challenges.
- PPL will convene a policy conference in coordination with private sector actors, non-governmental organizations, and universities that will help shape policy approaches to addressing key priorities within USAID's agenda to end extreme poverty.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: PPL uses several methods to annually measure progress on: (1) whether evaluation quality is improving at USAID; (2) whether staff capacity to carry out effective performance monitoring and evaluation is strengthening; and (3) how evidence and knowledge from evaluation and monitoring is being used to inform key Agency decisions. For example, in FY 2013, a total of 243 USAID evaluations were completed and sponsoring operating units indicated a total of 242 or 99 percent of evaluations were used to inform programming in some manner. Also, in FY 2014 a total of 357 USAID staff members were training in USAID's classroom evaluation courses.

As a complement to the on-going monitoring of its performance, PPL has funded several studies and evaluations to understand Agency capacity in performance monitoring, evaluation and learning and inform PPL's work. Following these studies, PPL continues to focus on capacity building activities to strengthen the implementation of the Program Cycle through the use of knowledge management platforms as well as increasing the use of webinars and e-consultations to disseminate new approaches and share best practices and trends in development programming.

PPL's long-term approach aims to improve program effectiveness by building staff capacity in performance monitoring and evaluation, fostering an institutional culture that incorporates collaborating, learning and adapting processes, and commissioning priority evaluations and partnering with international organizations to improve evaluation and performance monitoring practice in the development field as a whole.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: Based on the results of performance monitoring and evaluation activities in FY 2015, PPL plans to provide classroom training for up to 400 USAID staff, reach several hundred more staff through in-country and regional workshops, webinars and other internet-based approaches, and promote increased staff participation in evaluations through mentoring and peer-to-peer learning.

Every training activity that PPL conducts undergoes a comprehensive after-action review to identify its strengths and weaknesses and to propose adjustments for subsequent trainings. These reviews are based on participant feedback and staff observation and serve as an invaluable evaluative tool that assists PPL to continuously improve the quality of its training. As a result of these reviews, PPL is designing

performance monitoring and evaluation courses to integrate these topics, ensure more resources are available as online training modules, and dedicate more instruction time to planning and management of evaluation, and less time to evaluation methods.

In addition, PPL will continue efforts started in FY 2014 to study the use of evaluations in decision-making at USAID, and improve policies and systems to encourage use and to ensure that knowledge and evidence from evaluations and performance monitoring are readily available to USAID staff and partners.

In the area of Donor Engagement, performance information is used on a regular basis to determine both programmatic choices and the way selected programs are implemented. For example, performance information collected from long-standing Public International Organization grants to the United Nations Development Programme and the OECD in support of their efforts to lead the international dialogue on the achievement of the Millennium Development Goals informed USAID's position vis-à-vis SDGs and the AAAAA. In other cases, investments in building relationships with donor and recipient countries directly led to the ability of the U.S. to play a more credible leadership role in important international fora on development, including the OECD-DAC, GPEDC, the G-20 Development Working Group, in United Nations led negotiations for SDGs, the AAAAA and the upcoming World Humanitarian Summit.

USAID Program Management Initiatives

Foreign Assistance Program Overview

The FY 2017 request supports USAID Program Management Initiatives (PMI), including the Ocean Freight Reimbursement (OFR) program, the Partner Vetting System (PVS) Pilot, the Development Outreach and Communications (DOC) program, and Managing for Efficiency and Effectiveness.

Request by Account and Fiscal Year

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
TOTAL	-	*	1,700	1,700
Development Assistance	-	*	1,700	1,700

Development Assistance (DA)

FY 2017 funding is being requested for the OFR, PVS, and DOC Programs, as well as for Managing for Efficiency and Effectiveness.

Key Interventions:

- The OFR program allows USAID to pay eligible transportation charges for shipments of privately donated goods and U.S. excess property for registered U.S. Private Voluntary Organizations (PVOs). Grants reimburse PVO costs of transporting donated commodities like medical supplies, agricultural equipment, and educational supplies to developing countries. OFR is USAID's oldest PVO support program and leverages private sector resources many times the value of USAID funding, at around 126:1. These leveraged funds contribute to USAID development programs by awarding 30-50 competitive grants to small PVOs each year. In FY 2017, grants will be awarded to new PVOs and support the continued management of approximately 15 grants ranging up to \$150,000 per year. The FY 2017 request for this initiative is \$0.7 million.
- USAID will continue implementation of the joint Department of State and USAID PVS pilot. Funds will support salary and benefit costs of dedicated personnel who oversee the vetting process for five pilot missions in Guatemala, Kenya, Lebanon, Philippines, and Ukraine. Funds will improve the PVS information technology system and USAID's ability to meet data collection, analysis, and reporting requirements. The FY 2017 request is \$0.5 million.
- The DOC Program improves the ability of mission-based Development Outreach and Communications Officers (DOCs) to promote successful USAID program results, ensure that programs are well communicated to host country audiences, and increase overall awareness and understanding of U.S. foreign assistance. With FY 2017 funds, USAID's Bureau for Legislative and Public Affairs (LPA) will provide specialized training and support to overseas communications officers, who are hired and supervised by individual missions, and facilitate coordination between communications officers and USAID regional and pillar bureaus on key local initiatives and Agency priorities. LPA will use this funding to design training and implement headquarters-based support for communications officers serving as key USAID staff in over 80 missions. These officers will be responsible for implementing complex new branding guidelines which apply to all USAID projects throughout the world. The FY 2017 request for this initiative is \$0.5 million.
- Funds for Managing for Efficiency and Effectiveness will strengthen USAID's ability to support long-term development outcomes, establish rigorous standards for metrics and data quality, and promote a process for transparent monitoring and reporting on the delivery of assistance. Funds will enable the Agency to provide technical assistance on implementing business process review recommendations, pilot innovative solutions, undertake additional analysis in critical areas, and develop tools to enhance USAID's overall performance.

USAID Inspector General Operating Expenses

Sources (\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase/ Decrease
USAID Inspector General Operating Expenses, New Budget Authority	54,285	66,000	67,600	1,600
Other Sources ¹	23,453	20,335 ²	13,888	-6,447
Total Sources	77,738	86,335	81,488	-4,847

¹ Other Sources include supplemental appropriations, prior-year balances and recoveries, transfers, and collections.

² Includes \$2.9 million in subobligated Kerry Lugar Berman Funds to support OIG FY 2016 operating costs in Pakistan.

Overview

The Office of Inspector General (OIG) for the U.S. Agency for International Development (USAID) conducts and supervises audits and investigations of foreign assistance programs and operations and recommends policies for promoting economy, efficiency, and effectiveness and for preventing and detecting fraud, waste, and abuse in those activities. OIG executes these functions in relation to the programs and operations of USAID, the Millennium Challenge Corporation (MCC), the United States African Development Foundation (USADF), and the Inter-American Foundation (IAF), along with limited oversight of the Overseas Private Investment Corporation (OPIC).

The FY 2017 request of \$67.6 million will enable OIG to continue to execute core oversight functions in these areas. The request will fund OIG execution of statutorily mandated requirements as well as undertake discretionary oversight of high-risk activities and high-profile initiatives across the spectrum of U.S. foreign assistance efforts. OIG oversight activities will support agency fulfillment of development objectives overseas by promoting effectiveness, efficiency, and integrity in programs worldwide. OIG's work will also continue to help strengthen agency operations, including information and financial management, and ensure accountability among agency contractors, grantees, and other program implementers.

In FY 2017 OIG will maintain overall levels of oversight activity, using an increase over FY 2016 funding levels to add to its base of specialized skills and technical knowledge to address a growing and complex investigative caseload and to plan and undertake broadly scoped audit activities to improve planning, execution, and achievement of foreign assistance programs. Provided the levels of funding identified in the request, OIG will continue to identify and act on opportunities for internal improvements, including by increasing staff and stakeholder engagement, strengthening coordination and information sharing, and expanding the office's ability to respond to emerging trends. The FY 2017 request also provides sufficient funding to support the Council of the Inspectors General on Integrity and Efficiency.

OIG expects to continue to provide substantial benefits for the U.S. government and for taxpayers in executing its mandate, building upon work that resulted in \$374 million in questioned costs, funds to be put to better use, and investigative savings and recoveries over the past fiscal year.

Budget Priorities by Strategic Goal

Strategic Goal 1: Strengthen the ability of the organizations for which OIG provides oversight to manage and deliver foreign assistance efficiently and effectively through audit products and activities.

With funding at the requested level, OIG will continue to carry out mandatory audit work, such as conducting financial statement and Federal Information Security Management Act audits. It will conduct

audits of programs that address the needs of those who are displaced by conflict; are confronted by HIV/AIDS, malaria, and other diseases; facing food insecurity and lack of clean, potable water; and are living in extreme poverty and in countries with limited government capacity. Financial audit work will gauge compliance with related requirements and assess internal controls among agency implementers.

Strategic Goal 2: Deter and detect fraud, corruption, criminal activity, and misconduct in the programs, operations, and workforce of the organizations for which OIG provides oversight.

OIG will continue to conduct and support investigative activities, while emphasizing work on high-impact cases. OIG will be able to devote greater attention to high-priority investigations and initiatives, such as the additional investigative work that OIG anticipates as a result of USAID's ongoing efforts to increase the use of host country implementers under its Local Solutions Initiative. OIG plans to use the resources provided in this request to address related risks in this area and respond to the need to work more intensively with local authorities to address allegations of fraud and waste among local partners.

Under the President's request, OIG will retain personnel with expertise in forensic auditing and computer forensics to support investigative activities. Provided expertise in these areas, OIG will be in a stronger position to investigate complex financial schemes and obtain and fully examine computer evidence.

Strategic Goal 3: Provide useful, timely, and relevant information to enable stakeholders to make informed decisions about foreign assistance programs and operations.

OIG will provide timely and accurate responses to requests from external parties on its audit and investigative work, OIG authorities and operations, budget and staffing matters, and other topics that arise. In addition, OIG will continue to regularly notify executive and legislative branch personnel of newly released reports and informational materials, as well as provide alerts regarding investigative developments. OIG will likewise work to meet statutory reporting requirements related to oversight of overseas contingency operations.

Strategic Goal 4: Continually improve the efficiency, effectiveness, and quality of OIG operations and outputs.

OIG will continue to look for ways to eliminate unnecessary spending, promote automation to increase efficiency, and gather ideas and information from employees to improve operations. Efforts under Goal 4 include steps to further internal information sharing and transparency, increase staff engagement, and enhance productivity.

Strategic Goal 5: Recruit, develop, and retain a highly qualified, motivated, and diverse workforce with the necessary tools and training to fulfill OIG's mission.

OIG will continue to provide formal training for incoming personnel, meet recurrent specialized training requirements, and increase opportunities for employee leadership development. OIG will also use resources to provide dedicated human capital support for Foreign Service personnel and continue to promote telework opportunities when they contribute to increased organizational efficiency and effectiveness.

Legislative Proposals

OIG is requesting consideration of three legislative proposals that (1) clarify OIG authorities under the Inspector General Act, (2) provide for reauthorization of OIG authority to waive certain compensation restrictions on reemployed annuitants, and (3) refine authorities for oversight of overseas contingency operations.

Language pertaining to USAID OIG in the Inspector General Act of 1978, as amended, contains technical errors, omissions, and references to policies and functions that are no longer in effect. OIG proposes amendments to the Inspector General Act that would eliminate references to OIG security functions that were removed in the Omnibus Appropriation Act for 1999 (P.L. 105-277), make a technical correction related to OIG's authorities to manage Civil Service personnel, clarify OIG authorities to manage a Foreign Service personnel system, and eliminate a reference to an outdated Department of State system for setting personnel ceilings abroad. Other proposed changes would better reflect OIG's oversight relationship with other agencies it oversees by consolidating oversight authorities and responsibilities with respect to the Inter-American Foundation, U.S. African Development Foundation, and the Millennium Challenge Corporation in the Inspector General Act to ensure that future changes to the Act apply uniformly across OIG's oversight portfolio.

In FY 2016, Congress renewed OIG authority to waive certain compensation restrictions on reemployed annuitants to carryout assignments in Afghanistan, Pakistan, Iraq, and Haiti for the fiscal year. In the past, OIG used this authority to supplement its investigative workforce by facilitating assignments of reemployed annuitants on a temporary, flexible basis to meet emerging needs. With reauthorization for only one year, however, in addition to the late date of the FY 2016 appropriation, OIG's ability to hire using this authority is severely limited. Renewing this authority over a 2-year period starting in FY 2017—and expanding its application to Syria, Turkey, Jordan, and Lebanon—would considerably enhance OIG's ability to provide oversight in critical regions while preserving oversight capabilities elsewhere around the world.

Section 8L of the Inspector General Act of 1978, as amended, provides for the designation of a lead Inspector General for oversight of contingency operations and authorizes this inspector general to exercise special personnel authorities in performing related functions. Following consultations with the other OIGs specified in Section 8L, USAID OIG seeks to refine how personnel authorities under this section would apply in an overseas contingency operation. These changes would ensure that OIGs could use indicated personnel authorities during the full course of an overseas contingency operation. They would also ensure that compensation waivers for reemployed annuitants would apply to another key experienced personnel base: Foreign Service annuitants. Finally, proposed changes would enable OIGs to bring on reemployed annuitants more quickly in support of oversight needs once a new overseas contingency operation is in effect.

¹These amounts reflect the actual FY 2015 obligations of available resources, including new obligation authority.

²Other sources include trust funds, reimbursements, and carryover.

Overview

USAID's global engagement is essential to advancing U.S. interests, enhancing national security, and reaffirming its global development leadership. Recognizing that development is critical to U.S. foreign policy and national security, the National Security Strategy calls for investing in development capabilities and institutions. The FY 2017 USAID Operating Expense (OE) request will provide that investment, simultaneously advancing the global priorities of the Quadrennial Diplomacy and Defense Review and the Presidential Policy Directive on Development. The request will allow USAID to partner with countries and local institutions to build civilian capacity and use science, technology, innovation, and partnership solutions and expertise to improve development results and sustainability.

Although an increase from FY 2016, the request represents the minimum resource level necessary to sustain current operations and the existing workforce to meet U.S. foreign policy objectives, support Presidential initiatives, and expand global engagement. The requested increase will allow USAID to offset the projected decrease in other resources, such as carryover and recoveries, that support operations while restoring the new obligation authority needed to maintain its current level of operations into FY 2017.

The request also reflects the Agency's efforts to work more effectively and efficiently to meet the challenges of implementing foreign assistance in today's changing world. It continues the significant progress made in improving procurement, local-capacity building, innovation, and accountability that recent reforms have enabled.

Development is critical to national security, economic prosperity, and global leadership. To overcome today's global challenges, USAID continues to transform itself into a modern business enterprise based on partnership, innovation, and a strong commitment to policy reform. By partnering with other countries to end extreme poverty, USAID helps transform developing countries into stable and prosperous nations with efficient governments, thriving civil societies, and a vibrant private sector. Fully funding the FY 2017 USAID OE request will maintain current operations and is vital to achieving foreign policy and national security objectives.

Uses of Funds

Categories (\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request
Overseas Operations	735,725	798,644	829,595
Washington Operations	398,507	408,330	415,323
Central Support	268,561	262,780	271,983
Total Uses^{1/2}	1,402,883	1,469,754	1,516,902

¹ Refer to the Resources Table at the end of this chapter for fiscal-year breakout of funding sources.

² Totals may not sum due to rounding.

Overseas Operations

Categories (\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request ¹
Field Missions	500,032	508,572	534,380
USDH Salaries & Benefits	235,693	290,072	295,215
Total Overseas Operations²	735,725	798,644	829,595

¹ The FY 2017 request includes \$98.46 million for Overseas Contingency Operations.

² Totals may not sum due to rounding.

Field Missions

This budget line item funds the following activities:

- *Residential and office rents, utilities, security guard costs, and communications:* These costs are largely non-discretionary.
- *Intergovernmental payments:* The majority of these payments are for International Cooperative Administrative Support Services (ICASS). ICASS is the cost of administrative support provided to missions by other U.S. government agencies (generally the Department of State).
- *Operational travel and training:* This category includes essential travel to visit development sites and work with host-country officials; other operational travel, including responses to disaster; and the costs of tuition and travel for training not sponsored by Headquarters.
- *Supplies, materials, and equipment:* This category includes the cost of replacing office and residential equipment, official vehicles, IT hardware and software, general office and residential supplies and materials, and some security-related equipment.
- *Mandatory travel and transportation:* This category includes travel and transportation expenses for post assignment, home leave, rest and recuperation, and the shipment of furniture and equipment.
- *Contractual support:* This category includes mission requirements for data-entry assistance and other administrative support provided through contracts.
- *Operation and maintenance of facilities and equipment:* This category includes the cost of operating and maintaining facilities and equipment at overseas missions.

USDH Salaries and Benefits – Overseas

This category includes salaries and the Agency's share of benefits, such as retirement, Thrift Savings plan, and Social Security, health, and life insurance, for all Foreign Service Officers (FSOs) serving overseas. Overseas salaries also include various post differentials, including difficult-to-staff incentives for FSOs willing to extend tours at posts where harsh living conditions deter personnel from seeking such assignments. The request reflects a 1.6 percent pay raise and hiring to attrition.

Washington Operations

Categories (\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request
Washington Bureaus/Offices	75,898	71,157	71,868
Office of Security	18,871	18,870	19,059
USDH Salaries & Benefits	303,738	318,303	324,396
Total¹	398,507	408,330	415,323

¹ Totals may not sum due to rounding.

Washington Bureaus/Offices

The request will support the following:

- *Programmatic oversight and training travel:* This category includes essential travel to visit missions and development project sites, work with host country officials, and participate in training and other operational travel, including travel to respond to disasters.
- *Advisory and assistance services:* This category includes contracts and advisory services to support essential functions, such as preparation of the Agency's financial statements, voucher payment processing, financial analysis, contract closeout, and audit services.

Office of Security

The USAID Office of Security request represents a continuing effort to protect USAID employees and facilities against global terrorism and national security information against espionage. The request will fund additional physical security for missions not collocated with embassies, including building renovations, security enhancements, and increased local security-guard services. The budget is allocated among four major categories as detailed below.

Categories (\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request
Physical Security	15,347	13,816	13,830
Personnel Security	2,635	3,875	4,420
Counterintelligence and Information Security	794	879	409
Counterterrorism	95	300	400
Total	18,871	18,870	19,059

Physical Security

Funding will allow USAID to complete physical security enhancement projects at 13 overseas missions and maintain security counter-measures at Washington facilities. These funds also will support the installation and maintenance of emergency communications systems at eight missions, procurement of armored vehicles for nine missions, and the Federal Protective Service contract guards that protect USAID space in the Ronald Reagan Building.

Personnel Security

Funding will allow USAID to conduct the required applicant and facility-access investigations pursuant to E.O. 12968, Access to Classified National Security Information, and Homeland Security Presidential Directive-12 Policy for a Common Identification Standard for Federal Employees and Contractors working for the Agency. The request will support the Director of National Intelligence decision to reduce the intervals between initial and re-investigations of Federal employees and contractors from every five years to annually for top-secret clearance holders and from every 10 years to every five years for secret-level clearance holders. These funds will allow the Agency to enhance quality-assurance activities,

employee-reporting requirements, and its investigations database to implement the new Federal Investigative Standards. Additionally, system enhancements will allow for data collections that will support background-investigation statistical reporting required under Public Law 108-458, the Intelligence Reform and Terrorism Prevention Act of 2004.

Counterintelligence and Information Security

Funding will allow USAID to provide required training to its employees on how to properly protect classified national security information and themselves from being exploited by foreign intelligence services (FIS). FIS-targeting of U.S. government staff employed in non-Title 50 organizations, such as USAID, is recognized at the national level as an emerging and growing threat. These funds also will serve to expand and enhance training mechanisms provided to USAID employees, covering such topics as classified handling procedures, travel precautions, awareness of the techniques used by FIS, and security vulnerabilities of information technology (IT) systems. In addition, funding will support ongoing computer-based training made available to all employees at their workstations and applications to assist monitoring of travel-related incidents and information of counterintelligence or security concerns.

Counterterrorism

Funding will cover costs associated with maintaining the IT system that supports the current terrorist-screening processes and an expanded pilot-vetting program.

USDH Salaries and Benefits – Washington

This budget item includes salaries and the Agency's share of benefits, such as retirement, Thrift Savings Plan, and Social Security, health, and life insurance for all Civil Service and Foreign Service employees. The request reflects a 1.6 percent pay raise, hiring to attrition, and \$1 million for five temporary Civil Service positions to support the Administration's Digital Services Teams initiative.

The Digital Services Team will manage the digital services with the greatest impact on citizens and businesses to ensure USAID can effectively build and deliver digital services. It will be comprised of experts with modern digital product design, software engineering, and product management skills.

Central Support

Categories (\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request
Information Technology	104,052	98,188	105,270
Rent & General Support	98,109	98,067	99,048
Staff Training	24,189	25,075	25,326
Personnel Support	20,650	20,650	20,857
Other Agency Costs	20,654	20,800	21,482
Total	267,654	262,780	271,983

Information Technology (IT)

The USAID Information Technology budget supports IT systems, infrastructure, and architecture critical in helping USAID staff fulfill the Agency's mission and provide management support.

Categories (\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request
IT Systems	35,378	34,220	37,413
IT Infrastructure	57,229	54,216	55,745
IT Architecture	11,445	9,752	12,112
Total	104,052	98,188	105,270

IT Systems

Funding will support the operations and maintenance of the suite of enterprise-wide, legacy, and database systems, such as USAID's financial, acquisition and assistance management, Foreign Assistance Coordination and Tracking, and other essential systems. This funding also will support economic analysis programs and Microsoft enterprise licensing.

IT Infrastructure

The request covers worldwide telecommunications network; Washington telephone services; computer maintenance and management; e-mail and data archiving and storage; help-desk assistance; information-systems security support and anti-virus software worldwide; maintenance of classified devices in Washington; and support for the Agency's web services, such as Internet and Extranet design, implementation, and maintenance.

IT Architecture, Planning, and Program Management

Funding will support the ongoing operations of the Agency Information Resources Management Program including: strategic planning, systems engineering, IT governance, capital planning, acquisition, Agency operations, enterprise architecture, and customer-service management.

Washington Rent, Utilities, and Support Costs

The request will fund mandatory rent and general Agency support costs. In FY 2017, payments for office rent, utilities, and basic/building security services for the Ronald Reagan Building, International Trade Center, warehouse, and other space in the metropolitan area are estimated at \$86.2 million, approximately 87 percent of the budget.

The remainder of the request, \$12.8 million, is relatively fixed, supporting contracts for printing and graphics, mail and records management, travel and transportation services, workplace accommodations, office equipment maintenance, and other discretionary support services for headquarter staff.

Staff Training

The request will ensure USAID employees have the essential job skills and leadership training to carry out the Agency's development mission. It will support enhanced training in security and leadership; implementation of certification programs for senior leaders, program managers, technical officers, and support staff; mandatory training for all supervisors; and continued language training, including intensifying the understanding of local dialects. In addition, the request will support revised core courses (e.g., project design, monitoring and evaluation, personal safety and security) to ensure FSOs in non-

permissive environments have the tools, training, and knowledge to successfully implement development assistance programs.

To advance local sustainable development, the Agency will emphasize enhanced foreign-language capacity, deeper cultural awareness, and training opportunities for eligible family members and partners of FSOs overseas and the Foreign Service National cadre. This emphasis will deepen in-country knowledge and local engagement.

USAID maintains an emphasis on core competencies and training on diversity, private-sector alliances, management, and technical skills for all staff. The request will strengthen the core management and technical skills of the Agency's workforce essential to meet development goals. USAID will establish itself as a center of excellence and continue close collaboration with the Department of State to build a more flexible workforce and increase its capacity to respond to ever-increasing demands.

Personnel Support

Funding will cover mandatory Agency-wide personnel deployment and workforce planning costs, such as labor-relations casework, workforce planning, the subscription costs to Office of Personnel Management (OPM)-approved Human Resources Lines of Business providers for payroll (National Finance Center) and talent acquisition (recruitment), entry on duty, core personnel system, and enterprise reporting (Department of Treasury).

USAID will continue to develop its human capital and talent management capacity and support the five-year Human Resource Transformation Strategy and Action Plan. This includes improved business processes to ensure efficient and timely hiring and support of USDH staff. As mandated by Executive Orders, funding will enable USAID to expand the diversity of its applicant pool through targeted outreach and recruitment programs for the disabled, minorities, and veterans. Funding will support the Agency's Staff Care Program, which provides a necessary service that affords critical professional support and clinical interventions for employees in high-stress and life-threatening circumstances.

Funding also will support retirement and separation travel and transportation costs for Foreign Service Officers, arbitrations, and travel to assist the field in ensuring that staffing, training, mentoring, and personal development plans are adequate to meet the demands of the USAID workforce and ensure sound management of critical talent management programs.

Other Agency Costs

Funding for other Agency spending primarily covers mandatory costs, of which the largest are payments to the Department of State for administrative support and dispatch-agent fees and the Department of Labor for employee medical and compensation claims relating to job-related injury or death. This category includes travel and related costs associated with the Foreign Service panels and funding for medical, property, and tort claims.

Resources

USAID's operating expenses are financed from several sources, including new obligation authority, local-currency trust funds, reimbursements for services provided to others, recoveries of prior-year obligations, and unobligated balances carried forward from prior-year availabilities. Due to the loss of extended obligation authority (referred to as deob/reob authority) in FY 2012, recoveries of prior-year obligations will be exhausted in FY 2016 and no longer available in FY 2017.

Deobligation/Reobligation (“Deob/Reob”) Authority

USAID seeks to restore Deob/Reob authority for the OE account, in conformity with all USAID foreign assistance accounts. Until FY 2012, Section 511 or 7011 of the annual appropriation acts contained a provision that OE funds remained available for an additional four years from the date they would have otherwise expired, provided the funds were initially obligated by the end of their period of original availability.

Historically, USAID has used the Deob/Reob authority to mitigate risks beyond its control, particularly for overseas operations. For example, accurate obligations in non-permissive environments are difficult due to multiple factors, including weak supply chains and security costs that fluctuate as the security posture changes. This may result in unliquidated obligations if the specific risk does not materialize. However, sometimes it is unclear that the risk has not occurred until after the end of the original period of availability. Without Deob/Reob authority, it is often too late to deobligate and recover OE funds before the appropriation has expired.

Deob/Reob authority has served as an important budget management tool for USAID operations, providing an additional funding source and allowing for the effective and efficient use of OE resources. The loss of this authority has complicated budgetary management and necessitated appropriation increases to maintain current operations. Without Deob/Reob authority, OE funds will remain unexpended for years on inactive obligations, an inefficient use of taxpayer resources. Restoration of the authority would allow USAID to reuse these already-appropriated resources for operations rather than request the same amount as an appropriation increase in future budget years.

Restoration of the Deob/Reob authority for the OE account will provide USAID a vital budget-management tool and a regular, recurring source of funding to support operations in lieu of seeking an increased appropriation.

Resource Table: The table below provides a breakdown of OE resources.

(\$ in thousands)	FY 2015 Actual*	FY 2016 Estimate	FY 2017 Request
Appropriated Funds			
Enacted Level/NOA	1,090,836	1,143,614	1,306,340
Overseas Contingency Operations	125,464	139,262	98,460
Subtotal	1,216,300	1,282,876	1,404,800
Unobligated Balance – NOA	86,790	-	-
Obligations – NOA	1,129,510	1,282,876	1,404,800
Other Sources			
Local Currency Trust Funds	13,220	19,702	19,802
Reimbursements	3,998	5,300	5,300
PEPFAR Reimbursements	8,994	9,500	9,000
Space Cost Reimbursements	14,000	12,000	12,000
IT Cost Reimbursements	28,178	25,000	25,000
Unobligated Balances	101,836	86,790	41,000
Prior-year Recoveries	103,147	28,586	-
Obligations - Other Sources	273,373	186,878	112,102
Total Obligations	1,402,883	1,469,754	1,516,902

USAID Capital Investment Fund

Category (\$ in thousands)	FY 2015 Actual ¹	FY 2016 Estimate ²	FY 2017 Request ³
Information Technology	34,840	10,912	25,666
Overseas Facilities Construction	130,084	168,300	167,319
Real Property Maintenance Fund	1,198	13,151	7,000
Total⁴	166,121	192,363	199,985

¹ These amounts reflect the actual obligations of available resources, including carryover and new obligation authority.

² These amounts reflect the estimated available resources, including carryover and new obligation authority.

³ Overseas Facilities Construction amount includes \$133.8 million in CIF Overseas Contingency Operations (OCO) funding.

⁴ Totals may not sum due to rounding.

The Capital Investment Fund (CIF) is used to modernize and improve information technology (IT) systems and finance construction of USAID buildings overseas in conjunction with the Department of State. Prior to FY 2003, the Operating Expense (OE) account funded these activities. No-year funds provide greater flexibility to manage investments in IT systems and facility construction not permitted by the annual OE appropriation. Separate improvement and on-going operations funding gives the Agency more certainty for new investments independent of operational cost fluctuations. For FY 2017, the CIF request will support IT investments, facility construction, and real property maintenance.

Total	34,840	10,912	25,666

In FY 2017, USAID will support the following IT systems and infrastructure initiatives:

Information Technology Systems

Knowledge Management – New Records Management: This required investment will allow the Agency to stay in compliance with the Federal Records Act for greater transparency and expanded definition of a “record.” The demands on records management continue to grow while investment in supporting technology has not. Technology improvements and integration to other information systems are required.

E-Gov Contributions: This investment will support Federal e-Gov initiatives.

Phoenix Enhancements: This investment will fund enhancements required to improve operations and comply with government-wide Federal mandates. Projects include automated invoice management, improper payment prevention, single sign-on testing, improved financial data management, integration to Phoenix/E-Travel, and a new time-and-attendance capability to replace WebTA, the Agency’s current time and attendance system.

Development Information Solution: This investment will fund the Development Information Solution (DIS), which will provide a common portfolio management platform for use by missions and Washington operating units to capture program performance data. This platform will be fed by operations data from existing financial and procurement systems and will, in turn, provide its data to an Agency Portfolio Viewer. This will enable a corporate view of the entire USAID portfolio from which the Agency can extract data to support foreign assistance transparency and meet the requirements under the Open Data Policy. DIS will be a cloud-based platform in compliance with the Cloud First policy, ensuring a scalable solution while fulfilling executive mandates to ensure information privacy, confidentiality, and security.

Overseas Personnel System: This investment will enable the transition to an Overseas Personnel System that will replace the current system, WebPASS Post Personnel.

Information Technology Infrastructure

IT Asset Management and Inventory: This investment will allow the Agency to implement a robust suite of integrated tools to better determine and manage IT assets at missions worldwide.

Network Infrastructure Upgrades: This investment will fund the upgrades needed to keep up with increasing USAID network requirements and demands, including cloud computing, enhanced information security, remote-user mobility and collaboration, and virtual desktop infrastructure. These requirements stretch the technical capability and service thresholds expected by the missions, regulators, Agency partners, and public. USAID must, at a minimum, keep pace with business-critical network industry advancements in these areas to seamlessly achieve its mission statement and efficiently advance and technically support U.S. foreign policy interests. Without these enhancements, worldwide mission users will experience avoidable network bottlenecks and degradations across the full spectrum of applications and services, adversaries will be able to exploit network vulnerabilities, and the Agency will be unable to fully leverage core and advanced capabilities introduced by USAID IT strategic initiatives.

Cyber Security Preparedness Review & Response: This investment will fund an assessment of the Agency's preparedness to support mandatory cyber-security and privacy initiatives (including support for classified networks) that are continually updated, added, replaced, or otherwise issued. The assessment will identify gaps and the appropriate Agency response to comply with the mandatory initiatives. Without this funding, the Agency will only identify security gaps when they are breached or from audits (i.e., by the Office of the Inspector General), causing USAID to react without sufficient time to prepare the most appropriate solution. A reactive response may increase the cost to resolve the gaps and not sufficiently address all needs.

Overseas Facilities Construction

Category (\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request
Overseas Facilities Construction ¹	130,084	168,300	167,319

¹ The FY 2017 request includes \$133.8 million in CIF Overseas Contingency Operations (OCO) funding.

The Secure Embassy Construction and Counterterrorism Act of 1999 required the co-location of new USAID office facilities on embassy compounds when new embassies are constructed. The FY 2017 request of \$167.3 million will support USAID's full participation in the 13th year of the Capital Security Cost Sharing (CSCS) Program. This represents a decrease of approximately \$1.0 million below total estimated spending for FY 2016 of \$168.3 million. This minimal decrease is attributed to an incremental growth of USAID positions charged offset by a small decrease in the cost-per-position assessed under the program.

The CSCS Program is designed to: (1) accelerate the construction of new secure, safe, functional diplomatic and consular office facilities for all U.S. government personnel overseas; and (2) provide an incentive for all departments and agencies to right-size their overseas staff by taking into account the capital costs of providing facilities for their staff. The program also includes a maintenance cost sharing (MCS) component for major rehabilitation projects on existing embassy facilities. Funds from this component ensure existing facilities are kept in good repair.

To achieve these objectives, the CSCS Program uses a per capita charge for: (1) each authorized or existing overseas position in U.S. diplomatic facilities; and (2) each projected position above current authorized positions in those New Embassy Compounds (NECs) that have already been included in the

President's Budget or for which a contract already has been awarded. The CSCS Program charges for ICASS positions, which are passed through to agencies based on their relative percentages of use of ICASS services. Agencies are eligible to receive a rent credit each year for office rent paid because existing diplomatic facilities are unable to accommodate their overseas personnel.

The CSCS Program established per capita charges that reflect the construction and maintenance costs of the various types of space in NECs. USAID's proportional amount of these costs is derived from target CSCS and MCS annual budget amounts of \$2.6 billion (\$2.2 billion for NEC construction and \$400.0 million for maintenance). These dollar amounts are divided by the total billable positions overseas and results in the per capita charges for each category. Rate changes for different position categories are calculated each year based on aggregate U.S. government agency positions overseas. Each agency's bill will vary directly with changes in the number of its overseas workforce.

The CSCS Program charges were phased in over the first five years from FY 2005 to FY 2009. Since FY 2010, per capita charges are fully recognized.

In FY 2017, contracts are expected to be awarded in the following countries with USAID presence: NEC - Guatemala City, Guatemala; New Office Annex - Kampala, Uganda; Nairobi, Kenya; and New Delhi, India; and Marine Security Guard Quarters - Paris, France.

Real Property Maintenance

Category (\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request
Real Property Maintenance	1,198	13,151	7,000

The request will allow USAID to continue funding maintenance for real property through the Real Property Maintenance Fund, which was created in FY 2014 to extend and enhance the life of USAID-owned properties through adequate and timely maintenance and repair. The authority is similar to that which the Department of State's Overseas Building Operations has to perform major maintenance at State-owned facilities and housing. The Real Property Maintenance Fund will allow the Agency to bring its properties to "good" condition and maintain a proactive preventive maintenance program. This will reduce the expensive future costs of major repairs, limit health and safety risks, increase efficiencies, protect the value of the property, and align with best practices of property management.

As of the beginning of FY 2016, USAID owned 99 overseas facilities, encompassing 968,531 square feet, with an estimated replacement value of \$203.0 million. The owned facilities include office annexes built on Embassy compounds, standalone offices and warehouses, and residential properties.

When the Real Property Maintenance Fund was created in FY 2014, the estimated total maintenance budget to bring all properties to "good" condition was approximately \$23.0 million. The bulk of the \$7.6 million appropriated in FY 2015 will fund emergency facility-repair needs. The FY 2017 request will fund required repairs, allowing USAID to move toward its goal of bringing all of its real-property holdings to "good" condition.

Once required repairs bring the real-property inventory up to good condition, recurring funds will be necessary for regular preventative maintenance. Such preventative maintenance requirements accumulate at 2 percent – 4 percent of the replacement value of these properties. USAID will continue to annually assess its properties.

HIV/AIDS Working Capital Fund

Obligated balance end of year	439	573	706

The HIV/AIDS Working Capital Fund (WCF) was established in 2006 to assist in providing a safe, reliable, and sustainable supply chain of pharmaceuticals and other products needed to provide care and treatment for persons with HIV/AIDS and related diseases. Beginning in FY 2014, Congress expanded the authorization to include pharmaceuticals and other products for child survival, malaria, and tuberculosis.

The WCF does not receive direct appropriations. Funding is deposited in the WCF by the Department of State, the United States Agency for International Development (USAID), other U.S. government agencies, donors and host governments, including the Centers for Disease Control and Prevention (CDC), the World Health Organization (WHO), and United Kingdom's Department for International Development (DFID,) for commodity procurement. The WCF also receives repayments of funds advanced to host country governments and the Global Fund to Fight AIDS, TB and Malaria to avert stock-outs of life-saving HIV/AIDS commodities. To date, donors and host governments have deposited \$57.6 million for commodity procurement, including \$11.8 million during FY 2015.

Currently the funds are obligated into the President's Emergency Plan for AIDS Relief (PEPFAR) procurement mechanisms for the purchase of life-saving HIV/AIDS commodities. The WCF, which is managed by USAID, does not incur travel or other administrative expenses nor does it generate a profit.

Biodiversity

Summary

Biologically diverse and healthy ecosystems are essential to development. Local people and national economies depend on natural resources, such as wild fisheries and forest products for food, nutrition, revenues, and livelihoods; and healthy ecosystems for clean water, income from ecotourism, and productive grasslands for livestock pasture. Biodiversity conservation actions can increase incomes and the sustainability of livelihoods, counter disease and malnutrition, enhance transparent and equitable governance, and help people access, manage, and benefit from natural resources. As articulated in its Biodiversity Policy, the U.S. Agency for International Development (USAID) is committed to conserving the most biologically significant places in the world, addressing the wildlife trafficking crisis, and protecting the natural systems that can help alleviate extreme poverty and provide a foundation for development. USAID's conservation activities cover key terrestrial and marine ecosystems, including the rainforests of the Congo and Amazon River basins, savannah and dry forests of East Africa, peat forests of Indonesia, and coral reefs of the Philippines.

A portion of USAID biodiversity funding addresses the conservation challenges related to wildlife trafficking and poaching, which has expanded into both a serious conservation concern and a threat to global security. USAID will continue to mount a comprehensive response to the wildlife trafficking crisis, building on the Agency's long history of supporting efforts to conserve and protect wildlife. USAID's comprehensive approach to the trafficking crisis addresses supply, transit, and demand issues, including by helping communities gain rights, capacity, and incentives to protect wildlife, applying monitoring technology and systems in protected areas to more effectively detect and deter poaching, engaging new actors and approaches to tracking and disrupting the flow of illegal goods, and reducing demand for wildlife products, particularly in Asia. With FY 2017 funds, the Agency will expand the scope of engagement along the whole supply chain, to include additional demand reduction efforts and improved capacity to detect and disrupt illicit products in trade. This comprehensive approach deploys a combination of tactics in countries where we have identified wildlife trafficking as a major threat. USAID is a leader in supporting analysis-driven collaborative action among governments and civil society, and generating private sector partnerships and technological solutions focused on illegal transport, corruption and wildlife forensics.

USAID will continue to support innovative conservation approaches that effectively deploy technology and social media. For example, through a public-private partnership, USAID helped the maritime group of the Philippine National Police implement an anonymous text messaging hotline that allows local communities to report illegal fishing. In Tawi-Tawi province, more than 3,000 reports led to 25 arrests and seizure of over \$100,000 of illegal wildlife contraband. USAID, in partnership with the National Geographic Society, the Smithsonian Institution, and TRAFFIC, launched the Wildlife Crime Tech Challenge to reward innovative science and technology solutions that help combat wildlife trafficking. The Challenge focuses on four issues in the fight against wildlife trafficking: detecting transit routes, strengthening forensic evidence and data sharing, reducing consumer demand, and tackling corruption.

Conservation of highly biodiverse areas, and the species within them, remains at the heart of USAID's biodiversity programs. The Agency will build on successful efforts at long-standing priority sites and scale up to new ones. For instance, in the Democratic Republic of Congo and the Republic of Congo, USAID is protecting elephants, great apes, and their habitat. Support for more effective patrols in eight high-biodiversity landscapes contributed to rangers confiscating thousands of snares, weapons and wildlife products. These actions were reinforced by national-scale law enforcement to track the transportation and sale of wildlife products. Over 100 wildlife enforcement agents and judiciary officials

were trained in conservation laws and judicial procedures, strengthening punishment for wildlife crime. Hundreds of poachers were arrested in 2015, and some have already been prosecuted and sentenced. Approaches and lessons honed in these areas will be applied more broadly to sites where new threats have emerged.

Assuring the strong engagement of and benefit to local communities remains a pillar of USAID's approach. USAID support in Guatemala helped local communities manage and benefit from the forest while achieving near-zero deforestation rates in active community forest concessions. The Agency improved the commercial viability of 20 sustainably harvested non-timber forest products, and helped ensure that half a million hectares of timber and 227,468 hectares of sustainably harvested non-timber forest products maintained Forest Stewardship Council certification. About 270,000 hectares of forest is also in process of receiving organic certification for harvest of ramón nut, chicle, and allspice. These conservation enterprises collectively generated 3,861 full-time equivalent jobs and \$25.8 million in total sales. In the Philippines, USAID assisted members of the Tagbanua indigenous group to improve accounting to better manage their fisheries, which generated about \$355,000. These benefits help solidify the commitment of local communities to conservation while improving their well-being.

Combating Wildlife Trafficking

Summary

Wildlife trafficking is the poaching of, and illegal trade in, wildlife (including fish) and wildlife products. Wildlife trafficking is a conservation crisis, representing an economic and ecological threat to the U.S. government's development partner countries, as well as a threat to global security. As part of U.S. agencies' efforts to implement the *National Strategy for Combating Wildlife Trafficking*, the United States Agency for International Development (USAID) and the Department of State use DA, ESF, and INCLE funds to addressing the enforcement, demand, and transport of illegally traded wildlife and wildlife products. This comprehensive approach includes supporting efforts by governments, communities, and the private sector that strengthen enforcement at all points from anti-poaching to markets, reduce demand for illegally-traded wildlife and wildlife products, expand international cooperation and commitment, and support new technologies.

Through programming to increase trans-regional collaborative action and information sharing, USAID is prioritizing linking community conservation, enforcement, transit, and demand reduction actions. Together, these efforts address the illegal supply chains of wildlife and wildlife products. USAID is working to improve capacity to address the complexity and criminology of the illegal trade of elephant ivory, rhino horn, abalone, sharks, tigers, and snow leopards. In particular, USAID is working to address demand reduction for southern African rhinoceros species, African elephants and other highly traded and endangered species and populations.

To address poaching and illegal trafficking, USAID and its partners will improve ranger, community scout, and judicial capacity in conjunction with policy and legal reform to effectively improve bilateral and regional enforcement. USAID will focus anti-poaching and enforcement efforts in East, Southern, and Central Africa, with targeted programming also occurring in targeted countries in West Africa. USAID regional and bilateral missions in South-East Asia will also address anti-poaching and enforcement.

Through public-private partnerships and technological advances, USAID/Washington and regional Missions in Africa and Asia will improve detection of movement and transportation of wildlife and wildlife products internationally. Efforts will focus on engaging private sector companies and associations and multilateral and bilateral government partners to curtail the transport of illegal wildlife and wildlife products by air and sea.

In partnership with private sector and civil society, USAID will target key markets in South-East Asia to reduce consumer demand for illegally-traded wildlife and wildlife products. USAID central programs will scale up new technologies globally to address consumer demand reduction, as well as enforcement.

The Bureau of Oceans and International Environmental and Scientific Affairs will continue to support efforts to combat wildlife trafficking at the national, regional, and multilateral levels by: 1) supporting multilateral agreements of which the mission is to prevent the illegal trade in wildlife; 2) strengthening regional cooperation, in particular by establishing and strengthening regional wildlife enforcement networks (WENs) with the goal of creating a global network of WENs; 3) improving scientific analyses upon which to base decisions; 4) raising public awareness of the security, economic, social, and health impacts of wildlife trafficking to reduce demand and stop poaching; and 5) assisting governments to implement key agreements aimed at combating wildlife trafficking, including through our bilateral and regional Free Trade Agreements. The Bureau also will continue to support the Under Secretary of State for Economic Growth, Energy, and the Environment in her role as co-chair, with the Departments of

Justice and Interior, of the Presidential Task Force on Wildlife Trafficking. The Task Force, with active participation from USAID and other government entities, is guiding the implementation of the National Strategy for Combating Wildlife Trafficking, released in February 2014.

Working with international organizations, host countries, civil society, and other partners along the supply chain of illegally traded wildlife and wildlife products, the Bureau of International Narcotics and Law Enforcement (INL) will continue to support bilateral and regionally-focused efforts to combat wildlife trafficking by supporting capacity-building in four key areas: improving legislative frameworks, enhancing investigative and enforcement capabilities, enhancing prosecutorial and judicial capacity, and increasing cross-border law enforcement cooperation. INL's programming also aims to combat corruption, money laundering, and transnational organized crime involved in wildlife trafficking.

Countering Violent Extremism

Summary

Countering violent extremism (CVE) is an essential component of our foreign policy aimed at preventing recruitment into radical organizations that advocate violence as a means to political and religious ends. CVE refers to proactive actions to counter efforts by groups that advocate violence to radicalize, recruit, and mobilize followers to violence, and to address the conditions that allow for violent extremist recruitment and radicalization. CVE programming attempts to break the life cycle of radicalization to violence and to build community cohesion against the broader spread of violent extremism in areas identified as highly susceptible to recruitment and radicalization by violent extremists. CVE programming has three objectives: (1) mitigate specific drivers of violent extremism and build resilience among those populations or communities most susceptible to radicalization and recruitment to violent extremism – as well as providing positive alternatives; (2) weaken the appeal and legitimacy of messaging and narratives of violent extremist groups that incite and support violent activities and rhetoric, including through amplifying credible alternative voices; and (3) increase the will and capacity of governmental and nongovernmental partners to employ CVE strategies and tools to engage, rehabilitate, and, as appropriate, reintegrate individuals caught in the cycle of radicalization to violence.

CVE programming is evidence-based and tailored to the diverse set of drivers that enable extremism in vulnerable communities. Programming may include activities to empower communities to positively engage citizens and have inclusive impact on their well-being; promote the voices of the victims/survivors of terrorism and former violent extremists (“formers”), to the extent legally permissible; strengthen the capacity of women, youth, and other civil society actors to promote alternative voices and positive activities for their community; assist governments in the development of national CVE strategies and approaches; support community-oriented policing in, and engagement with, susceptible communities; and, within legal parameters, encourage rehabilitation and reintegration of violent extremists – including those in prison or detention or those who are returnees from a conflict zone. CVE-specific objectives, actors, audiences, and measures of effectiveness distinguish such programming from broader development or public diplomacy (PD) efforts; however, development and PD programming approaches can be adapted and tailored to meet objectives, work with actors, reach audiences and employ measures of effectiveness that are CVE-specific. CVE programming is characterized by persistent monitoring and adaptation throughout the life of the program to ensure objectives are being advanced. CVE programming seeks to achieve the below objectives:

Mitigating Drivers of Violent Extremism and Building Resilience

Individuals are often motivated to violent action by groups that capitalize on the grievances of those who feel excluded, underrepresented, or left behind, such as youth and minorities. CVE seeks to identify and ameliorate those political, economic, or social grievances that make communities vulnerable and diminish the operational environment that is conducive for violent extremist organizations. This objective also encompasses activities that promote positive alternatives to broader communities as a whole and seek to strengthen the capacity of civil society groups to mitigate conflict and counter violent extremism.

Countering Violent Extremist Messages and Narratives

Discrediting violent extremist messaging or narratives – or juxtaposing these narratives with alternative, positive narratives – is an important tool in reducing the appeal of violent extremism. This CVE objective includes activities to identify, create the space for, and build the capacity of authentic voices from at-risk communities who can challenge violent extremist messaging and ideology. There is a

particular focus on strengthening and amplifying the voices of locally influential figures with CVE credibility, such as victims and survivors of terrorism, “formers,” parents, and religious and other community leaders, to the extent legally permissible.

Building Capacity to Counter Violent Extremism

This objective includes engagement with and support for CVE-relevant host-country government institutions and civil society groups to develop, support, implement, and evaluate strategies, tools, and mechanisms to address individuals who are in the cycle of radicalization to violence. Activities are designed to improve the will and capabilities of partners, both governmental and nongovernmental, to counter violent extremism beyond U.S. involvement and support.

CVE Measures of Effectiveness

As CVE is a nascent field, the Department of State and USAID are working in tandem to establish linkages between specific CVE programming and reducing radicalization and recruitment into terrorism in a given context. CVE metrics include foreign assistance indicators – such as the number of project participants trained or the types of skills learned by project participants. USAID is working to formulate outcome-based indicators in an attempt to capture project results related to changes in CVE-specific or CVE-relevant perceptions, views, or opinions within particular susceptible communities or among target audiences; such changes can be either against violent extremism or in favor of positive alternatives.

Democracy, Human Rights, and Governance

Summary

Democracy, Human Rights, and Governance (DRG) programs are a critical component of our ability to promote resilient, open, and democratic societies. DRG programs support rule of law and human rights, good governance, political competition and consensus building, and civil society.

The FY 2017 request reflects strong U.S. support for DRG, because investments in DRG safeguard national security, foster global prosperity, and demonstrate our continued commitment to principles that reflect American values and identity. The link between DRG, national security, and global prosperity has been articulated in every U.S. National Security Strategy issued since 1990, the 2010 Presidential Policy Directive on Global Development (PPD-6), the Quadrennial Diplomacy and Development Review, the Joint State Department-USAID Strategic Plan, the USAID Policy Framework, and USAID's 2013 Strategy on Democracy, Human Rights, and Governance. These national and agency level policies were reinforced in 2015 by the internationally supported Sustainable Development Goals, particularly Goal 16, which states that progress on development requires investments in peaceful societies and inclusive, accountable institutions.

Some of our most pressing national security threats are at their core the result of poor democratic governance and unchecked human rights abuses. Weak institutions, poor governance, corruption, and rights abusing authorities create an enabling environment for instability and violent extremism, and often result in costly humanitarian crises. The data linking peace, justice, and good governance with sustainable development is overwhelming. DRG programs make for strong, stable economies that are fundamental to continued global economic growth. More robust DRG programs would support participatory, inclusive and representative political processes, promote more transparent and accountable governance, and protect civil and political rights and freedoms around the world, making the world safer, more prosperous, and more stable.

The FY 2017 request responds to DRG policy and development priorities, which are grounded in the following three goals: (1) address democratic backsliding and closing political spaces by promoting government accountability, citizen participation, and fundamental human rights; (2) respond to and support democratic political transitions; and (3) sustain our investments in countries that are making progress. Core DRG activities have positive effects both on furthering democracy, human rights, and governance abroad as well as sustaining progress and durability in other sectors, such as the three major Presidential Initiatives (the Global Health Initiative, Feed the Future, and the Global Climate Change Initiative) and other development priorities.

Across all of these priorities, DRG programs promote anti-corruption and government accountability, women's empowerment and the protection of human rights, including for historically marginalized populations.

Basic Education

Summary

Education is a pillar of inclusive and sustainable economic growth, as laid out in the U.S. Agency for International Development's (USAID) "Vision for Ending Extreme Poverty," and it plays a key role in USAID's mission to partner to end extreme poverty and to promote resilient, democratic societies while advancing our security and prosperity. Yet, the world is in the midst of a global learning crisis. In 2013, more than 59 million children of primary school age and about 65 million adolescents of lower secondary school age were out of school. Whether they attend school or not, some 250 million do not learn the basic skills required to be competitive economic actors in a globalized world. Drop-out rates remain high and too few students, particularly adolescent girls, continue studies beyond the primary level. While important gains in primary school enrollment have been achieved across the developing world, and the gender gap in access to primary education has been narrowed or closed in many countries, access to education remains inequitable and the quality of education remains poor. More children have a better chance of attending school than ever before, but they do not necessarily have a better chance of learning anything while there.

Thus, improving lives through education and learning is one of USAID's core development objectives. This request supports USAID's work to address the global learning crisis and ensure that pathways out of extreme poverty arise from educational opportunities. USAID investments are aimed to improve the lives of millions of children and young people globally through targeted support and strengthening of key elements of education structures and systems to promote and maximize learning. USAID education investments are working to reach the poorest and most vulnerable, and continued investments are needed to both advance our strategic goals in education and to realize USAID's vision of ending extreme poverty.

The request for basic education will support programs and investments that focus on the strategic goals of advancing learning outcomes and improving early grade reading; and increasing equitable access to education in crisis and conflict-affected areas. It comes as USAID is completing five years of implementation under its Education Strategy 2011-2015. Since 2011, USAID missions have put in place over 140 unique projects to advance USAID's Education Strategy goals, and these projects have benefitted over 30 million individual children and youth. The Agency has cultivated and advanced partnerships with host country governments, donor partners, multilateral partner organizations, private sector actors, and implementing partner organizations to advance our priorities and leverage our investments. USAID has learned much in the last five years to inform and improve basic education programming, and this request supports USAID work to sustain its investment and momentum in order to achieve its ambitious education goals. Our priority continues to be measurably improving educational outcomes for individual students and learners by supporting evidence-based interventions, while at the same time seeking out innovations and relevant technological solutions.

Higher Education

Summary

The 21st century knowledge-driven global economy underscores the need for higher levels of education, including skills beyond primary education. An increasing number of young people in developing countries find themselves without relevant knowledge and skills and are unable to fully participate in and contribute to economic development. Job creation requires a population that is educated, informed and skilled. Yet the current scale of youth underemployment and unemployment is a matter of worldwide concern. The global youth unemployment rate has remained at around 13 percent since 2009. There were over 73 million unemployed young people around the world in 2015, which represents major costs to both young people and society at large.

U.S. Agency for International Development (USAID) higher education programs and investments are aimed at improving the quality, contributions, relevance, and accessibility of tertiary education institutions in developing countries, including universities as well as workforce development and training organizations. In parallel with investments related to skills development and youth employment, USAID also recognizes the incredible potential of universities to apply their research capacities to pressing development issues, including food security, health, and other strategic priorities. This request supports the continued emphasis on tapping into the intellectual power of American and international academic institutions and to catalyze the development and application of new science, technology, and engineering approaches, tools, and research to inform investment decisions of USAID and its development partners and improve outcomes across sectors.

This request will build on USAID programs to strengthen a variety of aspects of public and private higher education institutions, including through improvement of curricula and skills development programs; promotion of technological innovation; conducting scientific research; engagement in community service; and creation of institutional partnerships and exchange programs. These investments help people, businesses, and governments develop the knowledge, skills, and capacity needed to support economic growth, promote just and democratic governance, and foster healthy, well-educated citizens.

Evaluation

Summary

Evaluation is the systematic collection and analysis of information about the characteristics and outcomes of programs and projects as a basis for judgments to improve effectiveness and inform decisions about current and future programming. The Department of State's and USAID's evaluation policies seek to promote accountability and learning and respond to the requirements of the Government Performance and Results Modernization Act of 2010 to evaluate programs. The policies also respond to increased emphasis from Congress and the Administration on evidence-based planning, decision making, and budgeting.

The Department of State and USAID have made major progress in collecting and analyzing country and program performance information to support evidence-based analysis, including evaluations. The evaluations are used to determine what is working and what is not, and in turn inform programmatic and budgetary decisions. The Department of State and USAID have significantly modified their respective approaches to link the various aspects of planning, budgeting, program management, and monitoring and evaluation to maximize the impact of Department of State and USAID resources, incorporating a stronger emphasis on evidence throughout.

Program evaluation policies at the Department of State and USAID provide a key framework for generating evidence to inform decisions. USAID updated its program Evaluation Policy in January 2011 as part of its *USAID Forward* reform agenda, and the Department of State updated its policy in 2015 to more closely align with the range of activities across the Department of State. USAID has published two reports and commissioned several evaluations and studies to track progress implementing its Evaluation Policy and the Department of State is planning a meta-evaluation. In addition to agency-specific efforts, the Department of State and USAID continue to collaborate to promote and sustain evaluation as a management tool. Steps both the Department and USAID are taking to strengthen evaluation standards and practices include:

- Integrating evaluation planning into policy, strategy, program and project design;
- Promoting the use of evaluation findings to support evidence-based decision-making;
- Establishing guidelines to minimize bias in evaluations;
- Emphasizing methodological rigor in evaluations; and
- Using evaluation information to generate knowledge and inform assistance policy and planning.

Key Components:

The foreign assistance funding attributed to evaluation is managed for the most part within country programs for USAID and within Bureaus and independent offices for the Department of State.

Adaptation

Summary

Adaptation programs help poor and especially vulnerable countries and communities build resilience to current and projected weather- and climate-related impacts, such as floods, droughts, long-term water scarcity, sea level rise, and the increased frequency and intensity of major storms. By building resilience to increasingly harsh or unpredictable climatic conditions and the effects of extreme weather events, programs reduce the risk of damage, loss of life, and broader instability that are exacerbated by lack of preparedness. Helping developing countries manage climate and weather-related risks protects decades of progress in reducing poverty and bolsters economic growth in vulnerable countries. State Department and USAID programs with Adaptation as a primary objective, along with other bilateral and multilateral adaptation programs government-wide and activities that provide climate adaptation co-benefits are part of the U.S. effort to double grant-based funding for adaptation by 2020.

USAID's bilateral and regional adaptation programs will focus assistance on least-developed countries, glacier-dependent nations, small-island developing nations, and other countries most prone to climate-related disasters. For example, climate change-related impacts are projected to reduce agricultural productivity, threaten clean water supplies, destroy vital infrastructure, and undermine public health. Adaptation activities will respond to these threats through partnerships with governments, the private sector, and civil society organizations. Activities will help partners access and use high quality climate information, improve governance by developing response plans and policies to manage anticipated climate change-related risks, and identify and implement effective strategies for reducing the impact of global climate change on vulnerable populations. This includes helping countries secure public and private financing and other resources needed to increase their populations' resilience to climate change.

Department of State adaptation funding will support Climate Smart Food Security, a new cross-cutting multilateral initiative that will help integrate climate, agriculture, and other development objectives in Central America. The State Department will continue to support the National Adaptation Plans Global Network in order to increase the adaptive capacity of partner countries and advance climate-resilient development globally. Vulnerable countries will work through the network to strengthen their efforts to mainstream adaptation into national development planning and programs, identify priority adaptation actions for implementation and develop proposals for adaptation funding from multilateral sources such as the Green Climate Fund. A portion of the Adaptation funding will support work through the UN Framework Convention on Climate Change and the Intergovernmental Panel on Climate Change for analysis of climate impacts.

¹ GCF funding is not currently factored into the GCCI pillar allocations because GCF programming – including decisions about support to mitigation and adaptation activities – will be determined by the GCF Board, of which the United States is a member.

Clean Energy

Summary

Clean Energy programs support the development of energy services that promote cleaner air, increase energy access and security, and reduce or avoid greenhouse gas (GHG) emissions. By helping create a policy framework for low-carbon economies and providing technical and financial assistance, these programs leverage additional sources of public and private financing and encourage future replication.

USAID's Clean Energy programs will focus on emerging economies, regional climate change leaders, and current and future major emitters in Asia, Latin America, and Africa, particularly those which submitted ambitious Intended Nationally Determined Contributions (INDCs) at the 2015 Paris negotiations. Through Enhancing Capacity for Low Emission Development Strategies (EC-LEDS) programs in selected countries, USAID will help countries reduce long-term emissions trends in ways that further national development goals and implement international commitments, which also fosters transparency, accountability, and ambition through GHG accounting, reporting, and policy analysis. Through the EC-LEDS and the Power Africa Initiative, USAID will help countries to leapfrog emissions-intensive energy technologies with support for renewable energy and energy efficiency; modernization of policy, planning and regulatory systems; emissions inventories; improved electric grids; improved access to finance; and actions to reduce emissions in the energy, industry, transportation, and buildings sectors. USAID will provide technical assistance to energy system planners, regulators, and grid operators on overcoming challenges associated with integrating renewable energy into the grid.

USAID will support developing countries' engagement in Mission Innovation, a global public and private endeavor to reinvigorate and accelerate clean energy innovation scaled to the economic and energy market conditions in developing countries. This will engage developing country and Mission Innovation partners on co-creation and open innovation efforts to research and develop breakthrough clean energy technologies and innovations that can be scaled to varying economic and energy market conditions in participating countries and in the broader world. Through this, USAID will help developing countries design, incubate, and accelerate clean energy technologies that can be scaled into "bankable projects" that enhance and connect energy demand from developing countries to R&D supply, and to entrepreneurs, investors, and businesses that have joined to invest patient capital in early-stage technology development coming out of Mission Innovation countries.

The State Department's bilateral work includes cooperation with China to develop, continue, and expand U.S. participation in the U.S.-China Climate Change Working Group, the U.S.-China Clean Energy Research Center, and other mechanisms. Cooperation with India, the world's third-largest emitter, will support the U.S.-India Partnership to Advance Clean Energy, which has already mobilized roughly \$2.5 billion in public and private investments in clean energy research and deployment. The Department will support the Capacity-Building Initiative for Transparency to build institutional and technical capacity on measurement, reporting, and verification of progress by developing countries in achieving their national climate targets. Other Clean Energy programming includes initiatives established through the Clean Energy Ministerial, the first standing forum of energy ministers specifically focused on accelerating a global market transformation for a broad array of clean energy technologies. The LEDS Global Partnership builds upon U.S. bilateral assistance by establishing a global knowledge-sharing platform and network of international experts to compare lessons and develop best-practice LEDS approaches. LEDS is at the heart of the U.S. strategy to help developing countries achieve significant emission reductions.

The Department will continue to support the Climate and Clean Air Coalition to reduce emissions of black carbon, methane, and hydrofluorocarbons, which cause more than 30 percent of current global warming, millions of premature deaths, and extensive crop losses. Support for the Montreal Protocol Multilateral Fund will provide support for developing countries to transition away from ozone-depleting substances, and begin implementing a phasedown of hydrofluorocarbons, if a phasedown amendment is adopted. Other programs targeted to enhance access to electricity and investment in clean energy include the Climate Technology Center and Network and the Partnership on Women's Entrepreneurship in Renewables.

Sustainable Landscapes

Summary

Sustainable Landscapes programs protect the world's remaining tropical forests, support more resilient and sustainable agricultural practices, and enhance land use governance around the world. By helping developing countries reduce deforestation, improve sustainable land management, and promote climate-smart agricultural practices, programs reduce greenhouse gas (GHG) emissions by addressing root causes of deforestation and ensure a level playing field for sustainably produced forest products, including from the United States.

USAID Sustainable Landscapes programs, focused primarily in countries and regions with globally important forests, will help national governments, regional authorities, and communities address deforestation and land degradation in ways that promote economic opportunity, improve local environmental conditions, and sequester or reduce GHG emissions. Under the Enhancing Capacity for Low Emission Development Strategies program, Sustainable Landscapes funding will support large-scale actions to reduce emissions from land use and build capacity to measure and monitor GHG emissions from forests, wetlands, and other carbon-rich landscapes, which will also support implementation of international commitments. Programs will promote policies and incentives that reward sustainable land use practices, build forest management capacity, and enhance property rights of local communities to help ensure better stewardship and management. Sustainable Landscapes programs also will work through public-private partnerships to reduce tropical deforestation associated with key value chains in cooperation with the Tropical Forest Alliance 2020.

The Department of State will support the interagency SilvaCarbon program, which helps developing countries construct robust forest monitoring systems and greenhouse gas inventories, develop forest and land-use maps, develop baselines for monitoring, and perform robust monitoring and reporting. By providing long-term technical support to key countries through advisors placed in-country for several years, the Climate Fellows program builds national capacity to implement Reducing Emissions from Deforestation and Forest Degradation (REDD+) and other land-based climate programs, preserving forests and reducing GHG emissions.

The BioCarbon Fund Initiative for Sustainable Forest Landscapes brings together public and private sector resources to address the structural drivers of deforestation and degradation in areas where agriculture is a major cause of deforestation and changes in land use. The Forest Carbon Partnership Facility assists developing countries in building capacity and designing plans for their REDD+ efforts and thereby providing value to standing forests. State Department programming will also build upon a partnership with the U.S. Department of Agriculture on Low Emission Development Strategies that will provide integrated support for Clean Energy and Sustainable Landscapes objectives, and help countries reduce their GHG emissions from the agricultural sector. State Department funding may also support bilateral cooperation on forests with Brazil and India.

Family Planning and Reproductive Health

Summary

About 222 million women in the developing world have an unmet need for family planning, resulting in 53 million unintended pregnancies annually. An essential intervention for the health of mothers and children and the goal of ending preventable child and maternal deaths, voluntary family planning and reproductive health programs contribute to reduced maternal mortality, as well as healthier children and reduced infant mortality (through better birth spacing).

U.S. government programs will exercise global leadership with the U.S. Agency for International Development (USAID) providing missions with technical and commodity support in voluntary family planning and reproductive health programs. These programs will expand access to high-quality voluntary family planning and reproductive health and information services to enhance the ability of couples to decide the number and spacing of births and reduce abortion and maternal, infant, and child mortality and morbidity.

Specifically, funding will support development of tools and models needed for successful voluntary family planning (FP) programs, including mobilizing demand for modern family planning services through behavior change communication; commodity supply and logistics; service delivery; policy analysis and planning; biomedical, social science, and program research; knowledge management; and monitoring and evaluation. Priority areas include: FP/maternal and child health and FP/HIV integration; contraceptive security; community-based approaches for voluntary family planning and other health services; access to long-acting and permanent contraceptive methods, especially implants and intra-uterine devices; healthy birth spacing; and crosscutting issues of gender, youth, and equity.

Global Health Security in Development

Summary

To accelerate progress toward a world safe and secure from infectious disease threats, in partnership with other nations, international organizations, and public and private stakeholders, U.S. assistance seeks to prevent avoidable epidemics, detect threats early, and respond rapidly and effectively to disease outbreaks. Nearly 75 percent of all emerging or re-emerging diseases affecting humans at the beginning of the 21st century originated in animals (zoonotic diseases), underscoring the need for the development of comprehensive disease detection and response capacities that span the traditional domains of animal health, public health, ecology, and conservation.

USAID's Global Health Security program will continue implementation of the Global Health Security Agenda by supporting key aspects of preparedness, detection, and response, including disease surveillance, laboratory and response capacity for animal and human health, zoonotic disease capability, reducing antimicrobial resistance, workforce development, and other core Global Health Security Agenda components. The program will also assist countries in establishing and expanding requisite wide-ranging prevention, detection, and response capabilities for the possible spread of dangerous pathogens across borders.

In addition, the Department of State's Biosecurity Engagement Program (BEP) in the Bureau of International Security and Nonproliferation's Office of Cooperative Threat Reduction aims to reduce the risk that terrorists or non-state actors will acquire and misuse biological material, equipment, or expertise. BEP focuses its resources on countries and regions where the threat of bioterrorism is highest. Current priority areas for biological nonproliferation activities include the Middle East/North Africa and South Asia regions. At the same time, BEP maintains flexibility to address emerging urgent threats, such as reducing the risk that nefarious actors can acquire Ebola samples in West Africa. By nature of its mission, BEP biological threat reduction activities help to support components of the Global Health Security Agenda, such as the National Biosafety and Biosecurity Systems action package

HIV/AIDS

Summary

Global HIV/AIDS programs through the U.S. President's Emergency Plan for AIDS Relief (PEPFAR) will continue to support a data-driven approach that strategically targets geographic areas and populations with the highest HIV/AIDS burden, and in which investments can have the greatest impact in preventing HIV infections, saving lives, controlling the epidemic and, ultimately, creating an AIDS-free generation.

To accelerate progress toward these goals and achieve President Obama's bold HIV prevention and treatment targets by the end of 2017, PEPFAR will focus on effective interventions, including: 1) targeting voluntary medical male circumcision (VMMC) to those at highest risk and where the impact will be greatest (15–29 year old men), 2) applying the DREAMS (Determined, Resilient, Empowered, AIDS-free, Mentored, and Safe) core package to reduce new HIV infections among adolescent girls and young women, 3) ensuring that orphan and vulnerable children programming is reaching at-risk young girls and adolescents and testing children, and 4) working with countries to move immediately to Test and START through the adoption and implementation of the new 2015 World Health Organization (WHO) guidelines, including those related to differentiated service delivery.

The FY 2017 request will support targeted global HIV/AIDS efforts by continuing the PEPFAR Impact Fund, directed to countries that take concrete steps to realign their national HIV/AIDS programs using geographic and site-level data, to increase their own share of HIV budgets, and to take greater ownership of data collection and expenditure analysis.

Geographically- and population-targeted prevention and treatment activities undertaken will include prevention of mother-to-child transmission (PMTCT), VMMC, antiretroviral treatment (ART), HIV testing and counseling, and condom distribution. Care activities will include support for orphans and vulnerable children and treatment for HIV-tuberculosis co-infected individuals. Children, adolescents, young women, and other key populations will also remain a priority for PEPFAR's investment and action, including through implementation of the ACT Initiative and the DREAMS Partnership.

PEPFAR funding will also support strategically targeted health systems strengthening investments, including human resources for health, laboratory capacity, supply-chain management, strategic information systems, and administration and oversight. PEPFAR will support sustainability by accelerating progress toward epidemic control and strengthening the leadership and capacity of partner governments, local providers, and institutions.

In addition, PEPFAR will support critical international partnerships with the Global Fund to Fight AIDS, Tuberculosis, and Malaria, and through contributions to the Joint United Nations Program on HIV/AIDS, the WHO, and the International AIDS Vaccine Initiative. These international partnerships save lives and strengthen partner country capacity to lead and manage their national HIV/AIDS responses. PEPFAR is led by the Office of the U.S. Global AIDS Coordinator and Health Diplomacy at the U.S. Department of State, and is implemented by the U.S. Agency for International Development; the Department of Health and Human Services, including the Centers for Disease Control and Prevention; the Department of Defense; Peace Corps; and the Department of Labor, and works through local and international nongovernmental organizations, faith- and community-based organizations, private sector entities, and partner governments.

Malaria

Summary

In 2013, an estimated 584,000 people died of malaria and 198 million people suffered from acute malarial illnesses. At least 85 percent of mortality due to malaria occurs in Sub-Saharan Africa, with the vast majority of the deaths among children under the age of five. The U.S. Agency for International Development (USAID) will continue to scale up malaria prevention and control activities and to strengthen delivery platforms in up to 22 African countries, as well as to support the scale-up of efforts to contain the spread of multidrug-resistant malaria in the Greater Mekong region of Southeast Asia and the Amazon Basin of South America.

These malaria programs will continue the comprehensive strategy launched in the President's Malaria Initiative (PMI), which includes prevention and treatment approaches and integrates these interventions with other priority health services. PMI will support host countries' national malaria control programs, and strengthen local capacity to expand the use of four highly effective malaria prevention and treatment measures, including indoor residual spraying, long-lasting insecticide-treated bed nets, artemisinin-based combination therapies to treat acute illnesses, and interventions to prevent malaria in pregnancy. Funding will also continue to support the development of new malaria vaccine candidates, malaria drugs, and other malaria-related research with multilateral donors.

Under the Global Health Initiative, USAID malaria programs will continue to integrate with other global health programs, particularly in maternal and child health, HIV, and health systems strengthening, as well as with programs of the Global Fund to Fight AIDS, Tuberculosis and Malaria. Priority areas include implementation of community-case management to treat pneumonia and malaria, strengthening antenatal care services, and improving the quality and availability of diagnostic capacity for all diseases.

Malaria Funding Summary

(\$ in thousands)	FY 2017 Total	GHP USAID

Maternal and Child Health

Summary

Every year in developing countries, there are about 6.3 million child deaths (of which, an estimated two-thirds could be prevented) and 283,000 women die from largely preventable complications related to pregnancy or childbirth. Achieving the Administration's goal of Ending Preventable Child and Maternal Deaths by 2035 will require improvements in mortality outcomes that are the result of effectively leveraging investments in maternal and child health (MCH), malaria, family planning, and nutrition. MCH programs focus on working with country and global partners to increase the availability and use of proven life-saving interventions, and to strengthen delivery platforms to ensure long-term sustainability of these programs. U.S. Agency for International Development (USAID) programs will extend coverage of proven high-impact interventions, such as immunization, treatment of life-threatening child conditions, and prevention and treatment of postpartum hemorrhage, for the most vulnerable populations in high-burden countries. These interventions will accelerate the reduction of maternal and child mortality.

Working with Gavi, the Vaccine Alliance, USAID will support the introduction and scale up of new vaccines, especially pneumococcal and rotavirus vaccines, which have the greatest potential impact on child survival. Other priority interventions for children include essential newborn care (including newborn resuscitation); prevention and treatment of diarrheal disease (including increased availability and use of household and community-level water, sanitation and hygiene); and expanded prevention and treatment of newborn sepsis and pneumonia (particularly with frontline health workers).

Resources will combat maternal mortality with expanded coverage of preventive and life-saving interventions, simultaneous investments in building the capability required to provide functioning referral systems, and comprehensive obstetric care. The maternal health program will provide support for essential and long-term health system improvements, including human resources, information, medicines, and financing. The program will further enhance its impact through interventions aimed at reducing maternal mortality during labor, delivery, and the vital first 24 hours postpartum, which is a particularly vulnerable time for women and their infants. The MCH program will leverage investments in other health programs, especially, malaria, family planning and reproductive health, nutrition, and infectious diseases.

Neglected Tropical Diseases

Summary

More than one billion people worldwide suffer from one or more painful, debilitating tropical diseases. These diseases disproportionately impact poor and rural populations, cause severe sickness and disability, compromise mental and physical development, contribute to childhood malnutrition, reduce school enrollment, and hinder economic productivity. Seven of these neglected tropical diseases (NTDs) can be controlled and treated through targeted mass drug administration: schistosomiasis, onchocerciasis, lymphatic filariasis, trachoma, and three soil-transmitted helminths. Treating at-risk populations for these diseases for four to six years can lead to elimination or control of these diseases.

U.S. Agency for International Development (USAID) programs use a delivery strategy that has been tested by the agency and is supported by the World Health Organization (WHO) targeting affected communities using drugs that have been proven safe and effective, and can be delivered by trained non-health personnel. The U.S. government NTD Control Program represents one of the first global efforts to integrate existing disease-specific treatment programs for the control of these diseases. This integration has allowed for better drug donation and procurement coordination, decreased costs, and improved efficiencies.

USAID obtains the vast majority of required drugs through public-private partnerships with several pharmaceutical companies. Over \$8 billion of drugs for NTD control have been donated by the pharmaceutical industry to the countries where USAID supported mass drug administration, resulting in the delivery of more than 1 billion treatments to approximately 468 million people through our integrated programs. The NTD program and drug donation programs support the acceleration of global efforts to eliminate and/or control NTDs. USAID will continue to work closely with the WHO and global partners to create an international NTD training course, standardized monitoring and evaluation guidelines for NTD programs, and ensure the availability of quality pharmaceuticals.

Neglected Tropical Diseases Funding Summary

International Partnerships	86,500	86,500

Nutrition

Summary

More than 200 million children under the age of five and one in three women in the developing world suffer from undernutrition, resulting in severe health and developmental consequences. Undernutrition is an underlying cause in up to 45 percent of child deaths and leads to long-term health consequences and irreversible losses to children's cognitive development resulting in lower educational attainment, lower wages, and lower overall Gross Domestic Product.

The U.S. Agency for International Development's (USAID) overall approach to addressing malnutrition concentrates on a multidisciplinary approach working across funding streams to address the root causes of malnutrition. Our focus is primarily on the prevention of undernutrition during the first 1,000 days (from pregnancy through a child's second birthday) through comprehensive programs. Programs work across humanitarian and development contexts with an emphasis in health, agriculture, and resilience. Undernutrition in the first 1,000 days not only puts a child at risk for early death and increased childhood morbidity, but also for long-term health problems such as higher susceptibility to infectious diseases, cardiovascular disease, metabolic disorders, and cancer.

Nutrition programming under the Global Health Initiative and Feed the Future agricultural projects, as well as P.L. 480 Title II development programs, aims to improve the nutritional status of women and children. Nutrition activities aim to prevent and treat undernutrition through a variety of integrated services, such as nutrition education to improve maternal diets; enhancing nutrition during pregnancy; promoting exclusive breastfeeding; and improving infant and young child feeding practices. Nutrition programs will also promote diet quality and diversification through fortified staple foods, specialized food products, and community gardens, as well as through the delivery of nutrition services, including micronutrient supplementation, and community management of acute malnutrition.

Additionally, USAID funds nutrition programs not included in the tables below that aim to address the underlying contributors to poor nutrition to provide a comprehensive integrated approach leveraging all available resources. For example, nutrition-sensitive agriculture can promote nutritious foods for consumption and increased income, and/or address women's access to resources. Nutrition-sensitive programs also integrate sanitation and hygiene interventions to prevent diarrheal disease and other infections that are highly correlated with poor nutrition outcomes.

Polio

Summary

Huge achievements have been made in the global fight against polio since 1988, when the World Health Assembly resolved to eradicate the disease. The number of polio cases worldwide has decreased by more than 99 percent, from 350,000 in 1988 to 350 cases in 2014. The number of endemic countries has decreased from over 125 in 1988 to just two – Afghanistan and Pakistan. Since 1988, more than 10 million people who would otherwise have been paralyzed are walking because of the Global Polio Eradication Initiative.

The U.S. Agency for International Development’s polio programs, which are a subset of maternal and child health programs, support the Global Polio Eradication Initiative and are undertaken in close collaboration with host-countries, international, and national partners. These programs support the planning, implementation and monitoring of supplemental immunization activities for eventual polio eradication; improve surveillance for Acute Flaccid Paralysis; strengthen laboratory capacity for diagnosis, analysis and reporting; improve communication and advocacy; support certification, containment, post-eradication, and post-certification policy development; and improve information collection and reporting.

Tuberculosis

Summary

Tuberculosis (TB) is a leading cause of death and debilitating illness for adults throughout much of the developing world. Globally, 1.5 million people die annually from TB, and there are nine million new cases of TB each year. Annually, there are an estimated 480,000 cases globally with multi-drug resistant tuberculosis, which are difficult to cure and often deadly.

Efforts of the U.S. Agency for International Development (USAID) focus on early diagnosis and successful treatment of the disease – to both cure individuals and prevent transmission to others. Funding priority will be given to those countries that have the greatest burden of TB and multidrug-resistant TB, and the poorest TB outcomes, consistent with the goals and objectives of the Administration’s National Action Plan for Combating Multidrug-Resistant Tuberculosis. Country-level expansion and strengthening of the Stop TB Strategy will continue to be the focal point of USAID’s TB program, including accelerated detection and treatment of TB in all populations including the private sector and communities, scaling up prevention and treatment of multidrug-resistant TB, expanding coverage of interventions for TB/HIV co-infection, and improving health systems. The accelerated scale-up of these approaches in USAID focus countries will greatly decrease transmission and save lives by detecting and treating TB cases.

USAID priority activities will include critical interventions to improve TB infection control, strengthen laboratory networks, introduce new rapid TB diagnostics, improve monitoring and surveillance of TB programs, and ensure access to quality first- and second-line anti-TB drugs. USAID will continue to collaborate with a number of U.S. government partners to integrate and strengthen TB control services at the country level and leverage investments, including those of the Office of the U.S. Global AIDS Coordinator, other U.S. government agencies, and the Global Fund to Fight AIDS, Tuberculosis and Malaria. USAID’s TB program will continue to invest in new tools for better and faster detection and treatment of TB, including the development of new drugs and diagnostics.

In addition, the U.S. Global AIDS Coordinator supports national TB and HIV/AIDS programs to integrate TB prevention, diagnostic, and treatment services into HIV services in TB care settings. PEPFAR has supported the development of adult and pediatric comprehensive care packages, which include TB prevention, screening and treatment and recommended interventions targeting the primary causes of HIV-related illness and death.

Microenterprise

Summary

Ending extreme poverty will only be possible if those living in extreme poverty are able to participate in and benefit from the unprecedented economic growth that is taking place throughout the developing world. While millions of poor and marginalized families earn their livings through the operation of microenterprises (including smallholder farms), many are constrained by challenges including small size, remote locations, insufficient capital, and lack of market linkages.

Microenterprise and microfinance development is a key tool in working towards USAID's mission to end extreme poverty. Assistance will expand access to microfinance, markets, and services for approximately six million people. USAID will target at least half of microenterprise funding towards those living in extreme poverty.

In FY 2017, USAID's microenterprise programs will continue to emphasize reaching women. The Agency's goal is that at least 60 percent of our microenterprise clients will be women, with at least 40 percent of recipients residing in rural areas.

To achieve these objectives, USAID efforts will target innovative approaches to financial inclusion, particularly in rural areas, through investments in financial systems, micro-savings, and technology-based solutions such as mobile payment systems. In addition, USAID will fund the microenterprise results report and poverty assessment tools to analyze the extent to which USAID's microenterprise efforts are reaching the extreme poor.

USAID has been pivotal in transforming the microfinance industry into a market-driven model that attracts private capital, dramatically lessening reliance on donor support. This has expanded access to financial services for millions of poor households in the developing world and is a prime example of USAID partnering with the private sector to find solutions to end poverty.

While USAID once developed stand-alone microenterprise and microfinance projects, these efforts are now integrated into other USAID programs in order to advance key initiatives, such as Feed the Future and PEPFAR.

The global economy has evolved substantially since USAID first began promoting microenterprises. Today, 82 percent of all capital flows to the developing world come from the private sector. The Agency is now moving toward a multi-pronged approach to building a stronger ecosystem for microenterprise development, which includes the following:

- Mobilizing Private Capital: USAID seeks to catalyze private capital investments that support financial institutions serving the poor. Access to finance is critical to the ability of micro and small enterprises to grow and support their communities.
- Promoting Digital Financial Services: Digital platforms enable financial institutions to reach a greater number of microenterprise customers more cost-effectively, particularly in remote locations.
- Advancing Financial Inclusion: USAID microenterprise activities balance profit with an emphasis on improving access to quality financial services through customer centered design, consumer protection, and social performance. This is particularly important for ensuring that microenterprise development benefits women and the extreme poor.

Public Private Partnerships

Summary

The Public-Private Partnership (PPP) Key Issue responds to the Administration's commitment to leverage the resources and capabilities of the private sector to achieve foreign assistance objectives. PPPs are collaborative working relationships with external, non-governmental partners (such as private businesses, financial institutions, entrepreneurs, investors, philanthropists, and foundations) in which the goals, structure, and governance, as well as roles and responsibilities, are mutually determined and decision-making is shared.

The United States is committed to increasing the sustainable results of our foreign assistance programs through strategic alliances with the private sector. Such alliances enable the U.S. government to leverage the expertise, creativity, innovation, and resources of private sector partners to create holistic, sustainable solutions to critical challenges. Partnerships also enable the private sector to leverage the U.S. government's expertise, resources, convening power and government relationships to advance U.S. foreign policy and foreign assistance objectives and to foster the broader economic growth and poverty reduction that is vital to sustaining such success.

Under the 2015 Quadrennial Diplomacy and Development Review (QDDR), the Department of State and U.S. Agency for International Development (USAID) highlighted the need to engage in PPPs. Consequently, the United States has been leading the development of new models of partnerships, including as part of endeavors such as the New Alliance for Food Security and Power Africa, which demonstrate broad-based collaboration among private sector partners, the U.S. government, and foreign governments. PPPs are distinct from traditional approaches in that they are rooted in co-creation, co-design, and co-resource mobilization towards a shared and mutually beneficial objective. Some partnerships may involve partner funding and/or provision of products, services, or time; others will solely be based upon shared interests and non-monetary contributions.

In FY 2016, the United States will continue to invest in public-private partnerships and support reforms under USAID Forward and the President's Emergency Plan for AIDS Relief (PEPFAR). For example, the Department of State's Office of the Global AIDS Coordinator recently supported the development of key global partnership initiatives for children, adolescents, women and girls, and other key populations, and it maintains support for country-designed and owned PPPs to catalyze sustainable innovation. Between 2009 and 2014, the Secretary of State's Office of Global Partnerships has leveraged approximately \$1.5 billion in public and private sector resource commitments to advance U.S. foreign policy and foreign assistance objectives, and will continue to facilitate the cultivation of high quality partnerships that are aligned with U.S. strategic foreign policy and development goals. At the end of 2014, USAID had over 250 active partnerships leveraging a combined total of over \$1 billion in private sector resources. USAID has continued to elevate the importance of private sector engagement, and anticipates that the number and leverage of PPPs will continue to increase in 2016, with across-the-board leverage of approximately \$3 of partner contributions for every \$1 invested by USAID in its Global Development Alliance model. Power Africa will build on its initial commitments of more than \$20 billion from private sector partners to continue towards its goal of collectively adding more than 30,000 megawatts of cleaner, more efficient electricity generation in Africa. In addition, the Global Development Lab provides a platform for USAID to co-invest with the private sector to test and scale development innovations affecting millions of households in the developing world.

Relief to Development Transitions

Summary

The focus on Relief to Development Transitions (R2DT) is important to ensure that chronically vulnerable populations are not inadvertently overlooked or left out of developmental consideration. R2DT is also responsive to the broader objective of demonstrating developmental progress that can ultimately lead to graduation from foreign assistance. The transition from relief to development is neither linear, constant across sectors or geographic regions, nor based on a prescribed time line. Transition is specific to each country's context and may be addressed through various sector perspectives and approaches. The following countries are currently designated as FY 2017 R2DT focus countries: Afghanistan, Ethiopia, Kenya, Lebanon, Mali, Pakistan, South Sudan, and Yemen. Additional resources are attributed to R2DT for other regions and countries reflected in the table below.

Actively planning and programming for R2DT may involve multiple years of coordination and gradually shifting the source of resources from humanitarian and transition accounts to developmental accounts and does not preclude the possibility that new humanitarian or transition needs may arise in other, or the same sectors or locations. R2DT is not sector specific; however, R2DT programs will have usually been planned and designed in consultation with the bureaus of Democracy, Conflict and Humanitarian Assistance (DCHA) and Population, Refugees and Migration (PRM), as appropriate, or are clearly addressing a need previously addressed by humanitarian or transition account resources.

U.S. assistance that is captured as R2DT includes Mission programs designed to reduce the impact of future disasters (known as disaster risk reduction programs - DRR), or programs that increase chronically vulnerable populations' ability to withstand cyclical shocks, as well as programs that assist in the transition to more sustainable services (e.g., a clinic or health service that was independently run by an NGO with humanitarian assistance, but is now managed by the host government's health system with or without donor developmental assistance). Mission, regional, or centrally-managed programming may be jointly programmed with, complementary to, or sequential to humanitarian support, as long as the expectation is that the need for humanitarian or transition assistance will eventually diminish while developmental assistance may continue for some time longer.

Examples of R2DT programming scenarios—which are neither mutually exclusive nor exhaustive—include:

- Funding for a country or region that has been identified for development assistance to reduce chronic vulnerability such as food insecurity and all of its attendant symptoms that have resulted in repeated or cyclical humanitarian support.
- Programming that carries on from relief and recovery programming following a sudden onset natural disaster, such as an earthquake or flood.
- Programs that address the socio-economic needs of displaced populations, and the communities receiving them, either in their country of origin or a second country, including populations which have been displaced for an extended period and have little hope of return in the near term, as well as populations that are returning to areas of origin that will need assistance in reestablishing their lives and livelihoods.
- Programs for countries where a violent conflict has ceased and government institutions are being created or reorganized, social services or programs are being regularized, and/or basic political organizing is taking place following interim humanitarian or transition assistance.
- Programming that mitigates or reduces vulnerability to disasters in disaster prone countries.
- Programs for countries where a combination of these situations apply.

Research

Summary

The U.S. Department of State and the U.S. Agency for International Development (USAID) support scientific research to meet the world's toughest development challenges. We build partnerships between U.S. based diaspora and communities abroad; support U.S. and foreign scientists; and leverage the expertise, investments, and resources of universities and U.S. government science agencies to address global challenges and promote economic growth.

The U.S. Global Development Lab (Lab) supports research activities that strengthen evidence-based programming across the Agency and increase the use of scientific research for improved development outcomes. The activities are designed to enhance research capacity and efficiencies both in developing countries and within USAID. The Lab's research programs target four areas: 1) strengthen research capacity in developing countries through support for local scientists and engineers; 2) leverage the intellectual capacity at U.S. universities to solve development challenges; 3) support collaborative, applied research focused on tackling some of the toughest global challenges; and 4) strengthen the Agency's science and technology capacity. Through the Partnerships for Enhanced Engagement in Research program, the Lab will support new collaborative research projects led by developing country scientists and engineers who are partnered with U.S. scientists and will work to translate findings into program and policy improvements. In partnership with U.S. and international universities, the Lab's Higher Education Solutions Network joins academic platforms, governments, investors and the private sector together to deploy research, innovation and entrepreneurship capacity against multidisciplinary challenges while creating new tools and methods to engage development practitioners and a new generation of students.

USAID's Global Health Program research advances efforts to end preventable child and maternal deaths, achieve an AIDS-free generation, and keep the world safe from infectious diseases and emerging threats. Investments in research help protect the health and well-being of newborns, toddlers, children, pregnant women and their communities. Efforts supported by this research include those that provide proper nutrition, develop life-saving vaccines, protect newborns from infection, treat diarrhea, pneumonia and malaria, provide options for family planning and reproductive health, and provide medicines and other innovations for preventing newborn and maternal death. USAID is using implementation science to drive results and enhance translation of HIV and AIDS research into programmatic impact for populations at risk. Global Health is also supporting biomedical science for advancing HIV and AIDS prevention methods and technologies, including microbicides for women and HIV vaccines. Strategic collaborations with international partners have helped strengthen clinical research capacity in regions most devastated by the HIV epidemic. Efforts are also underway to develop and test improved HIV treatment regimens that will be more effective and less expensive to manufacture. Similarly, working with other U.S. government agencies, academia, and commercial partners, Global Health continues to invest in the development of affordable malaria vaccines that have and maintain high efficacy, as well as using research investments in tuberculosis to protect communities from infectious diseases. In collaboration with other U.S. government agencies and international partners, USAID has assisted in strengthening local laboratory capacities in developing countries. Finally, the Agency's focus on systems research strengthens the health sector in areas such as workforce, information systems, leadership, and financing.

USAID's Bureau for Food Security (BFS) leads the implementation of the Feed the Future Research Strategy by engaging and leveraging research and policy advice from U.S. universities, international research centers, the private sector, and local institutions in partner countries to solve development challenges. Human and Institutional Capacity Development programs related to research, education,

extension, and policy advice are an integral component of research and development programs. These initiatives are providing farmers and the rural poor opportunities and technology needed to achieve the inclusive agricultural-led economic growth and improved nutrition goals of Feed the Future. These programs aim to improve agricultural productivity, increase incomes, and enhance household nutrition through focused research on the development and dissemination of improved agricultural technologies and best practices, the implementation of enhanced agricultural policies, and targeted human and institutional capacity building. BFS also supports research, capacity development, scaling and host country policy change. Programming will help smallholder farmers adapt to climate change and build resilience; improve the production and processing of safe, nutritious agricultural products; develop new animal vaccines, as well as crops and animals resistant to pests and diseases; integrate small-scale irrigation, mechanization, crop and animal diversification, and resource-conserving technologies in smallholder production systems; and strengthen the capacity of partner governments and institutions to achieve inclusive agricultural growth and improved nutrition. Research on the production and processing of safe, nutritious agricultural products will be closely linked to agricultural extension and expanded outreach for new participants, and to an ongoing learning agenda on factors affecting household nutrition, with a goal of reducing hunger and preventing malnutrition, especially in women and children.

Science, Technology and Innovation

Summary

Science, Technology, and Innovation (STI) advance inclusive economic growth and contribute new or improved tools to reduce extreme poverty. STI approaches can improve cost-effectiveness, boost outcomes, and promote sustainability and scale. The rapid expansion of scientific knowledge, the global spread of technology (such as the Internet and mobile phones), and the dynamically expanding network of new players that impact development all create significant opportunities to accelerate development results. These development results include: driving inclusive growth; ending extreme poverty; expanding access to health services and quality education; improving food security and nutrition; building transparent, accountable, and stable institutions; empowering women and girls; and enhancing sustainable management and utilization of energy and natural resources.

Under the Presidential Policy Directive on Global Development, U.S. assistance will seek to create an environment that helps accelerate the rate of scientific and technological innovation and the rate at which novel insights, approaches, and distribution strategies are applied at scale to overcome long-standing development challenges. Programs will engage market forces to provide incentives for the development or deployment of new solutions, including through competitions, prizes, and targeted partnerships.

In FY 2017, a core group of STI programs will focus on strengthening and extending the contribution that STI makes to the effectiveness and sustainability of U.S. foreign assistance, including progress on the Sustainable Development Goals. For example, under the U.S. Agency for International Development (USAID) Forward initiative, USAID is strengthening our work with scientists, researchers and universities, investing in innovative approaches to source and scale game-changing solutions, and supporting enabling technologies to dramatically expand opportunity and foster an inclusive digital economy. USAID's Global Development Lab (Lab) is expanding its collaboration with a range of federal science agencies to leverage U.S. government-supported domestic science research and to extend and apply it to solve critical global development challenges. The Lab also catalyzes advancements in access to the Internet and digital services, which foster financial inclusion, underpin good governance practices, and unlock entrepreneurship and private sector initiatives. In partnership with other donors, philanthropic organizations, and the private sector, the Lab supports both open and targeted challenge or innovation incentive competitions, which stimulate new approaches to address critical development constraints, leverage resources and partnerships, reward bold and innovative solutions, and promote efforts to scale up the results. For example, innovations sourced through Lab programs are providing safer water for over three million people in East Africa at two percent of the traditional cost and scaling up a proven household solar model to bring affordable electricity to one million homes by 2017.

Under the Feed the Future initiative and the Global Climate Change Initiative, the United States will both support U.S. and international research on critical food security issues and expand developing countries' access to and ability to utilize sophisticated U.S. climate data and information. Disaster risk-management programs will exploit the power of modern satellite imagery and communication technologies to identify early signs of drought or other natural disasters, helping developing country partners mobilize timely and effective responses. The Research and Technology Scaling programs within USAID's Bureau for Food Security aim to improve agricultural productivity, increase incomes, and enhance household nutrition through focused research on the development and dissemination of improved agricultural technologies and best practices, the implementation of enhanced agricultural technologies and policies, and targeted human and institutional capacity building. The Food Security Innovation Center engages and leverages research from US universities, international research centers, the private sector, and local institutions in partner countries to jointly solve development challenges and promote adoption of key agricultural technologies.

In support of U.S. global health goals, USAID helps to develop, introduce, and scale-up new and existing tools, technologies, and approaches for improving the availability, affordability and quality of health and nutrition services. STI programs are critical to supporting the Agency's efforts in Ending Preventable Child and Maternal Deaths. Focused on underserved populations in the countries that account for more than 70 percent of child and maternal deaths and unmet need for family planning, the USAID Global Health Bureau harnesses STI through investments in innovative and scalable tools and interventions that allow for transparent metrics to track their progress. Various investments and partnerships in data science demonstrate those priorities. For example, the computer based modeling tool LiST (Lives Saved Tools) allows users to set up multiple scenarios to estimate the impact and relative cost-effectiveness of different interventions. Another example is Demographic Health Surveys (DHS), which continue to be a leading data source for the global community. To date the DHS has collected, analyzed, and disseminated accurate and representative data on population, health, HIV, and nutrition in over 90 countries and provided a number of online tools and user-friendly applications to allow for broad use. Finally, STI programs that leverage mobile technology allow for two-way data streams between health practitioners and consumers. With increased speed, transparency and level of detail, Health is being used to provide updates to mothers over the course of their pregnancy, or to help community case management of childhood illnesses, while enabling data scientists to receive and understand information about health patterns and behaviors.

In addition, STI programs are integrated into a wide range of other U.S. foreign assistance programs. For example, education and workforce development programs around the world leverage information, communication, and technology systems to improve the quality of education outcomes and job skills and promote sustained and inclusive economic growth. Regional and bilateral agriculture programs draw on rapidly evolving mobile communications technologies to empower isolated farmers and fishermen to overcome “information asymmetries,” integrate into regional and global markets, and escape deeply entrenched poverty. The Department of State’s Bureau of International Narcotics and Law Enforcement is developing new tools for public health officials to rapidly address emerging and unprecedented drug addiction challenges, including “instant test kits” to detect toxic adulterants added to drugs of abuse (such as cocaine). Funding for the STI components of these integrated programs is based on country-driven strategies and plans developed through broad consultation with development partners and stakeholders.

STI can be categorized as focused or indirect. Focused pertains to funding that is requested for the specific and primary purpose of advancing STI through strategic, operational, or tactical means, whereas indirect is funding for STI-related activities that will be integrated into a wide range of other programs that have other primary purposes.

Trafficking in Persons

Summary

“Trafficking in persons” and “human trafficking” are crimes involving recruiting, harboring, transporting, providing, or obtaining a person for compelled labor or commercial sex acts through the use of force, fraud, or coercion. Ending human trafficking is a foreign policy priority. Human trafficking compromises the rule of law, undermines human rights, and creates instability. It tears apart families and communities and corrupts the global supply chains and labor markets that keep the world’s economies thriving. It is connected to a host of 21st century challenges, including the persistence of extreme poverty, discrimination against women and minorities, corruption and other failures of governance, the abuse of social media, and the power and reach of transnational organized crime. The U.S. government’s anti-trafficking approach – prosecution of traffickers, protection of victims, and prevention of the crime – is comprehensive and effective, but requires multiple levels of international engagement. The U.S. government aligns its foreign assistance with the findings of the Department of State’s annual Trafficking in Persons Report, targeting priority countries, particularly those on Tier 3, Tier 2 Watch List, and Tier 2, where there is a demonstrable need for resources and the political will to address the problems and deficiencies identified. The FY 2017 levels projected for this area represent the best current estimate.

Trans-Sahara Counterterrorism Partnership (TSCTP)

Summary

TSCTP is a multifaceted, multi-year strategy implemented jointly by the Department of State, the U.S. Agency for International Development, and the Department of Defense to assist partners in West and North Africa increase their immediate and long-term capabilities to address terrorist threats and prevent the spread of violent extremism. It builds long-term capacities to contain and marginalize terrorist organizations and facilitation networks; disrupts efforts to recruit, train, and provision terrorists and extremists; counters efforts to establish safe havens for terrorist organizations; and frustrates extremist attempts to influence populations potentially vulnerable to radicalization. Partner countries include Algeria, Burkina Faso, Cameroon, Chad, Mali, Mauritania, Niger, Morocco, Nigeria, Senegal, and Tunisia. In addition to training and equipping security forces to more effectively combat terrorist threats, TSCTP targets groups in isolated or neglected regions who are most vulnerable to extremist ideologies by supporting youth employment, strengthening local governance capacity to provide development infrastructure, and improving health and educational services.

Water

Summary

Water is a crosscutting issue in U.S. foreign assistance. Water use grew at more than twice the rate of population increase in the last century. The UN Food and Agriculture Organization estimates that by 2025, more than two-thirds of the world's population will live in either water-scarce or water-stressed conditions. Water programs are working to increase water security by increasing sustainable access to safe drinking water, sanitation, and hygiene; improving water resources management; increasing the productivity of water; and mitigating tensions associated with shared waters. These goals are reached through diplomatic engagement; new partnerships to leverage and scale resources; investment in science and technology; investment in infrastructure and associated software; institutional strengthening and policy/regulatory reform; capacity building; and technical assistance on stronger approaches to cost recovery and financing.

In particular, FY 2017 will be the fourth full fiscal year after the release of USAID's Water and Development Strategy. In FY 2017, USAID will focus on supporting water, sanitation, and hygiene activities that contribute directly to improving human health outcomes; promote broad-based economic growth; enhance security and reduce conflict; increased equality of access, transparency, and accountability in the provision of services and resources.

To coordinate the achievement of the Strategy's goal and support new approaches and activities, USAID will catalyze and leverage partnerships; develop knowledge management tools; promote evaluation, innovation, and research to measure and amplify the development impact of water programs; and champion technical excellence. New water sector activities will be closely tracking the three Presidential Initiatives: water and sanitation for the Global Health Initiative (water and sanitation); Feed the Future (increased water efficiency in food productions); and Global Climate Change (adaptation).

REGIONAL PERSPECTIVES

Africa Regional Overview

Foreign Assistance Program Overview

The FY 2017 budget request reflects U.S. policy priorities in Africa, set forth in the U.S. Strategy Toward Sub-Saharan Africa approved by the President on June 14, 2012, which are to: (1) strengthen democratic institutions; (2) spur economic growth, trade and investment; (3) advance peace and security; (4) and promote opportunity and development. The United States will continue to use diplomatic and development resources to partner with Africans across all four of these objectives, making it possible to save lives, prevent instability and the spread of violent extremism on the continent, advance democracy, and assist Africa to move along the path to a stronger future. The U.S.-Africa Leaders Summit in August 2014 and the President's high-level visit to Ethiopia and Kenya in July 2015 served to reaffirm the partnership and existing commitments between the United States and countries on the continent.

In the democracy, human rights, and governance arena, the 2015 Freedom House "Freedom in the World" index reflected the mixed pattern of gains and reversals on the continent during the past decade. For example, improvements were seen in Côte d'Ivoire and Madagascar as they emerged from conflict and began rebuilding democratic institutions. Nigeria held historic elections in 2015, with the opposition winning for the first time since the end of military rule in 1999, with the incumbent conceding defeat, making way for a peaceful and democratic transition of power. However, the Central African Republic and South Sudan are both suffering from the effects of full-scale political crises that threaten to further escalate despite efforts by neighbors and the international community, including the United States, to resolve the conflicts. While the number of free countries in Africa has remained relatively stable in recent years, the number of countries designated as not free has increased from 15 in 2009 to 21 in 2015. This downturn is in part due to the active efforts by some governments to close political space for independent civil society and opposition parties. Concurrently, there have been efforts by a growing number of sitting African presidents to remove constitutionally mandated term limits. These include Burundi, Burkina Faso, Republic of the Congo, Rwanda, and the Democratic Republic of the Congo (DRC), which have faced or are facing potential challenges to constitutional presidential term limits that in many cases have exacerbated tensions, most famously in Burkina Faso where efforts to abolish term limits led to popular protest and the ousting of the sitting president who had held office for 27 years. This trend is a symptom of deeper democratic governance deficiencies, including concentration of power in the executive branch, weak rule of law, closing civic space and limited media freedoms. Many key elections are scheduled for 2017, including in Angola, Liberia, Rwanda, Senegal, Sierra Leone, and South Sudan where polls will serve as tests of the depth and durability of democratic governance in these countries. Despite these and other persistent challenges, the overall trends in sub-Saharan Africa (SSA) point to accelerated democratization, continued economic growth, and development.

SSA is experiencing impressive economic growth, but continues to face challenges. Real gross domestic product (GDP) has risen nearly five percent per year since 2000 and poverty rates are falling more than one percent per year. The International Monetary Fund continues to predict robust growth for most African countries through 2016 (GDP growth averaging 4.5 percent in 2015 and 5.1 percent in 2016; low income African countries are expected to grow by 6.3 percent in 2015 and 6.9 percent in 2016). However, sustaining that high rate of growth into the future will be a challenge for many African countries. Continued progress depends on long-term efforts by SSA countries to broaden and deepen markets, expand linkages to regional and global economies, and invest in physical and social infrastructure, particularly power provision and roads. In addition, growth is increasingly at risk due to climate change, which is expected to have economic costs of one to three percent of GDP by 2030.

In terms of public health, since 1990, maternal and child deaths have been reduced significantly in all regions of the world. Despite lagging behind other regions, SSA has nonetheless registered an approximately 50 percent decline in under-five mortality since 1990, which latest estimates in 2012 are 98/1,000. Of particular note is that malaria mortality rates in African children have been reduced by an estimated 58 percent from 2001-2013, saving 3.9 million children's lives over that time period. It is estimated that between 1990 and 2013, maternal deaths globally have decreased by 50 percent, with half of the worldwide deaths still occurring in SSA. Investments in the HIV/AIDS response continue to generate concrete results, fueling optimism about ending the epidemic once and for all. UNAIDS estimates that at the end of 2014, approximately 37 million people were living with HIV/AIDS worldwide and that new HIV infections in 2014 were estimated at 2 million, down from 3.1 million in 2000. The number of AIDS-related deaths also continues to decline, with approximately 1.2 million people dying of AIDS-related causes in 2014, down 42 percent from the peak in 2004. Still, more than half of new infections occur in SSA. The higher mortality rates in developing countries, and in particular SSA, demonstrates that access to high-quality services is still often out of the reach for many children and mothers.

Since 2000, SSA has made significant progress towards achieving universal primary education; however, the region faces continued challenges despite its impressive accomplishments, including rapid population growth. Of the 59 million children of primary school age who were out of school in 2013, 30 million lived in sub-Saharan Africa, where one-half of the 30 million out-of-school children will never enroll. About 19 percent managed to start but dropped out and 31 percent are likely to enter school late. Girls face the greatest barriers with 56 percent of out-of-school girls in the region will never enter a classroom compared to 41 percent of out-of-school boys. For adolescents of lower secondary school age, of the 65 million out-of-school adolescents in 2013, 23 million lived in SSA and it is the only region in which the number of out-of-school adolescents has grown, from 21 million in 2000 to 23 million in 2013, a consequence of rapid population growth. Countries in the region have also experienced armed conflicts and numerous other emergencies that have kept children out of school.

Request by Account and Fiscal Year

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease

Detailed Overview

The FY 2017 request for Africa will support the strengthening of democratic institutions. Working in partnership with African governments and civil society, as the United States aims to strengthen governance institutions, address persistent challenges, such as corruption and restrictions on political rights and civil liberties, and protect and expand democratic and development gains across the continent. Programs in post-conflict and fragile states, such as Liberia, South Sudan and the DRC, will focus on the establishment of legitimate government institutions and improve the ability of post-conflict governments to deliver the benefits of peace to its people. Consensus-building, increasing access to independent information, building the capacity of electoral management bodies to oversee credible elections, supporting civil society, and strengthening rule of law will also be important elements of democracy, human rights and governance programs in these countries. The United States will continue to support transitions in countries recovering from instability and crisis such as Cote d'Ivoire and Mali. In autocracies and semi-authoritarian regimes, such as Sudan and Zimbabwe, the United States will support civil society organizations and democratic activists outside of government. In countries with elements of both autocracy and democracy, such as Rwanda and Uganda, the United States will strengthen governance institutions, focusing on checks and balances within and outside of government, and facilitating free and fair elections. In consolidating democracies, including Ghana, Kenya, Senegal, and Tanzania, the United States will focus on improving host government capacity to deliver basic services and support local monitoring and advocacy organizations as a means of sustaining democratic gains.

The FY 2017 request for Africa will also support the Strategy's pillar focused on spurring economic growth, trade, and investment. Although Africa is the world's least developed continent, a number of African countries have experienced rapid economic growth and significant poverty reduction in the last two decades. Inclusive, broad-based growth not only reduces poverty and hunger, but also creates jobs and provides the resources to expand and improve health and education services. The growth is fragile, with increased climate change stresses on agriculture and water, and greater risks of climate-related disasters. The United States will support African countries' efforts to expand and sustain equitable growth by supporting measures that increase agricultural productivity, strengthen markets, improve the management of renewable and non-renewable natural resources, strengthen vulnerable communities' resilience, address the risks of climate change, support small and medium sized business competitiveness, improve women's access to economic assets and decision-making in business and government, and strengthen the institutions of economic and political governance, including support for regional integration. Access to affordable information and communications technology (ICT) services as well as innovative and scalable ICT-enabled products and services will be leveraged to increase impact and penetration of economic growth.

Trade and investment capacity building programs, including support for the President's Trade and Investment Capacity Building Initiative (TICB), an expansion of the Trade Africa Initiative, will improve SSA's capacity for trade and export competitiveness, including trade facilitation and regional integration

to reduce the time and cost to trade across the African continent, while increasing opportunities for U.S. businesses to positively participate in and benefit from African economic growth. The FY 2017 request supports the President's TICB initiative (\$75.0 million) through USAID/Africa Regional (\$5.0 million), USAID/East Africa Regional (\$25.0 million), USAID/Southern Africa Regional (\$22.5 million) and USAID/West Africa Regional (\$22.5 million) platforms. In addition, programs will continue to expand African trade with the United States and other trading partners under the African Growth and Opportunity Act (AGOA).

Two out of three people in SSA lack access to reliable electricity affecting their ability to obtain quality health care, education and economic opportunities. Power Africa's goal is to increase electricity generation capacity by 30,000 megawatts and enable 60 million new connections throughout SSA, with access to clean energy gaining increased focus. As a new paradigm for development, Power Africa aligns the efforts of donors, partner governments, and the private sector to help overcome the barriers that constrain investors from investing in SSA's power sector and impede power projects from moving forward. Power Africa makes the financial, technical and transaction advisory linkages for private sector investments and works with partner governments to encourage the reforms necessary to promote private-sector investments. The FY 2017 budget requests \$291.3 million in a combination of bilateral funding for USAID/Ghana (\$5.0 million), USAID/Kenya (\$2.0 million), USAID/Ethiopia (\$2.0 million), USAID/Tanzania (\$5.0 million), the USAID/Southern Africa Regional (\$2.0 million) and the USAID/Africa Regional platform (\$271.3 million), of the \$291.3 million request, \$10.0 million is being attributed from Global Climate Change (GCC).

The U.S. government's Global Hunger and Food Security Initiative and Feed the Future (FTF), will remain the primary tools for addressing extreme poverty and under-nutrition in Africa, as well as boosting agricultural productivity, a critical driver of economic growth. The FY 2017 request will support sustainable, comprehensive, and country-driven investments in agriculture, rural development, and nutrition programs. The United States will provide assistance to increase agricultural productivity and incomes of small-scale agricultural producers, especially women, in relatively reform-minded, well-governed African countries that offer strong opportunities for improvement in food security, as well as in five regional economic communities (the Common Market for Eastern and Southern Africa, the East African Community, the Intergovernmental Authority on Development, the Economic Community of West African States, and the Southern African Development Community). The United States will also promote reforms and build the capacity of African institutions to support larger agricultural assistance programs in the future. In FY 2017, FTF will also focus on crisis-prone areas of countries to help mitigate future crises and improve resilience and economic growth, including in the Horn of Africa and the Sahel. Strengthening the Sahel and the Horn of Africa's recovery from devastating drought crises, supporting relief-to-development transitions, and building resilience to recurrent crises continues to be a high crosscutting priority within the region. In order to promote a more robust, regionally oriented, whole-of-government approach to addressing the challenges in the Sahel, the FY 2017 request will support the Sahel Development Initiative (SDI). SDI has four inter-related development objectives: countering violent extremism; strengthening vulnerable local communities; building capacity of regional, national, and subnational institutions to effectively deliver services; and interagency learning, as State and Defense colleagues work toward a common approach to the region. The overall goal is to strengthen the ability of Sahel countries and populations to withstand a range of potential security and socioeconomic shocks.

The FY 2017 request will continue to advance peace and security in Africa. Given state fragility, conflict, and transnational security issues, the promotion of peace and security remains one of the United States' highest priorities in SSA. FY 2017 resources will be used to support conflict prevention and mitigation, stabilization operations, security sector reform, peacekeeping operations, countering violent extremism, targeted counterterrorism and counter-narcotics initiatives, and maritime safety and

security programs throughout the region. Two initiatives -- the Security Governance Initiative (SGI) and the Africa Peacekeeping Rapid Response Partnership (APRRP) -- were launched at the U.S.-Africa Leader's Summit (ALS) in August 2014 in Washington, D.C. SGI is a comprehensive approach to improving security and justice sector governance and capacity in African partner states. Meanwhile, APRRP supports efforts to deploy, employ, and sustain an effective rapid response capability for African partners. These programs protect civilians and encourage African partners to confront challenges and threats with integrity and accountability.

The FY 2017 request includes support for efforts to mitigate extremism, through the Trans-Sahara Counterterrorism Partnership and the Partnership for Regional East Africa Counterterrorism, that aim to deny terrorists safe havens, operational bases, and recruitment opportunities. U.S. resources will be used to reduce and degrade the threat of violent extremism via effective policy, programs, enhanced coordination with partnership countries and bolstering regional activities to resist attempts by al-Qaeda, al-Shabaab, and others to impose radical ideologies on the vulnerable and largely tolerant populations of the region.

Stabilization operations and security-sector reform efforts in the DRC, Liberia, and Somalia will incorporate training to promote human rights and eliminate gender-based violence. Police and military professionalization programs in post-conflict states will also help to prevent future conflict, maintain regional stability and counter terrorism. Conflict mitigation and reconciliation programs will complement these efforts through regional activities designed to address the complex range of development problems that undermine stability across Africa. Engagement in Somalia will remain critical as the country continues its transition and strengthens its central government, which was formally recognized by the United States in January 2013.

Peacekeeping operations funds for the Central African Republic, DRC, Liberia, Somalia, and South Sudan will contribute to stability within the respective sub-regions, as well as the entire continent. The United States will continue to train African peacekeepers through the African Contingency Operations Training and Assistance program, which is part of the Global Peace Operations Initiative. These initiatives are critical to the long-term success of peace building in Africa.

Additionally, the FY 2017 request supports work to reduce the illegal trade in minerals, wildlife, timber, and other resources that, among other significant factors, sustain armed groups and fuel human rights abuses and displacement on the continent. U.S. technical assistance and training will strengthen the police and justice sectors to counteract the destabilizing effect of a dramatic increase in illicit trafficking in West Africa. If left unchecked, these and related illicit activities are likely to undermine government institutions and U.S. investments that promote stability and development in the region.

The FY 2017 request for Africa will further support the U.S. SSA strategy's pillar that promotes opportunity and development. Efforts to address disease and improve public health not only reduce mortality and improve the quality of life but also are essential to peace and security, economic growth, and development. Notable shifts are happening in Global Health that now allows the United States to expand its activities in the health sector. For example, the United States is a partner to the global movement to end preventable child and maternal deaths called "A Promise Renewed," which aims to reduce preventable mortality to levels enjoyed by Organization for Economic Co-operation and Development countries. This effort aligns with targets under the Sustainable Development Goal #3: ensure healthy lives and promote well-being for all at all ages (under-five years of age mortality below 25/1,000, newborn mortality of 12/1,000, and a maternal mortality of under 70/100,000) by 2030.

Through the investments in the President's Emergency Plan for AIDS Relief (PEPFAR), Africa may be AIDS-free within a generation. SSA is home to nearly 25.8 million people living with HIV, representing

nearly 70 percent of the global HIV/AIDS burden. Africa is also the largest recipient of PEPFAR program resources. In 2014, there were an estimated 1.4 million new HIV infections in SSA. Between 2000 and 2014, new HIV infections in SSA declined 41 percent, an impressive sign of progress. As of September 2012, more than 7.7 million people worldwide have received life-saving antiretroviral treatment under PEPFAR and millions more are receiving care and prevention services. The President's Malaria Initiative (PMI) mobilizes global efforts to combat a major killer, especially of Africa's children. According to the World Health Organization, the estimated number of malaria deaths in the Africa region has fallen by 58 percent from 2000 to 2013 in children under five years of age. Dramatic increases in the coverage of malaria-control measures are being documented in nationwide household surveys as a result of the contributions of PMI, national governments, and other donors. In 17 of the 19 PMI focus countries, declines in all-cause mortality rates among children under five have been observed. While a variety of factors may be influencing these declines, there is strong and continued evidence that malaria prevention and treatment efforts are playing a major role in these reductions. Impact evaluations in several PMI areas have noted this connection, and future malaria impact evaluations will also consider this question. Major U.S. efforts continue to address other critical health needs, including polio eradication, control of tuberculosis, access to voluntary family planning services and information, elimination of neglected diseases, strengthening disease surveillance systems for the prevention of and rapid response to epidemics (e.g. Ebola), and to advance the Global Health Security Agenda and strengthening of health systems.

Access to clean water, sanitation, and hygiene has a significant impact on health, economic well-being, and education. For this reason, the United States continues to work with African governments, regional institutions, service providers, and other donors to improve access to high-quality water and sanitation services. U.S. assistance has been guided and supported by the Paul Simon Water for the Poor Act of 2005 and, more recently, the USAID Water and Development Strategy 2013-2018 and the Paul Simon Water for the World Act of 2014. In FY 2014, U.S. efforts contributed to more than 1.6 million people achieving first-time access to an improved water source in Africa, and more than 1.3 million people gaining first-time access to improved sanitation. FY 2017 assistance will continue and expand on these achievements by improving the capacity of service providers through training and technical, financial, and operational improvements and by increasing private sector interest, involvement, and investment in the water sector. Programs will work directly with communities, local governments, and utilities responsible for service provision, but will also focus support on regional institutions, such as the African Ministers' Council on Water and the African Water Association, helping to strengthen their capabilities and programs.

An educated population is critical to promoting good governance, improving and expanding human capital, and contributing to accelerated and sustainable economic growth. In the midst of an increasingly knowledge-based global economy, 30 million primary school-age children in Africa—one in every four—are out of school, along with 23 million adolescents. In SSA, only 23 percent of poor girls in rural areas were completing primary education by the end of 2009. Disadvantaged children, such as those with disabilities and children in conflict-affected areas are also at risk. These children often require education adapted to their needs. However, in many SSA countries, such customized approaches are either deficient or unavailable, which prevents these children from going to school, and/or slows their progress. If recent trends in the region continue, the wealthiest boys will achieve universal primary completion in 2021, but the poorest girls, disadvantaged children, and children in conflict-affected areas will not catch up until 2086. The United States works to expand opportunities for African children (boys and girls) so that they and their families can enjoy the benefits and opportunities derived from an education. FY 2017 funding will focus on basic education activities that will assist Africa in meeting the USAID Education Strategy goals for education. Programs will focus on improving the quality of education, particularly reading in primary grades, and increasing equitable access to education in crisis and conflict environments. Programs that enhance community involvement in education will continue to increase access to educational opportunities for girls and other marginalized populations.

With almost 200 million people between 15 and 24 years of age, Africa has the youngest population in the world. This presents a unique opportunity to connect with and empower SSA's young leaders to participate in and advance sustainable economic growth and development. Utilizing FY 2017 resources, programs will build youth leadership capacity through technical training. Through the President's Young Africa Leaders Initiative (YALI), the program is enhancing the skills and effectiveness of Africa's emerging young female and male leaders, empowering them to more effectively manage and lead in business and entrepreneurship, civic engagement, and public management. Through Regional Leadership Centers in East, West and Southern Africa, YALI is facilitating increased linkages between African and U.S. universities and private-sector partner institutions, creating opportunities for business and social entrepreneurship, building leadership capacity with mentoring and professional internships, and connecting them to technology and high-quality training opportunities. These activities align with strategic objectives to strengthen democratic institutions, spur economic growth, and foster stronger ties to the United States.

Conserving Africa's natural resources, mitigating the causes of climate change, and promoting the populations' ability to adapt to climate change and climate variability will be critical both to the economic prosperity of the continent and the future of the planet. Africa is home to 45 percent of the world's biodiversity, and the survival of its forests is a critical factor in mitigating global climate change. The ongoing degradation of Africa's soil, water, and biodiversity resources is a significant threat to the economic well-being of future generations. U.S. assistance will promote the productive and sustainable management of natural resources, while helping to reduce long-term threats to the environment. GCC programs will focus on helping countries assess their vulnerability to climate change, and on build on the information systems, implementation plans, and governance mechanisms to adapt to these expected changes. U.S. assistance will also concentrate on reducing greenhouse gas emissions while sustaining economic growth under climate change, which helps strengthen capacity at the national level to develop emissions baselines and trajectories, enabling them to make choices about economic growth and emissions pathways. This initiative will be enhanced through on-the-ground investments in projects improving access to clean energy, energy efficiency, and improved land management that help reduce or sequester greenhouse gas emissions. In addition, and in response to the Executive Order on Climate-Resilient International Development, strategies that govern U.S. government development assistance and implementation programs will be increasingly screened for and address climate change risks, which have the potential to reverse development gains. Actively addressing climate change risks will strengthen long-term sustainability of the U.S. government's development portfolio, ensuring that development assistance in areas such as health, water, and food security are resilient to climate change and continue to result in measureable development outcomes.

U.S. assistance will also both prevent and respond to humanitarian crises across the continent, and will seek to raise awareness and support for improved African disaster preparedness, mitigation, and response capacity.

Linkages with the Millennium Challenge Corporation (MCC)

MCC is a key vehicle for delivering transformational economic growth that complements the programs detailed in this request. With MCC Compacts exceeding \$5.0 billion, countries in SSA receive nearly two-thirds of MCC's total funding. To maximize the effectiveness of U.S. assistance programs, USAID will work with MCC to ensure that these significant resources are put to the most effective use through increased collaboration in the development and implementation of relevant respective programs. The USAID Administrator supports greater USAID-MCC collaboration, particularly related to mobilizing private sector investments in MCC project areas. MCC and USAID will seek to obtain consistent and reinforcing policy commitments from partner governments.

Power Africa

Foreign Assistance Program Overview

Sustainable development and economic growth in sub-Saharan Africa (SSA) are constrained by energy deficiency across the continent. The current electricity access rate in SSA is approximately 32 percent, meaning that more than 600 million people live without reliable access to electricity – more than in any other region in the world. Of the 49 countries in SSA, only six (South Africa, Botswana, Gabon, Ghana, Cabo Verde and Equatorial Guinea) have an access rate of over 60 percent. Millions of people rely on expensive, polluting, and often unsafe power sources such as kerosene and diesel generation.

Power Africa’s goals are to increase power generation by 30,000 megawatts and increase access by 60 million connections. In order to meet these goals Power Africa is founded upon a new model of power sector development, one that focuses on completing power projects quickly and cost-effectively by attracting private investment and partnering with governments to make critical power sector reforms. These investments and partnerships are essential to developing sustainable power sectors in SSA. Through Power Africa, the U.S. government is partnering with more than 120 public and private sector entities to accelerate power-making transactions and has leveraged approximately \$30.0 billion from private sector partners and \$12.0 billion from public sector partners.

Power Africa is playing a critical role in bringing together African governments, private sector investors, development partners, civil society and affected communities to identify and breakdown the barriers that impede the development of bankable power projects and constrain sustainable regulatory reforms.

Power Africa’s model is built on three strategic pillars:

- Pillar 1: A focused approach to generation at scale
- Pillar 2: A comprehensive approach to grid-based and off-grid access
- Pillar 3: Support for enablers that unlock generation and connections

Under Pillar 1, Power Africa provides targeted support needed to unlock and accelerate power projects, through technical assistance, project preparation facilities, financing, and the development of risk mitigation tools. Power Africa facilitates investments in renewable technologies, most notably in solar, wind, biomass, and geothermal; in an effort to diversify African energy markets, increase energy security, expand off-grid access, and mitigate climate change. Power Africa also supports other resources with lower carbon emissions, such as natural gas, especially in markets with no viable, affordable alternatives.

Pillar 2 is focused on supporting the expansion of electricity grids to connect homes and businesses in urban and rural areas as well as increasing access to communities that are not connected to the national grid through off-grid/small-scale energy solutions. Power Africa is providing African governments and utilities with support to better plan, regulate, finance, procure, and manage power generation and transmission projects and improve the delivery of energy services. Through the *Beyond the Grid* sub-initiative, Power Africa supports companies and African governments to scale micro-grid and household systems.

Under Pillar 3, Power Africa is supporting the critical enablers needed for the development and maintenance of a sustainable power sector. Power Africa is working with regional, national and local government institutions, civil society organizations, and private sector trade associations, to help develop and implement a strong and transparent legal, regulatory, and policy environment that facilitates greater private sector investment. Power Africa is further supporting regional integration and cross-border trade, and strengthening regional power pools to bring power where it is needed and lower electricity costs.

Increasing access to power will drive economic growth and reduce poverty across the continent. Connecting households and businesses to power will improve living standards, support economic growth, and positively affect the provision of public services, including health and education. By working with African governments, private sector partners, civil society, and other donors to strengthen these three pillars, Power Africa will help shape Africa's energy path and expand access to power for millions of people across the continent.

Power Africa Funding

(\$ in thousands)		Development Assistance
TOTAL		291,300
Infrastructure		281,300
Ghana		5,000
Tanzania		5,000
USAID Africa Regional (AFR)		271,300
Environment¹		10,000
Ethiopia		2,000
Kenya		2,000
USAID Africa Regional (AFR)		4,000
USAID Southern Africa Regional		2,000

¹These funds are also part of the Global Climate Change Initiative

Angola

Foreign Assistance Program Overview

Angola has made impressive macro-economic gains since the end of its 27 year civil war in 2002. Based largely on its oil exports, the country crossed the financial threshold into middle income country status, and became one of the highest growth markets on the African continent. However, Angola lags behind other middle income countries in key human development indicators. U.S. assistance to Angola seeks to strengthen the country's financial management and procurement systems to ensure that sustainable platforms are built to manage, oversee, and operate basic health services. Angola's sizeable economy, rising regional status, and development challenges provide a genuine opportunity for the U.S. government to implement a new model for development. This model will gradually transition programmatic and financial responsibilities to the Government of the Republic of Angola (GRA), while mobilizing and leveraging private sector investment as a sustainable mechanism for Angola's development, to advance health outcomes and enhance citizen participation to achieve national development goals.

Request by Account and Fiscal Year

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
TOTAL	54,847	*	45,824	-9,023
Global Health Programs - State	11,429	*	12,899	1,470
Global Health Programs - USAID	37,400	*	28,400	-9,000
International Military Education and Training	718	*	525	-193
Nonproliferation, Antiterrorism, Demining and Related Programs	5,300	*	4,000	-1,300

Global Health Programs (GHP)

Assistance provided through the GHP accounts will support the goals and principles of the Global Health Initiative (GHI) to achieve major improvements in health outcomes in three globally shared goals: ending preventable child and maternal deaths, creating an AIDS-free generation, and protecting communities from other infectious diseases. The U.S. government will assist the GRA to build an integrated and sustainable health system through the provision of technical assistance and training to improve the health system through stewardship, human resource and logistics management, and financing. This will develop a competent workforce capable of providing quality health services to all Angolans.

U.S. assistance will aid the GRA to improve the technical, financial, and logistical skills of Angolan counterparts who will then have greater ability to collect and use data, perform research, and utilize high quality and readily available medicines. This increased capacity will ultimately improve the general health status of the Angolan population. U.S. assistance will also continue to support transparency and accountability in public financial management at the Ministries of Finance, Planning and Health, through budget planning and oversight and the development of civil society organization participation.

Improve Health Status and Well-Being of the Population

Key Interventions:

- **HIV/AIDS:** As a part of the President's Emergency Plan for AIDS Relief (PEPFAR) Angola will receive \$17.3 million (of which \$12.9 million GHP-State and \$4.4 million GHP-USAID) to build partnerships to provide integrated prevention, care, and treatment programs throughout the country

and support orphans and vulnerable children. Additional details of activities to be undertaken under this program will be provided in the PEPFAR Supplement to this Congressional Budget Justification.

- **Malaria:** U.S. assistance under the President's Malaria Initiative (PMI) will provide \$17.0 million to expand efforts to scale-up proven preventive and treatment interventions toward achievement of 85 percent coverage among vulnerable groups to support the PMI goal of reducing malaria-related morbidity by 50 percent. The FY 2017 request level for Angola does not include the total projected funding for the PMI. Decisions on allocations of centrally-managed funds will be made at the time that the FY 2017 operating year budget is set.
- **Family Planning and Reproductive Health (FP/RH):** U.S. assistance in FY 2017 will provide \$2.0 million to strengthen universal access to high-quality voluntary family planning services and reproductive health care, implemented by national GRA authorities. U.S. assistance will aid GRA counterparts to implement the new FP/RH Policy to promote quality reproductive health for all, particularly adolescent girls. Capacity building efforts will strengthen provincial health staffs' ability to provide technical and integrated health services for FP/RH.

Strengthen Responsiveness to Citizens' Needs

Key Intervention:

- **Malaria:** U.S. assistance under the President's Malaria Initiative (PMI) will provide \$5.0 million to expand efforts to scale-up proven preventive and treatment interventions toward achievement of 85 percent coverage among vulnerable groups to support the PMI goal of reducing malaria-related morbidity by 50 percent. The FY 2017 request level for Angola does not include the total projected funding for the PMI. Decisions on allocations of centrally-managed funds will be made at the time that the FY 2017 operating year budget is set.

International Military Education and Training (IMET)

IMET-funded courses and training events expose defense establishment personnel to U.S. military training, doctrine, and values. These activities are intended to promote democratic values, build capacity in key areas, increase the professionalization of forces, and build lasting military-to-military relationships. Most IMET-funded activities are conducted at U.S. military institutions in the United States, allowing for valuable cultural exchanges with communities across the country while students are attending these courses. U.S. assistance will support the Angolan military's efforts to improve the Angolan Defense Force capacity to meet its national and regional security stability requirements, such as maritime security, while reinforcing professionalization and rule of law within the force.

Advance Regional Security and Security Sector Reform

Key Intervention:

- U.S. assistance will provide \$0.5 million to support continued military professionalization to help strengthen the military-to-military relationship with Angola's forces and increase Angolan capacity to conduct maritime security operations.

Nonproliferation, Antiterrorism, Demining and Related Programs (NADR)

Angola is one of the most heavily mined countries in the world and possesses large stockpiles of Cold War era weapons and munitions that pose a risk to civilian populations. Continued U.S. support for the removal of landmines will allow displaced Angolans an opportunity to return home and safely access roads, water supplies, and agricultural land. The continued destruction of at-risk, unstable, excess, and obsolete weapons and munitions will decrease the possibility of accidental munitions explosions and the resulting civilian casualties. This work will restore arable land to productive use, thereby supporting Angola's economic development.

Build Stability through Demining Efforts

Key Interventions:

- U.S assistance will support non-governmental organizations to implement humanitarian demining efforts in agriculturally productive areas, on roads, and in refugee resettlement areas across Angola.
- U.S assistance will support activities to better secure excess Angolan conventional munitions stockpiles, including man-portable air defense systems that are at risk of accidental detonation and diversion.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: The following successful program monitoring and evaluation efforts were completed in FY 2014 and FY 2015.

- USAID established a new performance monitoring approach that includes the use of a new site visit report and the execution of mandatory project quarterly site visits. As a result, performance monitoring capacity has greatly improved, as any implementation issues are identified as early as possible for solutions to be applied to overcome these challenges.
- The Non-Governmental Strengthening through Health Services and Technical Assistance Project went through a final performance evaluation that assessed USAID's investments in malaria case management, training, and capacity building. Recommendations from this evaluation will shape the direction of malaria prevention and treatment activities, funded by the President's Malaria Initiative, in FY 2017.
- A USAID Local Capacity Mapping Exercise was conducted to determine the extent to which local organizations can manage USAID funding and maintain results beyond the life of USAID awards. In line with the goal of USAID's Country Development Cooperation Strategy to transition responsibilities for implementing activities to local organizations and Angolan counterparts, the pending results of this exercise are critical to planning for the implementation of FY 2017 activities as they will identify which local organizations are capable of receiving and managing standalone USAID awards. The results will also provide recommendations on how these organizations can be strengthened to take ownership of the development process through solidifying their sustainability efforts.
- Through PEPFAR, a series of baseline assessments at the health facility level and for key populations were performed to improve systems to better capture data. The data collected from these assessments will guide decision making for planned activities in FY 2017.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: The program monitoring and evaluation activities conducted by USAID provided critical information that resulted in the following programmatic actions and decisions regarding the FY 2017 budget.

- Preliminary results from the Local Capacity Mapping Exercise fed into the development of a new USAID project that will focus on malaria and HIV/AIDS capacity building and supervision activities. This new activity will include capacity building efforts for sub-awarded local organizations so these organizations can eventually receive direct USAID awards.
- Initial results from PEPFAR assessments led USAID to shift its programming to demonstrate effective epidemic control in nine select high volume health care facilities and communities in Luanda. USAID is creating models of high quality systems along the continuum of care (testing, care, treatment, adherence, and retention) for general and key populations.

Detailed Objective Descriptions

Improve Health Status and Wellbeing of the Population: U.S. government health programs will support the GRA's National Health Plan that envisions universal access to quality health care services to combat poverty and reinforce the well-being of the population. These programs will support Angolan efforts to build sustainable platforms for the effective supply and demand of health services and modernize public administrative systems through developing core technical and administrative skill sets for Angolan health care professionals. Through the implementation of these activities to strengthen health systems, the U.S. government will achieve U.S. foreign policy priorities of decreasing malaria morbidity, achieving an AIDS-free generation, and protecting communities from infectious diseases.

Strengthen Responsiveness to Citizens' Needs: U.S. government health programs will provide technical assistance and training to Angolan counterparts to improve the scale and quality of government services (health system strengthening, health budget planning, and good governance) and strengthen civil society capacity to engage and participate effectively in governance systems at national and local levels. This will lead to more efficient public financial systems that will improve the delivery of effective public health services (e.g. to combat malaria) at the lowest levels of government.

Advance Regional Security and Security Sector Reform: International military education and training activities in Angola work to develop sustainable institutional capacity that advances internal and regional security while emphasizing professionalism, rule of law, and respect for human rights. These activities will promote cultural understanding and establish relationships between future leaders of the Angolan Armed Forces and the U.S. Armed Forces.

Build Stability through Demining Efforts: Humanitarian mine action and weapons disposal efforts across the country support U.S. foreign policy priorities by helping the Angolans diversify and strengthen their economy through the return of land and resources to communities previously inaccessible because of mines. These activities also create good will towards the United States within mine-affected Angolan communities, especially those areas in the country's interior that are most affected by mines.

Benin

Foreign Assistance Program Overview

The primary goal of U.S. assistance in Benin is to improve the health of Beninese families by reducing the malaria disease burden, improving the health of mothers and young children, and strengthening the overall health system to deliver quality, high impact interventions. Additionally, U.S. assistance helps professionalize Benin's military, which increases its ability to maintain domestic peace and security while contributing to regional stability.

Request by Account and Fiscal Year

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
TOTAL	23,310	*	23,300	-10
Global Health Programs - USAID	23,100	*	23,000	-100
International Military Education and Training	210	*	300	90

Global Health Programs (GHP)

Assistance provided through the GHP accounts will support the goals and principles of the Global Health Initiative (GHI) to achieve major improvements in health outcomes in three globally shared goals: ending preventable child and maternal deaths, creating an AIDS-free generation, and protecting communities from other infectious diseases.

U.S. assistance will support improved planning and implementation of key national programs focused on malaria, maternal and child health (MCH), and family planning and reproductive health (FP/RH). U.S. assistance will strengthen the public health system by building the capacity of that system to lead national programs and provide quality services at the decentralized level, including community services. GHP assistance will also support the public health system to expand its reach to underserved urban populations and support private health care providers to align their services with national norms and expand coverage to the poor.

Benin has Access to Health Services, Education, and Adequate Nutrition to Enable the Population to Contribute Productively to Society and a Healthy Environment

Key Interventions:

- **Malaria:** U.S. assistance under the President's Malaria Initiative (PMI) will provide \$16.5 million to expand efforts to scale-up proven preventive and treatment interventions toward achievement of 85 percent coverage among vulnerable groups to support the PMI goal of reducing malaria-related morbidity by 50 percent. The FY 2017 request level for Benin does not include the total projected funding for the PMI. Decisions on allocations of centrally-managed funds will be made at the time the FY 2017 operating year budget is set. GHP assistance will focus on prevention and treatment, including indoor residual spraying, distribution of bed nets, procurement of artemisinin-based combination therapies, treatment of severe malaria, and the prevention of malaria in pregnant women.
- **Maternal and Child Health:** U.S. assistance will provide \$3.5 million to support proven, high-impact and low-cost interventions to improve maternal health, neonatal survival, childhood immunizations, and the provision of community case management and/or referral of common childhood illnesses such as malaria, pneumonia and diarrhea.

- Family Planning and Reproductive Health: U.S. assistance will include \$3.0 million to expand access to high-quality voluntary FP/RH services, information, and reproductive health care on a sustainable basis. U.S. assistance will also make substantial contributions to reducing maternal and child mortality and morbidity rates. U.S. assistance will focus on commodity support, with an emphasis on injectable and other longer-term FP/RH methodologies.

International Military Education and Training (IMET)

IMET courses and training events expose defense establishment personnel to U.S. military training, doctrine, and values. IMET activities are intended to promote democratic values, build capacity in key areas, increase the professionalization of forces, and build lasting military-to-military relationships.

Beninese Security Forces and Justice System Can Better Disrupt Local and Transnational Crime and Violent Extremist Elements and Respond to Regional Crises

Key Intervention:

- \$0.3 million will help support the development of a professional, apolitical, and well-trained military that will contribute to Benin's stability, support border security, and enhance its peacekeeping capacity.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: Several monitoring and evaluation efforts were undertaken in FY 2014 and FY 2015:

- End-user verification field visits were conducted to provide data on how commodities and supplies are reaching and benefiting the intended end-users of USAID-supported products, and to inform programming to improve the supply chain.
- A portfolio evaluation was completed in 2015.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: The monitoring and evaluation activities conducted by USAID/Benin informed the following actions and decisions regarding FY 2017 budget planning:

- Numerous field monitoring visits indicated that separation between malaria activities and other MCH activities implemented in the same health facilities was not efficient. Therefore, the new five-year health strategy, which begins in FY 2016, will emphasize integrated programming and integrated delivery of health services at facility and community levels.

Detailed Objective Descriptions

Benin has Access to Health Services, Education, and Adequate Nutrition to Enable the Population to Contribute Productively to Society and a Healthy Environment: U.S. government efforts to achieve this goal are focused primarily on reducing preventable deaths among vulnerable populations through increased use of high impact health services and healthy behaviors. This will be achieved through three programming areas: (1) improved delivery of integrated high-impact health services; (2) improved preventive and care seeking behavior of empowered communities; and (3) improved performance of key health systems. The strategy strengthens a dual track health system—public and private—that will ensure that quality health services and products match household and community demand for them. The principal outcomes to be achieved by activities in Benin's health portfolio are to reduce the malaria burden, reduce under-five years of age mortality, improve maternal health, and increase the modern contraceptive prevalence rate.

Beninese Security Forces and Justice System Can Better Disrupt Local and Transnational Crime and Violent Extremist Elements and Respond to Regional Crises: Due to its proximity to unstable neighboring countries and extremely porous borders, Benin continues to face an ongoing regional threat of transnational terrorism, organized crime, narcotics trafficking, and piracy. The U.S. Mission is committed to initiating regional law enforcement and security training designed to bolster capacity to respond to trans-national security issues. Despite its resource challenges, the Government of Benin (GOB) has demonstrated and expressed the desire to continue to advance its security sector, and to participate in U.S. bilateral and regional partnerships to counter illicit narcotics trafficking and transnational terrorism. The U.S. Mission will continue to provide effective engagement with the security sector to enhance the operational capabilities to counter narcotics, terrorism, and piracy as well as support the GOB's initiative to further develop its international peacekeeping operation capacity.

Botswana

Foreign Assistance Program Overview

Botswana is one of the United States' strongest allies in Africa and offers a powerful model to the region and world of a stable, democratic African nation. However, while attempting to meet the pressing need to diversify its diamond-dependent economy, Botswana continues to struggle to address one of the world's highest rates of income inequality and the second highest HIV prevalence rate in the world. U.S. assistance supports management of the HIV/AIDS epidemic, including the epidemic's broader impact on women and vulnerable citizens. U.S. assistance also seeks to build a more robust military-to-military partnership with Botswana while encouraging its support for regional security.

Request by Account and Fiscal Year

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
TOTAL	37,291	*	41,529	4,238
Global Health Programs - State	36,767	*	40,804	4,037
International Military Education and Training	524	*	725	201

Global Health Programs (GHP)

Assistance provided through the GHP accounts will support the goals and principles of the Global Health Initiative (GHI) to achieve major improvements in health outcomes in three globally shared goals: ending preventable child and maternal deaths, creating an AIDS-free generation, and protecting communities from other infectious diseases.

Botswana Reduces the Incidence of HIV and Tuberculosis among the 15-49 Age Group

Key Intervention:

- HIV/AIDS: As a part of the President's Emergency Plan for AIDS Relief (PEPFAR) Botswana will receive \$40.8 million to build partnerships to provide integrated prevention, care, and treatment programs throughout the country and support orphans and vulnerable children. Additional details of activities to be undertaken under this program will be provided in the PEPFAR Supplement to this Congressional Budget Justification.

International Military Education and Training (IMET)

IMET funded U.S. professional military education (PME) is the foundation of our bilateral relationship with the Botswana Defense Force (BDF) and contributes significantly to professionalization of the military. The BDF recognizes that knowledge imparted to senior officers is critical to BDF modernization efforts for manning, equipping, and strategic planning. The skills provided to junior officers are critical to operational and tactical execution of tasks.

Botswana's Military Forces are Increasingly Interoperable with U.S. Forces

Key Intervention:

- FY 2017 funding of \$0.7 million is requested to further professionalize the BDF. Key outcomes include: improved strategic planning and management; reinforcing civilian control of the military and respect for human rights; and increased understanding of U.S. doctrine and operational tactics.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities:

- The PEPFAR program has begun implementing Site Improvement through Monitoring System (SIMS) to increase the impact of PEPFAR programs through standardized monitoring of services delivered by PEPFAR implementing partners and focusing on key program area elements. The system is meant to support the use of data to improve quality of services and outcomes, and provide the foundational data needed for regional, national and global programmatic decision making. Additionally, SIMS will provide increased oversight and accountability for PEPFAR and its implementing agencies' funded activities.
- Overall, Strategic Information (SI) activities will help to ensure availability of data to measure components of the Sustainability Index and Dashboard (SID), in particular those areas in Botswana with low scores: Allocative Efficiency, Technical Efficiency, and Quality Management (QM). Allocative Efficiency will be examined through the analysis of relevant HIV/AIDS epidemiological, health, workforce, and economic data to inform HIV/AIDS investment decisions. For maximizing impact, data will be used to assess high-impact program services and interventions being implemented, where resources should be allocated, and what populations demonstrate the highest need and should be targeted. Technical Efficiency will be addressed through evaluation of enhanced processes, economies of scale, elimination of waste, prevention of new infections, expenditure analysis, strategic targeting, and other technical improvements, to be able to achieve improved HIV/AIDS outcomes within the available resource envelope. Finally, QM will be examined through the measurement of quality of HIV/AIDS services in relation to established national/global standards that are effective in achieving positive health outcomes (reduced AIDS-related deaths, reduced incidence, and improved viral load/adherence).

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: The Mission has developed a set of core principles that guide U.S. government investment in HIV/AIDS programming. These principles support a set of strategic program objectives, including the President's AIDS-free Generation goal and mission priorities (notably gender, gender-based violence, and key populations). They also support development of robust graduation and staffing plans for more mature interventions, with an eye towards graduation at an acceptable level of sustainability. Finally, they support the provision of assistance targeted at building Botswana's capacity and filling gaps within Botswana's national HIV/AIDS program. Evaluation findings have been used to select focus regions and populations for programs that will have the greatest impact on reducing the spread of the HIV/AIDS epidemic in Botswana.

IMET funding level requests are based on reviews at the Department of Defense's Africa Command (AFRICOM) and Department of State's Bureau of Political-Military Affairs, which evaluate program performance against the goals stated in AFRICOM's Theater Campaign Plan and assess country-specific projections for resources needed to further U.S. objectives.

Detailed Objective Descriptions

Botswana Reduces the Incidence of HIV and Tuberculosis Among the 15-49 Age Group: The Government of Botswana (GOB) shares in the AIDS-free generation goal. However, the GOB's capacity to address HIV/AIDS mitigation issues has lagged behind its desired results. Botswana's success combating HIV/AIDS is built on the GOB's dedication and ability to provide health services to its citizens free of charge.

Botswana's Military Forces Are Increasingly Interoperable with U.S. Forces: U.S. assistance to the BDF is predicated on maintaining a professional military force capable of executing the full spectrum of operations, potentially with U.S. forces if required. PME at senior and middle officer levels lays the foundation for interoperability by establishing common terms of reference and strategic planning principles. IMET also deepens connections between U.S. and BDF military leaders, creating trust and confidence. Finally, IMET courses reinforce democratic principles by teaching the role of the military in a democracy, the centrality of human rights, and the rule of law, which also constitute key U.S. priorities.

Burkina Faso

Foreign Assistance Program Overview

In November 2015, following more than a year of political unrest, Burkina Faso elected a new president for the first time in almost 30 years. The election, determined to be free and fair by international standards, bolstered a commitment to democracy that *Burkinabés* demonstrated in October 2014 when a mass citizen protest brought the resignation of long-standing President Blaise Compaore. This nascent democratic step is challenged by a lack of governmental checks and balances, and public perception of inequality before the law. U.S. assistance to Burkina Faso will promote engagement by civil society with responsive local and national governments; mitigate the adverse health outcomes of malaria and other health pandemics; and continue to support the professionalization of the *Burkinabé* military. In addition, this assistance will be complemented by a range of regionally funded USAID activities in support of economic growth, health, and countering violent extremism (CVE) goals. Burkina Faso is a key member of the Trans-Sahara Counterterrorism Partnership (TSCTP) as well as a strategic partner of the United States, promoting peace and stability throughout West Africa.

Request by Account and Fiscal Year

International Military Education and Training	242	*	345	103
P.L. 480 Title II	11,126	*	8,000	-3,126

Development Assistance (DA)

As Burkina Faso transitions to a democratically elected government, USAID will focus on solidifying the country's democratic gains by supporting the newly-elected central authorities in their role as civil servants. This support will help the executive branch encourage legislative oversight of government reform efforts and enhance accountability and transparency in the process for the *Burkinabé* population. In addition, USAID will work with local civil society organizations on advocacy, oversight and coalition building to partner with local leaders to develop two-way communication with government, and hold elected officials accountable.

The Government of Burkina Faso is More Responsive to the Needs of Its People, with More Balance of Power, Stronger Local Governance, Improved Respect for Human Rights, and Reduced Corruption

Key Intervention:

- In order to promote a more robust, regionally oriented, whole-of-government approach to addressing the challenges in the Sahel, the FY 2017 request will support the Sahel Development Initiative (SDI) with \$1.0 million in programming. SDI has four inter-related development objectives: countering violent extremism; strengthening vulnerable local communities; building capacity of regional, national, and subnational institutions to effectively deliver services; and interagency learning, as USAID, Department of State and Department of Defense colleagues work toward a common approach to the region. This will include democracy, human rights and governance programs to work with elected government officials on responding to the specific needs of the population in order to demonstrate the value of a responsive and accountable democratic government.

Burkina Faso Has a Civil Society Which Is More Effective in Engaging Government, Affecting Change and Mitigating Internal Conflict

Key Intervention:

- \$1.0 million, also under SDI, will strengthen civil society organizations and community-based groups to effectively advocate for their issues to local and national governments and other stakeholders. Special emphasis will be given to build effective oversight skills and constructive relations with elected officials.

Global Health Programs (GHP)

Assistance provided through the GHP accounts will support the goals and principles of the Global Health Initiative (GHI) to achieve major improvements in health outcomes in three globally shared goals: ending preventable child and maternal deaths, creating an AIDS-free generation, and protecting communities from other infectious diseases.

Improve the Health and Nutrition of Vulnerable Populations in Burkina Faso by Investing in People

Key Intervention:

- Malaria: U.S. assistance under PMI will provide \$9.0 million to expand efforts to scale-up proven preventive and treatment interventions toward achievement of 85 percent coverage among vulnerable groups to support the PMI goal of reducing malaria-related morbidity by 50 percent. The FY 2017 request level for Burkina Faso does not include the total projected funding for the PMI. Decisions on allocations of centrally-managed funds will be made at the time the FY 2017 operating year budget is set.

International Military Education and Training (IMET)

IMET resources will fund courses and training events that expose defense establishment personnel to U.S. military training, doctrine, and values. Most IMET activities are conducted at U.S. military institutions in the United States, allowing for valuable cultural exchanges with communities across the country while students attend courses.

Burkina Faso Remains a Stalwart Partner in Supporting Regional Stability in Protecting its Borders, Countering Terrorism, and Facilitating Peace in its Neighborhood

Key Intervention:

- Approximately \$0.3 million will support the professionalization of *Burkinabé* military leaders.

P.L. 480 Title II

USAID implements development food assistance programs to reduce food insecurity in areas where some of the highest levels of food insecurity consistently occur. Malnutrition continues to be a key challenge with more than one third of children under-five years of age suffering from chronic malnutrition (stunting) and a quarter of children under-five years of age being underweight. In FY 2017, Food for Peace (FFP) development programs will promote positive behavior change related to health and nutrition practices, improved agricultural and livestock techniques, as well as diversified economic opportunities among the most vulnerable populations. FFP funding will be coordinated with the Sahel Regional Program that seeks to increase the resilience of the most vulnerable populations throughout Burkina Faso.

Improve the Health and Nutrition of Vulnerable Populations in Burkina Faso by Investing in People

Key Intervention:

- \$8.0 million will support a variety of activities focused on health and hygiene with an emphasis on children. This includes improving post-harvest techniques and technologies to increase the quality of products in child complementary feeding; empowering mothers and community leaders to provide peer-based health promotion programs; training community health agents to perform community-based nutritional screenings; supporting small dairy processing units to increase productivity and improve the quality of dairy products for nutrition purposes, as well as creating income generation for local producers; and training on community-led total sanitation to water.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: Several monitoring and evaluation efforts were undertaken in FY 2015:

- USAID performed semi-annual portfolio reviews of both Food for Peace and GHP-funded activities, participated in regular site visits to monitor project implementation, and implemented programmatic adjustments in work plans to account for shifting dynamics on the ground.
- USAID also conducted an evaluation of its Food for Peace activities to determine future activities under a program extension. The purpose was to capitalize on lessons learned, consolidate achievements, and define a sound collaborative effort to promote food and nutritional security under the Resilience in the Sahel Enhanced program (RISE). The conclusions of the evaluation were incorporated into the FY 2016 work plans of the two programs as well as for other activities for the RISE initiative.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: The monitoring and evaluation activities conducted informed the following actions and decisions regarding the FY 2017 budget:

- The FFP evaluation suggested a number of programmatic modifications that have been incorporated into planning for the aforementioned program extension: a comprehensive approach to building resilient communities that combines risk reduction activities, early warning and disaster response, and livelihood recovery; enhancing the role of governance activities through building both formal and informal institutions at the household, community, and state levels; focusing on the role of women in leadership positions; and increasing community preparedness for disasters.

Detailed Objective Descriptions

Improve the Health and Nutrition of Vulnerable Populations in Burkina Faso by Investing in People:

Progress towards improved basic health and nutrition status of the *Burkinabé* people is a key U.S. foreign policy goal in the region. FY 2017 resources will support significant health improvements and an effective, efficient, and country-led platform for the sustainable delivery of essential health care. With strategic investments in public health and improved nutrition in Burkina Faso, U.S. assistance will contribute to an improved environment for economic growth. Specifically, the U.S. government will work towards achieving the above goals through a focus on the reduction of morbidity and mortality of malaria; increased access to family planning and reproductive health services; maternal and child health; improved nutritional status; and expanding access to potable water.

Burkina Faso Remains a Stalwart Partner in Supporting Regional Stability in Protecting its Borders. Countering Terrorism, and Facilitating Peace in its Neighborhood:

The counterterrorism specific assistance brought to the military under TSCTP and the Peacekeeping Operations-specific assistance under the Africa Contingency Operations Training and Assistance program depend heavily on the institutional and organizational backbone of the Burkinabe military for sustainability and execution. Professionalization of military personnel will support the U.S. government goal of enhancing the ability of Burkina Faso to contribute to regional peace, security and counterterrorism efforts. IMET-funded

courses and training events expose defense establishment personnel to U.S. military training, doctrine, and values. IMET activities are intended to promote democratic values, build capacity in key areas, increase the professionalization of forces, and build lasting military-to-military relationships. Most IMET-funded activities are conducted at U.S. military institutions in the United States, allowing for valuable cultural exchanges with communities across the country while students attend courses.

The Government of Burkina Faso is More Responsive to the Needs of Its People, With More Balance of Power, Stronger Local Governance, Improved Respect For Human Rights, and Reduced Corruption: If Burkina Faso is unable to improve governance and strengthen its democratic institutions; it could face renewed destabilizing unrest. Burkina Faso has taken important steps towards democratization, particularly in the area of elections, but institutions remain weak and lack strong checks and balances. The Burkinabé people are increasingly concerned with impunity and unequal treatment before the law, lack of transparency, and corruption. FY 2017 funds intend to work with selected government entities at the national and local level to ensure responsiveness to citizen demands and a willingness to be held accountable to the people. Government responsiveness and transparency are at the bedrock of the newly democratic system the country is in the process of building.

Burkina Faso has a Civil Society Which is More Effective in Engaging Government Affecting Change and Mitigating Internal Conflict: Although there are reportedly 70,000 civil society organizations (CSOs), it is rare to find them involved in responsible advocacy to affect policy changes. Several movements do, however, exert influence and with the advent of some donor assistance, continue to grow. Recent U.S. efforts have targeted youth in building a more active civil society. FY 2017 will build upon existing results to create a two-way relationship between civil society and governments and inculcate the value of effective CSO advocacy and oversight on government provision of services.

Burundi

Foreign Assistance Program Overview

More than a decade since the conclusion of ten years of civil war and five years of civil conflict, Burundi is one of the least developed and most fragile countries in the world, with alarming levels of hunger and malnutrition that have been exacerbated by the current political crisis that started in April 2015. An ongoing refugee crisis, with over 200,000 Burundians registered in neighboring countries, is separating people from their land during harvest time and refugee returns in the future will create an increasingly complex food security and land problem. The primary goals of U.S. assistance in Burundi are promoting peace, stability, and equitable economic growth while improving the health status and social conditions of the population, reducing the high rates of chronic malnutrition, mitigating the drivers of conflict, and enhancing democratic governance and human rights. Additionally, the United States will support the professionalization of Burundi's military, which helps maintain peace and security both at home and in the region.

Request by Account and Fiscal Year

P.L. 480 Title II	23,760	*	12,000	-11,760

Economic Support Fund (ESF)

ESF assistance will support activities that cultivate free and fair political processes and encourage consensus-building by focusing on discussions to revise and harmonize the legal framework governing the 2020 electoral process and national politics. Complementary activities will strengthen mechanisms for protection of and response to violations of human rights, support civil society organizations (CSO) and media to monitor government policies and systems, and address the drivers of continued and renewed conflict.

Improving Government Accountability and Transparency

Key Interventions:

- U.S. assistance of \$0.8 million will strengthen youth resilience and support peaceful, positive engagement in community and political processes and political engagement of youth. Activities will address identified drivers of conflict and support youth participation in reconciliation processes to resolve incidents of community-based violence.
- U.S. assistance of \$0.8 million will strengthen the capacity of CSOs and the media to play an important role in Burundi's democratic development by helping to build civic engagement and promoting transparency and accountability in governance and post-conflict reconciliation and healing.
- Assistance of \$0.5 million will enhance the ability of national human rights actors and advocates to document and investigate human rights abuses and to contribute to the fight against impunity.

Increased Economic Growth, Enhanced Regional Integration, and Improved Health Status of Burundians

Key Intervention:

- \$1.0 million of U.S. assistance will support training for individuals and groups to enable establishment of microenterprises; improve participation of women, youth, and other special groups in cooperative production and processing, marketing associations, and other entrepreneurial activities; and increase access to financing for and availability of quality inputs and technologies.

Global Health Programs (GHP)

Assistance provided through the GHP accounts will support the goals and principles of the Global Health Initiative (GHI) to achieve major improvements in health outcomes in three globally shared goals: ending preventable child and maternal deaths, creating an AIDS-free generation, and protecting communities from other infectious diseases. The GHI strategy in Burundi provides a platform for building on the successful interagency collaboration under the President's Emergency Plan for AIDS Relief (PEPFAR) between USAID and the Department of Defense (DOD).

Increased Economic Growth, Enhanced Regional Integration, and Improved Health Status of Burundians

Key Interventions:

- HIV/AIDS: As part of PEPFAR, Burundi will receive \$18.9 million (of which \$15.4 million GHP-State and \$3.5 million GHP-USAID) funding to build partnerships to provide integrated prevention, care, and treatment programs throughout the country and support orphans and vulnerable children. Additional details of activities to be undertaken under this program will be provided in the PEPFAR Supplement to this Congressional Budget Justification.
- Malaria: U.S. assistance of \$9.0 million under the Presidential Malaria Initiative (PMI) will support the goal of reducing malaria morbidity and mortality. Specifically, this assistance will target the routine distribution of insecticide-treated nets to pregnant women and children under five; and, support capacity-building for entomological monitoring, supply chain management and the National Malaria Control Program.
- Maternal and Child Health (MCH): U.S. assistance of \$2.0 million will be used to increase quality MCH services and the government's capacity to provide these services. Activities will focus on reducing maternal and neonatal deaths and preventing and treating childhood illnesses including malaria, diarrhea, and acute respiratory infections. Funding will strengthen facility and community-based integrated health services, with a focus on birth preparedness and maternity services, such as provider training, encouraging facility-based deliveries, referral support for complicated deliveries, treatment of obstetric complications through emergency obstetric care as well as the provision of immunizations and the strengthening of linkages for early screening, detection and treatment of malnutrition, stunting, HIV, and other chronic illnesses. Funds will strengthen Burundi's health system in the areas of policy and guidelines, leadership and management, supply chain management, and health information systems.
- Family Planning/Reproductive Health (FP/RH): U.S. assistance of \$3.0 million will help expand access to high-quality reproductive health care including voluntary FP services and information on a sustainable basis. Assistance will also support the National Reproductive Health Program by focusing on improved service delivery, behavior change communication, supply chain management, community-based distribution of contraceptives, and the promotion of longer term methods such as implants and intra-uterine devices. Community level activities will seek to increase knowledge about contraception and promote male involvement as well as educate vulnerable youth about reproductive health and support linkages to youth-friendly FP/RH services.

International Military Education and Training (IMET)

IMET-funded courses expose defense establishment personnel to U.S. military training, doctrine, and values and are intended to promote democratic values, build capacity in key areas, increase the professionalization of the forces, and build lasting military-to-military relationships. IMET will support the continued professionalization of the Burundian military which will contribute to its ability to support peacekeeping operations. Most IMET-funded activities are conducted at U.S. military institutions in the United States, allowing for valuable cultural exchanges with communities across the country while students are attending courses.

Building Capacity to Maintain Peace and Security at Home and Abroad

Key Intervention:

- U.S. assistance of \$0.5 million will help to professionalize the military, reinforce and support effective civilian oversight of the military, and strengthen civil-military relations. Funding will support attendance of Burundian military personnel at U.S. military institutions. IMET training will increase the Burundian military's understanding and acceptance of civilian control of the military, human rights, military justice, and management of defense resources.

P.L. 480 Title II

The Food for Peace (FFP) portfolio works to reduce chronic malnutrition and food insecurity among vulnerable households throughout Burundi.

Increased Economic Growth, Enhanced Regional Integration, and Improved Health Status of Burundians

Key Interventions:

- U.S. assistance of \$12.0 million will help address the high rate of chronic malnutrition in children under five years of age by strengthening health systems and service delivery; promoting social and behavior change communication and adaptive actions by households and communities; providing micronutrient supplementation; and supporting policies and governance practices that strengthen citizen participation and allow people to make informed decisions about their families' welfare.
- Activities will support increased household food availability and dietary diversity for a total of 500,000 direct beneficiaries over a five year period. FFP funding will help increase and diversify household crop and livestock production by strengthening producer organizations and promoting veterinary services. Funding will also support training for increasing income generation and promote the production and consumption of nutrient-rich foods.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities:

- In FY 2014, USAID conducted a mid-term evaluation of the Conflict Mitigation and Reconciliation Program. Assessing the situation of mistrust and inter-group insecurity (young people from different affiliations) that undermines social cohesion in communities across Burundi, the evaluation recommended that the youth work with local governmental administrative bodies to find alternatives from violence. The evaluation also suggested the need to engage politicians and authorities to eradicate political manipulation and maintain a free, democratic process. As a result of the mid-term evaluation recommendations, the program conducted four forums in FY 2015 that provided target youth a platform to engage with government authorities around the elections.
- In FY 2014, USAID assessed four projects using the Site Improvement through Monitoring System (SIMS) - a new standardized monitoring system developed by the U.S. Office of the Global AIDS Coordinator. Based on lessons learned from the FY 2014 SIMS implementation, USAID expanded this monitoring system and conducted sixteen visits through SIMS in FY 2015. As a result of these

visits, written documentation was improved to reflect the latest, updated content of national guidelines and protocols for care and treatment of HIV-infected patients, the availability and use of site level standard procedures, and the patient count referral system.

- The FFP activity began its baseline household survey and qualitative study in FY 2015. The baseline results will be shared once the analysis is complete in February 2016.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices:

- To inform the 2015 Country Operational Plan (COP), the PEPFAR team used the results and analysis from the 2013 – 2014 Priorities for Local AIDS Control Effort study that estimated the size of HIV/AIDS prevalence in Burundi, identified priority interventions zones and hotspots.
- In June 2014, the Preventing Malnutrition in Children Under Two Approach final evaluation highlighted the most effective activities to achieve results in preventing childhood stunting. The evaluation recommendations informed the design of the new five-year FFP activity (2014 – 2019) that has focused activities geographically, with the purpose of achieving sustainable nutrition and food security results in the Muyinga Province and replicating them nationally.

Detailed Objective Descriptions

Improving Government Accountability and Transparency: An important part of Burundi's fragility is the result of, and linked to problems in the governance, rights and democracy sector. Concern also remains about human rights violations, lack of support for freedom of expression and space for credible, responsible political opposition in Burundi. To address these issues, U.S. assistance will help foster collaborative, peaceful dialogue and solutions to local drivers of conflict, engage youth constructively in their communities, and strengthen mechanisms for the protection, mitigation and response to violations against human rights.

Increased Economic Growth, Enhanced Regional Integration, and Improved Health Status of Burundians: Although Burundi's health indicators have improved over the past ten years, there is still great concern about the prevalence of disease and the endurance of an insufficient health infrastructure. Through the GHI, the United States plans to continue its fight against AIDS focusing on HIV/AIDS, MCH and FP/RH programming and its fight against malaria.

The United States also contributes to improving food availability, access, utilization, and long-term stability of households' food security; and, to reducing the vulnerability of individuals, households, and communities to food insecurity. These programs will enhance resiliency among food-insecure households by increasing skills and assets, diversifying their livelihoods, and strengthening beneficiaries' ability to deal with and recover from the recurrent shocks that lead to persistently high levels of chronic malnutrition and food insecurity.

Building Capacity to Maintain Peace and Security at Home and Abroad: IMET funded courses facilitate valuable cultural exchanges and the building of life-long bonds and personal relationships that have had a significant impact on military-to-military relations and in building partner nation military capabilities.

Cabo Verde

Foreign Assistance Program Overview

Cabo Verde is one of Africa's success stories and an important U.S. partner in West Africa. A model of democratic governance, Cabo Verde enjoys a relatively high literacy rate, high per capita income, and positive health indicators. Its strategic location also means that Cabo Verde is increasingly at the crossroads of the transatlantic narcotics trade. Maritime security, domain awareness, and border control are among the highest priorities for the United States in Cabo Verde. U.S. foreign assistance in FY 2017 will continue to professionalize the military of Cabo Verde and build its capacity to respond more effectively to maritime security challenges, thereby helping the country to better access and develop potential wealth from national waters. U.S. assistance will be instrumental in allowing Cabo Verde to continue to develop and share its political and economic successes with neighbors in West Africa.

International Military Education and Training (IMET)

IMET-funded courses expose defense establishment personnel to U.S. military training, doctrine, and values. These courses intend to promote democratic values, build capacity in key areas, increase the professionalization of forces, and build lasting military-to-military relationships.

The Cabo Verdean Armed Forces Have the Capacity, Training and Means to Combat Transnational Crime, Protect Cabo Verde's Borders, and Enforce Maritime Security

Key Intervention:

- \$0.2 million in FY 2017 IMET funding will help develop a small, modern, and professionally-trained force.

Linkages with the Millennium Challenge Corporation (MCC)

In October 2010, the MCC and the Government of Cabo Verde completed a five-year, \$110.0 million Compact aimed at transforming Cabo Verde's economy from aid-dependency to sustainable, private sector-led growth. Because of Cabo Verde's continued success with good governance and economic policy reforms, and based on the successful implementation of its first compact, in February 2012, MCC awarded Cabo Verde a \$66.2 million second compact, marking the first time globally that any country has been awarded a second MCC compact. Cabo Verde's second compact entered into force on November 30, 2012, and is comprised of two key projects: 1) a water, sanitation, and hygiene project, which is designed to establish a financially sound, transparent, and accountable institutional basis for the delivery of water and sanitation services to Cabo Verdean households and businesses and 2) a land management for investment project designed to reduce the time required to secure property rights and to provide conclusive land information in areas of near-term high development potential in Cabo Verde.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: IMET activities are periodically reviewed by the Office of Security Cooperation (OSC) representative located in Dakar who engages with IMET graduates regularly by monitoring their career development and rotation within the military.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: Based on the findings of the above-mentioned evaluations, Embassy Praia continues to include elements of Expanded IMET (E-IMET) programming and professional military education as a part of its IMET-funded activities.

Detailed Objective Descriptions

The Cabo Verdean Armed Forces Have the Capacity, Training and Means to Combat Transnational Crime, Protect Cabo Verde's Borders, and Enforce Maritime Security: Continued IMET funds will improve Cabo Verdeans' capacity to monitor and police territorial waters, and expand awareness of maritime traffic within the exclusive economic zone.

Cameroon

Foreign Assistance Program Overview

U.S. engagement in Cameroon seeks to advance regional peace while encouraging development by strengthening healthcare systems. Foreign assistance contributes towards achieving these objectives by implementing programs that seek to strengthen the national response to the HIV/AIDS pandemic and increase the professionalism and effectiveness of Cameroon's military forces.

Request by Account and Fiscal Year

P.L. 480 Title II	18,301	*	-	-18,301

Global Health Programs (GHP)

Cameroon has one of the highest HIV-prevalence rates in the central Africa sub-region. Despite the Government of Cameroon's political engagement, the provision of basic health services (including HIV/AIDS services) remains a challenge, especially at local and decentralized levels of the healthcare system. Assistance provided through the GHP accounts will support the goals and principles of the Global Health Initiative (GHI) to achieve major improvements in health outcomes in three globally shared goals: ending preventable child and maternal deaths, creating an AIDS-free generation, and protecting communities from other infectious diseases.

Cameroon Reduces Incidence of HIV and Maternal Mortality Rates through Strengthened Health Service Delivery

Key Intervention:

- HIV/AIDS: As part of the President's Emergency Plan for AIDS Relief (PEPFAR), Cameroon will receive \$45.5 million (of which \$44.0 million GHP-State and \$1.5 million of GHP-USAID) to build partnerships to provide integrated prevention, care and treatment programs throughout the country and support orphans and vulnerable children. Additional details of activities to be undertaken under this program will be provided in the PEPFAR Supplement to this Congressional Budget Justification.

International Military Education and Training (IMET)

IMET-funded courses expose defense establishment personnel to U.S. military training, doctrine, and values and are intended to promote democratic values, build capacity in key areas, increase the professionalization of the forces, and build lasting military-to-military relationships. IMET will support the professionalization of Cameroon's military and promote effective civilian oversight and respect for human rights and the rule of law.

Cameroon Maintains a Durable Domestic Peace and Becomes a Reliable Partner for African Security

Key Intervention:

- FY 2017 funding of \$0.5 million is requested to professionalize Cameroon's military forces.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: As part of PEPFAR's monitoring, evaluating and reporting initiative, all agencies are required to systematically collect and analyze information for programmatic decision-making. Studies and evaluation efforts in FY 2015 and FY 2016 include:

- USAID commissioned Johns Hopkins University to perform three sets of studies: One study estimated the size of groups of people known as 'key populations', those who have the highest risk of contracting and transmitting HIV, (men who have sex with men, commercial sex workers and their clients, and truck drivers), so that interventions and resources can be planned appropriately. Another study mapped HIV prevention services and performed qualitative analysis on perception barriers faced by the identified key populations to accessing services. The third study triangulated existing HIV/AIDS data to further understand the HIV epidemic and adjust the response accordingly.
- USAID conducted a baseline survey of orphans and vulnerable children (OVC) to establish essential baseline data to determine potential program impact and determine targets for a new OVC activity.
- The U.S. Centers for Disease Control and Prevention conducted studies that helped identify better approaches for the provision of more effective HIV treatment regimens, as well as the provision of family planning services to HIV infected women.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: The monitoring and evaluation activities conducted in Cameroon informed the following actions and decisions regarding the FY 2017 budget:

- The "Continuum of Prevention, Care, and Treatment of HIV/AIDS for Most-at-risk Populations" (CHAMP) activity, builds upon the experience of predecessor programs and leverages ongoing PEPFAR activities to provide HIV services to those at highest risk of contracting and transmitting HIV. Building on research and findings from the Johns Hopkins University study, and in line with PEPFAR's "locations and populations" approach, CHAMP is currently establishing programs in areas with a high concentration of men who have sex with men and other high-risk populations.
- The USAID-funded study, "Examining risk factors for HIV and access to services among female sex workers and men who have sex with men in Cameroon", created a strong evidence base that facilitates stakeholder access to information and informs programmatic and financial decisions for those most susceptible to contracting or transmitting HIV. The Government of Cameroon uses study results to design interventions that target key populations and inform its funding application to the Global Fund to Fight AIDS, Tuberculosis, and Malaria (Global Fund). Furthermore, study findings fostered a collaborative partnership among the Global Fund, USAID, and the World Bank who are focused on designing joint interventions to scale-up HIV services for key populations.

Detailed Objective Descriptions

Cameroon Reduces Incidence of HIV and Maternal Mortality Rates through Strengthened Health Service Delivery:

The Mission's GHI strategy is focused on strengthening the capacity of national and non-governmental structures to improve the well-being of the Cameroonian population. The U.S. government will leverage PEPFAR resources to support interventions focused along five strategic pillars: (a) preventing mother-to-child transmission of HIV; (b) ensuring access to safe, secure, and sufficient supplies of blood and blood products; (c) preventing new HIV infections among key populations and other vulnerable populations; (d) providing care and support for orphans and vulnerable children; and (e) strengthening health systems.

Cameroon Maintains a Durable Domestic Peace and Becomes a Reliable Partner for African Security:
The U.S. government's engagement with Cameroon's Ministry of Defense is intended to promote democratic values, build capacity in key areas, increase the professionalization of forces, and build lasting military-to-military relationships. Most activities are conducted at military institutions in the United States, allowing for valuable cultural exchanges with communities across the country while students are attending courses.

Central African Republic

Foreign Assistance Program Overview

The Central African Republic (CAR) has a long history of political upheaval, and suffers from chronic under-development, poor governance and institutional capacity, lack of accountability, and inter-communal tension. CAR authorities – in tandem with the United Nations (UN) and international partners –are focused on bringing security and stability to CAR, resuming basic government functions and services, improving public financial management, and advancing an inclusive political process that is representative of ethnic, regional, and religious diversity found in CAR. U.S. foreign assistance supports the call from Central Africans to build a country that is unified, peaceful, stable, prosperous, tolerant, and accountable. As such, U.S. priorities include helping CAR re-establish a justice system; investing in local-level conflict mitigation efforts; supporting disarmament, demobilization, rehabilitation, and reintegration; providing assistance for security sector reform; and making targeted investments to support the economic revitalization and governance improvements that are necessary for long-term development and recovery. The U.S. government will continue to coordinate efforts closely with other donors in CAR, including the UN, the European Union, France, World Bank, African Development Bank, and International Monetary Fund.

International Military Education and Training	-	*	150	150
P.L. 480 Title II	29,264	*	-	-29,264

Economic Support Fund (ESF) - OCO

ESF-OCO assistance will contribute to peacebuilding, social cohesion, and conflict resolution dialogue in CAR.

Conditions Created for Voluntary Return Home for Refugees and IDPs

Key Interventions:

- Approximately \$1.3 million of U.S. assistance will focus on inter-religious and intra-community conflicts, the sharing of information to mitigate violence among communities, and activities to lay a stronger foundation for community reconciliation, social cohesion and trauma healing as a means to promote economic opportunities.
- Approximately \$3.0 million will support information sharing to mitigate violence and promote peace. By improving citizen access to information, activities will seek to reestablish social cohesion in and between communities and governmental entities, enhance community security, and improve local governance and transparency on issues that are drivers of conflict.

International Military Education and Training (IMET)

As part of a larger process of security sector reform CAR's armed forces must be reconstituted, re-structured, and retrained. IMET-funded courses expose defense establishment personnel to U.S. military training, doctrine, and values, and are intended to promote democratic values, build capacity in key areas, increase the professionalization of the forces, and build lasting military-to-military relationships.

Counter Threats to Civilian Population from Rebel Groups

Key Intervention:

- Approximately \$0.2 million will support activities that advance the professionalization of CAR's military, including training on respect for human rights and civilian control of the military; and mobile education teams focused on civil-military relations and international law.

International Narcotics Control and Law Enforcement (INCLE) - OCO

INCLE funds will support ongoing efforts to help re-establish a functioning criminal justice system in CAR, and build on current successful programming in collaboration with UNDP and the American Bar Association's Rule of Law Initiative. Based on the current state of CAR's criminal justice institutions, the country requires sustained donor involvement for multiple years in order to ensure its criminal justice system is accessible by a majority of CAR citizens and perpetrators are held accountable for their actions. As an initial step, the United States is supporting the CAR authorities to develop human and institutional capacities within the local criminal justice system and ensure accountability for serious crimes, particularly for perpetrators of human rights violations and mass atrocities. The increase in funds will sustain capacity-building programs, preserve gains in institutional development, and fund an officer from the Bureau of International Narcotics and Law Enforcement at Embassy Bangui.

Rule of Law Developed

Key Interventions:

- A total of \$3.7 million will support stabilization operations and security sector reform projects that expand the capabilities of and professionalize CAR law enforcement forces, prisons systems, and investigations. Activities will include the provision of training and equipment, in line with international standards and best practices, aimed at improving the overall professionalization of national and local police, and addressing the dire state of CAR's prisons. Funds will support the training and deployment of CAR's civilian law enforcement to CAR's provinces, where the government has very little civilian presence.
- \$2.0 million in INCLE resources will support rule of law projects that expand the capabilities of and professionalize justice sector actors, prosecution functions, and court institutions. INL will continue support for an initiative to combat sexual and gender-based violence. Training, mentoring, and work-related equipment will be provided for prosecutors, investigators, and court officials to enable them to build the capacity of CAR's justice system for ensuring due process and effective case management.

Peacekeeping Operations (PKO) - OCO

Funding will support equipment, maintenance, and/or advisory efforts for comprehensive security sector reform and defense institution building in CAR. Improving the security environment within CAR, building the CAR government's capacity to ensure internal security, and developing and implementing a long-term reform plan to professionalize the country's military and civilian security forces is critically important to overall peace and security in CAR. U.S. government efforts to address these issues include immediate actions to right-size the armed forces (FACA) and define a national security strategy for CAR under a permanent, democratically elected government.

Counter Threats to Civilian Population from Rebel Groups

Key Intervention:

- A total of \$8.0 million will support comprehensive, integrated security sector reform and defense institution building, including training, advisory support, and non-lethal equipment.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: With the resumption of operations at Embassy Bangui in September 2014, the U.S. government is now able to intensify monitoring and evaluation activities on the ground.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: As CAR emerges from crisis and stability returns, thus allowing U.S. assistance to increase, the United States will develop robust monitoring and evaluation plans that will be used to ensure that programs deliver sustainable results and inform future programmatic decisions. The end goal of the monitoring and evaluation efforts is to transition all programs to full CAR ownership.

Detailed Objective Descriptions

Counter Threats to Civilian Population from Rebel Groups: A secure and stable CAR permits citizens to resume a normal life and expand economic opportunity, and adds an element of stability to an unstable region. U.S. efforts seek to break the cyclical violence that has plagued CAR for decades and required ever more costly and frequent interventions by the international community.

Rule of Law Developed: The United States recognizes that within a post-conflict environment such as the Central African Republic, certain fundamental needs such as stability, security, and reform, must take priority if rule of law is to take hold. Only in such a context will a functioning government have the ability to expand governance throughout the national territory, increase national cohesion, build trust and credibility among its citizens, and lessen the need for foreign assistance.

Conditions Created for Voluntary Return Home for Refugees and IDPs: Communities throughout the Central African Republic have been torn apart, hindering a conducive environment for citizens to live harmoniously together again and to work through local and national governmental entities to help rebuild the nation. By improving the messaging broadcast to all citizens and encouraging forgiveness, those who left and those who remained behind will be encouraged to begin the healing process.

Chad

Foreign Assistance Program Overview

Chad is a strong U.S. partner in helping to maintain regional stability. It is in the U.S. interest to reinforce Chad's positive efforts to guard against exploitation by al-Qaeda in the Islamic Maghreb (AQIM), Boko Haram, destabilizing elements from Libya, Sudanese rebels in Darfur, and conflict in Central African Republic. U.S. foreign policy objectives include strengthening regional stability by countering terrorism and violent extremism; protecting the lives and interests of U.S. citizens; promoting democracy, good governance, and human rights; ensuring provision of humanitarian assistance; and encouraging economic development. U.S. assistance will continue to be applied to build Chadian capacity to professionalize its armed forces, control its borders, and interdict narcotics, arms and wildlife trafficking.

Request by Account and Fiscal Year

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
TOTAL	61,970	*	1,500	-60,470

International Military Education and Training (IMET)

IMET resources will support the professionalization of the Chadian armed forces through courses that expose Chad's defense establishment personnel to U.S. military training, doctrine, and values, and that are intended to promote democratic values, build capacity in key areas, increase professionalization of the forces, and build productive military-to-military relationships.

Professionalized Security Forces Provide Stability, Counter Extremism and Terrorism, and Enhance Security

Key Intervention:

- U.S. assistance provides \$0.5 million to support training to professionalize the military and strengthen its capacity to maintain border security.

Nonproliferation, Antiterrorism, Demining and Related Programs (NADR)

The Conventional Weapons Destruction program responds to security threats and risks to indigenous populations posed by landmines and unexploded ordnance; excess, loosely secured, and otherwise at-risk small arms and light weapons; man-portable air defense systems; and ammunition.

Professionalized Security Forces Provide Stability, Counter Extremism and Terrorism, and Enhance Security

Key Intervention:

- CWD funding of \$1.0 million program will develop an Explosive Ordinance Disposal program to dispose of conventional weapons of war.

Detailed Objective Descriptions

Professionalized Security Forces Provide Stability, Counter Extremism and Terrorism, and Enhance Security: Ensuring that the Chadian military becomes a more professional defense force is a high assistance priority for the United States. U.S. assistance seeks to improve Chad's ability to fight transnational threats and ensure internal stability through improving its military's capabilities and professionalism and limiting the ability of end users of proliferation concern to access conventional weapons. Other areas important to this objective include improving Chad's response to cases of trafficking in persons; enhancing Chad's ability to detect and interdict weapons of mass destruction and related items; strengthening border security by improving the capabilities and professionalism of the border guards and the customs service; and improving the export control system.

Comoros

Foreign Assistance Program Overview

U.S. government outreach in Comoros focuses on personal engagement and relationship-building, allowing access to Comoran institutions that are important to U.S. and regional counter-piracy and counter-terrorism efforts. Maintaining a bilateral relationship with Comoros and building its maritime security capacity allows the United States to contribute to a more stable Indian Ocean region. U.S. assistance to Comoros focuses on identifying future leaders and English training in order to better develop the country's fledgling Coast Guard.

Request by Account and Fiscal Year

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
TOTAL	232	*	150	-82

International Military Education and Training (IMET)

IMET-funded courses expose Comoran defense establishment personnel to U.S. military training, doctrine, and values; promote democratic values; build capacity in key areas; increase the professionalization of forces, and build lasting military-to-military relationships. IMET funded courses focus on maritime security and defense institution building.

The Coast Guard and Related Security Organizations are Able to Control Comoros Territorial Waters to Stem Illegal Migration, Trafficking of Persons and Other Criminal Activity

Key Intervention:

- \$0.2 million will support the training of Comoran military leaders to increase their professionalism, and improve their ability to patrol Comoros territorial waters which may help to stem the tide of illegal maritime activity.

Detailed Objective Descriptions

The Coast Guard and Related Security Organizations are Able to Control Comoros Territorial Waters to Stem Illegal Migration, Trafficking of Persons and Other Criminal Activity: Comoros needs increased training in professionalization and maritime security to improve its capacity to control its territorial waters. Illegal migration from Africa is rising along with smuggling and other criminal activity.

Integrated Country Strategy (ICS) Mission Objectives by Account and Program Area

Côte d'Ivoire

Foreign Assistance Program Overview

After more than a decade of political instability that culminated in post-electoral violence in 2010, Côte d'Ivoire is well on the way to reclaiming its position as a hub of economic growth and stability in West Africa. This was cemented by peaceful and transparent national elections in October 2015.

U.S. government assistance to Côte d'Ivoire will help to ensure that the benefits of the country's strong economic growth reach all Ivoirian citizens, providing the foundation for continued stability and providing a buffer against renewed conflict or the spread of violent extremism. Continued support to strengthen critical democratic institutions, including the judiciary and the national assembly, will be complemented by a growing focus on strong, vibrant civil society and human rights for all. FY 2017 assistance to Côte d'Ivoire will help to lay the groundwork for peaceful presidential elections in 2020; improve the professionalization of defense institutions; and support a continued effort to push for increased domestic health care financing, particularly for HIV/AIDS, where the United States is a major donor.

Global Health Programs - State	135,264	*	138,405	3,141
International Military Education and Training	481	*	340	-141
P.L. 480 Title II	505	*	-	-505

Economic Support Fund (ESF)

ESF assistance will provide training and other support to key government institutions, including the justice system, national assembly, and line ministries with responsibility for human rights, media, and delivery of social services that have influence and potential to improve their engagement with citizens. Developing increased capacity for civic engagement and social accountability is critical to the country's ongoing reconciliation process. Receptive and responsive public officials and an improved relationship between civil society organizations (CSOs) and government will help to strengthen this effort. CSOs, the media, and the private sector have important roles to play in advancing reconciliation in Côte d'Ivoire, promoting democracy, human rights, and good governance, as well as holding public officials accountable.

Côte d'Ivoire Promotes Democratic Reforms to Improve Accountability and Governance

Key Interventions:

- U.S. assistance will expand efforts to improve judicial services and case management processes in six additional high-need local courts throughout the country.
- FY 2017 resources will build upon work in case management and computerization, and focus more specifically on the provision of technical assistance to improve accountability and service delivery, and reduce corruption within the judicial system.
- U.S. assistance will build the capacity of representatives and political parties within the National Assembly to carry out their roles and responsibilities as representatives of the people.

- FY 2017 resources will provide support to key ministries to conduct outreach campaigns to ensure that policies, programs, budgets, and contact information are readily accessible.
- Activities will assist in the institutionalization of forums regularly convened by public officials to disseminate information and respond to inquiries from societal actors in order to promote governmental transparency and accountability.

Côte d'Ivoire Continues to Advance Reconciliation throughout the Country

Key Interventions:

- Activities will support women and other key civil society actors in outreach and education activities that address important issues such as land rights, political participation, and conflict mitigation.
- U.S. assistance will enhance the professionalism of journalists and CSOs, which would entail greater independence from partisan pressure and donor dependency.
- FY 2017 resources will be used to develop CSO capacity to identify and advocate for their goals and objectives through persuasive oral and written communication, as opposed to political rhetoric or adversarial posturing.
- Activities will strengthen the capacity of CSOs and journalists to monitor and report on state functions, public policies and the performance of public officials, through technical training in areas such as public finance, public policy, and lawmaking.
- U.S. assistance activities will increase public access to information and the capacity of the CSOs and journalists to generate and disseminate alternative sources of information based on informed opinions, independent research, and/or investigative reporting.
- FY 2017 resources will also promote CSO capacity building in business management and fundraising skills to improve self-sufficiency, autonomy, and public accountability.

Global Health Programs (GHP)

Assistance provided through the GHP accounts will support the goals and principles of the Global Health Initiative (GHI) to achieve major improvements in health outcomes in three globally shared goals: ending preventable child and maternal deaths, creating an AIDS-free generation, and protecting communities from other infectious diseases. This is consistent with the broader objectives of Côte d'Ivoire's Integrated Country Strategy.

The Ivoirian health system continues to be challenged by issues of quality and equity, uneven resource allocations (by geography, disease profile, and level of the public health care system), and competing priorities. U.S. government investments in the health sector of Côte d'Ivoire are focused primarily on supporting the national HIV/AIDS response, with programs to provide increased clinical services and community supports for HIV positive individuals and their families. The portfolio builds capacity for health information (patient records, surveys and surveillance, and routine monitoring and evaluation of service and outcomes) and laboratory systems for improved diagnoses and clinical monitoring. It also addresses policy issues such as increased host government financing, new clinical protocols, and linkages between clinical and community services. An additional component includes the provision and management of commodities (including antiretroviral medications, lab reagents and test kits, condoms and related pharmaceutical supplies) throughout the public health care system. These efforts have a broader impact on the overall health care system, and help Côte d'Ivoire address a broader range of health priorities, including maternal and child mortality and outbreak preparedness.

Côte d'Ivoire Reduces its HIV Infection Rate through Prevention, Care and Treatment by Working with and Strengthening the Ivoirian Health Care System

Key intervention:

- HIV/AIDS: As a part of the President's Emergency Plan for AIDS Relief (PEPFAR) Cote d'Ivoire will receive \$138.4 million to build partnerships to provide integrated prevention, care, and treatment programs throughout the country and support orphans and vulnerable children. Additional details of activities to be undertaken under this program will be provided in the PEPFAR Supplement to this Congressional Budget Justification.

International Military Education and Training (IMET)

A security force that respects the rule of law and is able to respond to the needs of the people will be necessary to create a secure environment for U.S. government investments in democracy and governance. FY 2017 funds will continue to assist the military in rebuilding its institutions and to support Government of Côte d'Ivoire efforts to professionalize and modernize its security forces as part of ongoing security sector reform (SSR) efforts. IMET-funded courses expose Ivorian military personnel to U.S. military training, doctrine, and values; promote democratic values; build capacity in key areas; increase the professionalization of forces; and, build lasting military-to-military relationships.

Côte d'Ivoire Strengthens the Capacity of Key Security Institutions to Improve Internal Human Security, Enforce the Law, and Combat Crime and Terrorism

Key Intervention:

- IMET-funded courses expose Ivorian military personnel to U.S. military training, doctrine, and values; promote democratic values; build capacity in key areas; increase the professionalization of forces; and, build lasting military-to-military relationships.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: Several monitoring and evaluation efforts were undertaken in FY 2014 and FY 2015.

- PEPFAR resources are being realigned geographically and programmatically to achieve control of the HIV/AIDS epidemic. Under the direction of the Office of the Global AIDS Coordinator, all PEPFAR teams reviewed site-level data in preparing 2015 Country Operational Plans with the goal to phase out PEPFAR-funded services where they have no or only marginal impact, and redirect scarce resources for increased coverage in places with a high disease burden.
- Epidemiologic data were used to evaluate the impact of HIV/AIDS interventions. Each project was evaluated for pertinence of activities and impact around reducing new infections and maintaining patients on treatment services. Targets, budgets and work plans were revised to support this realignment.
- The interagency team worked extensively with technical advisors to examine expenditure analysis data and resolve a multitude of unit costs associated with prevention, care, treatment, laboratory maintenance, and supply chain commodities acquisition. This analysis was a key component of targeting and budgeting exercises leading to the submission of the 2015 Country Operational Plan.
- Two mid-year Portfolio Implementation Reviews in FY 2014 and FY 2015 were completed for ESF and GHP activities managed by PEPFAR implementing partners. In these reviews, the interagency PEPFAR team examined partner performance in terms of financial disbursements, progress against targets, and overall project management.
- Starting in FY 2015, the interagency PEPFAR team began reporting quarterly to the PEPFAR Oversight Accountability Response Team (POART) to examine programmatic, financial, and site monitoring data and determine potential shifts through the "Corrective Action Summary" delivered by the POART.

- In FY 2015 USAID conducted a Democracy, Human Rights, and Governance (DRG) Assessment in order to identify major DRG trends and challenges in Côte d'Ivoire and recommended a medium-term strategic approach to assist with the strengthening of democratic governance and human rights as the country transitions out of a post-conflict environment. The assessment recommended that the overarching goal of DRG programming going forward in Côte d'Ivoire should be to increase the population's confidence in the Ivoirian government. Programs will work towards two broad objectives: 1) to increase public officials' interactions with, and responsiveness to, societal actors; and 2) to improve the performance of government core functions.
- Additionally, in FY 2016, the Côte d'Ivoire Operating Unit will conduct rigorous midterm evaluations of two ongoing DRG activities. The goal is to use the context obtained from the aforementioned Democracy, Human Rights, and Governance Assessment and make any necessary modifications to the activities being currently implemented.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices:

- The U.S. government used the PEPFAR platform and health systems strengthening interventions to allow for expanded investments towards protecting communities from other infectious diseases. This systems-level work was especially important in light of the Ebola Virus Disease epidemic and will allow for expanded Global Health Security programming to roll out in FY 2016.
- The proposed work plan and strategic vision of PEPFAR in Côte d'Ivoire builds on the reorientation toward gaining control of the HIV epidemic. In collaboration with the Ivoirian government and other stakeholders, the new strategy contributes to UNAIDS "90:90:90" goals for 90 percent of all people living with HIV to know their HIV status; for 90 percent of all people with diagnosed HIV infection to receive sustained antiretroviral therapy; and for 90 percent of all people receiving antiretroviral therapy to have viral suppression, by the year 2020; through better testing approaches to more efficiently identify people living with HIV; increased adult and pediatric treatment and care service provision; stronger community linkages; and more effective geographic targeting of scale-up activities based on district-level burden of disease.

Detailed Objective Descriptions

Côte d'Ivoire Promotes Democratic Reforms to Improve Accountability and Governance:

U.S. government engagement with key democratic institutions is intended to improve the responsiveness of government as well as to increase service provision. This support is crucial to increase citizen confidence in democratic processes, such as elections, as well as institutions, such as the National Assembly, Ministry of Justice, civil society, and media, as well as promote peace and stability, which lay the foundation for sustained economic growth. U.S. assistance will also contribute to improved judicial case management, more professional and effective judicial and other justice sector officials, expedited trials, and fairer, more uniform case adjudication. The goal is for more citizens to seek resolution of disputes through the court system as a result of an increased awareness of their rights and better access to legal aid. Increased confidence in the system should result from increased transparency and decreased corruption.

Côte d'Ivoire Continues to Advance Reconciliation throughout the Country: U.S. assistance is designed to support reconciliation based on the hypothesis that if individuals, elites, and groups from across political divides are engaged in a process of dialogue and reconciliation, healthier relationships and shared futures can be generated to increase social resilience to mobilized violence. The Embassy will encourage political elites to address issues of identity and land tenure in a responsible fashion and to seek political accommodations that avoid incitation to violence. The Embassy will also promote tolerance, non-violent conflict resolution and social inclusion within civil society. U.S. assistance will continue to support activities that encourage dialogue and reconciliation in the aftermath of the presidential and legislative elections to ensure continued economic and social prosperity in Côte d'Ivoire.

Côte d'Ivoire Strengthens the Capacity of Key Security Institutions to Improve Internal Human Security, Enforce the Law, and Combat Crime and Terrorism: Functioning security institutions are essential for stability and economic growth in Côte d'Ivoire. The development of reliable and accountable institutions requires both time and firm commitment. The Government of Cote d'Ivoire, however, continues to struggle with defining the roles of its security force components, the forces' limited capacity, and corruption. Assistance will support the professionalization of the Ivorian military which will build stronger relationships and foster pro-U.S. attitudes by exposing future military leaders to the United States and U.S. professional military education programs.

Côte d'Ivoire Reduces its HIV Infection Rate Through Prevention, Care and Treatment by Working With and Strengthening the Ivoirian Health Care System: The Ivoirian health system continues to be challenged by issues of quality and equity, uneven resource allocations (by geography, disease profile, and level of the public health care system), and competing priorities. U.S. investments in the health sector of Côte d'Ivoire are focused on supporting the national HIV/AIDS response, with programs to provide increased clinical services and community supports for HIV-positive individuals and their families. The portfolio builds capacity for health information systems (patient records systems, surveys and surveillance, and routine monitoring and evaluation of service provision and health outcomes), laboratory systems for improved diagnoses and clinical monitoring, policy development for the roll-out of new clinical protocols, linkages between clinical and community services, and the provision of commodities (including antiretroviral medications, lab reagents and test kits, condoms and related pharmaceutical supplies) throughout the public health care system. These efforts have a broader impact on the overall health care system, and help Côte d'Ivoire address a broader range of health priorities, including maternal and child mortality and outbreak preparedness.

Democratic Republic of the Congo

Foreign Assistance Program Overview

The Democratic Republic of the Congo (DRC) is a strategic priority for the United States due to its size, location, and role in the Great Lakes region of Africa. Following prolonged periods of insecurity and political turmoil, recent efforts by the U.S. government, the Government of the DRC (GDRC), and the international community have placed the DRC on a positive trajectory. The most recent Demographic and Health Survey showed general improvements in a range of social indicators, and there has been progress with respect to security in the volatile east of the country. The country, however, remains fragile. In this context, U.S. assistance seeks to consolidate recent gains by improving the capacity and governance of core national-level institutions, creating economic opportunities for all segments of the population, and addressing the root causes of the crisis in eastern DRC. These investments will ultimately improve the lives of the Congolese people through better delivery of basic services such as health and education, increasing stability and security throughout the country, and strengthening the business enabling environment.

Economic Support Fund (ESF) - OCO

ESF assistance will support a range of cross-cutting activities to strengthen Congolese institutions and governance at the national, provincial, and local levels, while also ensuring that core social services are delivered to Congolese citizens. At the national level, U.S. assistance will reinforce the institutional capacity of key government, civil society, and private sector organizations to improve service delivery and foster development. Provincial- and local-level assistance will be concentrated in select geographic

areas. In addition, U.S. assistance will identify the origins and solutions to some of the deep-seated grievances causing conflict and implement programs that promote peace, reconciliation, social protection, and improved local governance.

Selected National-Level Institutions More Effectively Implementing Their Mandates

Key Interventions:

- U.S. assistance will support political competition and consensus building with \$2.0 million to promote free, transparent and credible local and national elections. This will include civic and voter education and support to the independent electoral national commission.
- \$3.6 million in good governance assistance will engage policy-making entities at the national and provincial levels to bring about sustainable improvements in government service delivery in key sectors, including education, health, and economic growth. USAID interventions will coordinate with other donors to improve public administration and financial management, and improve resource flows to the provincial and local levels.
- \$2.8 million of U.S. assistance for civil society will strengthen Congolese citizens' ability to engage with the government to address the underlying governance and institutional challenges that erode the social compact between citizens and the state. USAID assistance will strengthen Congolese civil society actors to provide oversight of the government, increase public sector transparency, and raise citizen awareness about their rights and responsibilities.
- \$3.3 million of U.S. assistance for rule of law and human rights will support government and civil society to promote a more independent, effective, and accountable judiciary, and respond to human rights violations. Interventions will promote and support the roll-out of judicial sector reforms, and strengthen the capacity of national entities to enhance the delivery of legal services.
- U.S. assistance will improve early grade reading skills and increase education access for Congolese children and adolescents. USAID will provide \$6.0 million to develop national policies (such as in-service teacher training, free schooling, and national education standards), enhance the quality of teacher training programs through innovative technologies, and increase the capacity of governmental and non-governmental actors to ensure improved governance, accountability, and transparency in the education sector.

Lives Improved Through Coordinated Development Approaches in Select Areas

Key Interventions:

- \$6.6 million of U.S. assistance for good governance activities will increase the ability of local government entities to budget, plan, and manage financial resources with citizen input and oversight, and improve service delivery.
- \$4.7 million of civil society assistance will encourage and enable citizens to participate in local government budgeting, improve accountability, and ensure public sector service delivery.
- \$2.3 million of rule of law and human rights assistance will support a selected number of courts to build their financial and technical capacity at the provincial level, improve civil society organizations' ability to monitor and document human rights violations, and provide social and legal services to survivors of sexual and gender based violence (SGBV).
- U.S. assistance will provide \$21.0 million to support adolescent girls' transition from primary to secondary school in a safe learning environment that will enable them to assume leadership roles in their communities; increase equitable access to education by reducing barriers to access for poor, vulnerable, and marginalized groups; improve reading instruction through the development of reading standards, teacher training programs, and the distribution of teaching and learning materials; and harness community engagement and participation to improve the quality of education.

Foundation for Durable Peace Strengthened in Eastern DRC

Key Interventions:

- \$4.7 million of U.S. assistance for conflict mitigation and reconciliation will build and reinforce peace and stability in targeted geographic areas of eastern DRC. Activities will focus on building community cohesion and stabilization initiatives; developing scalable models of programming to address conflict drivers, build resilience, and bridge the gap between humanitarian and longer-term development activities; and supporting research to determine the root causes of instability.
- \$2.8 million of U.S. assistance will support social services activities and \$1.0 million for rule of law activities will increase community action to prevent SGBV, reinforce and sustain positive behaviors in eastern DRC through behavior change communication, and increase the capacity of local organizations to deliver social services, conduct survivor advocacy, and improve legal protections for survivors.
- \$1.8 million of good governance assistance will increase the ability of local government entities to budget and plan, manage financial resources with citizen input and oversight, improve service delivery, and increase the legitimacy of targeted government entities, thus reducing a key driver of conflict.
- \$3.5 million of U.S. assistance provided to private sector competitiveness and good governance activities will encourage a responsible natural resource trade that promotes civilian control of the mining sector, and improves certification and traceability requirements.
- \$1.8 million for civil society interventions will encourage and enable citizens to participate in local government budget development, improve accountability, and ensure public sector service delivery and will facilitate constructive civic participation that will help rebuild the social contract in conflict-prone areas.
- U.S. assistance will provide \$3.0 million to support equitable access to high-quality, accelerated and alternative learning programs for disadvantaged, conflict-affected, and poor children and youth who are out-of-school and have no or limited access to a formal school.
- As part of the President's Global Hunger and Food Security initiative, Feed the Future, USAID will provide \$4.0 million to support the efforts of the GDRC to implement agricultural development programs that remain critical to achieving core U.S. development and foreign policy goals, including combating extremism, achieving political and economic stability, reducing sources of conflict, reducing poverty, and accelerating and sustaining broad-based economic growth.
- U.S. assistance will provide \$0.2 million to improve the DRC's efforts to combat human trafficking of men, women, and children in select mining communities.

Global Health Programs (GHP)

Assistance provided through the GHP accounts will support the goals and principles of the Global Health Initiative (GHI) to achieve major improvements in health outcomes in three globally shared goals: ending preventable child and maternal deaths, creating an AIDS-free generation, and protecting communities from other infectious diseases. U.S. assistance will strengthen the technical, management, and governance capacity of the country's health care managers and service providers thereby improving health care services' access and quality. In addition to improving access to reproductive, maternal, newborn, and child health services, U.S. assistance will support the provision of prevention, care, and treatment services to populations at high risk of tuberculosis, HIV/AIDS, malaria, and other infectious diseases.

Selected National-Level Institutions More Effectively Implementing Their Mandates

Key Interventions:

- HIV/AIDS: As a part of President's Emergency Plan for AIDS Relief (PEPFAR), the DRC will receive \$21.1 million (of which \$18.3 million in GHP-State and \$2.8 million GHP-USAID) to build partnerships to provide integrated prevention, care, and treatment programs throughout the country

and support orphans and vulnerable children. Additional details of activities to be undertaken under this program will be provided in the PEPFAR Supplement to this Congressional Budget Justification.

- Tuberculosis: USAID's interventions improve surveillance and treatment of tuberculosis as well as detection and response to multidrug resistant tuberculosis. Approximately \$2.9 million of U.S. assistance will be provided to support the National Tuberculosis Program through technical assistance for tuberculosis monitoring, data quality control, drug forecasting, and operational research.
- Malaria: U.S. assistance under the President's Malaria Initiative (PMI) will provide \$10.0 million to expand efforts to scale-up proven preventive and treatment interventions toward achievement of 85 percent coverage among vulnerable groups to support the PMI goal of reducing malaria-related morbidity by 50 percent. The FY 2017 request level for the DRC does not include the total projected funding for PMI. Decisions on allocations of centrally-managed funds will be made at the time that the FY 2017 operating year budget is set.
- Maternal and Child Health (MCH): U.S. assistance will improve capacity and service delivery in birth preparedness and maternity services; treatment of obstetric complications and disabilities; management of newborn and childhood illness, immunizations, and nutrition; and water, sanitation and hygiene -related activities. GHP funding will support the GDRC Acceleration Framework to End Preventable Maternal and Child Deaths and the Global Financing Facility in conjunction with other donors. \$10.0 million of U.S. assistance will be provided to advocate for improved national policies, such as those that would allow non-medical professionals to be trained in providing basic medical services in areas that lack health care workers.
- Family Planning and Reproductive Health (FP/RH): USAID will expand access to high-quality voluntary family planning services and reproductive health care on a sustainable basis, as well as support behavior change communication interventions to decrease the prevalence of SGBV. Approximately \$5.1 million will be provided to improve national policies that meet family needs in the DRC.
- Nutrition: U.S. assistance will provide \$0.1 million of FY 2017 funds to improve the legal, regulatory, and operational framework for the management of nutrition related activities.

Lives Improved through Coordinated Development Approaches in Select Areas

Key Interventions:

- HIV/AIDS: As a part of PEPFAR, the DRC will receive \$49.1 million (\$42.7 million in GHP-State and \$6.4 million GHP-USAID) to build partnerships that provide integrated prevention, care and treatment programs focused on achieving epidemic control in the highest burden districts. Additional details of activities to be undertaken under this program will be provided in the PEPFAR Supplement to this Congressional Budget Justification.
- Tuberculosis: Approximately \$6.8 million will be provided to improve the management of tuberculosis commodities, enhance laboratory-testing capacity, and improve tuberculosis notification and treatment success rates at the local level.
- Malaria: U.S. assistance under the PMI will provide \$35.0million to expand efforts to scale-up proven preventive and treatment interventions toward achievement of 85 percent coverage among vulnerable groups to support the PMI goal of reducing malaria-related morbidity by 50 percent. The FY 2017 request level for the DRC does not include the total projected funding for the PMI. Decisions on allocations of centrally-managed funds will be made at the time that the FY 2017 operating year budget is set.
- MCH: Approximately \$24.0 million of FY 2017 GHP funds will be provided to support high-impact interventions that enable the primary health care platform to reduce preventable child and maternal deaths with a focus on rural and underserved areas. Similarly, funds will support scalable, high-impact maternal and child health programs and will strengthen polio surveillance and routine immunization systems.

- FP/RH: Approximately \$12.2 million of U.S. assistance will be provided for interventions that will support training and supervision of health care providers, provision of contraceptive commodities to select facilities, and community-based distribution of family planning commodities and information.
- Nutrition: With \$1.7 million of GHP funds, U.S. assistance will deliver an integrated package of cost-effective nutrition actions that are proven to reduce maternal and child under-nutrition and associated mortality and morbidity including promotion of exclusive breastfeeding, child growth monitoring, and vitamin A supplementation for children ages six months to 59 months old.

Foundation for Durable Peace Strengthened in Eastern DRC

Key Interventions:

- Tuberculosis: Approximately \$1.3 million will be provided for interventions to use a conflict-sensitive lens in implementing programs to improve tuberculosis notification and treatment success rates, and increase the availability of multi-drug resistant tuberculosis drugs in eastern DRC.
- Malaria: U.S. assistance under the PMI will provide \$5.0 million to expand efforts to scale-up proven preventive and treatment interventions toward achievement of 85 percent coverage among vulnerable groups to support the PMI goal of reducing malaria-related morbidity by 50 percent. The FY 2017 request level for the DRC does not include the total projected funding for the PMI. Decisions on allocations of centrally-managed funds will be made at the time that the FY 2017 operating year budget is set.
- MCH: Approximately \$6.0 million will be provided to support high-impact interventions that focus on building technical, leadership, and management capacities in targeted provincial health divisions and health zones in order to help communities in conflict-prone areas of eastern DRC, such as South Kivu.
- FP/RH: Approximately \$3.1 million of U.S. assistance will be provided to expand access to high-quality, FP/RH services and care on a sustainable basis in eastern DRC. Family planning interventions will increase access to high-quality voluntary family planning methods. Activities will also integrate prevention and response to SGBV in the primary health care platform.
- Nutrition: Using \$0.2 million of GHP funds, U.S. assistance will coordinate with agriculture and Food for Peace – Title II food aid resources to reduce chronic, severe and acute malnutrition in conflicted-affected areas.

International Military Education and Training (IMET)

IMET-funded courses and training events expose defense establishment personnel to U.S. military training, doctrine, and values. Future investment in military education and training will continue to support the professionalization of the DRC military by emphasizing civil-military relations rooted in democratic norms, human rights, leadership development, and increased English language proficiency.

Security Sector Reform is Implemented

Key Intervention:

- Approximately \$0.4 million of IMET funds will support the professionalization of the DRC military.

International Narcotics Control and Law Enforcement (INCLE) - OCO

As the GDRC strengthens state and civilian authority in the majority of the country, ongoing conflict and instability in the East continue to slow development efforts and reinforce a fragile and insecure environment where alarming levels of violence against women and children exist. Illegal armed groups, including foreign and indigenous militia, fight for control of land, natural resources, and economic and political influence. The United States seeks to increase the security of the country's citizens through training and equipping official actors and building the infrastructure vital for them to pursue law

enforcement-related work. Current programs fall into two main areas: police professionalization and countering SGBV. The funding will improve civilian security by expanding the capabilities and professionalism of Congolese law enforcement and promoting community policing initiatives. The assistance will also enhance the capacity of DRC law enforcement and justice institutions to combat SGBV and human trafficking.

Security Sector Reform is Implemented

Key Interventions:

- \$0.8 million of U.S. assistance will provide support and training to the law enforcement agencies of the DRC through training, infrastructure development, and supplying equipment. INCLE-funded security sector programming will address police training gaps and lack of proper equipment, while working to increase cooperation between the police service and the communities in which they operate. INCLE funds will also assist the GDRC law enforcement in improving border security and control, and maintaining the secure transportation of conflict-free minerals in eastern DRC. The Congolese National Police, including its sub-components the Border Police and the Mining Police, will be the primary beneficiaries. Other law enforcement agencies, such as Immigration, Customs, Penitentiary Services, and the Office of Controls, may also be included.
- Justice sector programs in the amount of \$1.2 million will assist the GDRC by strengthening institutional capacity. This assistance will increase access to justice for victims of SGBV while augmenting the capacity of the police to effectively respond to and deter instances of SGBV.

Nonproliferation, Antiterrorism, Demining and Related Programs (NADR) - OCO

The DRC remains heavily contaminated with explosive remnants and large stockpiles of excess small arms/light weapons (SA/LW) and munitions that it cannot adequately secure. DRC defense forces are unable to adequately secure and maintain SA/LW and munitions stockpiles in line with international standards. The porous borders between DRC and its neighbors facilitate arms smuggling, fueling further violence and posing a significant challenge to peace and security in the DRC and the region. As a result, numerous depots are vulnerable to theft by terrorists, criminal organizations, and other non-state actors, thereby threatening the security of the United States and its allies, while simultaneously posing a substantial risk of spontaneous and catastrophic detonation, placing thousands of lives in real and immediate danger. NADR supports ongoing Conventional Weapons Destruction activities. These programs reduce SA/LW availability to rebel and terrorist groups, while simultaneously increasing the *Forces Armées de la République Démocratique du Congo's* (FARDC's) capacity to safeguard and maintain its stockpiles and reducing the risk of ammunition depot explosions in populated areas, thereby protecting civilian populations and preventing loss of life.

Security Sector Reform is Implemented

Key Intervention:

- \$2.0 million of U.S. assistance seeks to reduce, eliminate, or secure, at-risk or unsecured conventional weapons such as landmines and unexploded ordnance, SA/LW, Man-Portable Air Defense Systems (MANPADS) and excess and deteriorating munitions. Funding will support conventional munitions stockpile management, and destruction of excess and poorly-secured SA/LW (including MANPADS), particularly in Eastern DRC. It will also support weapons accountability through serial number database entry and destruction of captured/unserviceable weapons. Humanitarian mine action projects will restore arable land to productive use near population centers in DRC, promoting development and economic recovery. Clearance of Unexploded Ordnance and survey of suspected hazard areas as well as basic improvements to the Physical Storage and Stockpile Management of weapons and ammunition will enhance protection of civilians and support the return of refugees and internally displaced persons (IDPs) in South Kivu.

P.L. 480 Title II

Food for Peace (FFP) assistance will support programs that reduce food insecurity of vulnerable populations and boost the resilience of communities. USAID programs will increase agricultural production; diversify livelihoods; improve nutrition, water, and sanitation practices; and strengthen gender equity.

Lives Improved Through Coordinated Development Approaches in Select Areas

Key Interventions:

- USAID will improve the health and nutritional status of mothers and children under-five years of age by delivering an integrated package of cost-effective nutrition actions in select areas, including the former Kasai Occidental and/or Kasai Oriental provinces. Proven initiatives, such as exclusive breastfeeding, child growth monitoring, and vitamin A supplementation for children six to 59 months old, will be employed to reduce maternal and child under-nutrition and associated mortality and morbidity.
- USAID will improve the food security of households by increasing agricultural productivity, strengthening linkages to local and regional markets, and boosting access to improved agricultural inputs, credit, and extension services.
- FFP activities will improve women's social and economic empowerment in their respective households and communities. Initiatives will strengthen women's engagement in household decision making processes, increase economic opportunities, reduce SGBV, and foster female participation in community leadership roles.

Foundation for Durable Peace Strengthened in Eastern DRC

Key Interventions:

- USAID will improve the health and nutritional status of mothers and children under-five years of age by delivering an integrated package of cost-effective nutrition actions in eastern DRC. Proven initiatives, such as exclusive breastfeeding, child growth monitoring, and vitamin A supplementation for children six to 59 months old, will be employed to reduce maternal and child under-nutrition and associated mortality and morbidity.
- USAID will improve the food security of households by increasing agricultural productivity, strengthening linkages to local and regional markets, and boosting access to improved agricultural inputs, credit, and extension services.
- FFP activities will improve women's social and economic empowerment in their respective households and communities. Initiatives will strengthen women's engagement in household decision making processes, increase economic opportunities, reduce SGBV, and foster female participation in community leadership roles.

Peacekeeping Operations (PKO) - OCO

The United States will encourage the GDRC to opt for durable political solutions to the country's civil conflicts and help strengthen the DRC military's capacity to both prevent and manage such conflicts in a way that protects human rights. Funds will support a comprehensive security sector reform effort through direct support to defense institutions. These multi-tiered efforts will encourage DRC-led military planning, logistics, training, and accountability processes in greater synergy with other donor contributions. Funds will be used to help strengthen defense systems through training, advisory support, and equipment. Furthermore, all training modules and plans are developed in consultation with the DRC military and cover areas prioritized in their reform plan.

Security Sector Reform is Implemented

Key Intervention:

- \$10.0 million in PKO funding will support strategic-level security sector reform (SSR), military justice, logistics, and the training of multiple SSR advisors. The advisors will assist the DRC's military leadership to establish systems and processes for executive direction, force generation, and force operation. The SSR Advisor liaises with senior Ministry of Defense officials, UN-system organizations, the United Nations Organization Stabilization Mission in the DRC (known by its French acronym "MONUSCO") mission, international donors, and Embassy leadership to facilitate strategic-level engagement and coordination on SSR efforts while encouraging GDRC ownership of the SSR process; the military justice advisors coordinate training for military justice personnel, support MONUSCO's Prosecution Support Cells in building prosecutorial capacity and promoting accountability and provide equipment and infrastructure for military justice resource centers; the training advisor and site coordinator assist in the development and implementation of training strategies and doctrine for the GDRC's military; the logistics advisor works closely with the DRC military's Logistics School to improve the capacity and infrastructure of the central log base (in cooperation with the European Union and other donors) and coordinates with the agricultural advisor and assistant in the PKO-funded military agricultural logistics program in Kisangani.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: Various assessments and monitoring and evaluation efforts were undertaken in FY 2015 and FY 2016:

- An assessment of the DRC's agricultural market systems resulted in recommendations that identified specific value chains that could have a stronger impact on the agricultural sector.
- An evaluation of the Ending Sexual Violence by Promoting Opportunities and Individual Rights (ESPOIR) activity resulted in the recommendation that training to healthcare providers on how to provide psychosocial treatment to victims of SGBV is necessary.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: The monitoring and evaluation activities conducted in the DRC informed the following actions and decisions regarding the FY 2017 budget:

- The monitoring and evaluation activities conducted in the DRC informed the following actions and decisions regarding the FY 2017 budget:
- Agricultural activity will focus on a few select commodities (i.e. coffee, rice, cassava and beans) that would raise a significant number of small farmers out of extreme poverty.
- Activity designs will continue to provide psychological treatments for SGBV survivors.
- A human rights assessment will be carried out in FY 2016.
- The DRC's fragile media institutions operate against increasing political and state interference. There will be a media assessment in FY 2016 that will inform the U.S. government how to improve reliable, objective, and timely news that contribute to a stronger civic participation.

Detailed Objective Descriptions

Selected National-Level Institutions More Effectively Implementing Their Mandates: U.S. assistance will strengthen the institutional capacity of select government, civil society, and private sector organizations to identify development challenges; propose solutions; develop appropriate policies, plans, and legislation; implement reforms and programs; and garner the resources to accomplish their mandates. Effective engagement among government institutions, the private sector, media, and local citizens will underlie the approach, ensuring that reforms are in line with citizen expectations, priorities, and needs.

Lives Improved through Coordinated Development Approaches in Select Areas: U.S. assistance will enhance the quality of life of Congolese citizens by strengthening institutions in select regions, improving health, education, justice, and agricultural services. U.S. assistance will support local and provincial institutions to provide quality services through improved planning, oversight, transparency, and accountability. Under this objective, U.S. assistance will concentrate activities in the Katanga, Kasai Occidental and Kasai Oriental provinces, as well as the urban centers of Kinshasa, Kisangani, and Lubumbashi. Interventions will focus resources, leverage cross-sector and geographic synergies, and empower citizens to engage with governments. These interventions will transform the citizen-state relationship and improve the sustainable delivery of services that improve lives.

Foundation for Durable Peace Strengthened in Eastern DRC: U.S. assistance will implement programs that seek practical, depoliticized, and inclusive solutions to conflicts in eastern DRC. Successful models of humanitarian and development activities will be implemented, continued, or expanded to link community-level interventions with local, provincial, national, and regional peace-building and governance initiatives. An emphasis will be placed on women's participation in activities. As the operations research agenda gathers momentum, recommendations and findings will inform new activities that will address the underlying causes of conflict.

Security Sector Reform is Implemented: U.S. assistance will support the Congolese government in their effort to implement sweeping reforms in the military, police, and justice sectors. The U.S. government will continue efforts to professionalize the Armed Forces of the Democratic Republic of the Congo and will promote long-term military reform, strengthen the Congolese National Police to respond to community security priorities, and support a more effective and accountable judiciary.

Djibouti

Foreign Assistance Program Overview

The goal of U.S. assistance in Djibouti is to support the development of an economically prosperous, stable democracy, capable of partnering with the United States against regional threats. Djibouti is a critical partner in advancing U.S. security interests in a region with entrenched Al Qaeda affiliates, piracy, and countries poised to become economic powerhouses. Djibouti hosts Camp Lemonnier, the only permanent U.S. military installation in Africa. Djibouti's stability is threatened by uneven economic growth, poor socio-economic indicators, and an economy that is unprepared to meet the needs of and provide opportunities for Djibouti's large youth population. U.S. assistance, in partnership with the Government of Djibouti, seeks to remove barriers to economic growth and opportunity by promoting improvements in the quality of education; strengthen the legal and regulatory environment in order to encourage private sector investment in Djibouti's energy sector; and support the growth of a capable and dynamic workforce. U.S. government programming also strengthens the health care system and reduces vulnerability to public health threats. Finally, U.S. assistance builds the capacity of Djiboutian security forces to better secure land and maritime borders and participate in regional peacekeeping operations, thereby contributing to international security.

Economic Support Fund (ESF)

Djibouti has a dearth of educated, technically, and professionally trained people to compete for and obtain jobs that are forecasted to meet the growing employment requirements for expanding the country's economy. The current vocational school system is insufficiently focused on employment, producing graduates with degrees that are incompatible with the needs of the private sector. In addition, up to 40 percent of the youth that make up a growing Djiboutian youth bulge lack basic literacy skills to take advantage of technical and vocational training opportunities if and when available. Although Djibouti has made strides in improving access to education, with primary school enrollment increasing from 2003-2012 from 49.5 percent of school age children to 78.2 percent, the quality of that education remains poor.

Government Capacity to Provide and Citizen Demand for Quality, Transparent Basic Services is Enhanced

Key Intervention:

- U.S. assistance of \$1.8 million will support interventions in basic education activities. Specifically,

U.S. assistance will contribute to improving literacy and numeracy skills of children in primary school so that they are better prepared for more advanced studies and eventually the workforce.

A More Engaged Private Sector Leads to Increased Growth and Diversification of Djibouti's Economy

Key Interventions:

- U.S. assistance of \$3.4 million will support a community development fund through rapid in-kind small grants that respond to the immediate economic and social needs of Djiboutian communities. Assistance will be community-led and focus on activities that support economic development of that community and of surrounding areas.
- U.S. assistance of \$2.0 million will help create an improved enabling environment for renewable energy, including the geothermal sector, through targeted technical assistance. It will also support the development of a sectorial regulatory framework to attract and manage private investment.

Foreign Military Financing (FMF)

FMF-funded training, equipment, and other assistance is targeted to ensure that Djibouti can protect its land and maritime borders, resist the spread of extremism and terrorism, support the professionalization of its military, and support Djibouti's ability to participate in peacekeeping operations.

Well-Trained, Professionalized Security Forces Counter Violent Extremist and Terrorist Threats in the Region

Key Intervention:

- U.S. assistance of \$0.5 million will support Djibouti's military forces and improve Djibouti's ability to provide maritime security, professionalization of its military, and participate in peacekeeping and counterterrorism operations.

Global Health Programs (GHP)

Assistance provided through the GHP accounts will support the goals and principles of the Global Health Initiative (GHI) to achieve major improvements in health outcomes in three globally shared goals: ending preventable child and maternal deaths, creating an AIDS-free generation, and protecting communities from other infectious diseases.

Djibouti's HIV/AIDS prevalence is estimated to be 2.9 percent. The country is vulnerable to HIV/AIDS and other infectious diseases due to its location straddling the Red Sea and the Indian Ocean and its proximity to Ethiopia, a country with a booming economy and a growing population of 98 million. Djibouti's underdeveloped health system and low capacity to prevent HIV/AIDS and the transmission of other diseases adds to its vulnerability.

Government Capacity to Provide and Citizen Demand for Quality, Transparent Basic Services is Enhanced

Key Intervention:

- HIV/AIDS: Djibouti will receive \$1.8 million to support the national HIV/AIDS strategy and the goals of the President's Emergency Response for AIDS Relief (PEPFAR).

International Military Education and Training (IMET)

IMET-funded courses expose Djibouti's defense establishment personnel to U.S. military training, doctrine and values.

Well-Trained, Professionalized Security Forces Counter Violent Extremist and Terrorist Threats in the Region

Key Intervention:

- U.S. assistance of \$0.5 million will support education and training to support the professionalization of Djibouti's armed forces.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: Several monitoring and evaluation efforts will take place, including:

- USAID will conduct a mid-term evaluation of its HIV/AIDS program to assess the program's impact on local civil society organizations (CSOs). This will include measuring the extent to which the program's technical assistance has resulted in an increased capacity, better financial management, and improved service delivery.
- The workforce development project design will be finalized in FY 2016. Ongoing intensive assessment and monitoring will be built into the project.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: The following monitoring and evaluation activities informed actions and decisions regarding the FY 2017 budget:

- The Early Grade Reading Assessment conducted in FY 2013 demonstrated that teacher training had a substantial and immediate impact on reading skills acquisition. Master teacher training has been built into the new education project. The inability to read at the early grade level continues to impact Djiboutian youth as they enter the workforce.
- The U.S. government funded a National Drug Supply Chain assessment in 2015. The assessment showed that HIV/AIDS commodities are managed with the most consistency across the supply chain, most likely due to donor funding requirements and program-specific support and oversight.

Detailed Objective Descriptions

Well-Trained, Professionalized Security Forces Counter Violent Extremist and Terrorist Threats in the Region: U.S. assistance will support activities that improve operational capabilities; support border security; modernize key equipment; and assist in the operation and maintenance of U.S.-supplied systems. Through these efforts, funds will help build the capacity of the military through training.

IMET-funded activities promote democratic values, build capacity, and increase lasting military-to-military relationships. The majority of activities will be conducted at U.S. military institutions in the United States. This will allow for numerous valuable cultural exchanges with communities across the country while students are attending courses.

Government Capacity to Provide and Citizen Demand for Quality, Transparent Basic Services is Enhanced: U.S. assistance will support activities which seek to strengthen national health systems—both civilian and military—and build the capacity of local organizations to effectively fight against HIV/AIDS through improved service delivery. Few donors are active in Djibouti, and the primary assistance provided to the Government of Djibouti in the area of HIV/AIDS prevention is provided by the U.S. government. Assistance will support the development of the Government of Djibouti's ability to improve accountability measures. Programs will also work with citizens via CSOs to increase their involvement with service delivery organizations.

U.S. assistance will also support activities that strengthen Djibouti's education system. The new education project aims to improve service delivery with a focus on improving early grade reading and numeracy skills, through the development of appropriate pedagogical tools and a teacher training to improve: (i) the quality of early grade reading instruction; (ii) reading delivery systems; and (iii) community and parental engagement in basic education. The project will assist the Government of Djibouti to reach its objectives of improving the quality of primary school education needed to prepare students for an increasingly demanding economy.

A More Engaged Private Sector Leads to Increased Growth and Diversification of Djibouti's Economy: Resources will support two core economic growth components: 1) continued support for energy sector development; and 2) a community development fund. Djibouti has numerous constraints on its economic growth potential, many of them structural. The program will provide funding for rapid, in-kind small grants that respond to the immediate economic and social needs of Djiboutian communities. The focus of the new program will be to strengthen community participation, increase incomes and promote sustainable development, while supporting the provision of basic services for rural and urban populations. Results will include the creation of economic opportunities for underdeveloped communities.

Ethiopia

Foreign Assistance Program Overview

The Government of Ethiopia's (GOE) new five-year Growth and Transformation Plan (GTP) II (2016 – 2020), which includes ambitious targets for growth and allocates huge resources to promote development, reflects the GOE's commitment to provide health, education, and economic growth opportunities to its people. Consistent with GOE objectives, U.S. assistance will continue to promote peace and security, broad-based economic growth and development, and democracy, governance, and human rights. Activities will align with GOE objectives in order to safeguard U.S. government development investments as well as those of the GOE and other donors. As a result of U.S. assistance, Ethiopians will continue advancing regional security; gaining access to better healthcare and education; improving food security; and advancing prospects for better livelihoods. Additionally, Relief to Development Transition (R2DT) activities continue to assure food security and includes improving access to services, natural resources management and strengthening disaster risk management at the community level.

Development Assistance (DA)

Assistance will continue to improve food security; empower women to increase household food security and income; promote sustainable agriculture; protect natural resources; and protect the livelihoods of vulnerable populations. Education programs will continue to improve learning outcomes at the primary and tertiary grade levels, and provide targeted training and other opportunities for youth. Funds will also support long-term climate change adaptive capacity in drought-prone areas of the country through activities that build community resilience to climate-related shocks and disasters. Funding for the democracy, rights and governance sector will support rule of law, human rights and good governance programs to improve the resilience of Ethiopian communities and strengthen accountable governance and transparency. Additionally, funds will continue to support improved water supply, sanitation, and hygiene.

Increased Economic Growth with Resiliency in Rural Ethiopia

Key Interventions:

- As part of the President's Global Hunger and Food Security initiative, Feed the Future (FTF), USAID will provide \$60.0 million to support the efforts of the GOE to refine and implement a country-led comprehensive food security strategy to reduce hunger and increase economic growth through market-led agricultural development. These strategies aim to reduce hunger, improve nutrition and promote broad-based economic growth through agricultural development.
- Proposed Global Climate Change (GCC) initiative funding will include participation in the Enhancing Capacity for Low Emission Development Strategies (EC-LEDS) program, helping the GOE to develop and implement national action plans for low emissions development, measure and curb greenhouse gas emissions, and pursue opportunities for private sector investment and clean growth.
- With \$2.7 million, WASH activities will continue to improve access to potable water and sanitation, protect safe water sources, promote hygiene behavior change, and strengthen community ownership for improved management of water supply systems and financial sustainability.
- Under Power Africa, the U.S. government will provide \$2.0 million to facilitate private sector participation on energy generation in Ethiopia by strengthening the capacity of the GOE to negotiate sustainable independent power purchase agreements and provide support for the establishment of off-grid/small-scale energy projects linked to broader agriculture focused programs.
- FTF, GCC, and WASH resources will continue to improve the resilience of pastoralist communities. Activities will include strengthening livelihoods, expanding access to financial services, improving natural resource management, improving access to water services, increasing youth employment opportunities, promoting conflict mitigation and peacebuilding activities, and increasing access to land tenure, land rights, and livestock drought insurance.

Learning Outcomes at All Levels Improved

Key Interventions:

- Basic Education: The United States will provide \$18.0 million to assist the GOE in developing education policy and planning; train teachers in early grade reading and writing in seven local

languages; establish and strengthen reading departments at select teacher training colleges; strengthen community-based learning; build the capacity of Ministry of Education, parents, and communities to develop literacy materials and promote reading in the primary grades; support critical English language development in grades one through eight; and raise the overall skills base needed to be successful in the current and emerging agricultural and industrial fields.

- Higher Education: U.S. assistance will strengthen the capacity of universities through partnerships between targeted Ethiopian and/or U.S. universities, and provide support to technical vocational training centers and other local service providers, such as farmer training centers, to support technical and soft-skills training for youth.

Improved Governance Environment for Sustainable Development

Key Interventions:

- In FY 2017, \$2.0 million for rule of law and human rights programs will build the capacity of officials in the legal and judicial systems to promote constitutional human rights (including improved curricula and teaching in selected law schools), strengthen legal aid services, and build on a mandate for university law schools to support access to justice and legal aid.
- Approximately \$2.1 million for good governance programs will be implemented in partnership with major GOE development programs in health, agriculture, humanitarian aid and education to strengthen citizen oversight of governance, and stimulate citizen-led accountability and participation in these major development initiatives. Programs will also strengthen conflict management policies, peace-building practices and community/government partnerships within and across borders, and support federal, state and local institutions to improve their ability to incorporate conflict mitigation practices, including legal aid and alternative dispute resolution mechanisms.

Increased Utilization of Quality Health Services

Key Intervention:

- With \$0.5 million, WASH activities will continue to improve access to potable water and sanitation, protect safe water sources, promote hygiene behavior change including hand washing and household water treatment, and strengthen WASH committees and community ownership for improved management of water supply systems and financial sustainability.

Foreign Military Financing (FMF)

FMF will support Ethiopian peacekeeping and counterterrorism efforts within the region, specifically in South Sudan and Somalia. FMF funds will enhance Ethiopia's ability to facilitate the deployment and long-term sustainment of peacekeeping forces in regional trouble spots. FMF funding will directly support Ethiopian efforts to establish and maintain an enduring regional stability that coincides with African Union, United Nations, and U.S. objectives in East Africa.

Ethiopia is a Responsible Force for Regional Peace and Security

Key Intervention:

- FMF funds will support maintenance of C-130 aircraft, as well as necessary training and peacekeeping equipment.

Global Health Programs (GHP)

Assistance provided through the GHP account will support the goals and principles of the Global Health Initiative (GHI) to achieve major improvements in health outcomes. Key areas of GHI are aligned with the globally shared goals of ending preventable child and maternal deaths, creating an AIDS-free

generation, and protecting communities from other infectious diseases. GHP will also support behavior change communication using the Essential Nutrition Actions framework and improved policy environment. Funding will continue to support the GOE to significantly improve the health status of the Ethiopian population in the areas of maternal and child health, family planning and reproductive health, control of infectious diseases, nutrition, and improved water supply and sanitation. Activities will increase access to evidence-based HIV/AIDS prevention, care, and treatment service.

Increased Utilization of Quality Health Services

Key Interventions:

- HIV/AIDS: As a part of PEPFAR, Ethiopia will receive \$187.2 million to build partnerships to provide integrated prevention, care and treatment programs focused epidemic control in the highest burden districts. Additional details of activities to be undertaken under this program will be provided in the PEPFAR Supplement to this Congressional Budget Justification.
- Tuberculosis (TB): USAID assistance for TB will strengthen key components of the GOE's TB program aimed at expanding early case finding and improving access to quality services for diagnosis and management. This will be accomplished by increasing the GOE's diagnostic capacity, improving drug supply management, improving and making more accessible MDR-TB diagnosis and treatment services, advancing TB/HIV collaborative activities, enhancing TB infection control, promoting community-based TB care and engagement of all care providers especially the private health sector.
- Malaria: U.S. assistance under the President's Malaria Initiative (PMI) will provide \$38.0 million to expand efforts to scale up proven preventive and treatment interventions toward achievement of 85 percent coverage among vulnerable groups to support the PMI goal of reducing malaria-related morbidity by 50 percent. The FY 2017 request level for Ethiopia does not include the total projected funding for the PMI. Decisions on allocations of centrally-managed funds will be made at the time that the FY 2017 operating year budget is set.
- Maternal and Child Health (MCH): With a goal of ending preventable child and maternal deaths in Ethiopia, assistance for MCH issues will focus on the leading causes of morbidity and mortality, including unclean and unsafe births; neonatal complications (including infections); lack of skilled birth attendance; absence of essential newborn care and treatment; variable immunization coverage; acute malnutrition; and poor water and sanitation. Prevention of HIV transmission, care and treatment are integrated throughout the MCH program in an effort to address the high drop-out rate of mothers and infants who test HIV positive.
- Family Planning and Reproductive Health: Assistance for Family Planning and Reproductive Health will expand access to high-quality voluntary family planning services and information and reproductive health care on a sustainable basis. Such programs enhance the ability of couples to decide the number and spacing of births, including timing of the first birth.
- Nutrition: Assistance for nutrition will focus on strengthening ongoing nutrition activities including behavior change communication using the Essential Nutrition Actions framework and improved policy environment, and reducing vulnerability and building resiliency among at-risk communities.

International Military Education and Training (IMET)

IMET funds are increasing the professionalization of the Ethiopian military through military education in areas such as civilian control of the military, respect for human rights, and the rule of law. This increased professionalization of Ethiopia's military increases its capability to conduct counterterrorism and peacekeeping operations.

Ethiopia is a Responsible Force for Regional Peace and Security

Key Intervention:

- U.S. government support will enhance the military professionalism of the Ethiopian National Defense Force (ENDF) by providing professional military education opportunities to ENDF officers through attendance at different schools in the United States of America.

P.L. 480 Title II

Developmental Food Assistance Programs (DFAPs), supported with FFP funding, collaborate with other donors and the GOE to provide predictable and timely transfers of cash and food in exchange for community asset building public works activities. DFAPs remain essential contributors to USAID's food security strategy in Ethiopia and maintain the foundation upon which transformative Feed the Future programming is built. Funds also support Ethiopia's Protective Safety Net Program (PSNP), a vast, scalable safety net that is able to respond to emergent transitory needs before they push food insecure households into crisis. The PSNP reduces poverty, enables vulnerable households to build resilience and graduate from food insecurity, and assists those suffering from transitory (short-term) food insecurity as a result of a crisis or shock. Through a PSNP Contingency Budget and Risk Financing Mechanism, the program is able to scale up quickly so that people receive additional relief support before resorting to destructive coping mechanisms that threaten hard-won development gains. The mechanism serves to protect household assets, thereby allowing vulnerable communities to strengthen efforts aimed at building household future resilience. Approximately 1.5 million individuals will benefit from \$100.0 million in investment.

Increased Economic Growth with Resiliency in Rural Ethiopia

Key Intervention:

- U.S. assistance will provide food or cash for public works that build assets, such as water harvesting structures, farm-to-market roads and land reclamation; provide timely and predictable safety net assistance to chronically food insecure households; and expand and diversify livelihoods by strengthening market linkages to key value chains and increasing access to financial services.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: In FY 2014 and FY 2015, USAID/Ethiopia undertook several monitoring and evaluation activities. This included routine performance monitoring activities such as: quarterly pipeline reviews; sector specific reviews on food security, including the Feed the Future program and early warning systems; field visits to select USAID operation areas; and data quality assessments for learning purposes and to gather strategic level details on programs and activities.

The Mission also completed eleven performance evaluations, two impact evaluations, and two assessments of activities. Performance evaluations were conducted on: (1) Better Potato for Better Life Project; (2) Empowering New Generations to Improve Nutrition and Economic Opportunities; (3) Water hygiene sanitation Transformation for Enhanced Resiliency; (4) Partnership for Capacity Building in Disaster Management-National Incident Management System; (5) Graduation with Resilience to Achieve Sustainable Development; (6) Food by Prescription; (7) Help Ethiopia Address Low TB Performance; (8) Agribusiness and Market Development; (9) FTF Program; (10) Livestock Marketing Development; and, (11) Malaria Laboratory Diagnosis and Monitoring. Impact evaluations and assessments were completed for: (1) Impact Evaluation on Feed the Future Program; (2) Impact evaluation on the Ethiopia Land Tenure and Administration; (3) Greatest Impact Assessment (GIA) on Health Services; and, (4) Assessment of Most at Risk Population. The findings of these evaluations revealed:

- The health activity, Help Ethiopia Address Low TB Performance, has led to an improved institutional capacity to manage TB programming. Despite this improved institutional capacity, the evaluation found limited engagement in support of community-based TB care.

- While the Mission's activity to improve pastoralist resiliency has demonstrated strong progress building capacity in rangeland management among pastoralists, the evaluation found that this progress needs to translate into increased production and lead to increased household incomes and enhanced resilience to climate change.
- The Ethiopia Land Tenure and Administration Program brought about improvements in the country's land tenure system and led to a 10 to 13 percent increase in the likelihood of households utilizing credit for farming purposes, an 11 percent increase in the likelihood of a wife possessing land in her name, and a 0.32 hectare increase in land held jointly by husband and wife or by female-headed households.
- The evaluation team for the agri-business and market development activity found that there is benefit when such activities are supported by other USAID programs, such as social protection, WASH, education, etc. Another evaluation of a FTF activity showed that significant progress is being made in interventions that improve the lives and livelihoods of chronically poor households in the country's PSNP districts. The evaluation also highlighted the benefit of a value chain development approach to enable households to develop more diverse and enhanced livelihood options.
- The Greatest Impact Assessment (GIA) on Health Services produced a defined list of indicators that can be used to map and analyze reproductive, maternal, newborn and child health sites where programmatic interventions have the most strategic opportunities to reduce maternal and child mortality.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: During the process of completing data quality assessments across technical sectors, USAID/Ethiopia confirmed that the majority of the data sources, data collection systems, data analysis, verification methods, and data maintenance at the implementing partner's level are sufficient to provide Mission staff with a level of confidence to be able to use the data for a range of management and programmatic decisions. Additionally, the Mission used the findings, conclusions, and recommendations from the completed performance evaluations and assessments to inform the next generation of activities as well as adjust budgeting and programming. Below are examples of how M&E results were applied:

- The annual work plan activities and budget for the TB program are being refined and evidence is being generated and documented to support the expansion of similar TB control strategies to new areas. There are also efforts to further define key sustainability indicators and ensure that activities are fully integrated into programs and owned by each level of the government.
- Positive results and significant contributions in malaria programming are leading to efforts to scale-up and integrate current activities and increase access to quality malaria diagnostic services.
- Agriculture, value chain and resiliency activities are placing more focus on achieving a balance between increasing agricultural production and improving market chains with more focus on increasing production.
- Land activities will continue coordination with the GOE on capacity building and land policy reform. With equipped institutions and trained personnel, the GOE will be able to expand second level land holding certifications to over 40 million parcels in the highlands and recognize communal land holdings in pastoral areas.
- Agriculture activities are expanding support for micro- and small enterprise development in rural areas adjacent to livestock producers and increasing the role and responsibilities of local implementing partners.
- FTF interventions are emphasizing building sustainable and integrated value chain activities, off-farm income generation activities, and employment pathways, particularly for the poorest households in Ethiopia.

Detailed Objective Descriptions

Increased Economic Growth with Resiliency in Rural Ethiopia: The agricultural sector is constrained by low productivity, fragmented market linkages, low value added to products and services, and climate variability, among other impediments. In response, U.S. assistance will continue to increase national economic growth, while also focusing on enhancing resilience in the most rural areas of Ethiopia by strengthening strategically selected value chains, promoting private sector engagement, and improving market function. GCC initiative funding will support a lower emissions development pathway for Ethiopia. U.S. assistance will also support vulnerable populations to achieve sustained food security through asset building, access to financial services, access to markets, capacity protection, improving nutritional status, and, where required, humanitarian assistance. Programs will also support the viability and resilience of pastoralist communities through market development, vocational training and livelihood development and natural resource management.

Learning Outcomes at All Levels Improved: In the last 15 years, Ethiopia has achieved unprecedented expansion of access to primary schools; recent data shows a primary gross enrollment rate of over 95 percent. Despite the gains, a number of significant issues remain. Today, the quality of teacher instruction in schools and low student learning gains remain the primary challenges confronting the education system. With FY 2017 funds, education programs will continue to focus on these foundational problems by improving learning outcomes at the primary grade level through targeted trainings and other opportunities for youth, and at the tertiary level. Significant attention and assistance will focus on strengthening early grade reading and writing nationwide, particularly in the seven most widely used local languages. The United States will work in close partnership with the Ministry of Education and regional education bureaus to ensure that the implementation of the newly-established national reading curriculum is on-schedule, and that the utilization of language textbooks, teacher's guides and teacher training manuals is maximized.

Improved Governance Environment for Sustainable Development: A successful transition to a stable multi-party democracy in Ethiopia remains a long-term objective. U.S. assistance supports programs that promote an enabling environment for sustainable development by improving the resilience of Ethiopian communities and strengthening accountable governance. Activities help communities withstand shocks from climate change and environmental degradation and increase their capacity, in conjunction with government partners, to prevent and mitigate violent conflict. Assistance is coupled with programs that are strengthening formal and customary institutions of conflict management, building inter-religious tolerance and preventing violent extremism.

Programs increase citizen participation to encourage community-level, participatory decision-making in order to hold the GOE more accountable in its governance and development aims. U.S. assistance supports programs that work directly to build the governance capacity of the GOE to catalyze reforms in accountability, transparency and to create space for the meaningful inclusion of civil society. A key focus area is protecting political space and respect for human and civil rights as opportunities present themselves. The United States supports civil society organizations and targets initiatives backed by the GOE (such as the Extractive Industry Transparency Initiative and Social Accountability) to create more democratic space.

Increased Utilization of Quality Health Services: The GOE has made tremendous progress implementing innovative health services and expanding both its physical infrastructure and the availability of Health Extension Workers (over 38,000 deployed to-date in rural and urban areas), and has improved the utilization of key quality services such as antenatal care, the prevention of mother to child transmission of HIV, and labor and delivery services. Nevertheless, the number of well-trained health providers is still inadequate, and utilization of the health system by the population is still low.

Malnutrition remains one of the major public health problems in Ethiopia, contributing to 53 percent of infant and child mortality. According to the 2014 mini Ethiopian Demographic Health Survey, 40 percent of children are stunted, nine percent of children are wasted and 25 percent of children are underweight. The multi-sectoral approaches to improving nutrition involves the health, agriculture, and WASH sectors and links Global Health and FTF Initiative programs. The United States will continue to work with the GOE to improve the provision of and demand for healthcare services; and improve health systems at the national and community levels with a focus on reducing maternal, neonatal and child deaths. U.S. assistance will support major improvements in health outcomes through sustainable approaches and increased country ownership.

Ethiopia is a Responsible Force for Regional Peace and Security: Security cooperation programs continue to support Ethiopian peacekeeping efforts and counterterrorism efforts within the region, specifically South Sudan and Somalia. Programs have focused on enhancing Ethiopia's logistical airlift capability to facilitate the deployment and long-term sustainment of peacekeeping forces in regional trouble spots. Ethiopia's ability to support these missions is strained by its limited availability of aircraft, which increases the burden on the existing fleet and increases maintenance requirements. U.S. assistance helps offset the increased requirements and allows Ethiopia to continue operations. Continued assistance will directly support Ethiopian efforts to establish and maintain an enduring regional stability that coincides with African Union, United Nations, and U.S. objectives in East Africa.

Gabon

Foreign Assistance Program Overview

Gabon is an active contributor to conflict resolution and regional security efforts in the Central African region, hosting, and acting as a driving force behind the Economic Community of Central African States, which is establishing a regional standby peacekeeping brigade under the auspices of the African Union's Africa Standby Force. U.S. security assistance to Gabon is aimed at professionalizing the small armed forces (fewer than 8,000 armed service members) by providing training, which will create a force able to operate effectively in regional peacekeeping and maritime security efforts. Gabon has roughly 500 troops participating in U.N peacekeeping efforts in the Central African Republic.

TOTAL	351	*	350	-1
International Military Education and Training	351	*	350	-1

International Military Education and Training (IMET)

IMET-funded courses expose Gabon's defense establishment personnel to U.S. military training, doctrine, and values. These activities are intended to promote democratic values, build capacity, increase the professionalization of forces, and build lasting military-to-military relationships. Increased professionalization of the Gabonese military will strengthen their capacity to ensure maritime and border security, a key U.S. priority in the resource-rich Gulf of Guinea.

Increased Regional Cooperation for Security and Stability

Key Intervention:

- Approximately \$0.4 million in IMET resources will support the professionalization of the Gabonese military which strengthens its capacity to ensure maritime and border security.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: Post regularly conducts out briefs with IMET training participants and conducts site visits to completed and ongoing projects.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: The assessment of IMET programs led to a decision to continue to concentrate on leadership development and border and maritime security activities.

Detailed Objective Descriptions

Increased Regional Cooperation for Security and Stability: Ensuring that the Gabonese military becomes a more professional defense force is a high assistance priority for the United States. U.S. assistance seeks to improve the ability of the Republic of Gabon's defense establishment to fight transnational threats and ensure internal stability by improving the capabilities and professionalism of the military.

Other areas important to this objective include improving the Republic of Gabon's response to cases of trafficking in persons; enhancing the Republic of Gabon's ability to detect and interdict weapons of mass destruction and related items; strengthening border security by improving the capabilities and professionalism of the border guards and the customs service; improving the Republic of Gabon's export control system; and limiting access of conventional weapons to end users of proliferation concern.

Ghana

Foreign Assistance Program Overview

The U.S. government provides significant assistance to accelerate Ghana's transition towards an established lower middle-income country status. U.S. assistance supports Ghana's efforts to solidify its position as a leader in a region unfortunately known for civil strife, poor governance and economic stagnation. U.S. assistance to Ghana is supported through a number of presidential initiatives and foreign assistance priorities, including Feed the Future (FTF), the Global Health Initiative, and Power Africa, as well as through support from the regional Trade Africa program. To support Ghana to achieve its development goals, U.S. assistance will promote good governance; improve health care; strengthen the basic education system; expand agricultural production; increase access to power; and enhance the capacity of the Ghanaian armed forces.

Development Assistance (DA)

Assistance will help consolidate and sustain Ghana's impressive development progress through targeted programs in economic growth, health, education, and democracy and governance. The Mission's economic growth portfolio will continue focusing on agriculture productivity, particularly in the rice, maize and soya value chains along with marine fisheries, thereby helping to bridge the severe poverty gap between northern Ghana and the rest of the country; and supporting the Government of Ghana's (GOG) progress in creating a stronger enabling environment for private sector investment. The water, sanitation and hygiene program will continue pursuing equitable and sustainable access to safe drinking water, sanitation, and hygiene promotion interventions to achieve health objectives. Education efforts will be centered on developing and strengthening the foundation of human potential in the education sector through core programming in early grade reading and child literacy. Democracy, human rights and governance efforts focus on improving local government revenue mobilization and public accountability; strengthening the justice sector and reducing corruption to improve government services; continued strengthening of Ghana's Electoral Commission as well as electoral reform processes; and enhancing the Government of Ghana's security governance capabilities.

Sustainable and Broadly Shared Economic Growth

Key Interventions:

- As part of the President's Global Hunger and Food Security initiative, FTF, USAID will provide \$38.0 million to support the efforts of the GOG to refine and implement a country-led comprehensive food security strategy to reduce hunger and increase economic growth through market-led agricultural development. These strategies aim to reduce hunger, improve nutrition and promote broad-based economic growth through agricultural development.
- \$5.0 million of U.S. assistance will support the goals of Power Africa. Technical assistance for institutional and regulatory reforms will be provided to increase Ghana's capacity to meet energy demands, improve transmission and distribution of power, and increase rural access to energy.
- \$1.5 million of biodiversity funding will help improve resource management along Ghana's coastal areas in the country's Western and Central regions. Assistance will focus on local government activities for land use planning as the country adapts to rapid population growth and increased commerce associated with the new oil fields along the coast. These efforts will be linked to the FTF Strategy.

Equitable Improvements in Health Status

Key Intervention:

- Approximately \$3.4 million will be used to improve access to a safe and adequate water supply as well as basic sanitation facilities for households, schools and clinics; and promote complementary hygiene practices to maximize the health impact of improved infrastructure in Ghana. The program will focus on expanding household sanitation and key hygiene behaviors; improving the governance and policy environment in the sector; improving water supply and sanitation infrastructure; and leveraging public/private partnerships to magnify impact and investment. Expected results include an increased number of households with access to improved drinking water sources and sanitation facilities, as well as a number of communities certified as "open defecation free."

Improved Reading Performance in Primary School

Key Interventions:

- A major issue facing the Ghanaian education system is the alarmingly low early grade reading statistics, demonstrating that only two percent of grade two students were able to read with fluency and comprehension. U.S. assistance in the amount of \$11.0 million will be used to strengthen

primary education reading instruction. Emphasis will be placed on improving the reading skills of students in kindergarten through grade three, beginning with local languages, and transitioning to English at grade four. Interventions will support consistent teacher professional development in reading instruction; teaching and learning materials; social advocacy to promote a culture of reading; and national and classroom measurement strategies to assess children's performance in reading and math. School and community-based activities will encourage reading for children in and out of school. USAID will also support local innovations designed to reinforce reading instruction, including the promotion of information and communications technology (ICT) and public-private partnerships. As a result of these complementary efforts, reading performance will improve for 2.8 million students nationwide.

- Ghana's education system is faced with weak management practices and outdated education policies. To address these issues, \$3.1 million in assistance will be provided to strengthen management systems at the central and local levels to help sustain learning and reading outcomes. Activities will target oversight, planning, management, participation and ownership functions of the GOG's decentralized structures, systems, and processes, as well as the use of data and appropriate ICT to improve evidence-based decision making.
- Approximately \$2.1 million will help increase government and school accountability and transparency. USAID will support efforts at the local level to help communities improve children's learning outcomes. USAID will expand civil society involvement in and support to education. Activities will support Parent-Teacher Associations and School Management Committees, as well as the processes and tools used by schools and communities to promote government accountability for improving learning outcomes, with an emphasis on reading and increasing the availability and use of data tools, such as school report cards.

Strengthened Responsive Democratic Governance

Key Interventions:

- To bolster the weak institutional capacity of Ghana's local governments and improve government accountability at the national level, \$5.0 million in assistance will be provided to improve revenue mobilization, service delivery outcomes, and local government technical capacity for effective public financial management. Social accountability mechanisms will be enhanced to ensure citizen participation in local governance processes. These investments will improve transparency, public accountability and government responsiveness through targeted institutional strengthening activities. U.S. support will further build cross-sector technical capacity among key local governance units critical to the success of the FTF Initiative and other presidential initiatives.
- To reduce corruption and improve upon the public accountability system in Ghana, \$1.0 million in U.S. assistance will be used to strengthen the responsiveness of the judicial sector, support civil society anti-corruption efforts and public interest litigation capacity, and improve human rights protections and inclusivity for vulnerable groups. These activities will strengthen the role of civil society organizations in holding government institutions accountable and ensuring equitable development in Ghana's less endowed districts.
- Effective security sector governance can help to prevent, deter, discover and punish misconduct, including corruption, other criminal activity and human rights abuses. As part of the Security Governance Initiative (SGI), funds will be used to assist USAID to better assess, design, implement and evaluate security governance and justice sector projects as they are developed jointly with the partner government through the SGI Joint Country Action Plan (JCAP) planning processes.

Foreign Military Financing (FMF)

U.S. assistance builds on past achievements and demonstrated commitment by the GOG. The Ghana Armed Forces remains a strong supporter of the United Nations and other peacekeeping efforts, with approximately 2,700 soldiers (about 15 percent of the total force) currently deployed on nine worldwide peacekeeping missions.

Increased Capability of Security Forces and Defense Institutions

Key Intervention:

- The United States will provide \$0.3 million to continue to support Ghana's efforts to enhance regional stability and to sustain Ghana's peacekeeping capability.

Global Health Programs (GHP)

Assistance provided through the GHP accounts will support the goals and principles of the Global Health Initiative (GHI) to achieve major improvements in health outcomes in three globally shared goals: ending preventable child and maternal deaths, creating an AIDS-free generation, and protecting communities from other infectious diseases.

Equitable Improvements in Health Status

Key Interventions:

- HIV/AIDS: As a part of the President's Emergency Plan for AIDS Relief (PEPFAR) Ghana will receive \$12.3 million (of which \$6.8 GHP-State and \$5.5 million GHP-USAID) to build partnerships to provide integrated prevention, care, and treatment programs throughout the country and support orphans and vulnerable children. Additional details of activities to be undertaken under this program will be provided in the PEPFAR Supplement to this Congressional Budget Justification.
- Malaria: U.S. assistance under the President's Malaria Initiative (PMI) will provide \$28.0 million to expand efforts to scale-up proven preventive and treatment interventions toward achievement of 85 percent coverage among vulnerable groups to support the PMI goal of reducing malaria-related morbidity by 50 percent. The FY 2017 request level for Ghana does not include the total projected funding for the PMI. Decisions on allocations of centrally-managed funds will be made at the time that the FY 2017 operating year budget is set.
- Maternal and Child Health (MCH): The U.S. government will provide \$12.0 million in assistance to build the technical capacity of Ghanaian health system employees to address the leading causes of maternal and under-five years of age mortality rates. Through USAID, the U.S. government will work in collaboration with the GOG, communities, and the Ghana Health Service to improve the quality of MCH services to reach more women and newborns with lifesaving interventions during and after childbirth. These efforts also include the appropriate management of childhood illnesses during the first five years of life through community-based health nurses.
- Family Planning and Reproductive Health (FP/RH): The United States will provide \$13.0 million to support the GOG's efforts to expand access to high-quality voluntary FP/RH services. Through USAID, the U.S. government will also work with the private sector to ensure that an adequate and sustainable supply of high-quality FP/RH commodities is available. These efforts will help reduce maternal and child mortality rates in Ghana.
- Nutrition: The United States will provide \$7.0 million to assist the GOG to prevent stunting and anemia, particularly in the most economically vulnerable regions of the country, through broad-based programs that seek to create economic growth while ensuring improved nutritional status. USAID will support the prevention and treatment of poor nutrition through local and international procurements of therapeutic food and medications.

International Military Education and Training (IMET)

IMET-funded courses and training events expose defense establishment personnel to U.S. military training, doctrine, and values.

Increased Capability of Security Forces and Defense Institutions

Key Intervention:

- Provide \$0.9 million of FY 2017 IMET funds to professionalize the Ghana Armed Forces through training courses.

Linkages with the Millennium Challenge Corporation (MCC)

Ghana's first MCC Compact of \$547.0 million closed on February 16, 2012, having made considerable investments in Ghana's agriculture, transport, and rural development sectors. The GOG signed its second compact with the MCC on August 5, 2014 with an estimated launch date in early 2016. This five-year Compact will provide up to \$498.0 million to help transform Ghana's power sector. The Compact is noteworthy for its link to Power Africa. Expected outcomes include improved reliability and service delivery and a more continuous support for more cost effective power fuel supplies to improve power generation and access to electricity. The Compact is also structured to incentivize policy reforms that will increase private investment.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: In the area of Monitoring and Evaluation a number of activities were undertaken in FY 2015. They included:

- The Demographic and Health Survey (DHS) was completed and disseminated during FY 2015. The DHS provides data on key demographic and health indicators. Based on the DHS results, the health program incorporated more precise data into the development of new projects, and set accurate baselines and targets. The data helped determine the most efficient uses of program resources to achieve results under the Health Development Objective.
- The Second Population-Based Survey (PBS) of the Savannah Accelerated Development Authority (SADA) Districts provided updates and progress reports for identified FTF Indicators. The survey was conducted using rigorous methodological approaches to ensure precision and quality. The PBS covered 45 Administrative Districts in four regions: Northern, Upper East, Upper West and Brong Ahafo of the SADA Zone. The PBS provides data on the Poverty, Nutrition and Women in Agriculture Index to inform tracking for FTF and other health and agriculture-related programming in Ghana.
- USAID/Ghana has continued to geocode all interventions in the Geographic Information System Database on all key development indicators which will be crucial in targeting future development interventions in Ghana.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: The monitoring and evaluation activities conducted by USAID/Ghana will inform the following FY 2017 actions and decisions:

- The results of the Population-Based Survey (PBS) will be used by the Economic Growth Office and the Health, Population and Nutrition Office. Such information will help refine work plan indicators and indicator targets for Agriculture and Maternal and Child Health outcomes. The PBS will also help prioritize activities to maximize the intended impact of the Feed the Future Initiative interventions. The Ministry of Food and Agriculture, Ministry of Health, and Ghana Health Services will be guided by the results of PBS for planning, budgeting and monitoring.
- In a similar vein, results from Demographic and Health Survey (DHS) will be used to redefine the indicator targets for Health, Population and Nutrition programs. It will provide more precise data for the development of new projects, setting accurate baselines and targets, and determining more efficient program resource uses to achieve results. Similarly, the Ministry of Health and Ghana Health Services will be guided by the results of the DHS for planning, budgeting and monitoring.
- Within the Partnership for Education project, USAID will conduct three impact evaluations, focused

on: 1) teacher retention; 2) early grade math performance; and 3) a demand-driven topic. These evaluations will determine the impact of USAID programming and provide an evidence base to inform policy and implementation within Ghana's basic education system.

- The final performance evaluation of the Local Governance and Decentralization Project (LOGODEP) indicated all five targeted districts increased their respective ability to collect local taxes, also called internally generated funds (IGFs), up to 32 percent on average in one year, from 2013 to 2014. Furthermore, the evaluation determined LOGODEP had national impact with significant contributions to the Ghanaian Presidential Directive to name every street. With such favorable results, USAID, along with Deutsche Gesellschaft für Internationale Zusammenarbeit (GIZ) and Global Affairs Canada are designing a follow-on activity that will scale up IGF interventions in 55 districts.

Detailed Objective Descriptions

Sustainable and Broadly Shared Economic Growth: Ghana is faced with a number of challenges including low productivity in agriculture; weaknesses in key agricultural value-chains; limited access to credit; and an unreliable power supply that disrupts economic activity. The poverty gap between the north and the south has widened. The poor are directly impacted by the near collapse of the coastal fisheries which are an affordable source of protein for the majority of the population. USAID's economic growth assistance program focuses on agriculture and marine fisheries, including biodiversity and natural resource management, private sector growth, and energy sector reform. Explicit attention is given to reducing gender gaps in access to and control over key resources, and improved nutritional status. Activities work on value chain production and market linkages, agricultural research and technology transfer, access to credit and financial services, nutrition, land use management and gas supply, energy production and distribution. Together, these activities will help increase competitiveness of major value chains; improve the environment for private sector investment; increase government accountability and responsiveness especially in the power sector; and improve resiliency of vulnerable households and reduced under-nutrition.

Equitable Improvements in Health Status: Ghana has made significant but uneven progress in improving health over the past decade. One of the key bottlenecks across almost all health indicators in Ghana is the uneven progress between wealth quintiles and the uneven distribution of success between the impoverished North and the South. The Ebola threat underlined the importance of a strong and responsive healthcare system prepared and able to work across sectors and international borders, in response to such dangerous outbreaks. USAID assistance will enhance the health of Ghanaians by expanding access to quality health services; reducing the impact and spread of malaria, HIV/AIDS, and other infectious diseases; and increasing the use of preventative measures delivered through high quality and equitably distributed, community-based health care that includes family planning, maternal and child health care, hygiene, and improved nutritional practices. Assistance will support the adoption of positive health practices by individuals and communities and strengthen the capacity of community and district-level health officers to plan and manage health programs.

Improved Reading Performance in Primary School: Essential to realizing Ghana's future as a stable, lower middle-income country, U.S. government efforts help to develop and strengthen the foundation of human potential in the education sector through core programming in early grade reading and child literacy. Reading is the gateway to lifelong learning and is a pre-requisite for success in today's world. Children who do not learn to read in the first few grades of school will struggle to keep up with classroom assignments in later grades and have difficulty becoming self-guided learners as they become mature adults. Globally, studies have shown that learning outcomes, for which reading is a foundation, have a direct correlation to a country's economic growth (UNESCO, Education for All Global Monitoring

Report, 2013-2014). The assistance request for FY 2017 to support this “Improved Reading Performance in Primary School” will focus on supporting key Ghana education sector institutions and relevant local organizations to meet Ghana’s basic education sector priorities. U.S. government efforts will support the Ministry of Education and its institutions to achieve objectives to improve educational quality and management in its Education Strategic Plan for 2010–2020, with an emphasis on improved primary reading performance

Strengthened Responsive, Democratic Governance: In an effort to help consolidate democracy and improve Ghana’s democratic governance systems, U.S. assistance will support activities which counter systemic corruption; improve accountable governance at national and local levels; enhance political competition and consensus-building, particularly with a view towards increasing the participation of women in political decision-making; and ensure that the rights of marginalized populations are respected. Expected results include improved accountable governance at national and local levels; enhanced political competition and consensus-building (particularly with increased participation of women in the political decision-making process); and greater opportunities for civil society to engage government on topical governance issues.

Increased Capability of Security Forces and Defense Institutions: U.S. military assistance seeks to address Ghana’s internal and regional security challenges, while supporting the nation’s efforts to maintain a professional and apolitical military that contributes to security in Ghana and the West African Region.

Guinea

Foreign Assistance Program Overview

The Ebola Virus Disease outbreak of 2014 – 2015 significantly affected the advances that Guinea has made since democracy took root in 2010. Though the epidemic was largely brought under control late by 2015, Guinea will continue to face the social, economic, and health consequences of the Ebola outbreak. The Ebola outbreak highlighted the weak governance that has crippled the well-being and growth of the country for decades. Dysfunctional government administration, pervasive public corruption, and rampant infectious diseases exacerbated by malnutrition are among Guinea's challenges. Environmental sanitation is poor, cholera and typhoid epidemics occur regularly, along with pervasive malaria and diarrhea that kill many, especially children. U.S. assistance will increase the availability of quality health services and improve food security, with a particular focus on improving delivery of health services, strengthening health systems, and encouraging communities to access health services. Assistance will also target civil society, media programming, and strategic security sector reform to encourage the development of a rule of law culture in Guinea, which is critical to reshaping the country's institutions. The United States seeks to accomplish these objectives through effective collaboration with the Government of Guinea (GOG), other donors, local non-governmental organizations (NGOs) and the private sector.

Request by Account and Fiscal Year

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
TOTAL	24,039	*	26,160	2,121
Development Assistance	6,000	*	8,320	2,320
Global Health Programs - USAID	17,850	*	17,500	-350
International Military Education and Training	189	*	340	151

Development Assistance (DA)

U.S. assistance will support good governance programs, as well as agricultural development programs to help end extreme poverty and improve food security. Activities will support agricultural communities to promote availability of food and improved nutrition throughout the lean season, as well as increased profitability. Raising agricultural productivity will enable households to meet their food consumption needs and sell their surpluses for additional income. U.S. assistance will build on the progress made in previous investments to advance the evolving democracy in Guinea and secure peace and stability in the country. The United States will support good governance practices around issues such as legislative function, decentralization reform, rule of law and access to justice reform, which will continue to target women, youth, and other marginalized groups.

More Inclusive, Effective Participatory Governance for a Healthier Guinea

Key Interventions:

- U.S. assistance will provide \$0.5 million to support the development of a rule of law culture in Guinea, and encourage citizens to understand and exercise their legal rights and responsibilities. U.S. assistance will support efforts to educate citizens in the areas of justice and human rights standards.

- U.S. assistance will provide \$1.0 million to support the National Assembly to become an effective legislative body, and support national executive institutions to enact governance reforms to increase transparency and accountability and reduce corruption. The United States will also support fiscal decentralization and improved local democratic governance.
- The United States will provide approximately \$0.8 million to expand its support to civil society organizations by providing small grants to implement innovative activities in advancing democratic governance in Guinea. USAID will work with civil society organizations to build their capacity and help them demand quality services from local and national governments and become better informed advocates on these key issues.
- As part of the President's Global Hunger and Food Security initiative, Feed the Future (FTF), USAID will provide \$6.0 million to work with the GOG to implement agricultural development programs that remain critical to achieving core U.S. development and foreign policy goals, including combating extremism, achieving political and economic stability, reducing sources of conflict, reducing poverty, and accelerating and sustaining broad-based economic growth.

Global Health Programs (GHP)

Assistance provided through the GHP account will support the goals and principles of the Global Health Initiative (GHI) to achieve major improvements in health outcomes in three globally shared goals: ending preventable child and maternal deaths, creating an AIDS-free generation, and protecting communities from other infectious diseases. Activities will also complement U.S. government investments under the Global Health Security Agenda by strengthening the resilience and capacity of primary and secondary health care systems to meet Guinean's basic health needs, and bolster health system resilience and pandemic disease preparedness through effective identification and management of infectious diseases.

More Inclusive, Effective Participatory Governance for a Healthier Guinea

Key Interventions:

- **Malaria:** U.S. assistance under the President's Malaria Initiative (PMI) will provide \$12.0 million to expand efforts to scale up proven preventive and treatment interventions toward achievement of 85 percent coverage among vulnerable groups to support the PMI goal of reducing malaria-related morbidity by 50 percent. The FY 2017 request level for Guinea does not include the total projected funding for the PMI. Decisions on allocations of centrally-managed funds will be made at the time that the FY 2017 operating budget is set.
- **Maternal Child Health (MCH):** U.S. assistance will provide \$2.5 million to reduce maternal and child deaths by increasing the capacity of health sector human resources, increasing the use of antenatal care, improving safe delivery and obstetric care, integrated management of childhood illnesses, and health information and education, as well as strengthening the health system through improved supply chain management, procurement and quality of medicines. In addition, U.S. assistance will continue to support fistula prevention and management, including repair, and the social reintegration of women stigmatized due to their condition.
- **Family Planning and Reproductive Health (FP/RH):** USAID will provide \$3.0 million to continue to expand access to high-quality, voluntary, FP/RH services and commodities. The support will include institutional capacity building to improve leadership and health governance as well as to increase coordination among donors and other partners for effective implementation of the national FP/RH strategy. Programming will also promote the transparent management of health programs and resources, including contraceptive commodities.

International Military Education and Training (IMET)

IMET funding will continue to be used to reinforce the significant security sector reform advances that have occurred since the transfer to civilian authority in 2011. IMET-funded courses and training events

expose defense establishment personnel to U.S. military training, doctrine, and values. IMET activities are intended to promote democratic values, build capacity in key areas, increase the professionalization of forces, and build lasting military-to-military relationships.

The Guinean security services lack strong institutions to serve as a basis for the development of a modern force. As the Guinean military transitions to a republican force respectful of civilian control, the military will need assistance in developing its future leadership and will require assistance in developing a modern, professional officer corps. Training will be primarily implemented through the IMET program, focused on training junior officers in order to develop the next generation of leaders in the Guinean Armed Forces. Additionally, English language training is a critical need in the Guinean Armed Forces to allow them to engage U.S. trainers (whether IMET or military-to-military) and participate in regional missions.

Support the Training of the Guinean Armed Forces to Increase Their Professionalism and Increase Their Capability to Engage Regionally and Provide Necessary Domestic Security Functions

Key Intervention:

- Approximately \$0.3 million in U.S. assistance will be used to support the professionalization of the Guinean Armed Forces.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: Several evaluations, assessments and monitoring activities were undertaken in FY 2015 by USAID including:

- During FY 2015, USAID conducted a value-chain analysis; and horticulture, nutrition, aquaculture and rice assessments; to inform the design of new activities for the FTF initiative.
- In collaboration with the World Health Organization and the Global Fund, USAID conducted a service availability and readiness assessment to generate reliable and regular information on service delivery including: service availability to provide basic healthcare interventions in HIV/AIDS, tuberculosis, malaria, MCH, FP/RH, and other non-communicable diseases.
- USAID conducted several field visits, particularly in the democracy, governance and conflict prevention areas. Findings of this field monitoring have highlighted program successes and continuous needs to expand conflict mitigation and management programming in order to maintain stability in Guinea, especially in the Forest Guinea region. Moreover, USAID interventions in this volatile region have drawn attention from the U.S. Atrocity Prevention Board, which conducted an assessment in May 2015.
- Periodic pipeline reviews were conducted which helped USAID evaluate financial performance and reprogram available funds.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices:

- In response to the findings on the impact the Ebola epidemic had on the implementation of USAID activities, USAID altered the design of its health service delivery project to address the medium and long-term effects of infectious disease outbreaks.

Detailed Objective Descriptions

More Inclusive, Effective Participatory Governance for a Healthier Guinea: The United States will continue to support Guinea's national health strategy with a particular focus on health system strengthening and improved governance, participation, accountability and transparency. The approach will empower Guineans to demand change, and enable demand and access to quality health services, resulting in healthy populations, economic opportunities and social prosperity. By improving governance, health systems will be transformed into well-functioning and transparent institutions. Efforts will be coordinated with the Ministry of Health, other donors, local NGOs and the private sector. Specifically, U.S. assistance will work towards strengthening health systems and improving the delivery and quality of health services at the regional/community level through support of key national level policy areas, which will contribute towards obtaining optimal health outcomes. Further, U.S. assistance aims to strengthen transparent, competitive, accountable institutions and processes, increase community participation with regard to access to public services and improve economic opportunities and social prosperity through supporting the agriculture sector through promotion of access to markets and trade facilitation, as well as encouraging nutrition gains.

Support the Training of the Guinean Armed Forces to Increase Their Professionalism and Increase Their Capability to Engage Regionally and Provide Necessary Domestic Security Functions: U.S. assistance aims to advance security sector reform through training Guinean security forces to engage domestically and regionally.

Guinea-Bissau

Foreign Assistance Program Overview

Elections in 2014 restored constitutional rule in Guinea-Bissau following the April 2012 *coup d'état*. The new government, under the leadership of Prime Minister Domingos Simões Pereira, quickly secured support from the international community and embarked on an ambitious slate of reforms. President José Mário Vaz dismissed Simões Pereira's government in August 2015, and the subsequent political stalemate stalled progress of the reform program. The new government of Prime Minister Carlos Correia, established in October 2015, includes a number of ministers from the previous cabinet and will likely pursue the same reform objectives. Tensions between the government and President Vaz may resurface as a result of deep divisions within the ruling party. U.S. foreign policy goals are: support the development of a stable, democratic government; build effective government capacity to counter narcotics trafficking; and advance economic growth based on good governance and sound economic policy. FY 2017 U.S. foreign assistance to Guinea-Bissau focuses on professionalization of the country's military forces.

TOTAL	130	*	150	20
International Military Education and Training	130	*	150	20

International Military Education and Training (IMET)

As a result of Guinea-Bissau's history of troubled civil-military relations, Security Sector Reform is a top priority for the new, democratically-elected government. IMET-funded courses expose defense establishment personnel to U.S. military training, doctrine, and values. They also promote democratic values, build capacity in key areas, increase the professionalization of the forces, and build lasting military-to-military relationships.

Advance Regional Security Cooperation and Security-Sector Reforms

Key Intervention:

- Approximately \$0.2 million will be used to support the professionalization of Guinea-Bissau's military forces. Training programs will include a focus on civil-military relations and human rights.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: The Office of Security Cooperation (OSC) representative located in Dakar periodically reviews IMET activities and engages with IMET graduates regularly by monitoring their career development and rotation within the military.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: Based on the findings of OSC's evaluations, Embassy Dakar continues to include elements of E-IMET programming and professional military education as a part of its IMET-funded activities.

Detailed Objective Descriptions

Advance Regional Security Cooperation and Security-Sector Reforms: Reforming the country's civil-military relations is critical to peace and security and the long-term process of democratization. IMET training will educate the Bissau-Guinean military on human rights and rule of law concepts in an effort to end the cycle of violence and rivalry between military and civilian leaders.

Kenya

Foreign Assistance Program Overview

In the last few years, Kenya has embarked on a comprehensive and ambitious democratic reform process, including the devolution of government structures and authorities. The goal of devolution is to facilitate a more accountable and participatory system of governance that will allow for broader-based economic growth and improved service delivery at the local level. U.S. assistance in Kenya works across sectors to support this process with an overarching goal of sustainably strengthening regional peace, prosperity and security. These sectors include democracy, human rights and governance; elections in 2017; health including quality and accessibility, infectious diseases, child and maternal health, and water and sanitation; agriculture; private sector competitiveness; education and youth; and environment including biodiversity, adaptation for climate change and combating wildlife trafficking. In addition to participating in several Presidential Initiatives, Kenya is a Relief-to-Development Transition (R2DT) Focus Country and receives assistance to promote resilience and climate adaptation in drought-prone areas.

Development Assistance (DA)

DA funds will support Kenya's governance structures at the national and local levels by strengthening democratic institutions, advancing the implementation of the 2010 constitution and supporting civil society and public participation. U.S. assistance will leverage private sector investments and the participation of civil society organizations to ensure that Kenya's most vulnerable citizens have access to civic and economic opportunities. Economic growth programs will help spur entrepreneurship, improve the investment climate, and encourage an exchange of economic and agricultural expertise. Assistance will improve basic education outcomes particularly early grade reading, and increase social and economic opportunities for youth through workforce and skill development. Environment programs will advance the continued successful transformation of community conservancies across critical biodiversity-rich landscapes, creating opportunities for inter-tribal peace, climate adaptation, sustainable livelihoods and protection of endangered species vulnerable to poaching and international trafficking. Partnerships with the Government of Kenya (GOK) and the U.S. government will advance progress in climate adaptation, low-emissions, and resilience.

Devolution Effectively Implemented

Key Interventions:

- Devolution activities are strongly integrated across the portfolio and complemented by indirect attributions from other sectors including health, agriculture, basic education, and environment. Activities totaling \$7.8 million will provide targeted technical assistance, training, and material support to national and county governments as well as non-governmental entities to implement devolution. Targeted county governments will strategically plan, manage, budget, and account for funds; raise additional revenue; engage with citizens; and deliver high-quality services.
- Effective security sector governance can help to prevent, deter, discover and punish misconduct, including corruption, other criminal activity and human rights abuses. As part of the Security Governance Initiative (SGI), funds will be used to assist USAID to better assess, design, implement and evaluate security governance and justice sector projects as they are developed jointly with the Kenyan government through the SGI Joint Country Action Plan planning processes. These activities

will foster public participation in governance and build links between local governments and citizens to help mitigate conflict.

- Interventions totaling \$2.0 million will provide technical assistance and training to the Independent Electoral and Boundaries Commission and other bodies responsible for elections administration, dispute resolution, electoral security, early warning-early response, women's political participation, political party strengthening, election observation, and voter registration and education. These interventions will contribute to free, fair, and peaceful elections in Kenya in 2017 followed by a peaceful transition of power nationally and locally after the elections.

Health and Human Capacity Strengthened

Key Interventions:

- Basic Education: Approximately \$9.8 million in basic education funding will improve reading skills and increase equitable access to education, in line with USAID's Education Strategy. Interventions will focus on expanding access to quality basic education for over five million young learners nationwide — approximately half will be female — concentrating on improving reading outcomes through state of the art learning materials and new methodologies in every Kenyan primary school, including areas affected by conflict and crisis.
- Higher Education: U.S. assistance of up to \$1.3 million will build on lessons learned under the Yes Youth Can! Project and help improve the ability of workforce development programs to take help address Kenya's youth bulge and the overall demographic dividend as a majority of Kenya's population moves into their productive working years. Youth workforce development programming will leverage resources through public and private sector partnerships to augment higher education and private sector competitiveness funding.
- U.S. assistance of \$2.0 million will increase the number of youth engaged in sustainable commercial agriculture by focusing on commodities, production, and marketing services of interest to rural and urban youth. Assistance will increase the number of youth entrepreneurs adopting agricultural innovations that improve food security.

Inclusive, Market-Driven, Environmentally Sustainable Economic Growth Achieved

Key Interventions:

- As part of the President's Global Hunger and Food Security initiative, Feed the Future (FTF), USAID will provide \$40.0 million to support the efforts of the GOK to refine and implement a country-led comprehensive food security strategy to reduce hunger and increase economic growth through market-led agricultural development. These strategies aim to reduce hunger, improve nutrition and promote broad based economic growth through agricultural development.
- U.S. assistance programs will continue to mobilize capital for development gains, increasing access to finance through loan guarantees, private equity, agricultural production, and marketing finance and bringing farmer-friendly banking services to the market.
- U.S. assistance of \$1.0 million will improve the competitiveness and innovation of producers, institutions, and the private sector involved in the production, trade, and value-addition of food and related commodities derived from horticulture, livestock (dairy and meat animals), cereals, and pulses.
- Water Supply, Sanitation, and Hygiene (WASH): Approximately \$4.0 million in development assistance funding will catalyze market-based service delivery of WASH with new technologies and private sector involvement and reduce the service burden on counties. R2DT activities continue to contribute to improved food security and prevent asset depletion for chronically food insecure households, while stimulating markets, improving access to services, improving natural resource management, and rehabilitating and strengthening disaster risk management at the community level.
- The United States, through the Power Africa initiative, will invest a proposed \$2.0 million in clean

energy assistance to support Kenya's efforts in power generation and transmission. Efforts will foster both private sector-led renewable energy transactions to increase power generation, and support the GOK to better manage and transmit energy.

- Proposed Global Climate Change initiative funding will include participation in the Enhancing Capacity for Low Emission Development Strategies program, helping Kenya to develop and implement national action plans for low emissions development, measure and curb greenhouse gas emissions, and pursue opportunities for private sector investment and clean growth.
- Biodiversity funding of \$1.9 million will advance implementation of Kenya's progressive Wildlife Conservation and Management Act and will be used to advance the extremely successful community conservation model within existing as well as to new, critical biodiverse landscapes; and support national policy reform and county-level implementation.
- Additional resources will bolster the Kenyan Government's capacity to combat wildlife trafficking at the national and regional levels, and support targeted counter-wildlife trafficking activities through the Kenya Wildlife Service. Interventions will be aimed at dismantling permissive systems supporting trans-national wildlife crime.

Foreign Military Financing (FMF)

FMF programs will continue to professionalize the Kenyan military by providing training and equipment to strengthen Kenya's ability to secure the border to counter terrorism and violent extremism, participate in peacekeeping operations, and to sustain prior investments in maritime and land border security.

Capacity to Prevent and Respond to Threats of Crime, to Counter Terrorism, and to Contribute to Regional Peace and Security Strengthened

Key Intervention:

- \$1.0 million in U.S. assistance will support building the capacity of the Kenyan military including for maritime and border security, counterterrorism, and peacekeeping by providing training and equipment.

Global Health Programs (GHP)

Assistance provided through the GHP accounts will support the goals and principles of the Global Health Initiative (GHI) to achieve major improvements in health outcomes in three globally shared goals: ending preventable child and maternal deaths, creating an AIDS-free generation, and protecting communities from other infectious diseases. U.S. assistance in Kenya will scale up health impacts in focus geographical areas in maternal, neonatal, and child health; malaria prevention and control; family planning and reproductive health; nutrition; tuberculosis control; and HIV/AIDS prevention, treatment, and care. Funding and activities in family planning and reproductive health, maternal neonatal and child health and nutrition will contribute to the goals of the Global Financing Facility and Kenya's Investment Framework. Kenya's transition to a devolved system of government is providing profound challenges and opportunities for the health sector.

Health and Human Capacity Strengthened

Key Interventions:

- HIV/AIDS: As part of the President's Emergency Plan for AIDS Relief (PEPFAR), Kenya will receive \$456.7 million to build partnerships that provide integrated prevention, care, and treatment programs throughout the country and support orphans and vulnerable children. Additional details of activities to be undertaken under this program will be provided in the PEPFAR Supplement to this Congressional Budget Justification.
- Tuberculosis (TB): Proposed funds include \$4.0 million to increase access to quality-assured TB

services nationwide, through the identification and implementation of evidence-based activities that support and/or complement the activities of the Kenyan Ministry of Health's TB, Leprosy, and Lung Diseases Unit.

- **Malaria:** U.S. assistance under the President's Malaria Initiative (PMI) will provide \$35.0 million to expand efforts to scale-up proven preventive and treatment interventions toward achievement of 85 percent coverage among vulnerable groups to support the PMI goal of reducing malaria-related morbidity by 50 percent. The FY 2017 request level for Kenya does not include the total projected funding for the PMI. Decisions on allocations of centrally managed funds will be made at the time that the FY 2017 operating year budget is set.
- **Maternal and Child Health:** Approximately \$16.0 million of proposed assistance will strengthen capacity and service delivery in birth preparedness and maternity services; treatment of obstetric complications and disabilities; and newborn and child care treatment, immunization and nutrition at community and facility levels. Funds will support focused and high-impact interventions during a mother's most critical 24-hour period around labor, delivery, and post-partum to reduce maternal and newborn mortality. Activities are aligned to the global effort to end preventable child and maternal deaths. Programs will increase awareness of the importance of safe drinking water, sanitation, and hygiene to lower the rates of diarrheal illness and improve appropriate management of diarrhea.
- **Family Planning and Reproductive Health (FP/RH):** GHP funds amounting to approximately \$26.0 million will expand access to a sustainable, high-quality voluntary family planning and reproductive health by providing training and supplies to the public, private, and non-governmental sectors. In addition, programs will emphasize increased access to youth-friendly FP/RH services in public health facilities in Kenya.
- **Nutrition:** U.S. assistance of approximately \$4.0 million will expand and improve community-level nutrition activities including breast-feeding promotion, improved household hygiene, and investigation of locally-made child food supplements. Programs will be integrated and linked to FTF. They will advance FTF and relief-to-development objectives and, in coordination with agriculture programs, support women, children, and vulnerable households by promoting nutrition programs.

International Military Education and Training (IMET)

IMET-funded courses expose Kenyan military personnel to U.S. military training, doctrine, and values; promote democratic values; build capacity in key areas; increase the professionalization of forces; and build lasting military-to-military relationships. IMET-funded programs will continue to focus on Kenyan military officers who are emerging leaders and who will provide positive influences and leadership in their services.

Capacity to Prevent and Respond to Threats of Crime, to Counter Terrorism, and Contribute to Regional Peace and Security Strengthened

Key Intervention:

- \$0.9 million will continue the professionalization of the Kenyan military including senior-level professional military education courses that promote respect for democratic values and human rights, strengthen civil-military relationships, and enhance senior leadership strategic management skills.

International Narcotics Control and Law Enforcement (INCLE)

U.S. assistance will support programs that encourage better governance and enhanced respect for human rights through the development and reform of the criminal justice sector. Strengthening the institutional capacity of the police services will ensure transparency and accountability, and will serve to combat endemic corruption.

Capacity to Prevent and Respond to Threats of Crime, to Counter Terrorism, and Contribute to Regional Peace and Security Strengthened

Key Intervention:

- U.S. assistance of \$1.0 million will be used to build Kenyan institutions designed to address police accountability. Programs will continue to offer operational and technical assistance to the new Kenyan Internal Affairs Unit of the National Police Service, the Independent Policing Oversight Authority, and the National Police Service Commission. The latter two agencies are civilian and offer external oversight to the police. With effective oversight of these three structures, the police should become a more accountable and trusted institution.

Nonproliferation, Antiterrorism, Demining and Related Programs (NADR)

Chronic insecurity in several regions and a long, porous border with Somalia place competing demands on Kenya's national security resources. U.S. programs will help Kenya address the need for security sector reform and conflict mitigation.

Capacity to Prevent and Respond to Threats of Crime, to Counter Terrorism, and Contribute to Regional Peace and Security Strengthened

Key Interventions:

- NADR-Antiterrorism Assistance (ATA) in the proposed amount of \$4.5 million will continue to help professionalize Kenya's counterterrorism law enforcement community. ATA will build capacity in the areas of land border security (especially the country's land border with Somalia), counterterrorism investigations, and counterterrorism crisis response with a strong emphasis on strengthening the skills, commitment, and knowledge necessary to conduct operations in accordance with international human rights conventions. ATA's continued support to Kenya's border security forces will be coordinated with the U.S. Department of Homeland Security, Customs and Border Protection. ATA may also support multi-agency maritime security patrols.
- NADR-Export Control and Related Border Security assistance in the proposed amount of \$0.5 million will support continued technical training of the Kenyan government on nonproliferation, as well as equipment donations and legal and regulatory assistance to strengthen the Kenyan government's strategic trade controls system.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: Several monitoring and evaluation efforts were undertaken in FY 2014 and FY 2015:

- Mid-term evaluations for the following programs were completed: (1) the USAID public-private partnership, Wings to Fly, which provides full scholarships to enable academically gifted but economically-disadvantaged and vulnerable children from conflict- and crisis-affected parts of the country to pursue secondary education; (2) *AfyaInfo* or "HealthInfo," which supports the Kenyan government to build a unified web-based health information system; (3) *Funzo Kenya* or "Training Kenya," which trains health workers to strengthen the Kenyan government's health systems for human resources; and (4) three Countering Violent Extremism activities.
- Final performance or impact evaluations were conducted for the following activities: (1) Yes Youth Can (YYC) – Impact Evaluation; (2) Conflict Mitigation and Civil Society Strengthening Activities – Performance Evaluation; (3) Elections Assistance Evaluation – Performance Evaluation; (4) AphiaPlus Health Communications and Marketing – Performance Evaluation; (5) Financial Inclusion in Rural Markets – Performance Evaluation; (6) Parliamentary Strengthening Program – Performance Evaluation; and (7) *APHIAPlus Kamili, Nuru ya Bande and Nyanza-Western*, three integrated health service delivery programs.

A series of assessments also helped to shape current and future programming. Key assessments from FY 2014-FY 2015 and planned for FY 2016 include the following: (1) Workforce Connections: Kenya Youth Assessment; (2) Baseline Assessment of *Tusome*, USAID/Kenya's Early Grade Reading Project; (3) Gender Assessment and Action Plan for improved gender programming in CDCS projects and activities; (4) Baseline for Development Objective 1: Devolution Effectively Implemented; (5) Peace Initiative Kenya; and (6) Kenya Conflict Assessment.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: USAID/Kenya applied results from the various monitoring and evaluation (M&E) activities identified above to all stages of the program cycle. The Mission also applied lessons learned and recommendations from M&E activities to define priorities and development goals during strategic planning processes. Results were also used to design and plan new procurements and to make course-corrections in the management of ongoing projects. Below are examples of how M&E results were applied:

- In the design of a new Youth Workforce Development project, the Mission incorporated the findings from assessments and evaluations such as the YYC impact evaluation and the "Workforce Connections: Kenya Youth Assessment" to better define and meet the economic and youth workforce needs in Kenya today.
- The Electoral Assistance Evaluation and the Rapid Assessment Review looked at the effectiveness of USAID's electoral assistance program, which was designed to support free, fair, transparent, and peaceful 2013 general elections in Kenya. These reports will be further used as the Mission designs an electoral assistance program to support the next national elections.
- The Conflict Mitigation and Civil Society Strengthening Evaluation looked at the effectiveness of USAID's conflict mitigation and civil society strengthening program from 2007-2013. The findings were immediately used in the design of four new conflict mitigation and civil society strengthening activities, and provided valuable input into USAID/Kenya's strategic planning process. One finding was the need to look for new sustainable approaches to civil society strengthening, leading the Mission to partner with the Aga Khan Foundation for a new activity that embodies a community philanthropy approach. The evaluation also influenced USAID/Kenya's expansion of its countering violent extremism programming and the program design of support for the upcoming 2017 general elections.

Detailed Objective Descriptions

Devolution Effectively Implemented: U.S. assistance will support the establishment and operationalization of effective, devolved structures of governance; improved legislative and policy processes; and greater citizen engagement and oversight of government actions. The United States will continue to collaborate with the international community in support of devolution. These efforts will contribute to local government legitimacy, improve the provision of quality services to citizens, and forge a stronger link between citizens and government at both the national and county levels. Assistance will address the obstacles to sustainable economic growth, including weaknesses in Kenyan institutions and regulatory policies. Reforms that facilitate broad-based economic development at the national, regional, and local levels, and improve accountability and transparency in the management of public resources will help ensure Kenya achieves its democratic and economic potential. Results will include sustainable civil society organizations effectively representing citizen interests and requirements to county governments. By addressing underlying grievances, programs aim to mitigate conflict and decrease conditions that lead to violent extremism.

Health and Human Capacity Strengthened: U.S. assistance will support activities to address significant constraints faced by Kenya's health and education systems at the national and county level to measurably improve outcomes in maternal mortality rates and newborn deaths, HIV transmission, the malaria burden,

and early-grade reading proficiency. Assistance will build the capacity of health and education institutions and systems to sustainably deliver and finance quality services in the long term, strengthening the foundational human capital needed to fuel Kenya's development. Assistance will bolster the government's ability to respond to challenges; reduce Kenya's reliance on donor funding to support service delivery; and stimulate private sector investments that contribute to better health and education outcomes for a healthier, more productive workforce. Additionally, programs will equip youth to improve health and education, increase employability skills, and develop individual and community resilience to extremism and manipulation.

Inclusive, Market-Driven, and Environmentally Sustainable Economic Growth Achieved: U.S. assistance will ensure improvement in the overall business and governance environment to accelerate economic growth. Assistance will promote agricultural productivity and innovations, value chain competitiveness, and agribusiness while conserving natural resources and strengthening resilience. Support for policy and regulatory reforms will reduce the burden of compliance, create incentives to unlock Kenyan capital for productive use, and reduce barriers to domestic and international trade. Interventions will address the most binding constraints to growth at the national and county level through activities such as improving non-urban infrastructure, specifically in energy and transport, and simplifying regulatory processes. Resilience investments will help Kenya adapt to extreme climate variations, which cause recurrent droughts and floods. Interventions will address deforestation, poor water management, and population growth to improve access to clean and safe drinking water. Technical assistance will help the GOK and the private sector implement clean, renewable, reliable, cost-effective energy systems under low-emissions growth models. Assistance will also help the GOK, non-government organizations, and the private sector to combat wildlife trafficking while simultaneously supporting critical landscape-scale conservation efforts through community conservancies. Critical policy support work will facilitate the harmonization of county-level policies to new national policies and laws for natural resource management and community land rights.

Capacity to Prevent and Respond to Threats of Crime, to Counter Terrorism, and to Contribute to Regional Peace and Security Strengthened: U.S. assistance aims to improve the capacity of security, law enforcement, and judicial institutions to respond to threats of crime and terrorism, while advocating for civilian oversight, accountability, and respect for human rights. U.S. intervention will leverage the expertise of multiple U.S. government agencies.

Lesotho

Foreign Assistance Program Overview

U.S. assistance to Lesotho supports the development of a stable, prosperous, and healthy nation. One of Lesotho's greatest challenges is a severe HIV/AIDS epidemic. U.S. assistance to address the epidemic complements a significant effort by the Government of Lesotho, other donors, and many U.S. nongovernmental organizations and universities. The U.S. government also seeks to enhance the professionalization of Lesotho's military by promoting democratic values. These efforts support the broader U.S. government objective of supporting institutions that help underpin the country's struggling democracy.

Global Health Programs (GHP)

Assistance provided through the GHP accounts will support the goals and principles of the Global Health Initiative (GHI) to achieve major improvements in health outcomes in three globally shared goals: ending preventable child and maternal deaths, creating an AIDS-free generation, and protecting communities from other infectious diseases.

Lesotho's 23.4 percent adult HIV prevalence rate is one of the highest in the world. An estimated 28 percent of children are orphans; UNAIDS estimates that about two-thirds of these children lost parents to HIV/AIDS. Due to high HIV prevalence, Lesotho also suffers from one of the highest tuberculosis rates in the world and multiple-drug-resistant strains are present. Food insecurity is also a critical issue with 39 percent of Basotho children under-five years of age identified as stunted due to malnutrition. The nascent steps taken by Lesotho's Ministry of Health towards national healthcare reform, and its increasing demonstration of partnership with the United States, present an opportunity to scale-up health programs throughout the country. Delivering on the promise of an AIDS-free generation, activities under the President's Emergency Plan for AIDS Relief (PEPFAR) will continue to work to reduce new HIV infections and decrease AIDS-related mortality through support for the scale-up of care and treatment interventions. This support will allow Lesotho to reach saturation of services in priority districts with an aim to expand epidemic control and stem new infections.

Lesotho Continues Rapid Expansion of HIV/AIDS Services

Key Intervention:

- **HIV/AIDS:** As a part of PEPFAR, Lesotho will receive approximately \$47.4 million (of which \$41.0 million in GHP-State and \$6.4 million in GHP-USAID) to build partnerships to provide integrated prevention, care, and treatment programs throughout the country and support orphans and vulnerable children. Additional details of activities to be undertaken under this program will be provided in the PEPFAR Supplement to this Congressional Budget Justification.

Lesotho's Health Systems have the Capacity to Sustain the National HIV/AIDS Response

Key Intervention:

- HIV/AIDS: As a part of PEPFAR, Lesotho will receive approximately \$23.7 million to build partnerships that provide integrated prevention, care, and treatment programs throughout the country and support orphans and vulnerable children. Additional details of activities to be undertaken under this program will be provided in the PEPFAR Supplement to this Congressional Budget Justification.

International Military Education and Training (IMET)

The U.S. government will provide support through IMET-funded courses that will expose Lesotho's defense personnel to U.S. military training, doctrine, and values. These activities are intended to promote democratic values, build capacity in key areas, increase the professionalization of the forces, and build lasting military-to-military relationships. While the Lesotho Defense Force prioritizes its roles in border security and humanitarian disaster response, it has targeted participation in regional peacekeeping efforts as a key goal for future development. Funds may be used to support training military or defense-related civilian personnel.

Lesotho's Security Services Are Professional and Respect Human Rights and the Rule of Law

Key Intervention:

- IMET funds will support professionalization of the military, as well as courses in civilian control of the military, human rights, military justice, and management of defense resources.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities:

- At the beginning of Lesotho's Country Operational Plan development process and related budgetary allocations, the PEPFAR team conducted an interagency portfolio review. The review assessed all PEPFAR-funded implementing partners' accomplishments against targets, costs, achievements, absorptive capacity, and the quality of the results being achieved.
- Data quality assessments have been conducted and have informed data-strengthening activities, including tool revisions. These exercises built on monitoring and evaluation processes inherent in all implementing partner agreements.
- The United States continues to support national surveys. Ongoing support for the dissemination of the Lesotho Demographic and Health Survey will provide population level information to measure progress towards the Millennium Development Goals.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices:

- Monitoring and evaluation activities such as the PEPFAR Site Improvement Monitoring System (SIMS) informed the FY 2017 budget request. The data gathered through SIMS on the performance of clinical and community sites will be used to develop individualized capacity building and quality improvement plans for PEPFAR partners.
- The Government of Lesotho is fully engaged in planning and implementing programs in Lesotho. The U.S. government holds biannual health summits with the Ministry of Health to develop the partnership and foster increased levels of joint planning to leverage funding fully and enable programmatic synergies – maximizing the impact of U.S. support.

Detailed Objective Descriptions

Lesotho Continues Rapid Expansion of HIV/AIDS Services: PEPFAR programming will support Lesotho's National Strategic Plan for HIV and AIDS through saturation of antiretroviral treatment (80 percent coverage of people living with HIV in three districts by 2017 and an additional two districts by 2018). This will be achieved through programmatic support in the priority districts at the service delivery site and health system levels to rapidly scale-up integrated prevention, care and treatment programs and to continue addressing the needs of orphans and vulnerable children.

Lesotho's Health Systems have the Capacity to Sustain the National HIV/AIDS Response: PEPFAR programming will support HIV-related policy reform efforts, and system-wide approaches for strengthening the national HIV/AIDS response by improving national procurement and logistics systems for health commodities. Human resources for health investments will be directed towards building a sustainable nurse-led HIV /AIDS response using nurse initiated and managed anti-retroviral therapy; strategic information capacity building for nationally executed routine monitoring, health information systems and surveillance to inform decision making towards epidemic control; and laboratory infrastructure strengthening for improved access, quality, and coverage of HIV, TB and opportunistic infection diagnostic testing and viral load monitoring of patients in HIV care and treatment programs.

Lesotho's Security Services are Professional and Respect Human Rights and the Rule of Law: The Government of Lesotho's implementation of security sector reform, one of its top policy priorities, will allow the Ministry of Defense counterparts and security personnel to receive professional military education through IMET funding, where they will gain an understanding and appreciation of U.S. military culture, leadership, organization, decision-making processes and most importantly, a military structure under a civilian government. These personnel will build networks of U.S. and international military associates and colleagues, creating opportunities for future collaboration.

Liberia

Foreign Assistance Program Overview

The Ebola Virus Disease outbreak of 2014 – 2015 dramatically affected the progress that Liberia had made towards sustained development since the end of the 14-year civil war. While Liberia demonstrated strong leadership and partnership with the international community in successfully controlling the outbreak, the emergency highlighted institutional flaws, which undermined the population's trust in the Government of Liberia (GOL). Though the disease outbreak was largely brought under control by mid-2015, Liberia continues to suffer the social, economic, and health consequences of a national crisis that cut off access to basic services, slowed domestic trade, and curtailed international travel and commerce for an extended period. U.S. assistance in FY 2017 will continue to be an essential part of helping to bring the country back onto a sustainable development path. The United States will continue to promote a secure, stable Liberia with enhanced rule of law, broad-based economic development, and improved education and health systems.

Economic Support Fund (ESF) - OCO

U.S. assistance will promote good public governance while strengthening the rule of law and protection of human rights in Liberia, helping to mitigate social and economic conflicts, prevent gender-based violence, improve access to justice, and provide a more predictable investment climate. In addition, U.S. assistance will increase the availability of potable water, sanitation and hygiene, expand access to quality education at all levels, help revitalize key economic sectors, and support the efforts of the GOL to refine and implement a country-led comprehensive food security strategy to reduce hunger and increase economic growth through market-led agricultural development.

More Effective, Accountable and Inclusive Government

Key Interventions:

- Approximately \$15.5 million will be used to build, strengthen, and maintain critical public administration functions at national and local levels, such as systems for improved management of policy-making, budget and financial accounting, human resources, information and communications technology, land governance, natural resources concessions, and performance monitoring.
- Approximately \$4.5 million will help to strengthen and deepen the technical capacity of the National Elections Commission to manage free and fair elections for national, county, and local government offices. The assistance will support election observation, and the development of Liberian political parties into more effective organizations for channeling participation and citizen concerns into the political process.
- Approximately \$4.0 million will be used to support the GOL's anti-corruption and transparency strategies through improved government systems and practices, freedom of information, and improved human and institutional capacities of Liberia's rule of law and anticorruption institutions.
- With approximately \$6.5 million, the mission will seek to increase the human and institutional capacity of civil society and media organizations through organizational development and financial sustainability, as well as improve access to information and civic education on citizen engagement to hold government accountable.

Sustained, Market-driven Growth Reduces Poverty

Key Interventions:

- As part of the President's Global Hunger and Food Security initiative, Feed the Future (FTF), USAID will provide \$7.0 million to support the efforts of the GOL to refine and implement a country-led comprehensive food security strategy to reduce hunger and increase economic growth through market-led agricultural development. These strategies aim to reduce hunger, improve nutrition and promote broad based economic growth through agricultural development.
- Approximately \$4.0 million in activities will build host country human capacity to develop and promote community-based natural resource management and enterprise development that leads to environmentally sustainable and equitable economic benefits for rural residents. Activities will also strengthen economic activities at the community level and for small- and medium-sized enterprises (domestic timber, other forest products, and oil palm production processing and marketing), while ensuring good governance of the natural resource base (community forestry and well-managed small plantations and businesses), resulting in improved biodiversity outcomes, sustainable land and forestry management, and social sustainability in the forestry sector.

Better Educated Liberians

Key Interventions:

- Approximately \$7.0 million in basic education funding will be used to improve student reading skills by targeting effective early grade reading approaches through in-service teacher training, data collection and analysis, materials development, and community mobilization. Approximately \$4.0 million will be used to increase access to school, making learning spaces safer and healthier, ensuring age-appropriate enrollment, and improving school management. Approximately \$3.5 million will be used to support human and institutional capacity development activities with the Ministry of Education at the central and decentralized levels, building and strengthening management systems and the education sector's capacity to deliver educational services and assess learning outcomes. Approximately \$3.0 million in basic education funding will be used to support implementation of a national education information management system to ensure data-driven decision-making; and strengthen teacher management systems for the transparent recruitment, deployment, compensation and training of teachers.

- Approximately \$1.3 million in higher education funds will be used to build literacy, numeracy, life skills, and livelihood pathways for out-of-school youth who have not had opportunities to get adequate education.

Improved Health Status of Liberians

Key Intervention:

- Approximately \$5.1 million will be used to improve water supply and sanitation infrastructure, supporting completion and operations of three new municipal water plants constructed with U.S. government funds, and supporting increased U.S. government assistance for improved rural water supply; strengthening the management and maintenance systems for sustainability; promoting point-of-use water treatment; scaling-up community-led total sanitation; and promoting sanitation and hygiene behavior change.

Foreign Military Financing (FMF) - OCO

Continued support through the FMF program is essential to the development and professionalization of the Armed Forces of Liberia (AFL), and consequently the stability of the country and the region. A professional military will assist Liberia to prepare for future national emergencies. Funds will support training, equipment, and advisory support for the AFL, including the Coast Guard.

Enhanced Security, Stability and Respect for Rule of Law

Key Intervention:

- Approximately \$2.5 million will provide mentorship, training and education opportunities for both Ministry of Defense civilians and AFL leadership to continue developing leadership, management and administrative skills critical to a properly functioning institution; build AFL capacity to maintain a reliable and safe vehicle fleet, as well as support the development of repair and parts acquisitions systems through a maintenance and service program for the fleet of tactical vehicles; and continue support of the Liberian Coast Guard to reinforce the successful development of a maritime capability and expand its search and rescue capabilities, as well as prevent illegal fishing and smuggling in Liberia's maritime domain.

Global Health Programs (GHP)

Assistance provided through the GHP accounts will support the goals and principles of the Global Health Initiative (GHI) to achieve major improvements in health outcomes in three globally shared goals: ending preventable child and maternal deaths, creating an AIDS-free generation, and protecting communities from other infectious diseases. Activities will also complement U.S. government investments under the Global Health Security Agenda by strengthening the resilience and capacity of primary and secondary health care systems to meet Liberians' basic health needs, and bolster health system resilience and pandemic disease preparedness through effective identification and management of infectious diseases.

Improved Health Status of Liberians

Key Interventions:

- HIV/AIDS: Liberia will receive \$3.5 million (of which \$0.4 million in GHP-State and \$3.2 million in GHP-USAID) to support the national HIV/AIDS strategy and the goals of the President's Emergency Plan for AIDS Relief (PEPFAR).
- Malaria: U.S. assistance under the President's Malaria Initiative (PMI) will provide \$12.0 million to expand efforts to scale up proven preventive and treatment interventions toward achievement of 85 percent coverage among vulnerable groups to support the PMI goal of reducing malaria-related

morbidity by 50 percent. The FY 2017 request level for Liberia does not include the total projected funding for the PMI. Decisions on allocations of centrally-managed funds will be made at the time that the FY 2017 operating budget is set.

- **Maternal and Child Health:** U.S. assistance of \$8.0 million in FY 2017 will continue to support Liberia's commitment to "A Promise Renewed," intended to reduce maternal and child mortality. This assistance will increase access to and utilization of high-quality antenatal care, safe delivery, post-natal care, and emergency obstetric and neonatal services with appropriate infection prevention measures. In addition, U.S. assistance will continue support for routine immunization, integrated management of childhood illnesses, and integrated community case management of malaria, diarrhea, and pneumonia, as well as strengthen the broader health system to effectively deliver quality family health services under Liberia's Essential Package of Health Services.
- **Family Planning and Reproductive Health (FP/RH):** With \$7.0 million, FP/RH programs will expand access to high-quality, voluntary FP/RH services and information. Programs will allow couples to make informed decisions on the number and spacing of births, and more specifically the timing of the birth of their first child. These interventions, along with support to strengthen management and stewardship of health sector resources, particularly at the decentralized level, will make substantial contributions to reduce abortion rates, decrease unwanted and unplanned teenage pregnancies, as well as mitigate maternal and infant mortality and morbidity.

International Military Education and Training (IMET)

IMET-funded courses and training events expose defense establishment personnel to U.S. military training, doctrine, and values. IMET activities are intended to promote democratic values, build capacity in key areas, increase the professionalization of forces, and build lasting military-to-military relationships. IMET funds have had a noticeable effect on the professionalism and competency of the soldiers, non-commissioned officers, and officers of the AFL.

Enhanced Security, Stability and Respect for Rule of Law

Key Intervention:

- Approximately \$0.4 million will be used to continue to support education courses for senior- and mid-level professional military and civilian defense personnel that promote respect for human rights, strengthen civil-military relationships, and enhance management skills across the AFL and Ministry of Defense.

International Narcotics Control and Law Enforcement (INCLE) - OCO

U.S. policy for Liberia involves supporting stability and security and strengthening the rule of law through building capacity in the justice and civilian security sectors. Liberia's development progress, particularly in the years immediately following the United Nations Mission in Liberia (UNMIL) and during the 2017 Presidential Election, is increasingly linked to stable security and legal sectors and respect for the rule of law. United States assistance to civilian law enforcement, and particularly to the Liberia National Police (LNP), will continue to assist Liberian law enforcement entities to develop senior leadership, crisis management, and professional and administrative divisions so the GOL becomes fully responsible for its own security. In addition to routine tasks, the judicial and law enforcement sectors will be charged with maintaining peaceful and transparent voter registration and election processes. To that end, and in general, community policing and nationwide police coverage are increasingly prominent in the civilian law enforcement agenda. Simultaneously developing institutions and processes within the justice sector is equally important, thus programming will include the judiciary and rule of law divisions within the Ministry of Justice and ancillary agencies involved in law and legal reform. Department of State-led efforts through contracts and grants to international and local organizations, will coordinate with and complement the programming of other donors, and support the broader strategy to assist the GOL.

U.S. assistance will also provide technical training and assistance, as well as advising, mentorship, and materials to criminal justice institutions to promote adherence to the rule of law.

Enhanced Security, Stability and Respect for Rule of Law

Key Interventions:

- Approximately \$7.3 million will be used to provide technical assistance, training, and material support to civilian law enforcement agencies and leadership to strengthen and expand their operational and administrative capacity, including building communications capacity. Funds will also be used to strengthen community engagement with security forces and foster a culture of respect for the rule of law with the aim of preventing violence and securing stability, particularly in border counties. Some funding will be used to strengthen the capacity of civilian law enforcement entities in responding to the growing threat posed by narcotics trafficking in West Africa.
- Approximately \$0.3 million will be used to provide assistance for decreasing drug demand and enhancing the treatment programs for persons suffering from drug addiction in Liberia.
- Approximately \$3.5 million will be used to support efforts to build the capacity of prosecutors, public defenders, court and corrections officials, and other justice sector actors through the provision of professional training and technical assistance. Funds will support the development of legal skills and knowledge-based training in crime investigation and prosecution, of more complex crimes, such as financial corruption and transnational organized crime. Continuing emphasis will be placed on further strengthening police-prosecutor cooperation. Funds will also be used to strengthen citizen engagement in legal processes and increase access to justice for all Liberians, especially for more vulnerable groups, including the indigent, women, children, and victims of sexual and gender-based violence.

Peacekeeping Operations (PKO) - OCO

U.S. assistance plays a critical role in rebuilding the AFL. The United Nations Mission in Liberia has provided international military peacekeepers since 2003; however this program continues to be drawn down dramatically. The AFL and LNP are expected to assume greater responsibility for Liberia's external and internal security, but are not yet ready to stand on their own.

Enhanced Security, Stability and Respect for Rule of Law

Key Intervention:

- Approximately \$1.0 million of funding will provide advisory support for military professionalization.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: Several monitoring and evaluation efforts were undertaken in FY 2015:

- A final performance evaluation of the Liberia Energy Sector Support Program identified priority areas that should be the focus of possible future programming in the Liberian energy sector, including the renewable energy market, and the rural development strategies in Liberia.
- A final evaluation of the Liberia Grants and Solicitation Mechanism provided better understanding of capacity building activities and the USAID local solutions agenda, the managing of scholarship programs, and general management of USAID mechanisms.
- A final evaluation of the Rebuilding Basic Health Services activity was completed in FY 2015, informing the startup of USAID's new health flagship activities particularly around engagement with county health offices and refining USAID's capacity building approach to supporting the health system decentralization process.

- A mid-term performance evaluation of the Liberia Municipal Water Project was completed and served as an assessment of progress in the design phase, and outlined key steps USAID, the GOL, and the contractors needed to take prior to and during municipal water construction to ensure quality, efficient construction and sustainability.
- The Liberia Elections and Perceptions survey helped the Mission better understand and provide information to the National Elections Commission on voter behavior and perceptions to improved outreach and civic and voter education in the lead up to historic national elections.
- The Consortium for Elections and Political Process Strengthening activity is acting as a pilot with USAID's Bureau for Policy, Planning, and Learning on furthering Complexity Aware Monitoring to be able to respond and quickly adapt to shifting and complex operating environments.
- A joint mid-term evaluation for the Sustainable Marketplace Initiative and final evaluation for Investing for Business Expansion activities began in FY 2015. The evaluation will assess the performance of the activities and inform future project design.
- The ongoing FTF Interim Population Based Survey began in FY 2015 and will shape USAID's knowledge of nutrition and agriculture results in the FTF Zone of Influence.
- An external Post Distribution Monitoring of Food for Peace cash transfer and agricultural inputs distribution programs and small scale infrastructure verification began in FY 2015.
- USAID is in the procurement process for the Liberia Strategic Analysis activity, a monitoring, evaluation, and learning activity which, starting in early FY 2016, will greatly enhance USAID's ability to rapidly and robustly carry out monitoring activities, evaluations, assessments, special studies, data collection exercises, and more effectively use the findings to better collaborate, learn, and adapt during budgeting, design, and implementation processes.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: The monitoring and evaluation activities conducted by USAID informed the following actions and decisions regarding the FY 2017 budget:

- Final evaluations are planned for early in FY 2016 of the Food and Enterprise Development and People, Rules and Organizations Supporting the Protection of Ecosystem Resources activities, both of which will shape future investments in agriculture and natural resources management.
- Several education sector mid-term and final evaluations, scheduled for early FY 2016, will support the design of new activities and implementation and adjustment of existing activities.
- USAID/Liberia's FY 2015 contribution to a World Bank-led Multi-Donor Trust Fund will support the Liberia Institute for Statistics and Geo-information Services' Household Income and Expenditure Survey. The survey will allow the GOL to better understand key development indicators such as Liberia's household living standards and welfare indicators, consumption patterns, household employment, production and assets, the consumer price index, and national accounts. This data will be critical information for all of USAID's technical interventions.
- The Africa Ebola Unit at USAID is engaged in a comprehensive and inter-agency monitoring and evaluation effort that will determine post-Ebola programmatic gaps and opportunities to ensure Liberians can regain their pre-Ebola development trajectory.

Detailed Objective Descriptions

More Effective, Accountable and Inclusive Government: U.S. assistance in this sector will help the GOL build its technical capacity to: effectively manage public finances; implement political and economic reforms; increase public access to justice; improve legal training; investigate and prosecute corruption; conduct free and fair elections; and perform other critical public functions, including governance over land tenure and use, in a manner that demonstrates to the Liberian people that the government is accountable and responsive to their needs and aspirations. In addition, the United States will continue to support civil society organizations advocating for the political and economic interests of Liberian citizens

and acting as a check on government. USAID will work through grants and contracts, as well as multi-donor trust funds, developed in collaboration with other donors in the sector.

Sustained, Market-Driven Growth Reduces Poverty: U.S. assistance will support GOL efforts to implement Liberia's food security strategy, the Liberia Agriculture Sector Investment Program, and to reduce food insecurity and increase economic growth through market-led agricultural development. Interventions will strengthen the enabling environment for private sector growth including: supporting business-enabling environmental policies and the capacity to implement those policies; improving infrastructure; strengthening business services support to the private sector and GOL institutions; improving natural resources and land policy; and supporting forestry and biodiversity programs that promote sustainable, community-led development of forest resources.

Better Educated Liberians: Education access and achievement remain serious challenges in Liberia. According to 2014 education statistics, only 60 percent of the primary school age population is enrolled in primary school. Of those students, approximately 88 percent are older than the appropriate age for their grade. Only half of the adult population over the age of 15 is literate. U.S. assistance will address barriers to educational access and achievement for Liberian children and youth by strengthening policies and management systems, encouraging community oversight, and building a qualified cadre of teachers to ensure safe learning spaces and foster improved student learning outcomes, especially in reading in the lower grades. U.S. assistance will also enhance the quality and relevance of workforce development and alternative learning programs to better equip over-age and out of school youth to build sustainable livelihoods and contribute to Liberia's key development goals.

Improved Health Status of Liberians: Liberia continues to struggle to rebuild a health system destroyed during its civil war and weakened by the Ebola Virus epidemic. Liberian women and girls, especially in rural areas, continue to show poor health indicators, suggesting a need to expand focus not only on improving access but also the quality of health care delivered. Preventable and treatable diseases, as well as chronic malnutrition, continue to affect women and children. Liberia also faces a massive infectious disease burden, being vulnerable to epidemic diseases such as Ebola, and is challenged with unmet needs for family planning and reproductive health and emergency obstetric care services. U.S. assistance will help to improve access to sustainable water supply and sanitation in counties where the United States is also working to improve health care services, as well as in three of Liberia's largest secondary cities.

Enhanced Security, Stability and Respect for Rule of Law: U.S. assistance will work to create a civilian-controlled, professional military institution that also effectively promotes respect for human rights. Funding will contribute to the continued development and professionalization of the AFL's enlisted and officer leadership, as well as the reinforcement of basic soldier skills and concepts of human rights and civil-military relations. Funding will continue to support the Defense Sector Reform program for the Ministry of Defense and AFL, including a senior defense advisor and life support services to the U.S. military members assigned as mentors to the AFL. State-led programs will engage the Ministry of Justice and its constituent divisions to build GOL capacity, encourage a consistent and effective justice process, and foster institutional reform, working through contracts and grants with local and international organizations and will complement and coordinate with other donors' efforts.

Madagascar

Foreign Assistance Program Overview

The U.S. government seeks to help Madagascar consolidate its democratic gains and begin addressing the root causes of poverty, which leave it ranked as one of the poorest countries in the world. According to the World Bank, more than 92 percent of Madagascar's population survives on less than two dollars a day and 77 percent live in extreme poverty. U.S. assistance will provide support in the areas of environment, democracy and good governance, and peace and security. Continued investments in health and food security activities will build upon successes and accelerate progress towards ending preventable child and maternal deaths, preventing malaria, as well as promoting a stable, resilient Malagasy society.

Development Assistance (DA)

Assistance provided through the DA account will strengthen accountability and transparency of government institutions, effectiveness of policy making, and service delivery. Resources will also strengthen local government and civil society organizations, ensuring that citizens have an avenue to interact with government and are able to effectively advocate for their needs. DA resources will also support conservation and development activities to improve rural livelihoods near areas of high-priority value for biodiversity. These activities will ensure sustainable use of natural resources, support the empowerment of local communities to manage resources, and enhance the resilience of communities and the resources on which they depend.

Support Return to Democracy and Rule of Law

Key Intervention:

- U.S. assistance will provide \$0.8 million to support good governance at the local level. The program will enable citizens to provide greater feedback to government service providers, participate more effectively in decentralized district structures, and promote community development planning practices. The program will also strengthen adherence to development plans to ensure sustainability of interventions, local ownership, and support the formation of Community Action Committees to manage and monitor government programming in targeted areas, such as health, the environment and agriculture.

Strengthen Democratic Engagement and Respect for Civil and Political Rights in the Malagasy Population

Key Interventions:

- U.S. assistance of \$0.4 million will support civic education and empowerment at the local level by strengthening the capacity of civil society organizations and of grassroots-based groups to contribute to community-based accountability-enhancing practices, citizens' understanding of their rights, and access to information regarding matters of public interest.
- Assistance will strengthen the capacity of local media organizations to promote government transparency, freedom of the press and better access to public information; and support platforms that bring together local officials and private-sector operators to improve delivery of public goods vital to enabling private sector activity.

Improve Sustainable Management of Natural Resources

Key Intervention:

- U.S. assistance of \$4.0 million will build the capacity of civil society, government, and non-governmental partners to secure community-based land tenure rights that ensure sustainable use practices; develop and promote appropriate value chains to significantly increase rural incomes based on sustainable use of biodiversity and other natural resources; improve oversight and legal use of natural resources; and incorporate evidence-based climate resilient practices to improve management of these resources and ecosystem services in the face of significant projected climate change impacts.

Global Health Programs (GHP)

Assistance provided through the GHP accounts will support the goals and principles of the Global Health Initiative (GHI) to achieve major improvements in health outcomes in three globally shared goals: ending preventable child and maternal deaths, creating an AIDS-free generation, and protecting communities from other infectious diseases.

Improved Health Through Increased Use of Targeted Malagasy Health, Nutrition, Water, and Sanitation Services

Key Interventions:

- **Malaria:** U.S. assistance under the President's Malaria Initiative (PMI) will provide \$26.0 million to expand efforts to scale-up proven prevention and treatment interventions toward achievement of 85 percent coverage to support the PMI goal of reducing malaria-related morbidity by 50 percent. Decisions on allocations of centrally-managed funds will be made at the time that the FY 2017 operating year budget is set.
- **Maternal and Child Health:** U.S. assistance will provide \$11.0 million to support an integrated package of low-cost, high impact child, newborn, and maternal health interventions to ending preventable child and maternal deaths. The package includes integrated community case management for the early recognition, prompt diagnosis, and appropriate treatment of simple pneumonia and diarrhea among children under five years of age, as well as referral for severe cases and preventative health facility services including vaccinations. More specifically, an emphasis will be placed on supporting the Government of Madagascar's routine immunizations at the facility level and implementing community surveillance to ensure that all children are vaccinated on time. U.S. assistance will also support preventative child health practices including improved hygiene and sanitation, home point-of-use water treatment, growth monitoring promotion, exclusive breastfeeding, appropriate complementary feeding, and dietary quality and diversity. Maternal health interventions include early detection of obstetric and neonatal complications, and medical referrals including emergency transport schemes. Leveraging the Food for Peace portfolio, programs will target stunting issues in severely malnourished areas in the country.
- **Family Planning/Reproductive Health (FP/RH):** U.S. assistance will provide \$14.0 million to

sustainably expand access to high-quality, voluntary FP/RH services throughout the health system. Over the next three years, the program aims to steadily decrease unmet need for family planning by increasing the use of modern contraceptive methods by approximately 1.5 percent a year. U.S. assistance will provide education, counseling and commodities through public and private health centers, mobile outreach sites, as well as pharmacies and other retail venues. The program will also serve the hardest-to-reach populations through a network of 17,000 trained community health volunteers. Adolescents and youth, a primary target group, will be reached with youth-friendly services and improved access to a broad range of voluntary FP/RH services. These interventions will allow individuals and couples to decide the number and spacing of births as well as the timing of first birth, which will contribute to decreasing maternal and infant mortality.

International Military Education and Training (IMET)

IMET-funded courses expose Malagasy defense personnel to U.S. military training, doctrine, and values, and areas intended to promote democratic values, build capacity in key areas, increase the professionalization of the forces, and build lasting military-to-military relationships .

Restore and Improve Security Sector Engagement and Partnership with the Malagasy Armed Forces

Key Intervention:

- Approximately \$0.3 million in IMET funding will support professionalization, respect for civilian authority, and institutional strengthening of Malagasy defense personnel.

P.L. 480 Title II

Roughly 92 percent of Madagascar's population survives on less than two dollars a day and two-thirds depend on agriculture, specifically small scale agriculture, to meet basic needs. Fifty percent of children under five suffer from stunted growth. Furthermore, natural disasters occur frequently in Madagascar, including cyclones, drought, epidemics, floods, famines and locust infestations which affect over half the population, causing significant damage to their livelihoods.

Resources will be used to improve the nutritional status of vulnerable households in target areas using a holistic approach including maternal and child health services, water sanitation and hygiene and agriculture as well as disaster risk reduction activities to ultimately improve beneficiaries' nutritional status and households' livelihood and resilience to shocks.

Improved Health through Increased Use of Targeted Malagasy Health, Nutrition, Water, and Sanitation Services

Key Intervention:

- U.S. assistance will provide \$7.0 million to support health services for vulnerable populations. Of this \$7.0 million, \$5.2 million of food security programming will target those most vulnerable to stunting and malnutrition, including pregnant and lactating mothers, children under five, and persons with disabilities, while building strong support networks among beneficiary communities. The programs will use \$1.8 million for a community-based approach to improve vulnerable households' health and nutrition status.

Improve Performance of the Targeted Agriculture Value Chains

Key Interventions:

- U.S. assistance will provide \$1.3 million to support market-led agribusiness activities to improve

household income in targeted communities. The program will train farmers in business skills and management of agribusinesses, build farmers' capacity in adding value to produce and will link farmers to potential buyers. The program will also promote access to credit through Village Saving and Loans Associations.

- U.S. assistance will provide \$4.5 million to improve agricultural practices, increasing productivity while respecting the environment. The programs aim to increase production and diversify agriculture to improve the availability of more nutritious food and achieve surpluses which allow farmers to participate in commercial activities and generate additional income. Activities will provide support at each stage of the value chain from increasing farmers' access to agricultural inputs, promoting environment-friendly improved agricultural techniques to improving access to market.

Increase Madagascar's Ability to Plan for and Recover from Natural Disasters

Key Interventions:

- U.S. assistance will provide \$4.3 million to support disaster readiness activities in communities at risk of cyclones, floods, or drought to strengthen their resiliency. The program will support disaster prevention, mitigation and preparedness efforts that include a plan for response in the event of significant disasters. The program aims to train the authorities within target rural communes and communities to develop their Disaster Prevention, Mitigation and Preparation Plan to prepare for shocks. Some of these communes will establish their Early Warning Systems to collect data from target communities. The program will lead these communities to proactively mitigate risks to their land, water and roads. These measures will rehabilitate roads, irrigation canals and small dams in order to manage water inflow and outflow. In addition, they will also protect the land against erosion through reforestation efforts. Village Saving and Loans groups will be formed to help mobilize capital for productive investment and individual household emergencies.
- \$0.9 million in U.S. assistance will support social and economic services and protection for vulnerable populations.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: Several monitoring and evaluation efforts were undertaken in FY 2014 and FY 2015:

- USAID designed an evaluation to assess the skills of community health volunteers (CHVs) through a measure of the performance of CHVs in receiving, counseling, diagnosing, and treating patients. The results show that about two-thirds of CHVs scored above the average in correctly identifying childhood illnesses such as respiratory disease and diarrhea.
- USAID designed and awarded to local entities two outcome monitoring surveys (OMS) for health activities in FY 2014. The results fed into USAID's Portfolio Review discussions by highlighting the increase of the modern contraceptive prevalence rate in several regions compared to the 2012 data; the good exposure of beneficiaries to health behavior communication change messages; and the high percentage of households with at least one insecticide-treated net exceeded 90 percent in endemic regions. One critical issue identified is the lack of capacity of the existing health product supply chain to provide supplies at the point of sale thus leading to health commodity stock-outs at the village level where community health volunteers work. USAID plans to conduct the OMS activities annually to ensure that activities are advancing Mission Objectives.
- USAID is evaluating the impact of the participation of CHVs in inclusive financial schemes on the quality of healthcare provision. Baseline data were collected in FY 2015; the final evaluation is planned to take place in FY 2017. The findings from the evaluation will provide USAID and other stakeholders working with CHVs with additional insights to increase the sustainability of the CHV community-based healthcare system in rural and remote areas.

- The health team implemented an evaluation on the impact of administering pregnancy tests for women seeking family planning counseling from CHVs on the uptake and use of modern contraceptive methods. The results of this impact evaluation revealed a monthly increase of 24 percent in the number of clients using modern contraceptive methods in the areas where the survey was conducted.
- The food security team commissioned a baseline data collection for its two food security projects in the East, Center, and Southern communes of Madagascar.
- USAID has increased field visits to monitor the implementation progress of USAID activities. The health team has added staff specifically to monitor the commodity management of health products.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: The monitoring and evaluation activities conducted by the Mission informed the following actions and decisions regarding the FY 2017 budget:

- USAID used the conclusions and recommendations from the series of evaluations on community healthcare to design its three-year (2015-2017) health strategy. With the re-engagement with the Government of Madagascar, USAID will gradually shift from direct support to CHVs to strengthening the health system of the country, especially the capacity of the basic health centers to treat patients referred by CHVs and to provide supervision to CHVs. USAID has also increased the coordination with the Ministry of Health.
- The conclusions from USAID's evaluation of the use of pregnancy tests led USAID to scale-up the use of pregnancy-test kits through community health volunteers in order to increase the modern contraceptive prevalence rate in rural areas.

Detailed Objective Descriptions

Improved Health through Increased Use of Targeted Malagasy Health, Nutrition, Water, and Sanitation Services: U.S. assistance will help improve the health of the Malagasy people, especially women and children, through the implementation of sustainable programs that deliver essential health services and products with a focus on rural and underserved areas. Resources will support the design and implementation of strategies to promote healthy behaviors and timely healthcare visits. Programs will strengthen public and private service networks to improve access to integrated health information and services. To improve service quality, assistance will provide technical training, and performance monitoring focusing on early diagnosis, treatment or referral.

Improve Performance of the Targeted Agriculture Value Chains: In order to meet the population's primary food needs and reduce malnutrition, U.S. assistance will promote technologically sound and dynamic agriculture. Programming will use a market-driven approach around value chains to improve the productivity and increase production, moving farmers from subsistence to commercial agriculture.

Increase Madagascar's Ability to Plan for and Recover from Natural Disasters: In order to save lives and lessen the impact of recurrent natural shocks affecting the country, the program will promote disaster mitigation and preparedness planning at the community and commune levels. The program will help the population implement activities and promote appropriate actions to save lives in case of a shock hitting the community.

Support Return to Democracy and Rule of Law: National progress in Madagascar is dependent upon good governance and rule of law. In order to expand and promote good governance, U.S. assistance will build political accountability in Madagascar. Access to information, and the development and use of inclusive platforms and venues to foster citizen participation and dialogue in local and national governance will strengthen the culture of accountability. Foreign assistance under this objective will lay the groundwork

to enable the 2018 election to serve as a lever for greater accountability of public officials and more meaningful linkages between citizens and the political process.

Strengthen Democratic Engagement and Respect for Civil and Political Rights in the Malagasy

Population: Increased political accountability depends upon the engagement of an informed and empowered electorate. Increasing the population's understanding of its rights and its readiness and capacity to demand recognition of those rights is essential. Non-governmental organizations and the media will play a key role in advancing citizens' understanding of their rights and in advocating directly with the government for improved human and political rights.

Improve Sustainable Management of Natural Resources: Madagascar harbors five percent of the world's species in less than half of one percent of its land area and is considered a top global priority for biodiversity conservation. However, Madagascar's people are among the poorest in the world with per capita incomes at only \$440/year or roughly \$1.20/day. The poorest segments of the country's population are rural-based and highly dependent on the use of natural resources to survive. In response to these threats both to the natural resources and to the natural resource-dependent citizens of Madagascar, USAID has developed a biodiversity conservation program to assist rural communities in securing their natural resource use rights, improving their management of these important resources, and undertaking appropriate economic activities based on sustainable natural resource use. This program also incorporates climate change resilience measures to help beneficiaries better respond to climate threats that affect biodiversity conservation.

Restore and Improve Security Sector Engagement and Partnership with the Malagasy Armed Forces:

Given the military's past role in Madagascar's political realm, it plays an important role in the balance of power and must support and demonstrate its neutrality as well as its subjugation to civilian authority. U.S. assistance will provide guidance to the Malagasy military to help it shift from an inappropriate executive role to a traditional armed forces' role that focuses on defense and national protection from external threats, and that refrains from tainting its impartiality by engaging in domestic political rivalries. The program will also support the development and maintenance of a capable and reliable maritime force that will enable the country to become a regional leader in counter-piracy, counter-illicit trafficking, and the battle against illegal, unreported unregulated fishing.

Malawi

Foreign Assistance Program Overview

U.S. assistance in Malawi aims to overcome longstanding poverty and make Malawi a stronger, healthier, more democratic partner of the United States. More than one-half of the country's 17 million people live below the poverty line and more than one-third consume less than the required daily calories, contributing to the stunting of nearly one-half of children under-five years of age. Malawi continues to score poorly on major health indicators for maternal, infant, and under-five mortality. Eighty-five percent of households engage in agriculture activities and most rely almost exclusively on rain-fed subsistence farming that is particularly vulnerable to cyclical droughts. These challenges are compounded by threats from the highest rates of deforestation and population growth in the region. Only 50 percent of children complete primary school, and of those, only 68 percent successfully pass the exam to access public secondary school; only 15 percent of girls are enrolled in secondary school.

P.L. 480 Title II	28,252	*	7,000	-21,252

Development Assistance (DA)

One of the primary objectives of U.S. assistance to Malawi is to improve the quality of life of Malawians. U.S. assistance in Malawi will address underlying structural problems through cross-cutting efforts to improve the organizational capacity of national and local public and private sector institutions, increase the use of technology and innovation, and strengthen the policy environment.

Social Development Improved

Key Interventions:

- With \$6.0 million in basic education funds, U.S. assistance will continue the expansion of basic education activities to all districts in Malawi. These funds will address low educational achievement, particularly in literacy. U.S. assistance will improve early-grade reading among primary school children and the instructional practices of their teachers by creating reading materials in Chichewa and English; providing textbooks and teaching materials; training and coaching teachers; involving parents and communities in extracurricular reading activities; and assessing students' reading skills to inform instruction and policy making. To support the long term sustainability of U.S. assistance, investments in the education sector will include targeted local capacity development for non-government organizations and state actors at the local and national levels.
- To deepen girls' empowerment, U.S. assistance will utilize the education funds referenced above to improve reading skills for girls in upper primary school, to provide a foundation for success in secondary school. These investments will be integrated with health investments to increase school enrollment, retention, and completion rates for girls, as well as encourage positive health-seeking behaviors.

Sustainable Livelihoods Increased

Key Interventions:

- As part of the President's Global Hunger and Food Security initiative, Feed the Future (FTF), USAID will provide \$16.0 million to support the efforts of the Government of Malawi (GOM) to refine and implement a country-led comprehensive food security strategy to reduce hunger and increase economic growth through market-led agricultural development. These strategies aim to reduce hunger, improve nutrition, and promote broad-based economic growth through agricultural development.
- U.S. assistance works with more than 500,000 smallholder farmer households, especially in vulnerable central and southern Malawi, training them in improved technologies and practices, linking them to value addition opportunities, and facilitating their participation in collective marketing and structured trade. The programs will focus on nutritious, climate-resilient commodities with market potential, such as legumes and orange-fleshed sweet potatoes. FTF funds will also improve nutritional outcomes by providing community-based nutrition interventions targeting children under-five years of age and pregnant and lactating mothers. To maximize impact in reducing malnutrition among children under five years of age and pregnant and lactating mothers, USAID approaches FTF and Food for Peace (FFP) Title II programs in an integrated manner, layering agriculture and food security interventions that reach both the vulnerable and productive poor.
- Global Climate Change Initiative (GCCII) funding of \$7.0 million will include participation in the Enhancing Capacity for Low Emission Development Strategies (EC-LEDS) program, helping Malawi to develop and implement national action plans for low emissions development, measure and curb greenhouse gas emissions, and pursue opportunities for private sector investment and clean growth. Investments in sustainable landscapes will address drivers of deforestation and support low-emission planning and analysis across multiple sectors, thereby implementing core elements of the EC-LEDS partnership between the United States and the GOM. These investments will complement ongoing integrated adaptation and biodiversity interventions that build the resilience of vulnerable communities. To strengthen the sustainability of FTF and GCCII investments, U.S. assistance will continue to work closely with civil society, private sector, and national and local government actors to improve relevant public services; and strengthen participatory, evidence-based policy making.

Citizen Rights and Responsibilities Exercised

Key Interventions:

- With \$0.2 million, the U.S. government will support preparations for Malawi's 2019 second tripartite elections, (President, Parliament, and Local Councilors) with a focus on reducing the irregularities and challenges faced during the country's first tripartite elections in 2014. This assistance will include technical support to political parties, civil society organizations, and/or the media, resulting in a more informed electorate, contributing towards a more efficient electoral process, and stimulating higher voter turnout.
- With \$0.8 million, the U.S. will provide technical support to local government staff and elected officials in eight of Malawi's 28 districts in order to improve service delivery. These activities will strengthen key public financial management systems and processes and will promote increased government transparency. Additionally, U.S. assistance will support the GOM's public sector reform agenda through the provision of technical assistance to improve the efficiency of the national civil service.

Global Health Programs (GHP)

Malawi has made impressive gains in health, but challenges remain including high infant and maternal mortality, HIV/AIDS and other major diseases, and low levels of modern contraceptive use. U.S. foreign assistance programs work with public and private sector actors to expand access to and to improve the

quality of interventions in health facilities. Assistance provided through the GHP accounts will support the goals and principles of the Global Health Initiative (GHI) to achieve major improvements in three globally shared goals: ending preventable child and maternal deaths, creating an AIDS-free generation, and protecting communities from other infectious diseases.

Social Development Improved

Key Interventions:

- HIV/AIDS: As a part of the President's Emergency Plan for AIDS Relief (PEPFAR), Malawi will receive \$103.5 million (of which \$88.0 million GHP-State funds and \$15.5 million GHP-USAID funds) to build partnerships to provide integrated prevention, care, and treatment programs throughout the country and support orphans and vulnerable children. Additional details of activities to be undertaken under this program will be provided in the PEPFAR Supplement to this Congressional Budget Justification.
- Tuberculosis (TB): The U.S. government will utilize \$1.5 million to improve TB case detection and treatment by increasing the TB diagnostic and treatment network in conjunction with scaling-up of antiretroviral therapy sites; increasing Central Reference Laboratory capacity; improving TB preventive therapy for HIV-positive patients that are not infected with TB; and facilitating community-to-facility linkages to improve diagnosis, contact tracing, therapy adherence, and retention in treatment care. U.S. assistance will also fund transport of samples for TB diagnosis as well as existing monitoring and evaluation systems.
- Malaria: U.S. assistance under the President's Malaria Initiative (PMI) will provide \$22.0 million to expand efforts to scale-up proven preventive and treatment interventions toward achievement of 85 percent coverage among vulnerable groups to support the PMI goal of reducing malaria-related morbidity by 50 percent. The FY 2017 request level for Malawi does not include the total projected funding for the PMI. Decisions on allocations of centrally-managed funds will be made at the time that the FY 2017 operating year budget is set.
- Maternal and Child Health: In partnership with the Ministry of Health and other stakeholders, U.S. assistance totaling \$14.5 million will work in health facilities and at a community level to improve the quality of care, including actions that expand immunization coverage, expand use of targeted interventions for at-risk newborns, and facilitate state and community actor's efforts to monitor maternal, newborn, and child health care, while simultaneously strengthening maternal, antenatal, and neonatal care and integrated case management.
- Family Planning and Reproductive Health (FP/RH): \$12.7 million in U.S. assistance will support the procurement of contraceptives and train service providers in supply chain logistics, strengthen FP/RH communications platforms, and support expansion of social franchises.
- Nutrition: \$4.2 million in U.S. assistance will promote exclusive breastfeeding, vitamin A supplementation, and complementary feeding. These interventions will be complemented by activities to increase production of nutritionally higher-value crops, such as legumes and orange-fleshed sweet potatoes. Other nutrition interventions include fortification of selected processed foods, coordinating to expand targeted coverage of USAID's FFP and U.S. Department of Agriculture's (USDA) Food for Progress efforts, and training programs in health facilities to treat acute malnutrition. Maximizing U.S. assistance, school textbooks produced with basic education resources will include educational messages to promote positive nutrition and dietary behaviors. Additionally, USDA's McGovern-Dole School Feeding Program complements USAID investments in education and nutrition.

International Military Education and Training (IMET)

Through the IMET program, the U.S. prepares Malawi Defense Forces (MDF) personnel for senior leadership positions within the military. IMET-funded courses expose defense establishment personnel

to U.S. military training, doctrine, and values and are intended to promote democratic values, build capacity in key areas, increase the professionalization of the forces, and build lasting military-to-military relationships. This exposure engenders a greater understanding within the MDF of the proper role of the military in a democratic society and the importance of regional peace and stability – priorities for the United States and factors that, in turn, support sustained economic development in Malawi.

Security Services' Multi-Mission Capability to Conduct Peacekeeping and Fight Transnational and Terrorism Threats Increased

Key Intervention:

- U.S. assistance totaling \$0.3 million will be used to support continued military professionalization.

P.L. 480 Title II

U.S. assistance will provide targeted assistance to reduce hunger and malnutrition among chronically food-insecure households particularly vulnerable to natural and economic shocks. In coordination with other U.S. assistance interventions, FFP will work at the household and community levels to promote maternal and child health and nutrition, natural resource management, disaster risk reduction, climate-sensitive agriculture, and household strategies for withstanding natural and economic shocks. To maximize the impact of U.S. government assistance, work to coordinate and foster linkages across all sectors will continue, where relevant and appropriate.

Social Development Improved

Key Intervention:

- \$3.5 million in U.S. assistance will reduce chronic malnutrition and food insecurity and build the resilience of vulnerable households in Malawi. These investments will utilize the evidence-based “First 1,000 Days” approach. Activities will treat moderately-malnourished children, and will support increased uptake of vitamin A, iron, and folic acid, as well as de-worming. Health workers and mothers will be trained on improved nutrition through better food preparation and preservation, community management of childhood illnesses, child growth monitoring, and the development of kitchen gardens. Activities will also link participants to appropriate FP/RH services, as well as improve household and community water, sanitation, and hygiene practices and facilities.

Sustainable Livelihoods Increased

Key Intervention:

- With \$3.5 million, FFP activities will support the most food insecure and vulnerable populations in Malawi. As mentioned previously, activities will be integrated with FTF assistance, layering agriculture and food security interventions that reach both the vulnerable and emerging farmers, while at the same time opening up commercial agricultural opportunities through FTF for FFP beneficiaries to “graduate” to when ready. This layered approach also enhances resilience for rural households that are especially vulnerable to climate variability and recurrent shocks.

Linkages with the Millennium Challenge Corporation (MCC)

The \$350.7 million MCC Compact with Malawi was reinstated on June 21, 2012 and entered into force on September 20, 2013. It aims to expand access to electricity for Malawians and businesses, and, in so doing, lower the cost of doing business in Malawi and increase value-added production. The MCC Compact includes investments in transmission lines to strengthen the country’s transmission backbone, distribution system rehabilitation and expansion, and additional generation capacity through the

rehabilitation of an existing hydropower plant. It covers equipment and sustainable land management to reduce soil erosion in the Shire River Watershed, thereby increasing the efficiency and sustainability of hydropower generation. Finally, and critically, it includes capacity building and technical assistance for key power sector institutions – to restore the commercial viability of the electricity utility, strengthen the energy regulatory authority, and create an enabling environment for greater public and private sector investment in the energy sector.

The existence of the Compact is already generating power sector investment interest from donors, such as the World Bank and JICA, and from private sector energy developers who are negotiating with the GOM to produce and sell electricity. GCCI-funded EC-LEDS programs will explore renewable energy activities to complement the much larger MCC effort. Additionally, targeted regionally funded Power Africa assistance will facilitate power purchase agreements between independent power providers, the GOM, and the national energy utility commission in order to increase energy capacity up to an additional 500 megawatts by 2020; and explore off-grid renewable sources of energy. Through its implementing partner, Millennium Challenge Account-Malawi, MCC has awarded grants to local NGOs aimed at reducing soil erosion in the Shire River Watershed, and MCC collaborates with USAID/Malawi's economic growth activities to ensure complementarity of approaches where there is geographical overlap.

Once the Compact is completed at the end of FY 2018, the benefits from more reliable energy will not only relieve a significant constraint to economic development in Malawi, but will boost results in USAID's programs, especially in health clinics and schools, as well as in private sector investment and marketing of agricultural commodities.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: USAID/Malawi completed a number of performance evaluations in FY 2014 and two in FY 2015.

- USAID/Malawi staff conduct regular site visits to monitor progress of activities and projects. These visits have allowed USAID staff to customize capacity building efforts with a focus on building capacity of local organizations.
- To assess the implementation of PEPFAR, USAID/Malawi conducted 69 Site Improvement through Monitoring (SIMS) visits in FY 2015. These visits allowed staff to assess how well partners are supporting the facilities.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: These assessments, evaluations, and routine monitoring informed the following actions and decisions:

- A performance evaluation of USAID's FTF flagship activity highlighted promising gains in soy and groundnut production, while revealing that critical challenges remain in access to markets, financing, and processing facilities. USAID/Malawi is applying the evaluation results to the development of the successor activity.
- An assessment of the dairy sector, including cost benefit analysis, noted that while generally the dairy sector in Malawi is expanding and creating new employment opportunities for the rural poor, there are a number of key challenges that limit the value chain's potential. Based on these findings, in FY 2014, USAID/Malawi changed its FTF strategy to drop dairy and add the orange-fleshed sweet potato value chain, which is projected to hold far greater economic potential.
- Another USAID/Malawi study examining Malawians' attitudes toward education revealed that children lacked safe spaces to develop their reading skills, whether due to lack of safety from outright violence or from competing demands to engage in agricultural and domestic work. Provision of such safe spaces was therefore a prominent feature in the statement of work of a newly procured, flagship education activity.

- A mid-term evaluation of a large health project found that the contractor had begun to implement interventions independent of the Ministry of Health due to pressure to progress with the activity work plan and demonstrate results. USAID/Malawi and the implementer subsequently met to resolve the issue and agreed on the need to work in tandem with host country officials. Since then, the implementing partner has made significant efforts to better engage district health management teams and zonal health officers.
- PEPFAR SIMS visit findings resulted in programmatic changes, including changes that strengthen use of expert clients to improve linkages to care and defaulter tracing, use of Health Diagnostic Assistants to increase testing and linkage to care, and partner coordination with and accountability to the Ministry of Health.

Detailed Objective Descriptions

Social Development Improved: U.S. assistance will implement a range of basic education and health activities that will expand facility- and community-level service delivery and reach an increased proportion of the population. Education assistance will primarily be used to increase the reading skills of students in Standards One to Three. Increasing learning levels will enable Malawi to become less dependent on humanitarian assistance, given that a well-educated population will make more positive, productive contributions to their economy and country. GHP funds will be used to improve Malawi's national health indicators by sustaining gains in currently-supported districts and saturating high disease-burden areas with priority, evidence-based health interventions that target the most vulnerable populations. U.S. assistance will increase access to quality, priority health services; strengthen the performance of health systems; and encourage adoption of positive health behaviors among target populations. Utilizing a cross-sectoral approach, USAID will also address underlying structural problems through cross-cutting efforts to enhance the organizational capacity of national and local public and private sector institutions, increase the use of technology and innovation, strengthen the policy environment, and encourage the adoption of positive behaviors. Additionally, USAID's investments will work to strengthen girl's and women's empowerment through integrated health and education investments. To maximize U.S. assistance resources, USAID will continue to coordinate and foster linkages across all sectors and with other agencies, where relevant and appropriate.

Sustainable Livelihoods Increased: This objective supports Malawians to improve their food security and livelihoods – an essential goal for a nation of smallholder farmers. Malawian agricultural development is hindered by deforestation, declining soil fertility, erratic rainfall, small land holding size, and poor extension support from national institutions. U.S. assistance will address these constraints through sustainable intensification of agricultural production, leading to improved rural incomes, nutritional status, and food security. Resources from FTF, FFP, and GCCI programs will be used in an integrated manner to achieve these results.

Citizen Rights and Responsibilities Exercised: This objective increases civic electoral involvement, strengthens citizens' participation in decision-making in order to ensure that citizens' rights and responsibilities are exercised, and supports GOM public sector reform. Following Malawi's first tripartite (President, Parliament, and Local Councilors) election since its transition to democracy in 1994, U.S. assistance will work to build a positive working relationship between the newly elected local councilors and citizens' groups in targeted districts that will engage in grassroots advocacy to demand quality services at the local level. Increasing citizens' opportunities for engaging with local government officials and strengthening civil society organizations' activities will cultivate democratic legitimacy and citizens' inclusion in local development processes. USAID will also support preparations for Malawi's 2019 elections, with a focus on reducing the irregularities and challenges faced during the 2014 elections. U.S. assistance will also support the creation of a more informed electorate, contribute towards a more efficient electoral process, and stimulate higher voter turnout.

Security Services' Multi-mission Capability to Conduct Peacekeeping and Fight Transnational and Terrorism Threats Increased: The U.S. government seeks to develop the MDF into a professional, apolitical military that can conduct a full range of peacekeeping, counterterrorism, and internal and border security operations. This objective will be achieved by training and mentoring members of the MDF with a view to improve their skills and readiness to carry out international peacekeeping, respect human rights, appreciate U.S. values, and improve logistics and maintenance systems as well as their capacity to identify and apprehend transnational and terror threats.

Mali

Foreign Assistance Program Overview

Mali is in a period of transition, as the country attempts to secure a fragile peace through implementation of the Accord for Peace and Reconciliation in Mali that was brokered by Algeria in June 2015. Having emerged from a complex crisis, Mali is rebuilding its social, economic and governance institutions while trying to combat violence and lawlessness throughout the country. The U.S. government will continue to deliver the critical development assistance necessary to support Mali's recovery and the peace process. Key U.S. interests in Mali include support for restoration of a stable democracy and improvement in accountable governance; promotion of regional security by combating terrorists and narco-traffickers that exploit ungoverned spaces in the Sahel; reduction of chronic vulnerability through improved social services; response to, and prevention of, threats such as Ebola; increased resilience; and economic growth through sustainable development and increased U.S. economic investment. Achieving these U.S. priorities requires not only continued U.S. government engagement on security and governance issues, but also robust investments in the areas of democracy, agriculture, health, education, and public diplomacy. Mali is also a Relief to Development Transition (R2DT) Focus Country.

Development Assistance (DA)

DA assistance will support programs in peace and security, good governance, civil society, and rule of law and human rights that promote the restoration of a stable democracy, re-establish confidence between the Government of Mali (GOM) and its people, promote tolerance among various ethnicities, and strengthen regional security by combating terrorists and narco-traffickers who seek to exploit ungoverned spaces in the Sahel. Economic and agricultural assistance will sustainably reduce poverty and malnutrition, build the resilience of poor communities to quickly respond to, and recover from periodic climatic or economic shocks, diversify livelihoods and improve food and income security. DA assistance will also strengthen national systems for the improved delivery of health and education services.

Strong Democratic Institutions Incorporate Democratic Opposition Voices and Gender/Ethnic Diversity to National Debates, and Enhance Rule of Law

Key Interventions:

- Effective security sector governance can help to prevent, deter, discover and punish misconduct, including corruption, other criminal activity and human rights abuses. As part of the Security Governance Initiative (SGI), \$3.0 million will be used to assist USAID to better assess, design, implement and evaluate security governance and justice sector projects as they are developed jointly with the partner government through the agreed upon SGI Joint Country Action Plan (JCAP). Assistance will help judicial institutions improve case management and implement their own reforms, as well as communicate progress on these reforms to the public. Resources will provide legal rights awareness and assistance to underserved populations, provide targeted reforms in the judiciary that will combat corruption and increase transparency, and increase the capacity of traditional dispute resolution mechanisms.
- In order to promote a more robust, regionally oriented, whole-of-government approach to addressing the challenges in the Sahel, these resources will also support the Sahel Development Initiative (SDI). The SDI has four inter-related development objectives: countering violent extremism; strengthening vulnerable local communities; building capacity of regional, national, and subnational institutions to effectively deliver services; and interagency learning, as USAID, Department of State and Department of Defense colleagues work toward a common approach to the region.
- FY 2017 funding of \$0.2 million will strengthen the link between the citizens and the GOM by building systems that ensure transparent financial flows to the sub-national level and public participation in the resource planning, allocation, and execution processes. Activities will champion Mali's decentralization efforts, a critical commitment of the country's 2015 Peace Accord. In addition, activities will foster reconciliation, bolster good governance and civic participation across multiple sectors, strengthen the delivery of public health and education services, and support economic growth.

Malian Civil Society is an Active, Critical, and Constructive Partner with Government, Promoting Fundamental Rights and Liberties

Key Intervention:

- \$0.6 million of U.S. assistance will strengthen the advocacy and monitoring capacity of Malian civil society organizations to perform meaningful watchdog functions regarding the use of public resources and to protect human rights; including those of traditionally disempowered members of society like women and youth; and further promote national reconciliation.

Malians Address Key Factors in Sustainable National Reconciliation and Resist Violent Extremism

Key Intervention:

- In line with Trans-Sahara Counterterrorism Partnership (TSCTP) principles, approximately \$2.9 million of U.S. assistance will promote inter-community dialogue to improve relations between the GOM, civil society organizations, local communities and traditional leaders. Activities will empower traditional leaders, journalists, and civil society to counter messages from the violent extremist groups with messages of peace and reconciliation and to promote non-violent forms of debate. Traditionally isolated communities will be encouraged to work effectively with local officials and neighboring communities.

Healthy Behaviors and Use of High-Impact Health Services Bring Sustained Health Improvements and Stronger Service Delivery

Key Interventions:

- FY 2017 funding of \$1.0 million will expand the use of social marketing networks to share information on point-of-use water treatment and foster behavior change communications that promote the use of safe drinking water in targeted geographic zones.
- Activities will build low-cost, community-led total sanitation approaches to increase access to household latrines, promote hand-washing with soap, support civil society organizations to engage with the government on issues related to water, sanitation, and hygiene, and improve community-level sanitation in selected intervention geographic zones.

Children Have Equitable Access to Quality Education and Capacity-building Opportunities

Key Interventions:

- Approximately \$8.9 million will support the development and implementation of innovative, affordable, high-quality teaching methodologies; provide teacher training and reading materials for early grade reading; and support community involvement in children's reading education.
- Interventions will provide access to education to children and youth in conflict-affected areas by providing safe and conflict-sensitive learning spaces; conflict and gender-sensitive learning materials; accelerated learning programs; entrepreneurship and work preparedness training; psychosocial support to conflict-affected students and teachers; teacher training; and institutional capacity building in conflict-sensitive program development, implementation, and management.
- Interventions will strengthen GOM budget and human resource management systems to improve the resource planning, allocation, and execution processes for the education sector.

Poverty and Malnutrition are Sustainably Reduced, and the Formal Economy Expands

Key Interventions:

- As part of the President's Global Hunger and Food Security initiative, Feed the Future, USAID will provide \$24.5 million to support the efforts of the GOM to refine and implement a country-led

comprehensive food security strategy to reduce hunger and increase economic growth through market-led agricultural development. These strategies aim to reduce hunger, improve nutrition and promote broad-based economic growth through agricultural development.

- Activities will increase sustainable gains in the production of subsistence cereals (millet, sorghum, rice) to help farmers become net producers of food; improve herd and pastureland management by semi-nomadic pastoralists to increase incomes and improve nutrition while minimizing environmental impact; and support diet diversification and rainfall-independent income generation by promoting vegetable gardens and nutritious tree species combined with training on proper food preparation and cooking.
- U.S. assistance will promote micro, small, and medium sized private enterprise development and employment generation by increasing access to credit to purchase agricultural inputs and processing equipment, facilitating contracts between producers and processors of agricultural commodities, reducing corruption along key trade corridors, and improving market information systems.
- \$3.0 million in Global Climate Change Initiative (GCCII) funding will improve the ability of the National Meteorological Services of Mali to become a stand-alone, quality service provider for climate data and analysis. Activities will improve climate forecasting to predict rainfall, support analysis, and develop recommendation tools which will lead to the scale-up of adoption of climate-change-adaptive practices by smallholder farmers in vulnerable areas.

Global Health Programs (GHP)

Mali continues to face serious challenges in the health sector, with some of the world's worst health indicators. Nearly all health facilities in northern Mali were destroyed in 2012 and have yet to be repaired, with internally displaced persons (IDPs) and war injuries overtaxing the already weak health system in the south. Assistance provided through the GHP accounts will support the goals and principles of the Global Health Initiative (GHI) to achieve major improvements in health outcomes in three globally shared goals: ending preventable child and maternal deaths, creating an AIDS-free generation, and protecting communities from other infectious diseases. GHP funding will continue to improve health service delivery at the community and health facility levels, and will strengthen key health systems throughout the country. Assistance provided through GHP accounts will also allow successful pilot interventions to be expanded, achieving greater impact on national health indicators.

Healthy Behaviors and Use of High-Impact Health Services Bring Sustained Health Improvements and Stronger Service Delivery

Key Interventions:

- HIV/AIDS: As part of the President's Emergency Plan for AIDS Relief (PEPFAR) Mali will receive \$4.5 million (of which \$1.5 million GHP-State and \$3.0 million GHP-USAID) to build partnerships to provide integrated prevention, care, and treatment programs throughout the country and support orphans and vulnerable children. Additional details of activities to be undertaken under this program will be provided in the PEPFAR Supplement to this Congressional Budget Justification.
- Malaria: U.S. assistance under the President's Malaria Initiative (PMI) will provide \$25.0 million to expand efforts to scale-up proven preventive and treatment interventions toward achievement of 85 percent coverage among vulnerable groups to support the PMI goal of reducing malaria-related morbidity by 50 percent. The FY 2017 request level for Mali does not include the total projected funding for the PMI. Decisions on allocations of centrally-managed funds will be made at the time that the FY 2017 operating year budget is set.
- Maternal and Child Health (MCH): \$16.5 million will support evidence-based, high-impact health interventions to reduce causes of morbidity and mortality in Mali primarily through work with community health centers and associations. Activities will provide a package of integrated

services to families to improve maternal and child health with a full range of interventions for malaria and other preventable causes of death. Funds will also strengthen public health financial and human resource management systems to improve the resource planning, allocation, and execution processes for the health sector.

- Family Planning and Reproductive Health (FP/RH): \$11.0 million will expand access to high-quality, voluntary FP/RH services and information, and reproductive healthcare on a sustainable basis. Such programs enhance the ability of couples to decide the number and spacing of births, including timing of the first birth. U.S. assistance will make substantial contributions to reductions of fistula and maternal and child mortality and morbidity; and mitigate adverse effects of population dynamics on natural resources, economic growth, and state stability.
- Nutrition: \$4.2 million will be used to scale-up evidence-based, high-impact nutrition interventions to reduce mortality and morbidity of pregnant women and children from conception to two years of age. Activities will focus on infant and young child feeding, improved screening efforts, safe water and hygiene practices, and distribution of micronutrient supplements. Funds will also strengthen the link between the citizens and the GOM by building systems that ensure transparent financial flows to the sub-national level and public participation in the resource planning, allocation, and execution processes for the health sector.

International Military Education and Training (IMET)

The IMET program provides training to students and presents democratic alternatives to key foreign military and civilian leaders. The program has sponsored Malian military officers and non-commissioned officers since 1985. The March 2012 coup and the abject failure of the Malian army to respond to the crisis in the North highlighted an urgent need for reform of the Malian military. Programs funded through this account will foster stronger military-to-military relations and expose Malian students to U.S. military procedures and the manner in which our military functions under civilian control.

Mali Has Strong and Effective Civilian Control Over its Military and Security Forces and Better Control of its Borders

Key Interventions:

- FY 2017 funding of \$0.4 million will provide strategic level professionalization courses that emphasize principles of effective force management, long term planning and force sustainment.
- Activities will provide strategic and technical expertise specifically in the areas of Military Training and Doctrine, Military Inspector General Operations and Military Legal Advocacy/Operational Law. Such education will directly contribute to Command and Control at a strategic level and allow more effective governance of the Malian Armed Forces.

Nonproliferation, Antiterrorism, Demining and Related Programs (NADR)

The Conventional Weapons Destruction (CWD) program responds to security threats and risks to indigenous populations posed by landmines and unexploded ordnance; excess, loosely secured, and otherwise at-risk small arms and light weapons; man-portable air defense systems; and ammunition.

Mali Has Strong and Effective Civilian Control Over its Military and Security Forces and Better Control of Its Borders

Key Intervention:

- CWD funding of \$1.0 million will be used to develop an Explosive Ordnance Disposal program to dispose of conventional weapons of war.

P.L. 480 Title II

Mali has historically suffered from chronic food insecurity due primarily to droughts and pests in the North and floods in the South. The recent political insecurity and instability has displaced populations and further aggravated the need for food and other types of humanitarian assistance. Child malnutrition is particularly severe in Mali, with stunting present in 38 percent of children under five years old. The combined effects of chronic malnutrition, poverty, conflict, and climatic risks have severely hampered the ability of Malians to quickly respond to, and recover from, periodic climatic or economic shocks. Food for Peace assistance will target the most vulnerable and augment the ability of local populations to resist and recover from these climate shocks on their own.

Poverty and Malnutrition are Sustainably Reduced, and the Formal Economy Expands

Key Interventions:

- \$4.5 million will support nutrition education for healthcare professionals and community members on infant and young child feeding practices for children six to 23 months; and support the construction and rehabilitation of drinking water sources.
- \$2.0 million will provide training to women on improved techniques for cultivating a variety of micronutrient-rich fruits and vegetables.
- \$2.5 million will provide business and technical skills development for youth, and the expansion of credit for farmers, entrepreneurs and youth.
- \$1.0 million will support the dissemination of agro-climatic data and early warning information that reaches vulnerable groups.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: Several monitoring and evaluation efforts were undertaken in FY 2015:

- USAID conducted an assessment of Mali's Health Management Information System (HMIS) that revealed critical weaknesses in the system, inhibiting the government's ability to provide healthcare to its own people. The recommendations from the assessment were validated by the government, and USAID provided support in the selection of the best HMIS tool named District Health Information System 2 (DHIS2).
- A field visit was conducted in order to study the country's bilingual reading curriculum and learning materials. It allowed the education team to have a greater understanding of the issues around reading instruction in a local language or French and adjust its strategy. Also, an early grade reading assessment (EGRA) and a conflict and disaster risk reduction (C/DRR) assessment were conducted to evaluate student performance in reading and to analyze the current provision of educational opportunities and how it impacts and is impacted by crisis or conflict, as well as the country's ability to appropriately respond. Additionally, an analysis of statistical data from the Ministry of Education on teachers, number of classrooms, and students was crucial in fine-tuning estimated targets, and thus budgets for future instruments.
- A new contract was awarded to establish an M&E service platform, which will build the capacity of mission staff and assist with the design of additional Impact Evaluations for large projects as well as performance evaluations.
- In FY 2015, USAID/Mali concluded its Population Baseline Survey for the Feed the Future Zone of Influence, the award and implementation of which had been delayed due to the political crisis.
- In FY 2015, USAID/Mali began implementation of an Impact Assessment for the core Feed the Future Cereal Value Chain (CVC) activity. This assessment will conduct initial, mid-point, and final evaluations of the CVC program.

- An evaluation is being designed to assess the impact of the USAID/Mali Justice Sector project. It is anticipated that this evaluation will be procured and implemented during 2016.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: The monitoring and evaluation activities conducted by USAID/Mali informed the following actions and decisions regarding the FY 2017 budget:

- The health program will fund a mechanism to develop and implement the roll out of DHIS2 that will help improve the country's Health Management Information System.
- The education and economic growth programs continue to incorporate the information and data collected through field visits, education specific assessments such as EGRA, and C/DRR into all project design and budget decisions.
- Based on findings of two joint assessments, USAID modified an existing cooperative agreement for elections and political processes to include more civic education, selected anti-corruption activities, and training for newly elected officials at the subnational level.

Detailed Objective Descriptions

Strong Democratic Institutions Incorporate Democratic Opposition Voices and Gender/Ethnic Diversity to National Debates, and Enhance Rule of Law: The lack of effective democratic opposition is often cited as a contributing factor to the 2012 coup d'état and ensuring diversity in Mali's democratic institutions will be critical for maintaining stability. U.S. assistance will help Mali strengthen its democratic institutions by incorporating opposition viewpoints and reinforcing the rule of law. Programs will support the professional development of journalists, particularly youth and women; empower political groups that promote gender equity in government; encourage women's participation in municipal, legislative, and presidential elections; and increase the ability of political parties to represent citizens' concerns.

Malian Civil Society Is an Active, Critical, and Constructive Partner with Government, Promoting Fundamental Rights and Liberties: Coming out of the post-coup environment, many human rights abuses remain unresolved and enforcement of laws defending human rights and civil liberties is weak. Civil society must play a critical role in reestablishing the social contract between the government and its citizens. U.S. assistance programs will advocate for the adoption and enforcement of a comprehensive anti-slavery law, strengthen government's responsiveness to human rights issues identified by civil society organizations (CSOs), and help implement a system for CSOs to report human rights violations to the government.

Malians Address Key Factors in Sustainable National Reconciliation and Resist Violent Extremism: Providing Malians with the tools necessary to counter violent extremist messages is necessary to protect U.S. interests and to foster the development of a democratic society capable of advancing the interests of Malians. Programs will increase positive dialogue among religious leaders and the communities they serve, promote inter-community dialogue by engaging with the GOM, CSOs, local community leaders, and traditional leaders, and promote the reintegration of former combatants by providing vocational training and viable economic opportunities. U.S. assistance will empower traditional leaders, journalists, and civil society to speak out against messages put forth by extremist groups. Programs will also facilitate the voluntary return and reintegration of refugees and IDPs to the north.

Healthy Behaviors and Use of High-Impact Health Services Bring Sustained Health Improvements and Stronger Service Delivery: Good health is essential to improved productivity, higher incomes, and poverty reduction in Mali. Programs will continue to build upon recent successes in the fight against infant, under-five, and maternal mortality and morbidity. In the next five years, U.S. assistance programs

will aim to reduce infant mortality by 25 percent, and reduce maternal mortality and under-five mortality by 30 percent. Additionally, HIV prevalence remains high among key populations. U.S. assistance to the health sector will increase the number and improve the quality of clinics, and deliver an integrated package of essential health services for HIV/AIDS, malaria, maternal and child health, family planning, water sanitation and nutrition to end preventable child and maternal deaths. U.S. assistance will support mass media communication campaigns; improve national-level health policy formulation, research, and drug security; increase citizens' demand for quality health services; and improve knowledge of preventive healthy behaviors among individuals, households, and communities.

Children Have Equitable Access to Quality Education and Capacity-Building Opportunities: There have been recent successes in the education sector, most notably the rise in child enrollment in primary school from 59 percent in 2000 to 83 percent in the 2011-2012 school year. Unfortunately, Malians have not seen an improvement in the quality of instruction, basic literacy, and the life skills that are essential if Mali's youth are to find gainful employment and expanded economic opportunity. Programs will continue to improve the reading skills of 500,000 Malian students in the first through second grades by delivering teacher training to over 12,000 teachers, providing innovative and affordable high-quality, evidence-based reading materials, strengthening service delivery systems in early grade reading, and involving communities in children's reading education. Programs will also provide opportunities for equitable access to education to 80,000 children and youth in conflict-affected areas by providing functional, safe, and accessible schools and learning spaces, conflict and gender-sensitive learning materials, psychosocial support to conflict-affected students and teachers, entrepreneurship and life skills training for youth, and institutional capacity building in conflict-sensitive programming and management.

Poverty and Malnutrition are Sustainably Reduced, and the Formal Economy Expands: With over 80 percent of the Malian population dependent on predominantly rain-fed agriculture, many Malians are extremely vulnerable to the impacts of external shocks, especially those related to climate change. Humanitarian and development assistance will augment the ability of local populations and environments to resist and recover from these climate-change shocks on their own. As rainfall becomes more unpredictable and variable, traditional agricultural crop calendars and indicators may no longer be effective or appropriate. To ensure that recent agriculture and food security gains are not reversed, U.S. investments will help Mali adapt to the impacts of climate change through improved weather information systems and more resilient practices.

Mali Has Strong and Effective Civilian Control Over its Military and Security Forces and Better Control of its Borders: The development of an accountable, professional, effective, and self-sustaining Malian military is essential for denying terrorist groups a safe haven in Mali. To achieve this goal, U.S. assistance programs will promote the professionalization of members of the Malian Armed Forces through the International Military Education and Training (IMET) program. This training will help develop professional, apolitical security and military forces grounded in strong institutions that respect the rule of law and civilian authority over the security sector. As a result of these training programs, the military's capacity to conduct border operations to counter illegal trafficking, build better cooperation with regional partners on counterterrorism operations, and ultimately build civilian trust in the Malian military, will be improved.

Mauritania

Foreign Assistance Program Overview

The primary goal of U.S. assistance to Mauritania is to support the country's development as an accountable and democratic state that is capable of countering violent extremism and maintaining a professional military that respects human rights and international norms. With high levels of unemployment and food insecurity, Mauritania continues to rank as one of the world's poorest countries, characterized as having "low human development" in the 2015 United Nations Human Development Report. With limited employment and few meaningful educational opportunities, the country's political and socio-economic situation is fragile, leaving large segments of the population vulnerable to recruitment by extremist organizations. To address these complex challenges, U.S. assistance focuses on enhancing the quality and availability of educational and professional opportunities for vulnerable youth, by working with the Government of Mauritania (GOM), an active participant in the Trans-Sahara Counterterrorism Partnership (TSCTP), to delegitimize extremist ideology and promote socially productive alternatives to political violence. In addition, U.S. assistance seeks to improve Mauritanian ability to safely and securely manage its conventional weapons and munitions stockpiles and professionalize Mauritania's security forces, thereby supporting the GOM's ongoing and substantial contributions to counterterrorism efforts in the region.

Development Assistance (DA)

In partnership with the GOM, DA resources under the TSCTP program will delegitimize terrorist ideology, promote socially productive outlets for at-risk populations, and reduce the underlying causes of vulnerability to violent extremism throughout Mauritania. FY 2017 resources will be programmed in close partnership with the GOM and civil society to promote constructive alternatives to extremism through increased economic opportunities, civic engagement, and educational opportunities. DA resources will specifically target historically marginalized, under-educated, and other at-risk populations.

Mauritania Effectively Counters Regional Terrorist and Violent Extremist Groups and Maintains the Security of its Borders against Infiltration by Transnational Criminal Organizations

Key Intervention:

- \$1.6 million of the FY 2017 DA request will be programmed to promote constructive alternatives to violent extremism through expanded economic opportunities for youth employment and education and through increased citizen participation on issues of governance.

International Military Education and Training (IMET)

IMET-funded courses expose defense establishment personnel to U.S. military training, doctrine, and values and are intended to promote democratic values, build capacity in key areas, increase the professionalization of the forces, and build lasting military-to-military relationships. IMET programs also provide English language training to improve military forces interoperability and facilitate participation in international peacekeeping operations.

Mauritania Deepens Security Cooperation with Regional Partners

Key Intervention:

- \$0.5 million in FY 2017 IMET funds will complement existing efforts of U.S. and other international partners to build effective defense institutions, professionalize the armed forces of Mauritania, and promote security for the government and people of Mauritania, particularly by countering terrorist threats.

Nonproliferation, Antiterrorism, Demining and Related Programs (NADR)

The Conventional Weapons Destruction (CWD) program will improve Mauritanian ability to safely and securely manage its conventional weapons and munitions stockpiles through an increase in its physical security and stockpile management capability. NADR-CWD activities are critical and directly support overall U.S. efforts to increase the peace, stability, and security of Mauritania.

Mauritania Deepens Security Cooperation with Regional Partners

Key Intervention:

- \$1.0 million in NADR-CWD assistance to reduce stockpiles of conventional weapons, continue stockpile management training, and provide physical security and safety improvements to Mauritania's conventional weapons and munitions stockpile facilities.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: Several monitoring and evaluation efforts were undertaken in FY 2015:

- USAID staff participated in several site visits to TSCTP-funded technical training programs, primarily to monitor public financial management and future plans for programming.

- In FY 2015 USAID funded an assessment of Countering Violent Extremism (CVE) resources and programming in Mauritania with the purpose of establishing the overall relevance and need for continued CVE programming in the country and the most effective programmatic interventions under such a program going forward. The assessment was based on three weeks of fieldwork by consultants, desktop literature reviews, and analysis of previous USAID, Department of State, and Department of Defense efforts in the region to counter violent extremism. The results of the assessment informed the FY 2017 DA request for TSCTP funding (see below).

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: The monitoring and evaluation activities conducted informed the following actions and decisions regarding the FY 2017 budget:

- The above-mentioned CVE assessment commissioned by USAID revealed two key findings that have informed this FY 2017 request: 1) CVE programming in Mauritania is contextually warranted and should be continued, and 2) future vocational education programming will be more effective if linkages to post-training employment opportunities, civic engagement, and other U.S. government efforts to counter violent extremism in the Sahel are enhanced. Program design for FY 2017 resources, currently underway, integrates these assessment findings, both of which have informed this request.
- In addition, ongoing discussions with partners in the GOM on current financial management and program implementation challenges of the TSCTP funded technical training program have shaped internal thinking on future TSCTP programming. Thus, USAID is currently consulting with Embassy Nouakchott, local civil society actors, and multilateral development partners in Mauritania on alternative, non-government-to-government, programming options going forward.

Detailed Objective Descriptions

Mauritania Effectively Counters Regional Terrorist and Violent Extremist Groups and Maintains the Security of its Borders against Infiltration by Transnational Criminal Organizations: Al-Qaeda in the Islamic Maghreb's presence in Mauritania and along its northern and eastern borders presents a range of challenges to the country's security. The GOM has been receptive to U.S. assistance on counterterrorism and border security, which provides an opening to facilitate positive impact on a range of U.S. government initiatives in the country, such as building the capacity of security institutions to detain suspected criminals and bring them to justice. U.S. assistance in FY 2017 will work to counter the influence of regional terrorist and violent extremist groups by promoting constructive engagement between citizens and the GOM and enhancing opportunities for historically marginalized groups throughout Mauritanian society.

Mauritania Deepens Security Cooperation with Regional Partners: Mauritania effectively counters regional terrorist and violent extremist groups and maintains the security of its borders against infiltration by transnational criminal organizations.

Mauritius

Foreign Assistance Program Overview

Enhancing maritime security and maintaining a strong bilateral relationship with Mauritius are priorities for the United States, as these efforts will contribute to a more stable Indian Ocean region. U.S. foreign assistance in Mauritius focuses on strengthening the country's coastal and maritime security capabilities. As one of the few African countries with a moderate Maritime Domain Awareness capability, Mauritius can play an important role in U.S. maritime security efforts in the region. Foreign assistance efforts will focus on training mid-level Mauritian government officers to increase professionalization including on maritime security issues.

Request by Account and Fiscal Year

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
TOTAL	244	*	150	-94
International Military Education and Training	244	*	150	-94

International Military Education and Training (IMET)

IMET-funded courses expose Mauritian defense establishment personnel to U.S. military training, doctrine, and values; promote democratic values; build capacity in key areas; increase the professionalization of forces; and build lasting military-to-military relationships. Most IMET-funded activities are conducted at U.S. military institutions in the United States, allowing opportunities for valuable cultural exchanges with communities across the country while students attend courses. IMET-funded courses focusing on maritime security may also take place in-country.

Mauritius and Seychelles Effectively Address Transnational Issues

Key Intervention:

- U.S. assistance of approximately \$0.2 million will support the training of Mauritian Police Force leaders, increasing their level of professionalism and enhancing their capacity to ensure maritime security.

Detailed Objective Descriptions

Mauritius and Seychelles Effectively Address Transnational Issues: Transnational crime causes regional instability, adversely impacting economies in general and the fishing and tourism industries specifically. Currently, Mauritius lacks the professionalized and effectively trained personnel to effectively identify and combat transnational crime in their extensive maritime domains. Mauritius relies heavily on third nation support to patrol their waters as well as investigate, apprehend, and prosecute criminals.

Mozambique

Foreign Assistance Program Overview

The main goal of U.S. assistance is to promote a more prosperous, democratic and stable Mozambique. U.S. assistance supports the country in leveraging emerging opportunities to achieve inclusive socio-economic development and improve the quality of life for all Mozambicans, particularly the poor, underserved, and marginalized. This assistance will continue to promote an integrated approach that addresses short and long-term social, economic, and health constraints to development. To achieve this goal, U.S. assistance combats serious health threats, increases the transparency and accountability of democratic institutions, and improves educational outcomes as fundamental pre-requisites for national development. U.S. assistance also promotes sustainable and inclusive economic development, sound agribusiness practices, the preservation of national biodiversity, and investments to adapt to climate change. The United States will continue to collaborate with the Government of the Republic of Mozambique (GRM) to combat trafficking in wildlife, and work across all programs to improve oversight, transparency, and civic involvement in governance.

Development Assistance (DA)

U.S. assistance will support the development of civil society organizations (CSO); public transparency and accountability; access to clean water; improved sanitation; enhanced basic education outcomes; improved nutritional status of rural populations; higher agriculture-sector incomes; and improved environmental protection of biodiversity and of populations vulnerable to climate change. Assistance will continue to leverage public-private partnerships to foster economic growth and environmental conservation.

Democratic Governance of Mozambican Institutions Strengthened

Key Interventions:

- U.S. assistance of \$0.2 million will increase citizen access to quality information by improving the quality of reporting and strengthening the financial sustainability of media outlets. Recognizing the essential role media plays in holding the government accountable, this activity will also focus on advocacy for the implementation of Mozambique's Right to Information Law as well as press freedom and free speech.
- U.S. assistance of \$1.0 million will be used to strengthen the impact of civic activism to improve accountable, effective democratic governance. Activities will focus on improving the organizational performance and advocacy capacity of strategically selected Mozambican CSOs, with attention focused on extractive industry management, governmental transparency and accountability, among other target sectors.
- \$0.1 million will be used to improve the administration of justice and support the effective implementation of key justice sector reforms. This activity will build upon past successes in fortifying internal management systems of Mozambique's Attorney General's Office and educating prosecutors on key legal issues.

Resilient, Broad-based Economic Growth Accelerated

Key Interventions:

- As part of the President's Global Hunger and Food Security initiative, Feed the Future (FTF), \$19.5 million in U.S. assistance will support the GRM to refine and implement a country-led, comprehensive, broad-based, agricultural development and food security strategy to reduce hunger and increase economic growth through market-led agricultural growth.
- \$4.0 million will support climate change adaptation activities that focus on both "green engineering" solutions such as rehabilitating natural coastal protective areas and working with the GRM to rezone the most vulnerable areas. Community outreach and education as well as GRM capacity development will be included to strengthen vulnerable cities' ability to adapt to the effects of climate change.
- \$1.4 million will fund conservation efforts in Gorongosa National Park, Niassa National Reserve, and other conservation areas to protect endangered wildlife in Mozambique's critical habitats and emerging tourist locations. Assistance will focus on addressing wildlife trafficking, increasing the policy development capacity of GRM agencies responsible for the management of protected areas, improving the management of selected protected areas, and increasing community economic activities that align with conservation efforts.

Labor Quality Improved through Education and Training

Key Intervention:

- Basic Education: \$5.3 million will be used to train teachers and school directors to improve early grade classroom instruction, reading outcomes and school management for students in grades one and

two. \$0.8 million of this funding will specifically support local civil society organizations to advocate for quality education, gender equity, and improved school leadership and management, \$0.3 million will be used to improve the national early grade reading policy framework and delivery systems through support to the Ministry of Education to improve coordination mechanisms, development of early grade reading standards, benchmarks and strengthening early grade reading assessment systems.

Health Status of Targeted Population Groups Improved

Key Intervention:

- **Water and Sanitation:** \$1.2 million will promote the adoption of key behaviors to improve overall hygiene such as safe drinking water management (including the collection, transport, treatment, and safe storage of drinking water), hand washing, safe disposal of feces including household construction and use of affordable latrines, proper storage and handling of food to prevent contamination. Behavior change messaging for water, sanitation and nutrition will be closely coordinated to contribute to improved nutrition outcomes. Efforts will also focus on increasing access to multiple-use water services and basic sanitation, both directly and through policy and regulatory approaches. Activities will include promoting water treatment methods, linking communities to water purifier retailers, targeted hygiene and latrine-use educational campaigns, and improving the policy and regulatory framework related to water and sanitation service delivery.

Global Health Programs (GHP)

The high prevalence of HIV/AIDS, malaria, tuberculosis, and other infectious diseases, as well as high maternal and newborn mortality, have resulted in an extremely low life expectancy of just 50 years for Mozambicans. Even within this context, Mozambique has seen important gains in health sector priority areas over the years. Assistance provided through the GHP accounts will support the goals and principles of the Global Health Initiative (GHI) to achieve major improvements in health outcomes in three globally shared goals: ending preventable child and maternal deaths, creating an AIDS-free generation, and protecting communities from other infectious diseases. More specifically, resources will focus on reducing maternal mortality by increasing health services available before, during, and after pregnancy. U.S. assistance will also concentrate on the cross-cutting issue of health system strengthening, enabling the country to manage limited health resources more effectively and efficiently, while improving the quality of services available to its citizenry.

Health Status of Targeted Population Groups Improved

Key Interventions:

- **HIV/AIDS:** As a part of the President's Emergency Plan for AIDS Relief (PEPFAR) Mozambique will receive \$298.3 million to build partnerships to provide integrated prevention, care, and treatment programs throughout the country as well as support orphans and vulnerable children. Additional details of activities to be undertaken under this program will be provided in the PEPFAR Supplement to this Congressional Budget Justification.
- **Tuberculosis (TB):** \$5.0 million will support activities to strengthen institutions and programs that relate to TB control; improve accessibility and quality of TB prevention, diagnosis and treatment, including multidrug-resistant TB; community involvement in TB control; and enhance effective linkages across the continuum of care from home to hospital, contributing to the national, global and Sustainable Development Goal targets for TB.
- **Malaria:** U.S. assistance under the President's Malaria Initiative (PMI) will provide \$29.0 million to expand efforts to scale-up proven preventative and treatment interventions toward achievement of 85 percent coverage among vulnerable groups to support the PMI goal of reducing malaria-related morbidity by 50 percent. The FY 2017 request level for Mozambique does not include the total

projected funding for the PMI. Decisions on allocations of centrally-managed funds will be made at the time that the FY 2017 operating year budget is set.

- Maternal and Child Health: \$17.0 million will be used to improve health facilities' abilities to expand evidence-based, high-impact delivery services to reduce maternal mortality such as emergency obstetric care and scaling-up high impact interventions (antenatal care, care for normal delivery, three post-natal care visits and post-partum family planning). Assistance will also include community education and outreach activities to increase facility-based births and link communities with facilities to reduce infant mortality.
- Family Planning and Reproductive Health (FP/RH): \$13.0 million will expand access to high-quality voluntary FP/RH services and information on a sustainable basis. Activities will procure FP/RH commodities, improve access to a range of voluntary contraceptive options, integrate services, train health care providers and promote communications for behavioral change through community outreach and facility-based interventions.
- Nutrition: \$6.3 million will be used for community and facility education and outreach activities for growth monitoring and promotion as well as behavior change activities to incorporate more nutritious foods and vitamins into household diets. A portion of these funds will be used for a nutrition challenge fund that will allow agribusinesses and food processors to introduce new, innovative, nutritious products for household consumption.

International Military Education and Training (IMET)

IMET-funded courses expose defense establishment personnel to U.S. military training, doctrine, and values and are intended to promote democratic values, build capacity in key areas, increase the professionalization of the forces, and build lasting military-to-military relationships.

Enhanced Capability to Address Transnational Threats and to Provide Accountable Domestic Security

Key Intervention:

- Assistance of \$0.4 million will support professionalization of the Mozambican military.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: Several monitoring and evaluation efforts were undertaken in FY 2014 and FY 2015:

- USAID-funded Support Program for Economic and Enterprise Development (SPEED) activity underwent a performance evaluation. SPEED is the third generation of USAID trade and investment environment work, focused on the enabling business environment and works primarily to influence governmental policy advocacy, change, and implementation.
- USAID conducted a Bio-Tourism performance evaluation that included three biodiversity and ecotourism activities.
- After five years of implementation, the Platform of Agriculture Research and Technology Innovation (PARTI) program, underwent a performance evaluation in Sofala, Maputo, Gaza, Manica, Zambezia, Nampula, Tete and Cabo Delgado provinces.
- An impact evaluation of the major education project continued into its third year, with an independent contractor monitoring reading achievement in both intervention and control groups.
- The Maternal-Child Health Integrated Program (MCHIP) underwent an end-term evaluation in order to assess its performance and contributions to the integrated health results framework.
- A performance evaluation of the Media Strengthening Program (MSP) was conducted.
- USAID and the Department of State's Bureau for International Narcotics and Law Enforcement Affairs (INL) conducted a joint mid-term evaluation of their government-to-government assistance activities with the Mozambican Attorney General's Office (AGO).

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: The monitoring and evaluation activities conducted in Mozambique informed the following actions and decisions regarding the FY 2017 budget:

- The results of the PARTI evaluation identified important issues to include in any follow-on efforts, including scale-up and better marketing of improved technologies and more effective extension linkages.
- Results and recommendations of the SPEED performance evaluation were adopted into the design of the SPEED follow-on activity in order to improve the enabling business environment in Mozambique through policy development, approval, dissemination, and implementation.
- The early grade reading impact evaluation demonstrated with greater precision which activities have the most impact on students' reading success. Based on very positive results so far, USAID is working on more cost-effective designs to expand the activity to more regions. This could more than triple the number of students who are reached through this activity.
- The MSP performance evaluation validated interventions that are valued by stakeholders and contributing to desired results, while also generating evidence-based recommendations for improved implementation of MSP and design of the follow-on activity.
- The Bio-Tourism evaluation contributed to the changes implemented in the follow-on activity designs including the development and advocacy of management plans for the Gorongosa Restoration Project activities.
- In July 2015, recommendations from the MCHIP evaluation were comprehensively reviewed by the follow-on activity design team. Many of the recommendations have been incorporated into the design. Specific recommendations include: ensuring a baseline and mid-term evaluations are part of the monitoring and evaluation plan; developing an exit strategy for after activity is completed; and reducing block trainings in favor of one-on-one training.
- The AGO mid-term evaluation is being used by USAID to make adjustments during the final six months of the program, and by INL to help guide its continuing work with the AGO. The results will inform any future activities with the AGO.

Detailed Objective Descriptions

Democratic Governance of Mozambican Institutions Strengthened: To strengthen democratic governance of Mozambican institutions, U.S. assistance will work to increase the capacity of CSOs advocating for accountability and better governance, as well as citizen access to quality information from a more diverse, effective and independent media. Assistance also will strengthen government institutions that combat corruption and promote accountability.

Resilient, Broad-based Economic Growth Accelerated: U.S. assistance will address specific areas of intervention: growth in the agriculture sector, which includes the vast majority of livelihoods; an improved business enabling environment; protection of natural resources; and strengthening of bilateral trade and investment.

Labor Quality Improved through Education and Training: U.S. assistance in this area will focus on improving early grade reading outcomes. These activities will seek greater engagement of the GRM, civil society, and communities in education, increasing transparency and raising accountability among a range of public actors.

Health Status of Targeted Population Groups Improved: U.S. assistance in this area will focus on a range of national health needs, including: improving the care, treatment and prevention of HIV/AIDS; reducing mortality due to malaria; improving health outcomes related to maternal and child health; increasing access to clean drinking water and improved sanitation; and increasing knowledge and use of family

planning methods to improve reproductive health. These activities will seek greater engagement of the GRM, civil society, and communities in health services, increasing transparency and raising accountability among a range of public actors.

Enhanced Capability to Address Transnational Threats and to Provide Accountable Domestic Security:
IMET funds will support professionalization training courses that will increase the professionalization of the Mozambican military which will enable them to more effectively conduct maritime security activities.

Namibia

Foreign Assistance Program Overview

Following the 2014 national and Presidential elections, Namibia came under new leadership that is striving to put the country on a path of prosperity for all Namibians. However, Namibia continues to face formidable development challenges that could prevent it from reaching its full potential. Notwithstanding Namibia's classification as an upper middle-income country, these challenges include one of the highest levels of income disparity worldwide, a poorly performing education system, a high unemployment rate, an estimated 14 percent HIV prevalence rate, and a high co-infection rate of tuberculosis (TB). U.S. assistance to Namibia will focus on a transition to sustainability in a post-emergency HIV response, on programs to strengthen local capacity to respond to the HIV/AIDS epidemic, and efforts to strengthen the U.S. government's ongoing military cooperation with the Government of the Republic of Namibia.

Request by Account and Fiscal Year

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
TOTAL	16,834	*	38,663	21,829
Global Health Programs - State	16,639	*	38,513	21,874
International Military Education and Training	195	*	150	-45

Global Health Programs (GHP)

The HIV/AIDS epidemic in Namibia is mature, generalized, and driven by heterosexual and mother-to-child transmission. The HIV/AIDS epidemic disproportionately affects the Khomas Region, which includes the capital, Windhoek, and six northern regions. HIV prevalence is 14 percent nationally, ranking Namibia sixth in the world, and there are an estimated 214,956 people living with HIV and AIDS out of a total population of roughly 2.1 million.

The Government of Namibia's strong political, administrative, and financial leadership has resulted in Namibia having impressively high coverage levels for treatment and prevention of mother-to-child transmission, rapidly adopting new international guidelines and best practices, and increasing domestic financing for HIV programming. As a result of the progress made in the fight against HIV/AIDS, new HIV infections were halved since 2004 and life expectancy rose from 56 in 2005 to 64 in 2012 (World Bank).

Assistance provided through the GHP accounts will support the goals and principles of the Global Health Initiative (GHI) to achieve major improvements in health outcomes in three globally shared goals: ending preventable child and maternal deaths, creating an AIDS-free generation, and protecting communities from other infectious diseases.

Improved Health Status of Namibians Leading to a Healthier Workforce

Key Intervention:

- **HIV/AIDS:** As a part of the President's Emergency Plan for AIDS Relief (PEPFAR) Namibia will receive \$38.5 million to build partnerships to provide integrated prevention, care, and treatment programs throughout the country and support orphans and vulnerable children. Additional details of activities to be undertaken under this program will be provided in the PEPFAR Supplement to this Congressional Budget Justification.

International Military Education and Training (IMET)

FY 2017 IMET resources will support efforts to strengthen the U.S. government's ongoing military cooperation with the Government of the Republic of Namibia, through support to the Namibia Defense Force (NDF), as it transforms from a threat-based to a capabilities-based military that is responsive to the nation's emerging security needs. The NDF remains committed to the goal of participation in peacekeeping operations within the context of the Southern African Development Community to ensure the collective security of the southern Africa region.

U.S. government support for the Namibian military is focused on improving the NDF's capacity to meet its national and regional security and stability requirements, while reinforcing professionalization and rule of law within the force. To strengthen sound leadership principles, U.S. IMET assistance provides Namibian military leaders with the professional and specialized training they need to support the Namibian military.

The focus for U.S.-Namibian bilateral military relations is exposure to U.S. based leadership training for officers and non-commissioned officers (NCOs) that will ground the NDF training establishment in best practices and procedures. All training provided under the proposed IMET program will have a leadership component to reinforce the fundamental principles of professional leadership, and provide the foundation for leaders to make positive decisions independently during fluid situations.

Civil Institutions Effectively Respond to the Needs of the Community

Key Intervention:

- The FY 2017 request includes \$0.2 million for U.S.-based professional training for military personnel, focusing on officers and NCOs. This will enable the NDF to rewrite NCO training doctrines and allow follow-on U.S. government funding to ground the NDF training establishment in best practices and procedures. English language training program support for the NDF will also be provided.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: USAID continued to implement monitoring and evaluation efforts to ensure that program goals are tracked appropriately and to inform future programming using best practices:

- USAID conducted an evaluation of the HIV Prevention among Adult Women in Namibia activity to determine whether intended results were achieved, and to inform the design of potential future activities.
- USAID conducted an end-line performance evaluation of the Strengthening HIV/AIDS Responses in Prevention and Protection Project.

Critical gaps were identified during these monitoring and evaluation efforts and new strategies outlined to respond to the changing environment of the HIV program in Namibia, but also key gains were identified and shared with the host government, to consolidate national efforts. More data- and evidence-driven activities are planned to track the increase of direct service delivery activities, particularly in antiretroviral therapy scale up, with a focus on key priority regions and hotspots.

In FY 2016, USAID will undertake additional evaluations to review the gains made by U.S. government investments in prevention with key populations and HIV retention and adherence.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: The monitoring and evaluation activities conducted by USAID and the Department of State informed the following actions and decisions regarding the FY 2017 budget:

- The evaluation of the HIV Prevention among Adult Women in Namibia activity has informed future directions for policy and programs, with the emphasis on the development and expansion of horizontal systems of response that are led on the ground and incorporate contextually relevant solutions for HIV prevention programming.
- USAID will use the updated Agency guidelines and the findings of the USAID program evaluations conducted in FY 2014 to ensure that U.S. assistance is used to implement the GHI Strategy components that address TB and HIV/AIDS co-morbidity. Specifically, the goal for future programming is to ensure equal access to quality health care and transition to greater Namibian ownership, while emphasizing the importance of sustainability and systems strengthening.
- The findings of the evaluation of the Strengthening HIV/AIDS Responses in Prevention and Protection Project concluded that the project was generally a success, and that USAID has done extensive work to ensure that the services provided through this project are sustained beyond U.S. government assistance.
- The findings and recommendations of the evaluations planned for FY 2016 to review the gains made by U.S. government investments in prevention will be used to plan and influence future program direction for the reduced spread and mitigation of the impact of HIV/AIDS through a comprehensive and integrated facility-to-community response.
- IMET program reviews determined that the military-to-military relationship and capacity building are contributing to the NDF's capacity to meet its national and regional security and stability requirements. The level of capacity is expected to increase in FY 2017 with the professional training for military personnel, focusing on officers and NCOs. This will enable the NDF to rewrite NCO training doctrines and allow follow-on U.S. government funding to ground the NDF training establishment in best practices and procedures.

Detailed Objective Descriptions

Improved Health Status of Namibians leading to a Healthier Workforce: Activities will focus on a transition to sustainability in a post-emergency HIV response and on programs to strengthen local capacity to respond to the HIV/AIDS epidemic with improved strategic coordination among stakeholders and enhanced local capacity for research and innovation.

Civil Institutions Effectively Respond to the Needs of the Community: Military institutions will effectively develop human resources to more professionally respond to state and citizen security needs.

3.1 Health	38,513

Niger

Foreign Assistance Program Overview

Niger continues to be vulnerable to a range of shocks adversely affecting its citizens, including poor harvests; security threats posed by Boko Haram, al-Qaeda in the Islamic Maghreb, and other extremist groups; and instability in northern Mali, northern Nigeria, and Libya that poses a threat to Niger's efforts to grow its economy, strengthen governance, address human rights issues, and enhance the resilience of its most vulnerable citizens. Despite these challenges, Niger is a partner nation of the Trans-Sahara Counterterrorism Partnership (TSCTP), and is a key U.S. security partner in the Sahel. Through this partnership, Niger has contributed to the United Nations peacekeeping missions in Mali and Côte d'Ivoire, conducted operations to secure borders and interdict terrorists; and hosted U.S. military aircraft. In FY 2017, U.S. assistance will focus on increasing Government of Niger's responsiveness to citizen demands, supporting the professionalism of Niger's military, and advancing Niger's ability to safely and securely manage its conventional weapons and munitions stockpiles.

Development Assistance (DA)

Niger suffers from a lack of citizen confidence in the government and its institutions due to multiple coup d'états, unmet development expectations, and poor public service delivery. U.S. assistance will enhance constructive dialogue between citizens and the Government of Niger, and promote collective action on a range of citizen priorities, including increased access to quality public goods and services.

The Nigerien Government is Transparent with Resources, Management, and Service Delivery

Key Interventions:

- Effective security sector governance can help to prevent, deter, discover and punish misconduct, including corruption, other criminal activity and human rights abuses. FY 2017 funds will be used to assist USAID to better assess, design, implement and evaluate security sector governance and justice sector projects as they are developed jointly with the partner government through the Security Governance Initiative (SGI) Joint Country Action Plan (JCAP).
- In order to promote a more robust, regionally oriented, whole-of-government approach to addressing the challenges in the Sahel, the FY 2017 request will support the Sahel Development Initiative (SDI). SDI has four inter-related development objectives: countering violent extremism; strengthening vulnerable local communities; building capacity of regional, national, and subnational institutions to effectively deliver services; and interagency learning, as USAID, Department of State and Department of Defense colleagues work toward a common approach to the region.
- FY 2017 resources will be used to increase the ability of political parties and other key actors, including media, civil society organizations, and private sector entities, to identify and respond to priority public needs in order to increase citizen confidence in the state amongst target populations.

International Military Education and Training (IMET)

IMET-funded courses and training events expose defense establishment personnel to U.S. military training, doctrine, and values. IMET activities are intended to promote and strengthen democratic values, build capacity in key areas, increase the professionalization of forces, and build lasting military-to-military relationships. Most IMET-funded activities are conducted at military institutions in the United States, allowing for valuable cultural exchanges with communities across the country while students are attending courses.

Professionalized Security Forces Provide Stability, Counter Extremism and Terrorism, and Enhance Security

Key Intervention:

- In FY 2017, Niger will receive \$0.5 million in IMET support for training military personnel, thereby increasing the overall level of professionalism and capabilities among military forces.

Nonproliferation, Antiterrorism, Demining and Related Programs (NADR)

The NADR Conventional Weapons Destruction (CWD) program improves Nigerien ability to safely and securely manage its conventional weapons and munitions stockpiles through an increase in its Physical Security and Stockpile Management capability. This funding allows physical security improvements while supporting continuing stockpile training and reduction. These activities are critical and directly support overall U.S. efforts to increase the peace, stability, and security of Niger.

Professionalized Security Forces Provide Stability, Counter Extremism and Terrorism, and Enhance Security

Key Intervention:

- \$1.0 million in NADR-CWD assistance will be used to reduce stockpiles of conventional weapons, continue stockpile management training, and provide physical security and safety improvements to Niger's conventional weapons and munitions stockpile facilities.

Linkages with the Millennium Challenge Corporation (MCC)

After its suspension in 2010, Niger's MCC Threshold program was resumed in 2012 with a four-year, \$7.6 million Niger Education and Community Strengthening Program co-funded by USAID. The program focuses on improving educational outcomes through the introduction of an innovative early grade reading program utilizing local languages and strengthening community involvement. MCC's contribution to this program will end in 2016; however the MCC Compact development team has conducted a Niger country assessment and plans to focus on irrigation near the Niger river for future program development.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: Several monitoring and evaluation efforts were undertaken in FY 2015 and are planned for FY 2016:

- USAID performed portfolio reviews for Food for Peace and DA-funded activities (FY 2014 resources), conducted regular site visits to monitor implementation, and instituted programmatic adjustments when necessary to account for shifting dynamics on the ground.
- In FY 2015, USAID conducted a gender assessment in Niger and is using the information provided in the report to help guide programmatic adjustments and the design of future programs.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: Monitoring and evaluation activities informed the following actions and decisions regarding the FY 2017 budget:

- A Political Economy Analysis (PEA) will be conducted in Niger in FY 2016 to support the upcoming Participatory, Responsive Governance (PRG) project. The PEA will also facilitate the dissemination of research to the Nigerien public, key local stakeholders and to international partners as well as influence strategy development for future democracy and governance assistance in Niger.

Detailed Objective Descriptions

The Nigerien Government is Transparent with Resources, Management, and Service Delivery:

U.S. assistance will support the Government of Niger to become more responsive to citizen needs, more participatory in implementing governance solutions, and more effective in meeting service delivery challenges. More specifically, the Nigerien government will focus on enhancing the understanding and awareness of citizen priorities by ensuring greater civic participation among women and youth at the local, regional, and national levels.

Professionalized Security Forces Provide Stability, Counter Extremism and Terrorism, and Enhance Security: Niger is a reliable partner in the struggle against terrorism and other transnational threats. Therefore, assistance will support Niger's ability to contribute to UN peacekeeping missions, which promote regional security.

Integrated Country Strategy (ICS) Mission Objectives by Account and Program Area

1.3 Stabilization Operations and Security Sector Reform	1,000

Nigeria

Foreign Assistance Program Overview

The primary goal of U.S. assistance in Nigeria is to support the country's development as a stable democracy while reducing extreme poverty. In the North East region, where the violent Boko Haram insurgency has devastated local populations, the U.S. government will continue to provide life-saving humanitarian assistance and transitional programs for stabilization. Targeted U.S. foreign assistance in Nigeria seeks to reduce extreme poverty and improve the quality of life for Nigeria's most vulnerable communities through improved governance at the federal, state, and local levels; reduced corruption; a strengthened private sector as a source of job creation; and improved quality of social service delivery. U.S. assistance will continue to address security issues by increasing the skills of security forces and advocating for institutional reform. Additionally, U.S. assistance will better position Nigeria to achieve its goal of regional leadership in West Africa via the Abuja-based Economic Community of West African States (ECOWAS) regional commission, while advancing U.S. policy objectives.

Development Assistance (DA)

DA funds will strengthen democratic governance, enhance economic growth, and increase access to basic education in Nigeria. Democratic governance activities will increase the capacity of Nigeria's electoral management bodies to manage, coordinate, and oversee the electoral process; assist civic groups to promote electoral reform recommendations; and provide technical assistance to major political parties on developing internal rules and procedures. Activities will enhance economic growth through institutional capacity building to public sector agencies; lending to small enterprises; and strengthening trade policy and trade facilitation. Assistance will expand basic education in Northern Nigeria, increasing access and improving reading outcomes for many of the country's poorest children. Underpinning these efforts will be support to strengthen Government of Nigeria (GON) leadership at the state and local level governing bodies to increase the provision of basic services, including health and education, to its citizens.

Technical, Organizational, and Political Support to Nigeria's Electoral System Produces Credible Outcomes

Key Intervention:

- Approximately \$7.0 million will provide election-related assistance at the federal, state, and local levels to strengthen the capacity to manage elections, enhance the capacity of civil society organizations to conduct independent election observations, support youth participation in political processes, and promote peaceful elections. Funds will strengthen the ability of Nigerian political parties to better function, be more inclusive, and improve their communication with ordinary citizens.

Improve Infrastructure through Investment and Greater Privatization in Key Sectors, such as Agriculture and Energy

Key Interventions:

- \$3.9 million of U.S. assistance will continue to build the financial and productive ability of water providers in select Nigerian states to operate more sustainably and with appropriate corporate governance.
- As part of the President's Global Hunger and Food Security Initiative, Feed the Future (FTF), USAID will provide \$23.0 million to work with the Government of Nigeria to implement agricultural development programs that remain critical to achieving core U.S. development and foreign policy goals, including combating extremism, achieving political and economic stability, reducing sources of conflict, reducing poverty, and accelerating and sustaining broad-based economic growth. Agriculture provides livelihoods for about 70 percent of the population in Nigeria and as such is a key element in accelerating broad based economic growth.

Comprehensive Strategies by the Government of Nigeria in Partnership with Civil Society and the Private Sector Prevent, Mitigate, and Resolve Violent Extremism

Key Intervention:

- Approximately \$3.8 million will support activities that help authorities identify and address emerging conditions—such as corruption and impunity—that trigger violent conflicts. Funds will empower women and youth-led organizations to influence the development and implementation of reforms that address the needs of communities and underlying causes of violence and conflict.

Government Engagement in Providing Basic, Quality Services for the Nigerian People Is Expanded

Key Interventions:

- Effective security sector governance can help to prevent, deter, discover and punish misconduct, including corruption, other criminal activity and human rights abuses. FY 2017 funds will be used to

assist USAID to better assess, design, implement and evaluate security governance and justice sector projects as they are developed jointly with the partner government through the Security Governance Initiative (SGI) Joint Country Action Plan (JCAP) planning processes.

- Approximately \$9.5 million in civil society funds will support activities that strengthen partnerships among civil society coalitions and networks, targeted GON institutions, and other key stakeholders to advocate for and monitor democratic reforms aimed at strengthening transparency, reducing corruption, and enhancing accountability and good governance. Specific interventions will support advocacy campaigns for issues such as access to information, transparent public financial management, and a policy framework for local governance and decentralization. They will also focus on citizen participation and oversight of privatization of public utilities.
- Approximately \$10.5 million in good governance funds will strengthen systems in the basic education and health sectors, improve transparency of state and local government operations, increase implementation of state and local government budgets, and strengthen civil society organizations and other relevant stakeholders in expenditure performance tracking
- Good governance and civil society funds will focus on increasing the provision of services from federal, state, and local governments by building upon already-developed tools and skills and providing training in financial and program management.
- Approximately \$15.0 million in education funds will improve the quality of education through a variety of interventions including: strengthening key education management systems in targeted states; improving the overall quality of teaching by supporting reforms for teacher training policies; and working to improve systems that support improvements in academic skills for reading, writing, and math. Funds will also increase access to education services for populations lacking adequate, safe learning environments.

Foreign Military Financing (FMF)

Despite years of battling internal conflicts and playing a substantial role as a regional peacekeeper, Nigeria's security forces remain ill prepared to address the array of crises that the country faces. FMF funds provide leadership training and equipment to support the GON's efforts to participate in peacekeeping and other security operations. Activities will continue to support increased regional cooperation among Nigeria, Benin, Cameroon, Chad, and Niger to contain Boko Haram.

Capacity of Security Forces to Counter Terrorism and Transnational Crime is Improved

Key Intervention:

- U.S. assistance of \$0.5 million will continue to support institutional reform and capacity building in security services. Assistance will be used to train leaders and units to procure and maintain equipment, enabling Nigeria's security forces to conduct peacekeeping and counterterrorism activities.

Global Health Programs (GHP)

Nigeria suffers from high maternal and child mortality, and inadequate health services contribute to Nigeria's high poverty rate. Assistance provided through the GHP accounts will support the goals and principles of the Global Health Initiative (GHI) to achieve major improvements in health outcomes in three globally shared goals: ending preventable child and maternal deaths, creating an AIDS-free generation, and protecting communities from other infectious diseases. The GHI strategy in Nigeria provides a platform for building on the successful interagency collaboration among USAID, the U.S. Centers for Disease Control and Prevention, and the Department of Defense under the President's Emergency Plan for AIDS Relief (PEPFAR).

Government Engagement in Providing Basic, Quality Services for the Nigerian People Is Expanded

Key Interventions:

- HIV/AIDS: As a part of the President's Emergency Plan for AIDS Relief (PEPFAR) Nigeria will receive \$356.7 million to build partnerships to provide integrated prevention, care, and treatment programs throughout the country and support orphans and vulnerable children. Additional details of activities to be undertaken under this program will be provided in the PEPFAR Supplement to this Congressional Budget Justification.
- Tuberculosis (TB): U.S. assistance of \$11.0 million will strengthen GON efforts to improve TB treatment outcomes and reduce multi-drug resistant TB (MDR-TB) prevalence in collaboration with the Nigerian National Plan. Activities will improve the number of facilities able to detect MDR-TB and TB/HIV co-infection and increase the number of patients receiving care and treatment.
- Malaria: U.S. assistance under the President's Malaria Initiative (PMI) will provide \$75.0 million to expand efforts to scale-up proven prevention and treatment interventions toward achievement of 85 percent coverage among vulnerable groups to support the PMI goal of reducing malaria-related morbidity by 50 percent. The FY 2017 request level for Nigeria does not include the total projected funding for the PMI. Decisions on allocations of centrally managed funds will be made at the time that the FY 2017 operating year budget is set.
- Maternal and Child Health (MCH): \$50.0 million will strengthen Nigeria's capacity to extend coverage of proven, high-impact interventions to the most vulnerable populations. It will also build on previous years' investments in scaling-up high-quality delivery services and newborn health care to mitigate the high burden of preventable child and maternal deaths.
- Family Planning and Reproductive Health (FP/RH): \$37.0 million of assistance will support a key component of reducing preventable child and maternal deaths by increasing access to voluntary FP/RH services for healthy timing and spacing of pregnancies. Scaled-up programs in the public and private sector will expand clinic-based services for long-acting, reversible contraceptive methods and community-based services for both injectable contraceptives and natural methods of birth control.
- Nutrition: With \$2.5 million, the U.S. government will support research to better understand the drivers and underlying causes of malnutrition in Nigeria and will support the GON in implementing an integrated, multi-sector nutrition strategy. Interventions are part of the Feed the Future strategy and will work in synergy with water, sanitation, and hygiene activities. Working at both the federal and state levels, activities will aim to support a change of existing social norms and predominant behaviors, through existing community structures to promote improved nutrition. There will be a continued focus on the first 1,000 days of life (gestation through 24 months) to improve birth weight during this critical period of physical and intellectual development.

International Military Education and Training (IMET)

IMET programs will continue to teach the skills needed for the Nigerian military to effectively undertake peacekeeping and counterterrorism operations as well as to strengthen its national defense capabilities and civil-military relations.

Capacity of Security Forces to Counter Terrorism and Transnational Crime is Improved

Key Intervention:

- \$0.8 million of U.S. assistance will be used to continue to advocate for institutional reform in security services in conjunction with providing increased capacity building. IMET funding will support the professionalization of the Nigerian military, which will enable it to better participate in peacekeeping, counterterrorism, and maritime security operations.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: USAID undertook several monitoring and evaluation activities in FY 2014 and FY 2015. The Mission conducted evaluations of its largest health activities, a key local partner-led conflict activity, and a trade and transport activity:

- The evaluation of the Targeted States High Impact Project (TSHIP) showed that the project succeeded in some areas, including policy, capacity building, community mobilization, participation and ownership, as well as distribution of life saving commodities. TSHIP's efforts and accomplishments in its two states, however, were not enough to lead to the desired health outcomes without the necessary political will and funding commitment from the GON's state actors.
- Similar to the TSHIP evaluation, the Strengthening Integrated Delivery of HIV/AIDS Services project evaluation showed that while service delivery was on track, health systems strengthening, leadership and sustainability were performing poorly. These findings will be used to adjust project implementation going forward.
- The conflict activity evaluation looked at the contribution of the Interfaith Mediation Centre (IMC) Training of Leaders on Religious and National Coexistence project to the reduction of religious conflict in targeted states. The evaluation showed that while this project had contributed to the reduction of religious conflict in target communities, its early warning system was not formalized, thereby undermining results substantially. Furthermore, the project lacked significant capacity in various management areas. USAID and IMC are addressing these findings.
- The trade and transit evaluation showed that the project's trade policy and trade facilitation were successful, while the Lagos-Kano-Jibiya (LAKAJI) Corridor improvement was less successful. Similar to the evaluations above, there is little buy-in from the GON on the LAKAJI corridor. In addition, the evaluation identified data quality as an issue with this project. USAID is addressing these issues at multiple levels.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: The monitoring and evaluation activities conducted by USAID informed the following actions and decisions regarding the FY 2017 budget:

- USAID conducts intensive field monitoring of its activities. Findings from these field visits are used for continuous project management purposes. USAID's follow-on monitoring and evaluation mechanism has a third party monitoring component that enables better monitoring of projects in security-challenged locations.
- USAID will conduct five evaluations in FY 2017. Findings of these evaluations will form the basis for mid-course corrections, project design, and strategy alignment.
- Based on recommendations from previous evaluations, the USAID's leadership will not adopt any focus states for its programs that do not demonstrate a political will evident in funding of development interventions. Memoranda of Understanding with focus states will define state roles and contributions as well as USAID roles and contributions.

Detailed Objective Descriptions

Technical, Organizational, and Political Support to Nigeria's Electoral System Produces Credible Outcomes: While there has been some improvement in election administration, some recent elections have been marred by allegations of fraud and deficiencies, occasionally leading to violence. It is in the U.S. interest to prevent similar results in future Nigerian elections. To secure free, fair, and credible elections and to ensure that Nigeria's progress towards an inclusive, representative democracy continues, programs will focus on the administration and monitoring of off-cycle, gubernatorial elections as well as preparations for the 2019 federal elections.

Improve Infrastructure through Investment and Greater Privatization in Key Sectors, such as Agriculture and Energy: Private sector-led, non-oil economic growth will largely reduce the number of Nigerians living in poverty. To spur investment and greater privatization in key sectors, U.S. assistance will support increased agricultural competitiveness, increased energy access, and privatization of the energy sector for improved efficiency.

Capacity of Security Forces to Counter Terrorism and Transnational Crime is Improved: To counter terrorism and transnational crime, U.S. assistance will continue to support institutional reform in security services in conjunction with providing increased capacity building.

Comprehensive Strategies by the Government of Nigeria in Partnership with Civil Society and the Private Sector Prevent, Mitigate, and Resolve Violent Extremism: Nigeria's weak governance record and ethno-religious violence fuel grievances that lead to rising levels of conflict driven by economic or ideological motivations. To prevent, mitigate, and resolve violent extremism, U.S. interventions will connect communities through dialogue and other reconciliation approaches to build relationships across religious and ethnic divides and promote greater trust. It is expected that the growth of these relationships will build social capital, bring communities together, create a common understanding and shared vision of the future, and provide the essential basis for democratic development. Interventions to prevent and resolve conflicts will utilize holistic systems that address the root causes of conflicts before they escalate.

Government Engagement in Providing Basic, Quality Services for the Nigerian People Is Expanded: With over 10 million students out of school and dismal educational achievement statistics, U.S. assistance will support GON efforts to improve the quality of and access to basic education in northern Nigeria. This includes support at the local level, provision of appropriate learning materials, and teacher training on reading instruction. As part of the Global Health Initiative, the United States will assist the GON in improving family planning, reproductive health, and maternal and child health services. This includes systems strengthening in the health sector and direct support to expand skilled birth services, expand community-based health services, promote use of insecticide-treated bed nets and artemisinin-based anti-malarial combination therapy, increase routine immunizations and polio eradication efforts, increase access to safe water, and improve nutrition among infants and young children. Furthermore, U.S. assistance will continue to expand the use of antiretroviral therapy (ART) services by focusing on states with a high HIV burden and unmet needs, early identification of HIV-infected persons, linkages to referral centers and retention in care, and continued decentralization of ART services to primary health care centers. As studies have shown that a large portion of new HIV infections come from mother-to-child transmission, HIV/AIDS interventions will integrate maternal and child health efforts to address this issue and enhance developmental impact.

Republic of the Congo

Foreign Assistance Program Overview

U.S. assistance to the Republic of the Congo (Congo) focuses on promoting regional peace and security in this post-conflict country. Boasting Central Africa's only deep water port, the Congo's financial capital of Pointe-Noire maintains its International Ship and Port Facility Security (ISPS) certification. This certification creates significant economic opportunity for the Congo – which seeks to turn the coastal city into a regional shipping hub – while requiring a modern, professional security posture in accordance with strict ISPS standards. To help promote this growth and encourage regional stability, U.S. foreign assistance focuses on development of the Congo's professional military capabilities and provides foundational training for development in this area, in keeping with post's Integrated Country Strategy.

Request by Account and Fiscal Year

(\$ in thousands)	FY 2015 Actual	FY 2016 Estimate	FY 2017 Request	Increase / Decrease
TOTAL	270	*	250	-20
International Military Education and Training	270	*	250	-20

International Military Education and Training (IMET)

IMET-funded courses expose Congolese defense establishment personnel to U.S. military training, doctrine, and values through attendance at professional military education programs in the United States. IMET-funded activities are intended to promote democratic values, build capacity in key areas, increase the professionalization of forces, and build lasting military-to-military relationships.

Military and Law Enforcement Agencies Continue to Improve their Capacity across the Spectrum of Security Services

Key Intervention:

- Approximately \$0.3 million in IMET resources will support the professionalization of the Congolese military.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: Students are monitored and evaluated throughout training at the U.S. institutions. Upon completion of training, student training records are maintained in a U.S. Defense Department database; the Office of Security Cooperation updates student profiles over time to record student professional growth.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: The Office of Security Cooperation maintains relationships with IMET students to monitor the performance of these officers in their posts over time to assess whether the Congolese military is placing training recipients in positions commensurate to the training received.

Detailed Objective Descriptions

Military and Law Enforcement Agencies Continue to Improve their Capacity across the Spectrum of Security Services: Ensuring that the Congolese military becomes a more professional defense force is a high assistance priority for the United States. U.S. assistance seeks to improve the ability of the Congolese military to fight transnational threats and ensure internal stability by improving the capabilities and professionalism of the military. Other areas important to this objective include improving Congo's response to cases of trafficking in persons; enhancing Congo's ability to detect and interdict weapons of mass destruction and related items; strengthening border security by improving the capabilities and professionalism of the border guards and the customs service; improving Congo's export control system; and limiting access of conventional weapons to end users of proliferation concern.

Rwanda

Foreign Assistance Program Overview

The primary goal of U.S. assistance in Rwanda is to support the country's commitment to tackle development challenges in order to achieve sustainable, broad-based economic and social transformation that expands opportunity and increases national and regional security and stability. To achieve this goal, U.S. assistance will strengthen the capacity of the health system to deliver high quality care and provide support for Rwandans to utilize and apply high-impact health and nutrition practices. U.S. assistance will support innovative, targeted agricultural investments in key crops as well as policy reforms to encourage greater agriculture investments, regional trade, and increased nutrition outcomes alongside sustainable growth in the agriculture sector. U.S. support for foundational literacy skills for children in lower primary schools, as well as youth employment training, provide a long-term foundation for skills building needed in a workforce oriented towards a service-based economy. In addition, U.S. assistance will support reforms that promote government accountability, respect for human rights and greater democratization of decision-making by building the capacity of relevant civil society and other key actors, improving justice and advancing reconciliation in this post-genocide country, as well as ensuring participatory planning with local populations and stakeholders, and encouraging improved community relationships. U.S. assistance will also support the continued professionalization of Rwandan military personnel participating in regional peacekeeping operations aiming to improve civilian command and control over the military and mutual respect of human rights. All U.S. assistance will integrate gender equality and women's empowerment to ensure that men and women equally participate in and benefit from the country's development.

Request by Account and Fiscal Year

TOTAL	169,164	*	137,680	-31,484
Development Assistance	54,700	*	35,621	-19,079
Global Health Programs - State	69,845	*	57,559	-12,286
Global Health Programs - USAID	44,000	*	44,000	-
International Military Education and Training	619	*	500	-119

Development Assistance (DA)

DA funds will support agricultural economic growth programs that increase productivity and nutrition of the Rwandan people, and enhance Rwanda's private sector competitiveness. Assistance will improve the Government of Rwanda's (GOR) capacity to manage natural resources and respond to climate change. In addition, DA funds will be utilized in the education sector to increase the opportunities for Rwandan children and youth to succeed in the modern workplace. In the area of democracy and governance, U.S. assistance will support programs that contribute to the improvement of the conditions for durable peace and development through strengthened democratic processes and respect of human rights and rule of law. Programs will focus on promotion of civic engagement and consultation in decision-making at all levels, and improvement of the performance and engagement by civil society organizations (CSOs) and GOR entities. For all these programs, USAID will leverage other donor and private sector investments.

Economic Opportunities in Rural Areas Expanded

Key Interventions:

- As part of the President's Global Hunger and Food Security initiative, Feed the Future (FTF), USAID will provide \$24.5 million to support the efforts of the GOR to refine and implement a country-led comprehensive food security strategy to reduce hunger and increase economic growth through market-led agricultural development. These strategies aim to reduce hunger, improve nutrition, and promote broad-based economic growth through agricultural development. FTF activities will increase productivity of the Rwandan agricultural sector by: facilitating farmers' access to extension services, productive inputs such as improved seeds and fertilizer, and improved post-harvest handling technologies; strengthening Rwandan agricultural research; promoting increased private sector investment in the agricultural sector; enhancing market opportunities; and facilitating access to rural and agricultural finance.
- FTF assistance will also improve the nutritional status of women and children, and the livelihoods of vulnerable populations through sustainable, integrated nutrition and agriculture interventions, such as production of nutrient-dense foods and nutrition educational messages.
- The United States will utilize \$3.0 million in Global Climate Change funding to enable GOR institutions, the private sector and farmers to use climate data in agricultural production planning and land use planning. Farmers will be trained on climate smart agriculture practices that help to conserve soils and efficiently manage natural resources. U.S. assistance will also increase farmers' adaptation and resilience to climate change while minimizing agriculture's contribution to greenhouse gas emissions. U.S. assistance also will help the GOR develop a National Adaptation Plan to promote greater coordination and coherence in identifying risks and priorities; use those plans to prepare viable funding proposals; and identify relevant funding sources.

Increased Opportunities for Rwandan Children and Youth to Succeed in the Modern Workplace

Key Interventions:

- The United States will use \$5.1 million of basic education funding to improve education outcomes in literacy for boys and girls in primary school through the strengthening of teacher training. Activities will provide technical assistance to improve teaching practices; increase the availability and use of innovative and relevant teaching and learning materials; and strengthen the capacity to monitor, assess, and analyze student performance.
- In addition, \$1.0 million in U.S. higher education assistance will support programs that aim to strengthen knowledge, work readiness, and life skills of youth, and work with local employers and service providers to ensure that these skills are relevant to meet labor market demand.

Democratic Engagement Within and Between Communities, Civil Society, and Government is Strengthened

Key Interventions:

- \$1.0 million of U.S. assistance will support proposals from civil society related to specific rights-focused themes, including strengthening the rule of law; empowering local actors to engage in effective policy and rights research, education, public awareness campaigns and advocacy; and reducing and monitoring gender-based violence and trafficking in persons.
- \$1.0 million will be provided to strengthen civil society capacity and support proposals that advocate for greater accountability, inform and empower citizens, promote increased citizen engagement in policy development, and empower youth to build leadership skills and advocate for increasing tolerance and rights of vulnerable groups.

Global Health Programs (GHP)

Assistance provided through the GHP accounts will support the goals and principles of the Global Health Initiative (GHI) to achieve major improvements in health outcomes in three globally shared goals: ending preventable child and maternal deaths, creating an AIDS-free generation, and protecting communities from other infectious diseases. U.S. assistance will continue to support programs for improved maternal and child health, family planning and reproductive health, nutrition, malaria prevention and treatment, and HIV/AIDS prevention, care and treatment.

Improved Health and Well-being of Rwandans Sustained

Key Interventions:

- **HIV/AIDS:** As a part of the President's Emergency Plan for AIDS Relief (PEPFAR), Rwanda will receive \$57.6 million to build partnerships to provide integrated prevention, care, and treatment programs throughout the country and support orphans and vulnerable children. Additional details of activities to be undertaken under this program will be provided in the PEPFAR Supplement to this Congressional Budget Justification.
- **Malaria:** U.S. assistance under the President's Malaria Initiative (PMI) will provide \$18.0 million to expand efforts to scale-up proven preventive and treatment interventions toward achievement of 85 percent coverage among vulnerable groups to support the PMI goal of reducing malaria-related morbidity by 50 percent. The FY 2017 request level for Rwanda does not include the total projected funding for the PMI. Decisions on allocations of centrally-managed funds will be made at the time that the FY 2017 operating year budget is set. Thanks to continued PMI support, malaria is no longer the leading cause of morbidity and mortality in Rwandan children under the age of five.
- **Maternal and Child Health:** \$10.0 million will support a continuum of high-impact services from pregnancy to early childhood development. This includes antenatal care; treatment of obstetric complications and disabilities including fistula; and essential newborn care. Funds will support essential, long-term health system strengthening. In addition, the funding will support integration with nutrition activities in maternal and young child feeding, while leveraging PMI funds for focused antenatal care and the treatment of childhood illnesses such as pneumonia, malaria, and diarrhea.
- **Family Planning and Reproductive Health (FP/RH):** The United States will provide \$13.0 million to expand access to high-quality voluntary FP/RH services and information on a sustainable basis. Activities will make substantial contributions to reducing maternal and child mortality and morbidity and improve pregnancy outcomes by integrating not only FP/RH and nutrition interventions to reduce high rates of malnutrition in children, but also HIV prevention services, while strengthening the overall health system.
- **Nutrition:** \$3.0 million will contribute to the prevention of under-nutrition through nutrition education to improve maternal diets, nutrition during pregnancy, exclusive breastfeeding, and infant and young child feeding practices. Diet quality and diversification through fortified and bio-fortified staple foods, specialized food products, and family gardens will continue to improve. Activities will be linked with FTF to improve food security.

International Military Education and Training (IMET)

IMET-funded courses expose defense establishment personnel to U.S. military training, doctrine, and values and are intended to promote democratic values, build capacity in key areas, increase the professionalization of the forces, and build lasting military-to-military relationships. IMET will support the continued professionalization of the Rwandan military and its ability to support peacekeeping operations.

Rwanda Contributes to Regional Stability and Development

Key Intervention:

- IMET will further aid in the professionalization of the Rwandan Defense Force. \$0.5 million will support military professionalization and training to reinforce civilian control of the military, military justice and human rights.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: Improvements and enhancements of USAID monitoring and evaluation efforts that were undertaken in FY 2015 include:

- USAID/Rwanda utilizes AIDTracker Plus (AT+), a management information system, to monitor performance of implementing partners and provide more effective program management and oversight of U.S. foreign assistance. AT+ was utilized to generate data for the annual FY 2015 Performance Plan and Report (PPR) and its improved data reporting capability allowed USAID/Rwanda to analyze all of PPR data disaggregated by project and/or indicator. AT+ has improved the overall visibility of USAID's development portfolio, helped identify performance data gaps, promoted more active performance monitoring (on a quarterly basis), and helped foster greater data ownership and improved target setting practices among project managers. Results for the FY 2014 reporting period suggest that USAID programs in Rwanda exceeded targets for 53 percent of their indicators, as compared to 30 percent in FY 2013. This increase is in large part due to improvements in target setting capacity and utilization of AT+ to improve evidence-based decision-making.
- Quarterly site visits and the regular monitoring of issues related to data quality, environmental concerns, gender, and USAID branding are a pivotal part of USAID/Rwanda's monitoring of activity and partner performance. During FY 2015, to help support this important activity, USAID/Rwanda instituted more robust data quality assessment monitoring and site visit scheduling and reporting tools.
- USAID/Rwanda will undertake a Human and Institutional Capacity Development program performance evaluation, and an impact evaluation of the Improved Services for Vulnerable Populations program. USAID/Rwanda has also begun work on the design of an impact evaluation of its new basic education project.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: In FY 2015, USAID conducted mid-term performance evaluations of the Integrated Improved Livelihood Program (IILP) and the Rwanda Dairy Competitiveness Program II (RDCP II). The IILP evaluation assessed the program's effectiveness, sustainability, nutrition outcomes, and impact on women's empowerment. IILP evaluation recommendations resulted in the implementation of an activity action plan to implement enhancements in agricultural extension services delivery, increased diet diversity and access to finance and credit. The RDCP II evaluation provided information on the program's performance and the cost-effectiveness of interventions. RDCP II evaluation recommendations are being used to determine how best to scale-up the utilization of improved technology in the dairy sector.

During FY 2015, USAID conducted an evaluation of the quality and costs of service delivery to orphans and vulnerable children (OVC) by international non-governmental organizations (INGOs) and local CSOs in Rwanda. The evaluation provided important data about the capacity of local CSOs, in terms of technical strategies and approaches to deliver quality programs that will help USAID and the GOR identify key technical and program management related strengths, weaknesses, opportunities, and threats to the implementation of OVC programs. The evaluation also provided important data that compared the quality and comprehensiveness of INGO services with that of local CSOs to help USAID and the GOR identify and address gaps in capacity and quality of services provided by CSOs, and to improve OVC program planning.

Detailed Objective Descriptions

Economic Opportunities in Rural Areas Expanded: In direct alignment with the fifth pillar of the GOR's Vision 2020, U.S. assistance focuses on expanding economic opportunities in rural areas by transforming the agriculture sector from its current subsistence nature to a market-led, demand-driven agriculture. In doing so, the United States supports the role of agriculture in improving the nutritional status of the population and strengthening women's leadership and decision-making roles. In particular, U.S. assistance helps develop sustainable market linkages in targeted staple and high-value agricultural value chains, delivers innovations to enable sustainable agricultural growth, promotes access to finance along agricultural value chains and advocates for improved policies. In this regard, U.S. assistance works to enhance private sector competitiveness through an improved environment for investment promotion and support both the GOR and the private sector in taking full advantage of the opportunities that regional economic integration offers. To complement these efforts, planned U.S. investment through the Power Africa program, funded through the USAID/AFR Regional operating unit, will contribute to increasing the electricity supply by leveraging existing local opportunities in solar, methane and hydro, and by expanding the electricity trade in the Great Lakes region. In addition, efforts to improve the capacity to manage natural resources and adapt to climate change contribute to increased agricultural productivity through a resilience-based approach that focuses on providing households and communities distinct capacities and coping mechanisms to manage future shocks. U.S. assistance strives to develop income-earning opportunities for rural youth and women so as to address challenges faced by Rwanda's existing youth bulge and to empower women. U.S. assistance also supports GOR's efforts in managing and preventing malnutrition and reducing micronutrient deficiencies to address the high child malnutrition level defined by a 38 percent stunting rate.

Increased Opportunities for Rwandan Children and Youth to Succeed in the Modern Workplace: A strong foundation in literacy is necessary for Rwandan children and youth to engage in higher-level learning and critical thinking and contribute to Rwanda's economic growth. The GOR's Vision 2020, and its Economic Development and Poverty Reduction Strategy 2, lay out ambitious plans to transform the country into a knowledge-based economy built on a skilled workforce that can compete regionally and internationally. Education is crucial to this transformation, particularly as literacy and primary school completion rates remain low. U.S. assistance strengthens the quality of teaching and learning to enable Rwandans to acquire the foundational literacy skills and the analytical, critical thinking, and communication skills needed to contribute to the development of a knowledge-based economy. The United States is strategically focusing programming on the achievement of measurable improvements in education outcomes, targeting the foundational skills of children and youth. U.S. assistance for youth workforce readiness training helps address the short-term needs of Rwanda's large, unemployed youth population as well as contribute to longer-term economic development goals.

Democratic Engagement Within and Between Communities, Civil Society, and Government is Strengthened: Assistance focuses on strengthening democratic engagement within and between communities, civil society, and government by building the capacity of civil society to participate in policy dialogue. A grants program will support proposals from local and international organizations that will contribute to improving rule of law and respect for human rights, as well as to empower citizens to exercise their rights and responsibilities. Technical assistance and training will be provided to strengthen the media's capacity to cover public policy issues, engage in objective investigative journalism, and develop substantive programming content.

Improved Health and Well-being of Rwandans Sustained: Rwanda has achieved impressive gains in health over the last ten years. Fertility declined from 6.1 children per woman (Demographic and Health Survey - DHS 2005) to 4.2 children (DHS 2015). In just the past five years, infant and child mortality

rates decreased, from 50 infant and 76 children under five deaths per 1,000 live births (DHS 2010), to 32 infant and 50 children under five deaths per 1,000 live births (DHS 2015). However, despite Rwanda's significant progress in improving the health status of its population, much work remains. For example, 38 percent of the children under age five are chronically malnourished or stunted. U.S. assistance continues to support strategic investments to address key health needs in maternal and child health, family planning and reproductive health, hygiene and sanitation, nutrition, HIV/AIDS and malaria. The United States is working to support supply and demand needs in health, through the provision of high-quality services, as well as helping Rwandans utilize these services and adopt healthy behaviors. In addition, the United States continues to work to build capacity among GOR institutions and local CSOs.

Rwanda Contributes to Regional Stability and Development: As the world's fifth-largest contributor to United Nations peacekeeping missions, Rwanda is a strong and highly effective peacekeeping partner. Bilateral military-to-military cooperation is therefore heavily focused in this sector. Strongly motivated by the experience of the 1994 genocide, Rwanda is committed to preventing atrocities by governments against their own civilian populations, especially within Africa. More professional military troops trained through IMET help support this objective.

Sao Tome and Principe

Foreign Assistance Program Overview

U.S. assistance to Sao Tome and Principe (STP) is focused on improving the professionalism and capacity of the country's small military and coast guard, and enhancing its maritime security efforts. Situated in the oil-rich, strategically significant Gulf of Guinea, STP is a member of the Economic Community of Central African States (ECCAS), which is the focus of an increasing number of regional security initiatives. STP has been active in ECCAS's Zone D maritime security exercises. STP is a participant in Africa Partnership Station ship visits to Gulf of Guinea countries and is very open to strengthening its bilateral partnership with the United States on maritime security.

Request by Account and Fiscal Year

TOTAL	74	*	150	76
International Military Education and Training	74	*	150	76

International Military Education and Training (IMET)

IMET-funded courses expose STP defense establishment personnel to U.S. military training, doctrine, and values. IMET-funded activities are intended to promote democratic values, build capacity in key areas, increase the professionalization of forces, and build lasting military-to-military relationships.

Increased Regional Cooperation for Security and Stability

Key Intervention:

- Approximately \$0.2 million in IMET resources will support programs to enhance the professionalism of the Coast Guard and strengthen its ability to conduct maritime security activities.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: Embassy Libreville regularly conducts, as possible, out-briefs with IMET training participants.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: Assessments by Embassy Libreville and U.S. Africa Command led to the decision to continue activities to strengthen maritime security capability training.

Detailed Objective Descriptions

Increased Regional Cooperation for Security and Stability: Ensuring that the Sao Tomean military becomes a more professional defense force is a high assistance priority for the United States. U.S. assistance seeks to improve the ability of STP's military to fight transnational threats and ensure internal stability by improving its capabilities and professionalism. Other areas important to this objective include improving STP's response to cases of trafficking in persons; enhancing STP's ability to

detect and interdict weapons of mass destruction and related items; strengthening border security by improving the capabilities and professionalism of the border guards and the customs service; improving STP's export control system; and limiting access of conventional weapons to end users of proliferation concern.

Senegal

Foreign Assistance Program Overview

Senegal is one of the key partners of the United States on the African continent, and has an unbroken history of peaceful political transition since independence in 1960. The country has made marked progress in key health indicators and in ensuring access to education, but economic growth has lagged. A growing population of young people is demanding meaningful employment opportunities, education, and high quality social services. The Government of Senegal (GOS) understands that failure to satisfy these demands could lead to instability and emigration. U.S. assistance seeks to support the delivery of high quality health services, improve the quality of and access to basic education, increase agricultural productivity to accelerate economic growth, strengthen democratic governance, and provide training to the Senegalese armed forces. The regionally funded Trade Africa activity, a partnership between the United States and sub-Saharan Africa to increase internal and regional trade within Africa, is expanding trade and economic ties between Senegal and its neighbors and helping Senegal to reap the benefits of the African Growth and Opportunity Act. Senegal will also benefit from regionally funded Power Africa activities as the high cost and inadequate supply of power is a major constraint to growth.

Development Assistance (DA)

USAID will increase the social and economic well-being of the people of Senegal through targeted activities aligned with the GOS development strategy, known as the *Plan Sénégal Emergent* or Emerging Senegal Plan. Health, economic growth, education, water, and governance investments concentrate on populations with the highest rates of poverty, malnutrition and child mortality. Strengthening private sector and local government roles in development is a priority. USAID continues to place special emphasis on the conflict-affected Casamance region, the poorest and least developed region of the country. Democracy and governance activities reinforce work with local governments in the Casamance to increase community ownership and government accountability, countering mistrust due to decades of conflict. Education activities increase access to education for out-of-school youth in the Casamance region and improve student reading skills in four local languages and French. Economic growth and agriculture interventions focus on the Casamance and the northern Senegal River Valley. This northern region is the main growing area for rice, one of three focus staple crops selected to improve Senegal's food security and to boost agriculture-driven economic growth.

Increased Inclusive Economic Growth

Key Interventions:

- As part of the President's Global Hunger and Food Security Initiative, Feed the Future (FTF), USAID will provide \$28.0 million to support the efforts of the GOS to refine and implement a country-led comprehensive food security strategy to reduce hunger and increase economic growth through market-led agricultural development. These strategies aim to reduce hunger, improve nutrition and promote broad-based economic growth through agricultural development. Extensive analyses funded through FTF have confirmed the importance of private sector investment in the grain processing industry for Senegal's economic growth.
- \$3.0 million in Global Climate Change Initiative (GCCII) funding will help Senegal cope with an increasingly volatile climate and improve the management of Senegal's natural resources, including the implementation of policies to promote sustainability. U.S. assistance will increase productivity and build resilience by providing timely, accurate and appropriate climate and weather information to local decision-makers and agricultural producers, including farmers, fisher folk, and pastoralists.

Improved Health Status of the Senegalese Population

Key Intervention:

- \$2.2 million of U.S. assistance will improve access to clean drinking water and basic sanitation services in targeted rural communities through the development of a private sector service delivery system. Activities will also strengthen the Ministry of Water and Sanitation's capacity to develop and manage public-private partnerships.

More Effective Citizen Participation in Governance

Key Interventions:

- Basic Education: \$5.5 million will support activities to improve early grade reading performance for approximately half of primary school students in Senegal. Assistance will improve curricula, provide teacher training and instructional materials, and strengthen parent and community engagement to support student success in reading. A separate project will increase access to education for out-of-school youth in post-conflict and conflict-prone areas and reduce drop-out rates. Activities will support access to safe and gender sensitive education opportunities for youth as well as improve the capacity of central and local governments to provide equitable education services.
- \$6.0 million of U.S. assistance will support activities to strengthen governance in Senegal. Funds will increase the capacity of civil society to demand transparency and accountability from their elected officials. Activities will also focus on fiscal and administrative decentralization to help improve local governance and the delivery of public services country-wide, with an emphasis on the conflict-affected Casamance region and the marginalized regions of Kedougou and Tambacounda. Assistance will provide the GOS with tools to effectively manage public resources to deliver social services and improve local development. USAID will fund a new project to train recently elected local officials on their roles and responsibilities, and deliver targeted capacity building that will aim to improve health, education, and water/sanitation services. At the same time, USAID will support civil society groups to understand the roles of their elected leaders.

Foreign Military Financing (FMF)

U.S. assistance will support Senegalese participation in peacekeeping operations, professionalize its military, build its counterterrorism capabilities and improve maritime security.

Greater Capacity for Peacekeeping Operations

Key Intervention:

- \$0.3 million in resources will continue to support the professionalization of the military and provide transportation and refurbishment of equipment used to train and equip Senegalese military officers involved in peacekeeping and counterterrorism operations.

Global Health Programs (GHP)

Assistance provided through the GHP accounts will support the goals and principles of the Global Health Initiative (GHI) to achieve major improvements in health outcomes in three globally shared goals: ending preventable child and maternal deaths, creating an AIDS-free generation, and protecting communities from other infectious diseases. U.S. assistance will continue to support Senegal as it makes advances in its health sector, evidenced by improvements in key health indicators. To combat persistently high rates of maternal and neonatal morbidity and mortality, activities will seek to increase access to and use of high quality maternal and antenatal care, expand assistance in malaria treatment and prevention, and help Senegal maintain a low HIV prevalence rate. In addition to increased access to and demand for quality health services, programs will seek to improve strategic planning, management and supervision skills of GOS health system personnel, design innovative health financing methods, foster private sector health services, and support decentralized management of health districts and pharmaceutical supply chains.

Improved Health Status of the Senegalese Population

Key Interventions:

- HIV/AIDS: Senegal will receive \$4.5 million (of which \$0.6 million GHP-State and \$3.9 million GHP-USAID) to support the national HIV/AIDS strategy and the goals of the President's Emergency Plan for AIDS Relief (PEPFAR).
- Malaria: U.S. assistance under the President's Malaria Initiative (PMI) will provide \$22.0 million to expand efforts to scale-up proven preventive and treatment interventions toward achievement of 85 percent coverage among vulnerable groups to support the PMI goal of reducing malaria-related morbidity by 50 percent. The FY 2017 request level for Senegal does not include the total projected funding for the PMI. Decisions on allocations of centrally-managed funds will be made at the time that the FY 2017 operating year budget is set.
- Maternal and Child Health (MCH): \$10.0 million in resources will be used to make pregnancy and childbirth safer in all 14 regions by increasing the availability of essential services, including newborn care, high quality obstetric care, treatment for childhood illnesses and childhood immunizations. Activities will support the training of health workers at both the clinical and community levels.
- Family Planning and Reproductive Health (FP/RH): USAID will use \$15.0 million to expand access to high-quality voluntary FP/RH services and information on a sustainable basis. Assistance in FP/RH improves the ability of couples to decide the number and spacing of births, including timing of first birth. FP/RH assistance will also make substantial contributions to reducing maternal and child mortality, and morbidity; and to mitigating adverse effects of population dynamics on natural resources, economic growth, and state stability. Specific program activities will include high impact interventions, such as public information and education campaigns, expanding the availability of FP/RH methods, and expanding FP/RH counseling to involve men and youth.
- Nutrition: \$4.5 million in resources will focus on activities within the first 100 days of life, including the training of health staff on nutrition issues, the promotion of micronutrient supplementation and food fortification programs for women and young children, and the promotion of breastfeeding and optimal complementary feeding practices in early childhood. Nutrition activities will advance the goals of both FTF and GHI, and target malnourished children by promoting a higher quality and more diverse diet in the most vulnerable regions of Senegal.

International Military Education and Training (IMET)

Senegal's Armed Forces are among the most professional militaries on the African continent. IMET resources will continue to support the professionalization of the Senegalese armed forces through courses that expose its defense establishment personnel to U.S. military training, doctrine, and values, and that are intended to promote democratic values, build capacity in key areas, increase professionalization of the forces, and build productive military-to-military relationships.

Greater Capacity for Peacekeeping Operations

Key Intervention:

- \$1.0 million in resources will continue to support the professionalization of Senegalese military personnel which will enable them to better support their peacekeeping deployments.

Nonproliferation, Antiterrorism, Demining and Related Programs (NADR)

Throughout the conflict-affected Casamance region, landmines and undetonated munitions/remnants of war remain a great threat to the population.

Effective Response to Transnational Threats

Key Intervention:

- \$1.0 million in resources will train and equip Senegalese demining personnel, a national police unit charged with responding to terrorist incidents, and other elements of the police and military responsible for land and maritime border security to reduce the flow of illicit arms and narcotics trafficking.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: In FY 2015, USAID/Senegal completed and initiated a number of monitoring and evaluation activities:

- USAID/Senegal finalized the mid-term performance evaluation of the 5-year integrated health portfolio.
- USAID/Senegal conducted a retrospective assessment of interventions in Casamance to document achievements over the last decade and inform future programming in this region.
- Two mid-term performance evaluations of FTF activities were conducted by USAID/Senegal in order to identify successful approaches to scale up, adjust project implementation, and guide future programming.
- USAID/Senegal completed final performance evaluations of the flagship Peace and Governance Program (PGP) and the Improving Education Quality activity.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: Monitoring and Evaluation activities contributed to the following management decisions:

- The findings and lessons learned from the recently-completed 'acquisition of reading skills in primary schools' activity have been taken into consideration in the development of subsequent government-to-government agreements, not only in education but in health and other sectors.
- A learning agenda study of PGP, which sought to identify the efficacy and impact of integrated efforts across the education, health, governance and justice sectors in resolving birth certificate granting issues, and the PGP performance evaluation's results were used in development of the work plan for the one-year extension of the activity.
- Recommendations from the mid-term evaluation of the USAID integrated health portfolio were used

to design the new health program, resulting in a renewed focus on facility-based services, community-based services, and national health system strengthening, and the increased use of mobile technology to streamline data collection and verification.

Detailed Objective Descriptions

Increased Inclusive Economic Growth: The U.S. government will focus on agriculture sector growth throughout the value chain for four different commodities: rice, maize, millet and fisheries. To maximize the number of people raised out of poverty, USAID/Senegal is using market-consolidation approaches to link small farmers with larger market players, promoting improved seed technology and more efficient food processing techniques. Assistance will also promote environmentally sound management of land and fisheries in fragile areas and along the coast. Complementary activities will be funded through two regional initiatives, Trade Africa and Power Africa. Trade Africa leverages other U.S. programs that focus on improving private sector competitiveness and access to credit and financial services; increasing agricultural productivity; improving agricultural policies and promoting the integration of regional trade in staple food crops such as maize, rice, millet and fisheries. Power Africa's regional activities will facilitate the completion of transactions that will add power to Senegal's grid and reduce the prohibitively high cost of energy. Announced in April 2015, the Tortue natural gas find in Mauritania (near the Senegal border) could help unlock gas-to-power exports, thereby aiding Power Africa efforts.

Improved Health Status of the Senegalese Population: U.S. assistance will improve the health status in regions most in need, across a range of health interventions including those to reduce maternal and neonatal mortality as well as malaria and HIV/AIDS prevention, detection, treatment and control. USAID seeks to deepen the engagement of individuals and local communities in the governance and financing of health services and community management of health. In addition, USAID will support health care providers to encourage individuals to take ownership of and responsibility for their own health. Assistance will help to maintain an emphasis on strengthening health systems to improve management of human resources for health, data for decision-making, commodities management, and health care financing. USAID is committed to strengthening the private sector, supporting decentralized structures and local communities, and providing more focused health systems strengthening and governance support. Senegal has been named one of 24 USAID priority countries for ending preventable child and maternal deaths. Through the Department of Defense (DOD) HIV/AIDS Prevention Program, the U.S. government will support the Senegalese Armed Forces to prevent the spread of HIV/AIDS.

More Effective Citizen Participation in Governance: U.S. assistance will increase citizen engagement through nongovernmental organizations; strengthen local governments' ability to respond to citizen needs; and improve government transparency and accountability. USAID is working to strengthen the oversight capacity of national agencies and increasing the capacity of civil society to promote transparency and accountability.

Greater Capacity for Peacekeeping Operations: In an effort to achieve regional security goals, IMET and FMF programs enable the Senegalese Armed Forces to become a more professional military which is important as Senegal remains a vital regional peacekeeping partner. FMF funds will also support equipment for peacekeeping and maritime security operations.

Effective Response to Transnational Threats: Continued U.S. assistance will enable efforts in establishing lasting peace across the region, providing the capability of successfully removing landmines, the prevention of arms and narcotics trafficking by securing borders, and countering threats of terrorism.

Seychelles

Foreign Assistance Program Overview

Seychelles is a strong U.S. partner in efforts to combat maritime piracy and promote maritime domain awareness in the Indian Ocean, and plays a key regional role by accepting and prosecuting piracy cases. Maintaining a strong bilateral relationship with Seychelles and enhancing its capacity to ensure maritime security are key priorities for the United States. These efforts contribute to a more stable Indian Ocean region. U.S. foreign assistance to Seychelles provides training to support professionalization of the country's military. Seychelles will graduate from the General System of Trade Preferences on January 1, 2017.

International Military Education and Training (IMET)

IMET-funded courses expose defense establishment personnel to U.S. military training, doctrine, and values; promote democratic values; build capacity in key areas; increase the professionalization of forces; and build lasting military-to-military relationships. Most IMET-funded activities are conducted at U.S. military institutions in the United States, allowing for valuable cultural exchanges with communities across the country while students are attending courses. IMET-funded courses focused on maritime security may also take place in-country.

Mauritius and Seychelles Effectively Address Transnational Issues

Key Intervention:

- Approximately \$0.2 million will support the training of Seychelles military leaders, increasing their level of professionalism and enhancing their capacity to ensure maritime security.

Detailed Objective Descriptions

Mauritius and Seychelles Effectively Address Transnational Issues: Transnational crime causes regional instability, adversely impacting economies in general, and the fishing and tourism industries specifically. Piracy has harmed the Seychellois economy as a result of its negative impact on commercial shipping and tourism. Currently, Seychelles lacks the professionalized and trained personnel to effectively identify and combat transnational crime in their extensive maritime domains. Seychelles relies heavily on third nation support to patrol its waters as well as investigate, apprehend, and prosecute criminals.

Sierra Leone

Foreign Assistance Program Overview

Despite experiencing the most severe Ebola Virus disease outbreak ever recorded, Sierra Leone has made significant gains in consolidating peace, promoting democracy at local and national levels, encouraging economic growth and facilitating overall engagement in development processes. Nevertheless, Sierra Leone continues to grapple with serious development challenges, such as entrenched corruption, weak governmental institutions, high unemployment, slow economic growth and inadequate social services, including water and electricity. U.S. assistance will improve the daily lives of Sierra Leoneans through strategic investments in agriculture and health services, including farmer training, nutrition programs and policy reform. U.S. assistance will also target civil society and media programming, security sector reform, and rule of law programs. The U.S. government will accomplish these goals through close collaboration with the Government of Sierra Leone (GOSL), other donors, local non-governmental organizations, and the private sector.

Development Assistance (DA)

U.S. assistance will support agricultural development programs to help end extreme poverty, and improve food security and nutrition. Activities will focus on providing support to agricultural communities to increase productivity and production of key agricultural commodities and strengthen value chains to improve incomes, and promote the availability of nutrition sensitive agricultural crops to reduce malnutrition. Raising agricultural productivity will enable farm households to meet their food consumption needs and sell their surpluses for additional income.

Sierra Leone Improves Health, Food Security and Nutrition

Key Intervention:

- As part of the President's Global Hunger and Food Security initiative, Feed the Future, USAID will provide \$6.0 million to work with the Government of Sierra Leone to implement agricultural development programs that remain critical to achieving core U.S. development and foreign policy goals, including combating extremism, achieving political and economic stability, reducing sources of conflict, reducing poverty, and accelerating and sustaining broad-based economic growth.

Sierra Leone Increases Government Accountability, Transparency, and Responsiveness

Key Intervention:

- U.S. assistance of \$1.0 million will help build the capacity of civil society and the media to more effectively advocate for marginalized groups, including women and girls, and to improve relationships between local and national government as well as civil society organizations. The Ebola outbreak and its magnitude underpinned the strained relationship between and among civil society organizations, media, the GOSL, and the citizenry. U.S. assistance will improve the capacity of targeted media and civil society groups to support monitoring of and reporting on the government's Ebola recovery programs. These efforts will foster improved relationships between local and national government and the media, and improve the capacity of female and male journalists to undertake investigative reporting.

Economic Support Fund (ESF)

U.S. assistance will support programs that promote governing justly and democratically. Activities will build on the progress made with previous investments to advance the nascent democracy in Sierra Leone and secure peace and stability in the country. U.S. assistance will support good governance practices and civil society reforms around issues such as local government and decentralization, public sector executive functions, civic participation, media freedom and freedom of information. The activities will also promote greater inclusion of women, youth and other marginalized groups.

Sierra Leone Increases Government Accountability, Transparency, and Responsiveness

Key Interventions:

- U.S. assistance of approximately \$0.6 million will support the development of a culture of the rule of law in Sierra Leone, and encourage citizens to understand and exercise their legal rights and responsibilities, while supporting efforts to educate citizens in the areas of justice and human rights. U.S. support will also enhance improvements in legal representations, increased citizen confidence in the judicial system, and overall functioning of the judicial system.
- U.S. assistance of \$1.0 million will support interventions focused on improving the accountability of targeted local and national government institutions. Assistance will improve coordination and accountability between local and national government institutions, increase the accountability and transparency of government planning and decision making processes in targeted government institutions, and support more inclusive and responsive government policies and programs.

Global Health Programs (GHP)

Assistance provided through the GHP accounts will support the goals and principles of the Global Health Security Initiative (GHI) to achieve major improvements in health outcomes in three globally shared goals: ending preventable child and maternal deaths, creating an AIDS-free generation, and protecting communities from other infectious diseases. Malaria, cholera and HIV continue to plague the daily lives of Sierra Leoneans and have a negative impact on health, the economy, and security. Opportunities for health sector capacity building are limited by a lack of ongoing evidence-based clinical education and resources for post-graduate education of health care providers. Improving health sector capacity is needed to reach the goals of decreased mortality and morbidity. U.S. assistance will strengthen the laboratory and surveillance capacity of the Ministry of Health and Sanitation of Sierra Leone.

Sierra Leone Reduces Incidence of HIV and Maternal Mortality Rates through Strengthened Health Service Delivery

Key Intervention:

- HIV/AIDS: Sierra Leone will receive \$0.5 million to support the national HIV/AIDS strategy and the goals of the President's Emergency Plan for AIDS Relief (PEPFAR).

International Military Education and Training (IMET)

IMET-funded courses expose defense establishment personnel to U.S. military training, doctrine, and values, and are intended to promote democratic values, build capacity in key areas, increase the professionalization of the forces, and build lasting military-to-military relationships. Increased professionalization of the military through IMET funding will help strengthen the military's capacity to participate in peacekeeping operations and to protect the country's territorial integrity.

Sierra Leone is Able to Counter Transnational Threats, Including Terrorism and Crime

Key Intervention:

- Approximately \$0.4 million will continue support for the Republic of Sierra Leone Armed Forces to help professionalize its military which will improve its ability to defend its territorial integrity, improve maritime security, and conduct peacekeeping operations.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: Several evaluations, assessments and monitoring activities were undertaken in FY 2015:

- Within the context of proposed new USAID Feed the Future interventions, a value chain analysis, a horticulture assessment, a nutrition assessment, and an aquatic rice assessment were conducted.
- In collaboration with the World Health Organization and the Global Fund, USAID conducted a service availability and readiness assessment to generate reliable and regular information on service delivery, including service availability to provide basic healthcare interventions in HIV/AIDS, tuberculosis, malaria, Maternal and Child Health, Family Planning/Reproductive Health, and other non-communicable diseases.
- Periodic pipeline reviews were conducted which helped USAID evaluate financial performance and management.
- USAID continues to closely monitor progress on the Women Empowered for Leadership Development program. These updates have provided valuable insights on the status of women in decision making processes, and in informing the direction of USAID's programming in Sierra Leone.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: Utilizing results from assessments conducted in the food security, nutrition and democracy and governance sectors, USAID will develop appropriate interventions in these program areas. Consultations with stakeholders including GOSL officials, local councils, donor and development partners, and the private sector have guided program development processes. These consultations ensure that USAID interventions are aligned with the GOSL's strategy and focus on achieving measureable results. Completed and ongoing assessments are closely monitored and portfolio reviews are conducted to assess progress, issues, and opportunities to ensure achievement of goals and objectives.

Detailed Objective Descriptions

Sierra Leone Increases Government Accountability, Transparency, and Responsiveness: The objective aims to reduce fragility in Sierra Leone and assist the country in maintaining its stability and transitioning to a better governed state in which transformational development can take place. U. S. assistance will enhance greater accountability, transparency, and responsiveness to citizens as they are empowered and informed to participate in decision making processes for improved economic opportunities and social prosperity.

Sierra Leone Improves Health, Food Security and Nutrition: U. S. assistance aims to obtain optimal nutritional and food security outcomes through support to key national level policy areas, by providing support to agricultural communities to promote availability of food and nutrition throughout the lean season, including increased profitability.

Sierra Leone Reduces Incidence of HIV and Maternal Mortality Rates through Strengthened Health Service Delivery: Sierra Leone seeks to reach the goal of an AIDS-free generation, reduce further maternal mortality and eliminate neglected tropical diseases. Malaria, cholera and HIV continue to plague the daily lives of Sierra Leoneans and have impact on health, the economy, and security.

Sierra Leone is Able to Counter Transnational Threats, Including Terrorism and Crime: U. S. assistance will increase the professionalization of the Sierra Leone military which will improve the Sierra Leone capacity to prevent, detect, and counter terrorist activities, including through enhanced maritime security, and prepare Sierra Leone security forces to meet transnational threats.

Somalia

Foreign Assistance Program Overview

The primary goal of U.S. assistance to Somalia is to promote security and support the development of a unified, peaceful nation. Somalia faces many challenges to consolidate its nascent government in the face of violent extremism, including elections scheduled for 2017. U.S. resources assist the Federal Government of Somalia (FGS) to defeat the al-Qaeda-affiliated al-Shabaab terrorist group that still controls rural territory, and to build a representative, sustainable Somali military, police service, and justice sector that can deter future threats and protect human rights. Additionally, U.S. resources assist the FGS build governance structures for sustainable growth and social service delivery. Resources requested for transparent and responsive governance will support the consolidation of representative governing institutions and critical state-building processes, build responsive and legitimate local governance, and expand the delivery of critical basic services. At the same time, greater stability provides an unprecedented opportunity to expand support for Somalia's economic recovery, fueled by a revival of the agro-pastoral sector; the return of a vibrant, entrepreneurial diaspora; and management of natural resources, but only through substantial international support.

Economic Support Fund (ESF) - OCO

ESF-OCO assistance will support governance and rule of law programs to improve the capacity of governing institutions at all levels to deliver critical social services, ensure credible and legitimate democratic processes, and improve citizen confidence in Somalia's nascent governing institutions. ESF-OCO assistance will also support U.S. government efforts to expand the delivery of critical basic services and promote economic growth and job creation. Specifically, resources will improve education and employment outcomes for Somali youth, alleviate Somalia's high level of unemployment, catalyze increased private sector investment to promote durable growth, and improve management of Somalia's biodiversity, providing a durable foundation for Somalia's long-term stability and prosperity.

Improved Livelihoods

Key Interventions:

- FY 2017 assistance in the amount of \$11.6 million will focus on increasing investment and growth in key industries, which may include agriculture, fisheries and renewable energy, and expanding export and investment-oriented economic opportunities.
- An additional \$9.0 million will promote broad-based economic growth in Somalia by increasing investment, employment, and incomes in key growth sectors. The resources will assist new small and existing medium-sized businesses to create employment opportunities, especially for women and youth; support private sector-led development through access to credit and business services; address regulatory barriers to growth in key industries; and support environmental preservation by promoting climate-smart agriculture and clean energy development.
- \$1.4 million will be used to support improved private and public sector sustainable management and conservation of Somali natural resources.

Increased Somali Government Capacity to Deliver Services

Key Interventions:

- The United States will support improved delivery of services to Somalis, increasing the legitimacy of government and reducing the appeal of extremism. \$14.0 million of assistance will provide a comprehensive package of basic education services to increase equitable access to quality education

and improve learning for marginalized children and other out-of-school youth through formal and non-formal programs across Somalia, particularly in areas newly liberated from al-Shabaab control.

- \$1.0 million will strengthen the capacity of health workers to deliver basic services and expand the provision of affordable, accessible health services.
- \$7.7 million will strengthen the government's ability to provide basic services and protect and empower vulnerable populations most affected by conflict, especially youth and women.

Established, Representative Governance

Key Interventions:

- Reinforcing the legitimacy and inclusivity of the FGS, \$4.0 million will be used to promote and strengthen political competition and consensus building, support peaceful and democratic elections, and stabilize communities while improving relationships with government. This will include activities to increase citizen awareness around governance and government initiatives through a robust civic education campaign that includes women, youth, and marginalized groups.
- \$7.0 million will support the drafting of key legislation required to implement the Constitution, introduce multi-party elections, organize a public referendum, and build the capacity of Somali institutions.
- \$7.7 million will be used to increase confidence in government, based on equitable participation in decision-making and management of community assets, and will also provide quick impact activities to stabilize communities liberated from al-Shabaab.

Improved Accountability and Transparency

Key Intervention:

- \$16.0 million will be used to promote good governance and strengthen institutional capacity, enhancing transparency and accountability at all levels of government. Resources will be used to strengthen the capacity of government institutions to perform essential functions and implement reforms, utilizing transparent and accountable processes. Funding will provide technical assistance to civil society and federal and state parliaments to continue development and implementation of the constitution while enhancing their critical oversight and legislative roles. Funding will also consolidate gains at the regional level, including activities such as training of civil servants in improved service delivery, increasing revenue collection, developing and implementing regulations, broadening democratic space, improving public financial management, and enhancing political competition.

International Military Education and Training (IMET)

IMET-funded courses expose defense establishment personnel to U.S. military training, doctrine, and values and are intended to promote democratic values, build capacity in key areas, increase the professionalization of the forces, and build lasting military-to-military relationships. IMET will focus on professional military education and building English language training.

Al-Shabaab Defeated

Key Intervention:

- Approximately \$0.4 million will support English language training and professionalization of the Somali National Army (SNA) through courses that reinforce the role of a military in a democracy, the centrality of human rights, and the rule of law.

International Narcotics Control and Law Enforcement (INCLE) - OCO

Security forces lack the skills and equipment required for effective policing at the most basic levels. The U.S. government will provide support to police entities, including those at the regional level when able and appropriate, to ensure the African Union Mission in Somalia (AMISOM)'s gains are maintained and stabilizing security services are provided to regional populations that have recently been liberated from al-Shabaab. The support will be in the form of training and/or equipping, and will complement assistance to the more specialized Criminal Investigation Division. Strengthening the institutional capacities of the police sector will support the goal of the FGS to provide basic security and access to justice to its citizens throughout the country. Funding will promote areas of stability within Somalia, which will support overall stability of the Horn of Africa.

Developed Rule of Law

Key Intervention:

- \$2.8 million in U.S. assistance will support rule of law and security sector reform programs in Somalia that encourage better security and governance through the development and reform of the criminal justice sector. Funding will be used to provide continued support to the Criminal Investigative Division of the Somali Police Force (SPF) to enable them to respond to and properly document serious incidents. Assistance with recruitment of additional members, basic and/or advanced training, and equipment may be provided. Assistance will also support mechanisms to ensure all entities with the mandate to respond to major incidents coordinate effectively with other security forces and justice sector actors, to include judges, prosecutors, and defense lawyers, to ensure those cases which meet evidentiary standards are lawfully prosecuted. Resources will assist regional police forces, who are often at the forefront in the fight against al-Shabaab. This assistance will provide basic policing and management skills, as well as support information and intelligence sharing mechanisms for communication with relevant security institutions at all levels of government.

Nonproliferation, Antiterrorism, Demining and Related Programs (NADR) - OCO

By building Somali civilian law enforcement capacity to counter terrorism, U.S. assistance provided through the Antiterrorism Assistance (ATA) program will contribute to improving Somalia's overall security and stability. Training for Somalia is designed to help the FGS more effectively manage and respond to conventional terrorist attacks. Assistance will strengthen the capacity of the SPF to address vital crisis response needs and help contribute to broader security sector reform. The program's strategic goal is to build the capacity of the SPF to respond to critical incidents, especially in and around Mogadishu.

The United States Conventional Weapons Destruction (CWD) program supports physical security and stockpile management (PSSM) of conventional weapons and munitions to reduce the risk of illicit arms trade throughout Somalia, as well as humanitarian demining and mine risk education in Somaliland and Puntland. Beyond threats to U.S. national security interests, deteriorating and poorly-secured munitions sites in the vicinity of major population centers also pose a grave humanitarian threat, as degrading and unstable munitions stockpiles are vulnerable to spontaneous and catastrophic detonation. To address these problems, the CWD program will continue to build local capacity to effectively manage munitions stockpiles; destroy excess, unstable, and at-risk weapons and munitions; keep stockpiles under government control; prevent illicit small arms/light weapons trafficking; and build capacity within the SNA and other security forces to support Somalia's ability to comply with the partial lifting of the arms embargo and the United Nations Security Council Resolutions on management of arms and ammunition.

Al-Shabaab Defeated

Key Interventions:

- Approximately \$2.8 million of bilateral NADR-ATA will continue to professionalize SPF to encourage operations conducted in compliance with international human rights standards and conventions. NADR-ATA resources will also continue to train the SPF's Joint Investigative Teams on critical incident management to better respond to terrorist attacks. Training and mentoring of these first responders will include instruction in areas such as securing and managing a crime scene, evidence collection, post-blast investigation, and facilitation of and mentorship for SPF development of their own best practices and standard operating procedures.
- \$1.0 million in FY 2017 NADR-CWD funding will focus on programs that reduce the threat of illicit small arms and light weapons, landmines, and explosive remnants of war, and promote local and national CWD capacity building. This support includes improved PSSM of conventional weapons and munitions throughout Somalia, as security allows. The funds will also support capacity building efforts within the SNA and other security forces to support Somalia's ability to comply with United Nations Security Council Resolution 2142 requirements regarding notification, marking, storage, and proper distribution of pre-notified imported weapons. This plan directly supports reconstruction and security initiatives vital to regional peace and security.

Peacekeeping Operations (PKO) - OCO

PKO funds will be critical to improving the ability of AMISOM and SNA to stabilize and expand the reach of legitimate governance throughout southern and central Somalia, and to defend FGS institutions from al-Shabaab. The United States will seek to bolster AMISOM's operational effectiveness by facilitating the deployment of rotational battalions, providing additional mobility and force protection assets, providing peacekeeping soldier and battalion staff training, and providing other equipment required by the mission to more effectively implement its mandate. Additional mobility assets, equipment, and training will be critical to improving the ability of AMISOM to operate across its area of operations and assist the FGS to stabilize areas liberated from al-Shabaab. U.S. assistance will also support the provision of advisors and mentors to AMISOM in order to ensure that AMISOM troop contributors maintain the critical skills provided through pre-deployment training, and are able to adjust their operations in response to shifting insurgent tactics.

U.S. assistance will also support the provision of logistical support, training (including training activities implemented in part or in whole by regional partners), mentors and advisors, stipends, equipment, and limited facility refurbishments and construction for the SNA and Ministry of Defense. Supporting the development of a professional, effective SNA that respects human rights is critical to the ability of the FGS to defend itself and its people from al-Shabaab and to shore up the significant security gains made over the past several years by AMISOM, the SNA, and their strategic partners within the region. Equally critical is building the capability of the Ministry of Defense to provide effective civilian oversight of the SNA. PKO funds are complemented by current and future 2282 (formerly 1206) funds, as well as by the Counterterrorism Partnership Fund.

Al-Shabaab Defeated

Key Interventions:

- Approximately \$37.7 million of PKO funds will provide equipment, training, advisory, and logistical support to AMISOM to enable it to stabilize southern and central Somalia and defend the FGS.
- Approximately \$69.8 million of PKO funds will provide equipment, training, advisory and logistical support, stipends, and limited facility enhancements and construction designed to improve the professionalism and operational effectiveness of the SNA. This will include efforts to create and mentor a small number of professional, highly capable light infantry battalions, able to conduct effective counter-insurgency operations in partnership with AMISOM and defeat al-Shabaab wherever it takes refuge in Somalia.

- Approximately \$2.5 million of PKO funds will provide targeted support to develop the Somali Ministry of Defense, military institutions, headquarters, and support apparatus to lead and support SNA in the field and particularly the aforementioned light infantry.

Performance Information in the Budget and Planning Process

Key Program Monitoring and Evaluation Activities: Several monitoring and evaluation efforts were undertaken in FY 2014 and FY 2015:

- Given that Somalia's security situation restricts travel by U.S. government staff, USAID continued to use third party monitors to carry out verifications of 277 intervention sites across Somalia in FY 2014 and 346 intervention sites in FY 2015. For each verification site visit, monitors provided notes from interviews with direct and indirect beneficiaries, and photographic evidence for USAID's review. In addition to allowing USAID to manage for results, these verifications identified some good practices for implementing activities in Somalia.
- In FY 2015, an additional 56 sites were verified for construction quality, with photographic evidence for USAID's review. These verifications contributed to partner planning and establishment of good practice.
- In FY 2014, USAID undertook a mid-term performance evaluation of its education and youth activities, and in FY 2015, a baseline assessment was conducted to establish baseline values for teacher and student performance and to inform continuing education and youth investments.
- In FY 2014, USAID commissioned an economic growth assessment for Somalia and a mid-term evaluation of its economic growth activity. Together, these two reports demonstrated that while some gains have been made, the scope of USAID's current activity is small and that there is a continued need for activities that aim at providing long-term economic development assistance in Somalia. In FY 2015, a final evaluation of economic growth activities in the South Central region confirmed these findings, in addition to documenting successes in the agriculture and livestock sectors. These results inform new economic growth investments currently underway.
- In FY 2014, USAID commissioned a final performance evaluation for its legislative strengthening, elections, and political processes activities.
- USAID undertook a Gender Assessment and Natural Resource Management Assessment, both of which were finalized in FY 2014.
- In FY 2014, USAID undertook an assessment of democracy, human rights, and governance in Somalia, which has informed investments in strengthening governance and elections assistance.
- In FY 2015, USAID commissioned a baseline survey to establish baseline values for public confidence in governance and to inform investments in strengthening governance.
- In FY 2014, USAID undertook a study consisting of a survey of over 3,100 respondents and 33 focus group discussions to develop a benchmark of perceptions related to its stabilization activities in Somalia. The research found that perceptions of social cohesion, connectedness, community involvement, confidence in government and local administration, and satisfaction with essential services, are overall significantly higher in sites with USAID-funded stabilization activities than in sites where there were no USAID-funded stabilization activities.
- In FY 2015, USAID commissioned a final evaluation (currently ongoing) of the contribution of stabilization and development activities, the findings from which will inform continuing investments in stabilization activities.
- Department of State (DOS) contracted Site Coordinators monitor the delivery and quality of DOS PKO-funded support, which is in the form of equipment and materials as well as technical training. Site Coordinators provide their findings in weekly situation reports and through weekly teleconferences with the Contract Officer's Representative from the DOS. Their reporting has led to the improvement of maintenance support to DOS provided vehicles, which has greatly expanded the user life of the equipment.

- The Site Coordinators have accounted for and facilitated distribution of all PKO provided equipment currently being utilized to improve the security sector throughout Somalia.

Use of Monitoring and Evaluation Results in Budget and Programmatic Choices: As a result of third-party monitoring and evaluations, the following actions and decisions regarding the FY 2017 budget have been taken:

- Education and youth programming has been realigned with USAID's Education Policy.
- A new economic growth activity has been awarded and has been structured around recommendations made in a recent economic growth assessment to focus assistance on key growth sectors, as well as to provide support for legal and regulatory interventions.
- Based on the recommendations of the Gender Assessment, gender will be integrated in project design, procurement processes, performance indicators, and evaluations.
- A Natural Resource Management Assessment identified the most significant environmental issues and challenges affecting Somalia and highlighted some interventions that USAID may consider for future support.
- Results of the stabilization and development activities are being used to inform the development of USAID's future strategy.

Detailed Objective Descriptions

Established, Representative Governance: In the lead up to Somaliland elections anticipated in 2017, programs will provide support for drafting electoral legislation, technical assistance to the national electoral commission, voter education, and political party strengthening. USAID will also continue to provide community-driven, quick-impact small grants to help stabilize Somalia's cities and countryside—both in the more secure regions of Somalia and in newly-recovered areas. The participatory processes used to develop, implement, and monitor these projects will improve citizen representation in municipal planning, instituting inclusiveness into Somali governance practices and increasing Somalis' trust in government.

Improved Accountability and Transparency: In Transparency International's 2014 Corruption Perceptions Index, Somalia tied with North Korea for the most corrupt country, maintaining its poor 2013 ranking. The FGS, therefore, must manage resources more transparently and accountably to improve its ability to provide services and increase its legitimacy—particularly outside Mogadishu. With the establishment of proper checks and balances, opportunities for corruption will decrease. Improved government accountability will help ensure that scarce resources are used to bolster economic growth activities, and to implement vital security, financial, and political reforms.

Increased Somali Government Capacity to Deliver Services: Growth and prosperity in Somalia remains contingent upon the health and well-being of the Somali population. Somalia's health and social indicators are among the worst in the world. One of every 10 children dies before their first birthday and one in 12 women die from pregnancy-related causes. Over half of Somali children have no access to primary education and only six percent of eligible youth are enrolled in secondary school. During Somalia's prolonged conflict, social service providers came under attack and critical infrastructure was destroyed, inducing service providers to leave or undermining their capacity to provide critical services. Women are especially affected; gender-based violence and discrimination against Somali women and girls is widespread. Activities in this area will increase the resilience of Somali communities and expand service delivery—especially in health and education—in targeted geographical areas, focusing on vulnerable populations affected by conflict or natural disaster. A healthier and more educated population is both fundamental to human development and critically linked to broad-based economic growth and democratic governance. Programming will leverage political commitments of the FGS to education,

galvanize donors to support a robust education system in support of Somalia's long-term stability, and build momentum towards the goal that every Somali child receives a quality education.

Improved Livelihoods: Somalia's economic recovery and resumption of growth after decades of misrule and conflict is essential to both national and regional stability. Overall unemployment among people aged 15 to 64 in Somalia is estimated at 54 percent. Youth in Somalia have one of the highest rates of unemployment in the world at 67 percent. Women fare even worse at 74 percent. Despite high levels of unemployment, weak government authority, and recurrent climatic shocks, Somalia has a thriving private sector with opportunities for investment and growth. Over 5 million livestock were exported in 2015, Somali waters have the potential to support some of the most productive fisheries in the world, and there are extensive opportunities for irrigated agriculture in South Central Somalia. If Somalia is able to increase investment and growth in key industries, remove legal and regulatory constraints to broad-based economic growth, and expand export and investment-oriented economic opportunities, especially for women and youth, greater stabilization will ensue. Together, these interventions will promote stability and facilitate inclusive local economic development within a more resilient economic system.

Al-Shabaab Defeated: U.S. engagement and more capable security forces will improve FGS capacity to diminish the strength of al-Shabaab, prevent its resurgence, and halt attacks against U.S. and Western interests in the Horn of Africa. Trained and accountable SNA and local police forces under improved command and control chains can serve as the holding forces in areas liberated from al-Shabaab control and can prevent and deter future al-Shabaab attacks in south-central Somalia and elsewhere. Increased civilian oversight will promote the transparent growth of the military and law enforcement sectors to reduce corruption and abuse of power. As the United States continues to assist Somalia with security sector funding to improve its capacity to defeat al-Shabaab, AMISOM's eventual departure must be closely followed by the SNA and the SPF to ensure that security is sustained in newly liberated areas.

Developed Rule of Law: Somalia's lack of capacity, transparency, and institutions needed to operate an effective judicial system and law enforcement structure have hindered the ability of the FGS to further develop rule of law. A lack of infrastructure and capacity in the judicial sector, coupled with a weak police presence and inability to effectively investigate and document even the most basic crimes, has left Somalia unable to prosecute criminals and bring formal justice to the majority of Somalis. As the security situation in Somalia improves, so will the need to increase the capacity and reach of the judicial system, especially in areas that the FGS has recently retaken control. Capacity building throughout the criminal justice sector will provide the foundation required for growth in the area of rule of law. Increased training and oversight will increase law enforcement capabilities in reducing crime and combating al-Shabaab operations and infiltration in areas liberated by AMISOM and SNA operations. Professionalization and collaboration among security forces will allow for strong, coordinated operations and the prevention of terrorist attacks in Somalia, greatly increasing public trust and confidence and cooperation with security and police forces. An effective judicial infrastructure will allow for the arrest and prosecution of terrorists, terrorism-supporters, and all other criminals, thereby reducing overall security threats in Somalia.

South Africa

Foreign Assistance Program Overview

South Africa continues to be an important strategic partner of the United States. Although it is the second largest economy in Africa, South Africa struggles with serious socioeconomic challenges, including HIV/AIDS and other health concerns, mass unemployment, a failing education system, increasing corruption, poor accountability, and critical levels of violent crime. As South Africa continues to exert leadership in the region, it is working with the United States and other donors to address its social and economic challenges. U.S. investments, in line with South African national development priorities, will target efforts where funding can catalyze innovative approaches for reform and improve efficiency, helping South Africa sustain its democracy and improve the lives of its people

Development Assistance (DA)

Given South Africa's prominent role in the region and growing influence on the global stage as a member of the G-20, U.S. goals are to help prevent the economic and social challenges facing South Africa from derailing the progress made over the last 20 years. U.S. assistance seeks to support democracy and economic growth in South Africa to create a stable and prosperous trade and investment partner for the United States. This assistance also is focused on bolstering efforts to partner with South Africa to advance U.S. government peace, democracy, and development interests in Africa and in the wider international arena.

South African Resource Effectiveness Advanced in Targeted Sectors

Key Interventions:

- \$3.0 million in Global Climate Change initiative funding will support participation in the Enhancing Capacity for Low Emission Development Strategies (EC-LEDS) program, helping South Africa to develop and implement national action plans for low emissions development, measure and curb greenhouse gas emissions, and pursue opportunities for private sector investment and clean growth.
- \$3.0 million in U.S. basic education funding will increase primary grade literacy rates in targeted South African schools by piloting and testing innovative scalable interventions, including in-service teacher and administrator training, technology for education, student assessment, and school management.

- \$1.0 million in U.S. assistance will continue to support the higher education strategy through workforce development.
- FY 2017 funding of \$1.0 million will support domestic civil society organizations and mobilize citizens to demand accountable, transparent, and responsive governance in South Africa, which will enable improved public services, increased public integrity, and more effective management of public resources. This will include small grants and technical assistance to civil society organizations working with government to improve service delivery in marginalized communities, increase transparency and combat corruption as well as organizations that challenge government to be more accountable for international and constitutional commitments, particularly with regard to human rights. Activities will include support for the development of public feedback mechanisms, public campaigns and may include support to strategic litigation.
- \$1.0 million in U.S. assistance will support improved access to justice and support for victims of gender-based violence. This include technical assistance to justice sector mechanisms such as the sexual offense courts, rape crisis centers and piloting innovative community-based mechanism improve multi-disciplinary responses to GBV, including education, the justice sector, social services, and civil society.
- \$1.0 million in U.S. assistance will provide technical assistance to government institutions and constitutionally mandated organizations, such as the Office of the Public Protector and the Human Rights Commission, to ensure citizen's rights and promote transparency, accountability, and good governance within government structures.
- \$0.6 million of U.S. assistance will build South Africa's capabilities to develop and implement evidence-based policies related to labor and youth, the business environment, and competitiveness. This includes support to the Government of South Africa (GOSA) in performing socio-economic impact assessments of proposed economic sector legislation. Assistance will also promote public-private partnerships to foster innovative solutions to national development challenges including inequality, youth unemployment, education, infrastructure, and service delivery.

Foreign Military Financing (FMF)

FMF programs support maintaining the ability of the South African National Defense Force (SANDF) to respond to regional crises and participate in peacekeeping operations. FMF funding supports equipment, training, and technical assistance for the SANDF. FY 2017 FMF funding will be used to support spare parts, training, technical support, and technical publications for the SANDF C-130 aircraft, aircrew, and ground support personnel. Funds will also be used to support development of other capabilities in the area of maritime and border security.

South African Security Services Ability to Conduct Peacekeeping and Combat Transnational Crime and Terrorism Improved

Key Intervention:

- U.S. assistance will provide \$0.3 million to support equipment, training, and technical assistance for the SANDF.

Global Health Programs (GHP)
